Sesame and Lilies

THREE LECTURES BY

JOHN RUSKIN, LL.D

1. OF KINGS' TREASURIES
2. OF QUEENS' GARDENS
3. OF THE MYSTERY OF LIFE

REVISED AND ENLARGED EDITION

NEW YORK
JOHN W. LOVELL COMPANY
150 Worth Street, corner Mission Place
PREFACE.

Being now fifty-one years old, and little likely to change my mind hereafter on any important subject of thought (unless through weakness of age), I wish to publish a connected series of such parts of my works as now seem to me right, and likely to be of permanent use. In doing so I shall omit much, but not attempt to mend what I think worth reprinting. A young man necessarily writes otherwise than an old one, and it would be worse than wasted time to try to recast the juvenile language; nor is it to be thought that I am ashamed even of what I cancel; for great part of my earlier work was rapidly written for temporary purposes, and is now unnecessary, though true, even to truism. What I wrote about religion, was, on the contrary, painstaking, and, I think, forcible, as compared with most religious writing; especially in its frankness and fearlessness: but it was wholly mistaken; for I had been educated in the doctrines of a narrow sect, and had read history as obliquely as sectarians necessarily must.

Mingled among these either unnecessary or erroneous statements, I find, indeed, some that might be still of value; but these, in my earlier books, disfigured by affected language, partly through the desire to be thought a fine writer, and partly, as in the second volume of Modern Painters, in the notion of returning as far as I could to what I thought the better style of old English literature, especially to that of my then favourite, in prose, Richard Hooker.

For these reasons, though, as respects either art, policy, or morality as distinct from religion, I not only still hold, but would even wish strongly to re-affirm the substance of what I said in my earliest books, I shall reprint scarcely anything
in this series out of the first and second volumes of *Modern Painters*; and shall omit much of the *Seven Lamps* and *Stones of Venice*: but all my books written within the last fifteen years will be republished without change, as new editions of them are called for, with here and there perhaps an additional note, and having their text divided, for convenient reference, into paragraphs consecutive through each volume. I shall also throw together the shorter fragments that bear on each other, and fill in with such unprinted lectures or studies as seem to me worth preserving, so as to keep the volumes, on an average, composed of about a hundred leaves each.

The first book of which a new edition is required chances to be *Sesame* and *Lilies*, from which I now detach the old preface, about the Alps, for use elsewhere; and to which I add a lecture given in Ireland on a subject closely connected with that of the book itself. I am glad that it should be the first of the complete series, for many reasons; though in now looking over these two lectures, I am painfully struck by the waste of good work in them. They cost me much thought, and much strong emotion; but it was foolish to suppose that I could rouse my audiences in a little while to any sympathy with the temper into which I had brought myself by years of thinking over subjects full of pain; while, if I missed my purpose at the time, it was little to be hoped I could attain it afterwards; since phrases written for oral delivery become ineffective when quietly read. Yet I should only take away what good is in them if I tried to translate them into the language of books; nor, indeed, could I at all have done so at the time of their delivery, my thoughts then habitually and impatiently putting themselves into forms fit only for emphatic speech; and thus I am startled, in my review of them, to find that, though there is much, (forgive me the impertinence) which seems to me accurately and energetically said, there is scarcely anything put in a form to be generally convincing, or even easily intelligible; and I can well imagine a reader laying down the book without being at all moved by it, still less guided, to any definite course of action.

I think, however, if I now say briefly and clearly what I
meant my hearers to understand, and what I wanted, and still
would fain have, them to do, there may afterwards be found
some better service in the passionately written text.

The first Lecture says, or tries to say, that, life being very
short, and the quiet hours of it few, we ought to waste none of
them in reading valueless books; and that valuable books
should, in a civilized country, be within the reach of every
one, printed in excellent form, for a just price; but not in any
vile, vulgar, or, by reason of smallness of type, physically in-
jurious form, at a vile price. For we none of us need many
books, and those which we need ought to be clearly printed,
on the best paper, and strongly bound. And though we are,
indeed, now, a wretched and poverty-struck nation, and hardly
able to keep soul and body together, still, as no person in de-
cent circumstances would put on his table confessedly bad
wine, or bad meat, without being ashamed, so he need not
have on his shelves ill-printed or loosely and wretchedly-
stitched books; for, though few can be rich, yet every man
who honestly exerts himself may, I think, still provide, for
himself and his family, good shoes, good gloves, strong har-
ness for his cart or carriage horses, and stout leather binding
for his books. And I would urge upon every young man, as
the beginning of his due and wise provision for his household,
to obtain as soon as he can, by the severest economy, a re-
stricted, serviceable, and steadily—however slowly—increasing,
series of books for use through life; making his little library,
of all the furniture in his room, the most studied and decora-
tive piece; every volume having its assigned place, like a little
statue in its niche, and one of the earliest and strictest lessons
to the children of the house being how to turn the pages of
their own literary possessions lightly and deliberately, with no
chance of tearing or dogs' ears.

That is my notion of the founding of King's Treasuries;
and the first Lecture is intended to show somewhat the use
and preciousness of their treasures: but the two following
ones have wider scope, being written in the hope of awaken-
ing the youth of England, so far as my poor words might have
any power with them, to take some thought of the purposes
of the life into which they are entering, and the nature of the world they have to conquer.

These two lectures are fragmentary and ill-arranged, but not, I think, diffuse or much compressible. The entire gist and conclusion of them, however, is in the last six paragraphs, 135 to the end, of the third lecture, which I would beg the reader to look over not once nor twice (rather than any other part of the book), for they contain the best expression I have yet been able to put in words of what, so far as is within my power, I mean henceforward both to do myself, and to plead with all over whom I have any influence, to do also according to their means: the letters begun on the first day of this year, to the workmen of England, having the object of originating, if possible, this movement among them, in true alliance with whatever trustworthy element of help they can find in the higher classes. After these paragraphs, let me ask you to read, by the fiery light of recent events, the fable at p. 116 (§ 117), and then §§ 129—131; and observe, my statement respecting the famine at Orissa is not rhetorical, but certified by official documents as within the truth. Five hundred thousand persons, at least, died by starvation in our British dominions, wholly in consequence of carelessness and want of forethought. Keep that well in your memory; and note it as the best possible illustration of modern political economy in true practice, and of the relations it has accomplished between Supply and Demand. Then begin the second lecture, and all will read clear enough, I think, to the end; only, since that second lecture was written, questions have arisen respecting the education and claims of women which have greatly troubled simple minds and excited restless ones. I am sometimes asked my thoughts on this matter, and I suppose that some girl readers of the second lecture may at the end of it desire to be told summarily what I would have them do and desire in the present state of things. This, then, is what I would say to any girl who had confidence enough in me to believe what I told her, or do what I ask her.

First, be quite sure of one thing, that, however much you may know, and whatever advantages you may possess, and
however good you may be, you have not been singled out, by
the God who made you, from all the other girls in the world,
to be especially informed respecting His own nature and char-
acter. You have not been born in a luminous point upon the
surface of the globe, where a perfect theology might be ex-
pounded to you from your youth up, and where everything
you were taught would be true, and everything that was en-
forced upon you, right. Of all the insolent, all the foolish
persuasions that by any chance could enter and hold your
empty little heart, this is the proudest and foolishest,—that
you have been so much the darling of the Heavens, and fa-
vourite of the Fates, as to be born in the very nick of time,
and in the punctual place, when and where pure Divine truth
had been sifted from the errors of the Nations; and that your
papa had been providentially disposed to buy a house in the
convenient neighbourhood of the steeple under which that
Immaculate and final verity would be beautifully proclaimed.
Do not think it, child; it is not so. This, on the contrary, is
the fact,—unpleasant you may think it; pleasant, it seems to
me,—that you, with all your pretty dresses, and dainty looks,
and kindly thoughts, and saintly aspirations, are not one whit
more thought of or loved by the great Maker and Master than
any poor little red, black, or blue savage, running wild in the
pestilent woods, or naked on the hot sands of the earth: and
that, of the two, you probably know less about God than she
does; the only difference being that she thinks little of Him
that is right, and you, much that is wrong.

That, then, is the first thing to make sure of;—that you are
not yet perfectly well informed on the most abstruse of all
possible subjects, and that, if you care to behave with modesty
or propriety, you had better be silent about it.

The second thing which you may make sure of is, that however
good you may be, you have faults; that however dull you may
be, you can find out what some of them are; and that how-
ever slight they may be, you had better make some—not too
painful, but patient—effort to get quit of them. And so far
as you have confidence in me at all, trust me for this, that
how many soever you may find or fancy your faults to be,
there are only two that are of real consequence,—Idleness and
Cruelty. Perhaps you may be proud. Well, we can get much
good out of pride, if only it be not religious. Perhaps you
may be vain: it is highly probable; and very pleasant for the
people who like to praise you. Perhaps you are a little en-
vvious: that is really very shocking; but then—so is every-
body else. Perhaps, also, you are a little malicious, which I
am truly concerned to hear, but should probably only the
more, if I knew you, enjoy your conversation. But whatever
else you may be, you must not be useless, and you must not
be cruel. If there is any one point which, in six thousand
years of thinking about right and wrong, wise and good men
have agreed upon, or successively by experience discovered,
it is that God dislikes idle and cruel people more than any
other;—that His first order is, "Work while you have light;"
and His second, "Be merciful while you have mercy."

"Work while you have light," especially while you have the
light of morning. There are few things more wonderful to me
than that old people never tell young ones how precious their
youth is. They sometimes sentimentally regret their own
earlier days; sometimes prudently forget them; often fool-
ishly rebuke the young, often more foolishly indulge, often
most foolishly thwart and restrain; but scarcely ever warn or
watch them. Remember, then, that I, at least, have warned
you, that the happiness of your life, and its power, and its
part and rank in earth or in heaven, depend on the way you
pass your days now. They are not to be sad days; far from
that, the first duty of young people is to be delighted and
delightful; but they are to be in the deepest sense solemn
days. There is no solemnity so deep, to a rightly-thinking
creature, as that of dawn. But not only in that beautiful
sense, but in all their character and method, they are to be
solemn days. Take your Latin dictionary, and look out "sol-
ennis," and fix the sense of the word well in your mind, and
remember that every day of your early life is ordaining irre-
rocably, for good or evil, the custom and practice of your soul;
ordaining either sacred customs of dear and lovely recurrence,
or trenching deeper and deeper the furrows for seed of sor-
row. Now, therefore, see that no day passes in which you do
not make yourself a somewhat better creature; and in order
to do that, find out, first, what you are now. Do not think
vaguely about it; take pen and paper, and write down as
accurate a description of yourself as you can, with the date
to it. If you dare not do so, find out why you dare not, and
try to get strength of heart enough to look yourself fairly in
the face, in mind as well as body. I do not doubt but that
the mind is a less pleasant thing to look at than the face, and
for that very reason it needs more looking at; so always have
two mirrors on your toilet table, and see that with proper
care you dress body and mind before them daily. After the
dressing is once over for the day, think no more about it:
as your hair will blow about your ears, so your temper and
thoughts will get ruffled with the day's work, and may need,
sometimes, twice dressing; but I don't want you to carry
about a mental pocket-comb; only to be smooth braided al-
ways in the morning.

Write down then, frankly, what you are, or, at least, what
you think yourself, not dwelling upon those inevitable faults
which I have just told you are of little consequence, and which
the action of a right life will shake or smooth away; but that
you may determine to the best of your intelligence what you
are good for, and can be made into. You will find that the
mere resolve not to be useless, and the honest desire to help
other people, will, in the quickest and delicatetests ways, im-
prove yourself. Thus, from the beginning, consider all your
accomplishments as means of assistance to others; read attent-
ively, in this volume, paragraphs 74, 75, 19, and 79, and you
will understand what I mean, with respect to languages and
music. In music especially you will soon find what personal
benefit there is in being serviceable: it is probable that, how-
ever limited your powers, you have voice and ear enough to
sustain a note of moderate compass in a concerted piece; —
that, then, is the first thing to make sure you can do. Get
your voice disciplined and clear, and think only of accuracy;
never of effect or expression: if you have any soul worth ex-
pressing it will show itself in your singing; but most likely
there are very few feelings in you, at present, needing any particular expression; and the one thing you have to do is to make a clear voiced little instrument of yourself, which other people can entirely depend upon for the note wanted. So, in drawing, as soon as you can set down the right shape of anything, and thereby explain its character to another person, or make the look of it clear and interesting to a child, you will begin to enjoy the art vividly for its own sake, and all your habits of mind and powers of memory will gain precision: but if you only try to make showy drawings for praise, or pretty ones for amusement, your drawing will have little of real interest for you, and no educational power whatever.

Then, besides this more delicate work, resolve to do every day some that is useful in the vulgar sense. Learn first thoroughly the economy of the kitchen; the good and bad qualities of every common article of food, and the simplest and best modes of their preparation: when you have time, go and help in the cooking of poorer families, and show them how to make as much of everything as possible, and how to make little, nice; coaxing and tempting them into tidy and pretty ways, and pleading for well-folded table-cloths, however coarse, and for a flower or two out of the garden to strew on them. If you manage to get a clean table-cloth, bright plates on it, and a good dish in the middle, of your own cooking, you may ask leave to say a short grace; and let your religious ministries be confined to that much for the present.

Again, let a certain part of your day (as little as you choose, but not to be broken in upon) be set apart for making strong and pretty dresses for the poor. Learn the sound qualities of all useful stuffs, and make everything of the best you can get, whatever its price. I have many reasons for desiring you to do this,—too many to be told just now,—trust me, and be sure you get everything as good as can be: and if, in the villainous state of moderate trade, you cannot get it good at any price, buy its raw material, and set some of the poor women about you to spin and weave, till you have got stuff that can be trusted: and then, every day, make some little
piece of useful clothing, sewn with your own fingers as strongly as it can be stitched; and embroider it or otherwise beautify it moderately with fine needlework, such as a girl may be proud of having done. And accumulate these things by you until you hear of some honest persons in need of clothing, which may often too sorrowfully be; and, even though you should be deceived, and give them to the dishonest, and hear of their being at once taken to the pawnbroker's, never mind that, for the pawnbroker must sell them to some one who has need of them. That is no business of yours; what concerns you is only that when you see a half-naked child, you should have good and fresh clothes to give it, if its parents will let it be taught to wear them. If they will not, consider how they came to be of such a mind, which it will be wholesome for you beyond most subjects of inquiry to ascertain. And after you have gone on doing this a little while, you will begin to understand the meaning of at least one chapter of your Bible, Proverbs xxxi., without need of any laboured comment, sermon, or meditation.

In these, then (and of course in all minor ways besides, that you can discover in your own household), you must be to the best of your strength usefully employed during the greater part of the day, so that you may be able at the end of it to say, as proudly as any peasant, that you have not eaten the bread of idleness. Then, secondly, I said, you are not to be cruel. Perhaps you think there is no chance of your being so; and indeed I hope it is not likely that you should be deliberately unkind to any creature; but unless you are deliberately kind to every creature, you will often be cruel to many. Cruel, partly through want of imagination (a far rarer and weaker faculty in women than men), and yet more, at the present day, through the subtle encouragement of your selfishness by the religious doctrine that all which we now suppose to be evil will be brought to a good end; doctrine practically issuing, not in less earnest efforts that the immediate unpleasantness may be averted from ourselves, but in our remaining satisfied in the contemplation of its ultimate objects, when it is inflicted on others.
It is not likely that the more accurate methods of recent mental education will now long permit young people to grow up in the persuasion that, in any danger or distress, they may expect to be themselves saved by the providence of God, while those around them are lost by His Improvidence: but they may be yet long restrained from rightly kind action, and long accustomed to endure both their own pain occasionally, and the pain of others always, with an unwise patience, by misconception of the eternal and incurable nature of real evil. Observe, therefore, carefully in this matter: there are degrees of pain, as degrees of faultfulness, which are altogether conquerable, and which seem to be merely forms of wholesome trial or discipline. Your fingers tingle when you go out on a frosty morning, and are all the warmer afterwards; your limbs are weary with wholesome work, and lie down in the pleasanter rest; you are tried for a little while by having to wait for some promised good, and it is all the sweeter when it comes. But you cannot carry the trial past a certain point. Let the cold fasten on your hand in an extreme degree, and your fingers will moulder from their sockets. Fatigue yourself, but once, to utter exhaustion, and to the end of life you shall not recover the former vigour of your frame. Let heart-sickness pass beyond a certain bitter point, and the heart loses its life forever.

Now, the very definition of evil is in this irremediableness. It means sorrow, or sin, which end in death; and assuredly, as far as we know, or can conceive, there are many conditions both of pain and sin which cannot but so end. Of course we are ignorant and blind creatures, and we cannot know what seeds of good may be in present suffering, or present crime; but with what we cannot know, we are not concerned. It is conceivable that murderers and liars may in some distant world be exalted into a higher humanity than they could have reached without homicide or falsehood; but the contingency is not one by which our actions should be guided. There is, indeed, a better hope that the beggar, who lies at our gates in misery, may, within gates of pearl be comforted; but the Master, whose words are our only authority for thinking so,
never Himself inflicted disease as a blessing, nor sent away the hungry unfed, or the wounded unhealed.

Believe me, then, the only right principle of action here, is to consider good and evil as defined by our natural sense of both; and to strive to promote the one, and to conquer the other, with as hearty endeavor as if there were, indeed, no other world than this. Above all, get quit of the absurd idea that Heaven will interfere to correct great errors, while allowing its laws to take their course in punishing small ones. If you prepare a dish of food carelessly, you do not expect Providence to make it palatable; neither, if, through years of folly, you misguide your own life, need you expect Divine interference to bring round everything at last for the best. I tell you, positively, the world is not so constituted: the consequences of great mistakes are just as sure as those of small ones, and the happiness of your whole life, and of all the lives over which you have power, depends as literally on your own common sense and discretion as the excellence and order of the feast of a day.

Think carefully and bravely over these things, and you will find them true: having found them so, think also carefully over your own position in life. I assume that you belong to the middle or upper classes, and that you would shrink from descending into a lower sphere. You may fancy you would not: nay, if you are very good, strong-hearted, and romantic, perhaps you really would not; but it is not wrong that you should. You have then, I suppose, good food, pretty rooms to live in, pretty dresses to wear, power of obtaining every rational and wholesome pleasure; you are, moreover, probably gentle and grateful, and in the habit of every day thanking God for these things. But why do you thank Him? Is it because, in these matters, as well as in your religious knowledge, you think He has made a favourite of you? Is the essential meaning of your thanksgiving, "Lord, I thank thee that I am not as other girls are, not in that I fast twice in the week while they feast, but in that I feast seven times a week, while they fast," and are you quite sure this is a pleasing form of thanksgiving to your Heavenly Father? Suppose you saw
one of your own true earthly sisters, Lucy or Emily, cast out of your mortal father's house, starving, helpless, heartbroken; and that every morning when you went into your father's room, you said to him, "How good you are, father, to give me what you don't give Lucy," are you sure that, whatever anger your parent might have just cause for, against your sister, he would be pleased by that thanksgiving, or flattered by that praise? Nay, are you even sure that you are so much the favourite: suppose that, all this while, he loves poor Lucy just as well as you, and is only trying you through her pain, and perhaps not angry with her in anywise, but deeply angry with you, and all the more for your thanksgivings? Would it not be well that you should think, and earnestly too over this standing of yours: and all the more if you wish to believe that text, which clergymen so much dislike preaching on, "How hardly shall they that have riches enter into the Kingdom of God?" You do not believe it now, or you would be less complacent in your state; and you cannot believe it at all, until you know that the Kingdom of God means—"not meat and drink, but justice, peace, and joy in the Holy Ghost," nor until you know also that such joy is not by any means, necessarily, in going to church, or in singing hymns; but may be joy in a dance, or joy in a jest, or joy in anything you have deserved to possess, or that you are willing to give; but joy in nothing that separates you, as by any strange favour, from your fellow-creatures, that exalts you through their degradation—exempts you from their toil—or indulges you in time of their distress.

Think, then, and some day, I believe, you will feel also—no morbid passion of pity such as would turn you into a black Sister of Charity, but the steady fire of perpetual kindness which will make you a bright one. I speak in no disparagement of them; I know well how good the Sisters of Charity are, and how much we owe to them; but all these professional pieties (except so far as distinction or association may be necessary for effectiveness of work) are in their spirit wrong, and in practice merely plaster the sores of disease that ought never have been permitted to exist; encouraging
at the same time the herd of less excellent women in frivolity, by leading them to think that they must either be good up to the black standard, or cannot be good for anything. Wear a costume, by all means, if you like; but let it be a cheerful and becoming one; and be in your heart a Sister of Charity always, without either veiled or voluble declaration of it.

As I pause, before ending my preface—thinking of one or two more points that are difficult to write of—I find a letter in The Times, from a French lady, which says all I want so beautifully, that I will print it just as it stands:

Sir,—It is often said that one example is worth many sermons. Shall I be judged presumptuous if I point out one, which seems to me so striking just now, that, however painful, I cannot help dwelling upon it?

It is the share, the sad and large share, that French society and its recent habits of luxury, of expenses, of dress, of indulgence in every kind of extravagant dissipation, has to lay to its own door in its actual crisis of ruin, misery, and humiliation. If our ménagères can be cited as an example to English housewives, so, alas! can other classes of our society be set up as an example—not to be followed.

Bitter must be the feelings of many a French woman whose days of luxury and expensive habits are at an end: and whose bills of bygone splendour lie with a heavy weight on her conscience, if not on her purse!

With us the evil has spread high and low. Everywhere have the examples given by the highest ladies in the land been followed but too successfully.

Every year did dress become more extravagant, entertainments more costly, expenses of every kind more considerable. Lower and lower became the tone of society, its good breeding, its delicacy. More and more were monde and demi-monde associated in newspaper accounts of fashionable doings, in scandalous gossip, on racecourses, in premières représentations, in imitation of each other’s costumes, mobiliers and slang.

Living beyond one’s means became habitual—almost necessary—for every one to keep up with, if not to go beyond, every one else.

What the result of all this has been we now see in the wreck of our prosperity, in the downfall of all that seemed brightest and highest.
Deeply and fearfully impressed by what my own country has incurred and is suffering, I cannot help feeling sorrowful when I see in England signs of our besetting sins appearing also. Paint and *caignons*, slang and vaudevilles, knowing "Anonymas" by name, and reading doubtfully moral novels, are in themselves small offences, although not many years ago they would have appeared very heinous ones, yet they are quick and tempting conveyances on a very dangerous high-road.

I would that all Englishwomen knew how they are looked up to from abroad—what a high opinion, what honour and reverence we foreigners have for their principles, their truthfulness, the fresh and pure innocence of their daughters, the healthy youthfulness of their lovely children.

May I illustrate this by a short example which happened very near me? During the days of the émeutes of 1848, all the houses in Paris were being searched for firearms by the mob. The one I was living in contained none, as the master of the house repeatedly assured the furious and incredulous Republicans. They were going to lay violent hands on him, when his wife, an English lady, hearing the loud discussion, came bravely forward and assured them that no arms were concealed. "Vous êtes anglaise, nous vous croyons; les anglaises disent toujours la vérité," was the immediate answer, and the rioters quietly left.

Now, Sir, shall I be accused of unjust criticism if, loving and admiring your country, as these lines will prove, certain new features strike me as painful discrepancies in English life?

Far be it from me to preach the contempt of all that can make life lovable and wholesomely pleasant. I love nothing better than to see a women nice, neat, elegant, looking her best in the prettiest dress that her taste and purse can afford, or your bright, fresh young girls fearlessly and perfectly sitting their horses, or adorning their houses as pretty [*sic*; it is not quite grammar, but it is better than if it were;] as care, trouble, and refinement can make them.

It is the degree *beyond* that which to us has proved so fatal, and that I would our example could warn you from, as a small repayment for your hospitality and friendliness to us in our days of trouble.

May Englishwomen accept this in a kindly spirit as a new year's wish from

French Lady.

Dec. 29.
That, then, is the substance of what I would fain say convincingly, if it might be, to my girl friends; at all events, with certainty in my own mind that I was thus far a safe guide to them.

For other and older readers it is needful I should write a few words more, respecting what opportunity I have had to judge, or right I have to speak, of such things; for, indeed, too much of what I have said about women has been said in faith only. A wise and lovely English lady told me, when Sesame and Lilies first appeared, that she was sure the Sesame would be useful, but that in the Lilies I had been writing of what I knew nothing about. Which was in a measure too true, and also that it is more partial than my writings are usually; for as Ellesmere spoke his speech on the —— intervention, not indeed otherwise than he felt, but yet altogether for the sake of Gretchen, so I wrote the Lilies to please one girl; and were it not for what I remember of her, and of few besides, should now perhaps recast some of the sentences in the Lilies in a very different tone: for as years have gone by, it has chanced to me, untowardly in some respects, fortunately in others (because it enables me to read history more clearly), to see the utmost evil that is in women, while I have had but to believe the utmost good. The best women are indeed necessarily the most difficult to know; they are recognized chiefly in the happiness of their husbands and the nobleness of their children; they are only to be divined, not discerned, by the stranger; and, sometimes, seem almost helpless except in their homes; yet without the help of one of them,* to whom this book is dedicated, the day would probably have come before now, when I should have written and thought no more.

On the other hand, the fashion of the time renders whatever is forward, coarse or senseless, in feminine nature, too palpable to all men:—the weak picturesqueness of my earlier writings brought me acquainted with much of their emptiest enthusiasm; and the chances of later life gave me opportunities of watching women in states of degradation and vin*
dictiveness which opened to me the gloomiest secrets of Greek and Syrian tragedy. I have seen them betray their household charities to lust, their pledged love to devotion; I have seen mothers dutiful to their children, as Medea; and children dutiful to their parents, as the daughter of Herodias: but my trust is still unMOVED in the preciousness of the natures that are so fatal in their error, and I leave the words of the Lilies unchanged; believing, yet, that no man ever lived a right life who had not been chastened by a woman's love, strengthened by her courage, and guided by her discretion.

What I might myself have been, so helped, I rarely indulge in the idleness of thinking; but what I am, since I take on me the function of a teacher, it is well that the reader should know, as far as I can tell him.

Not an unjust person; not an unkind one; not a false one; a lover of order, labor, and peace. That, it seems to me, is enough to give me right to say all I care to say on ethical subjects: more, I could only tell definitely through details of autobiography such as none but prosperous and (in the simple sense of the word) faultless, lives could justify;—and mine has been neither. Yet, if any one, skilled in reading the torn manuscripts of the human soul, cares for more intimate knowledge of me, he may have it by knowing with what persons in past history I have most sympathy.

I will name three.

In all that is strongest and deepest in me,—that fits me for my work, and gives light or shadow to my being, I have sympathy with Guido Guinicelli.

In my constant natural temper, and thoughts of things and of people, with Marmontel.

In my enforced and accidental temper, and thoughts of things and of people, with Dean Swift.

Any one who can understand the natures of those three men, can understand mine; and having said so much, I am content to leave both life and work to be remembered or forgotten, as their uses may deserve.

Denmark Hill,
1st January, 1871.
A passage in the fifty-fifth page of this book, referring to Alpine travellers, will fall harshly on the reader's ear since it has been sorrowfully enforced by the deaths on Mont Cervin. I leave it, nevertheless, as it stood, for I do not now write unadvisedly, and think it wrong to cancel what has once been thoughtfully said; but it must not so remain without a few added words. No blame ought to attach to the Alpine tourist for incurring danger. There is usually sufficient cause, and real reward, for all difficult work; and even were it otherwise, some experience of distinct peril, and the acquirement of habits of quick and calm action in its presence, are necessary elements, at some period of life, in the formation of manly character. The blame of bribing guides into danger is a singular accusation, in behalf of a people who have made mercenary soldiers of themselves for centuries, without any one's thinking of giving their fidelity better employment: though, indeed, the piece of work they did at the gate of the Tuileries, however useless, was no unwise one; and their lion of flawed molasse at Lucerne, worthless in point of art though it be, is nevertheless a better reward than much pay; and a better ornament to the old town than the Schweizer Hof, or flat new quay, for the promenade of those travellers who do not take guides into danger. The British public are however, at home, so innocent of ever buying their fellow creatures' lives, that we may justly expect them to be punctilious abroad! They do not, perhaps, often calculate how many souls flit annually, choked in fire-damp and sea-sand, from economically watched shafts, and economically manned
ships; nor see the fiery ghosts writhe up out of every scuttleful of cheap coals: nor count how many threads of girlish life are cut off and woven annually by painted Fates, into breadths of ball-dresses; or soaked away, like rotten hemp-fibre, in the inlet of Cocytus which overflows the Grassmarket where flesh is as grass. We need not, it seems to me, loudly blame any one for paying a guide to take a brave walk with him. Therefore, gentlemen of the Alpine Club, as much danger as you care to face, by all means; but, if it please you, not so much talk of it. The real ground of reprehension of Alpine climbing is that, with less cause, it excites more vanity than any other athletic skill. A good horseman knows what it has cost to make him one; everybody else knows it too, and knows that he is one; he need not ride at a fence merely to show his seat. But credit for practice in climbing can only be claimed after success, which, though perhaps accidental and unmerited, must yet be attained at all risks, or the shame of defeat borne with no evidence of the difficulties encountered. At this particular period, also, the distinction obtainable by first conquest of a peak is as tempting to a traveller as the discovery of a new element to a chemist, or of a new species to a naturalist. Vanity is never so keenly excited as by competitions which involve chance; the course of science is continually arrested, and its nomenclature fatally confused, by the eagerness of even wise and able men to establish their priority in an unimportant discovery, or obtain vested right to a syllable in a deformed word; and many an otherwise sensible person will risk his life for the sake of a line in future guide-books, to the fact that "—horn was first ascended by Mr. X. in the year ——";—never reflecting that of all the lines in the page, the one he has thus wrought for will be precisely the least interesting to the reader.

It is not therefore strange, however much to be regretted, that while no gentleman boasts in other cases of his sagacity or his courage—while no good soldier talks of the charge he led, nor any good sailor of the helm he held,—every man among the Alps seems to lose his senses and modesty with
the fall of the barometer, and returns from his Nephelo-coc-cygia brandishing his ice-axe in everybody’s face. Whatever the Alpine Club have done, or may yet accomplish, is a sincere thirst for mountain knowledge, and in happy sense of youthful strength and play of animal spirit, they have done, and will do, wisely and well; but whatever they are urged to by mere sting of competition and itch of praise, they will do, as all vain things must be done for ever, foolishly and ill. It is a strange proof of that absence of any real national love of science, of which I have had occasion to speak in the text, that no entire survey of the Alps has yet been made by properly qualified men; and that, except of the chain of Chamonii, no accurate maps exist, nor any complete geological section even of that. But Mr. Reilly’s survey of that central group, and the generally accurate information collected in the guide-book published by the Club, are honorable results of English adventure; and it is to be hoped that the continuance of such work will gradually put an end to the vulgar excitement which looked upon the granite of the Alps only as an unoccupied advertisement wall for chalking names upon.

Respecting the means of accomplishing such work with least risk, there was a sentence in the article of our leading public journal, which deserves, and requires expansion.

“Their” (the Alpine Club’s) “ropes must not break.”

Certainly not! nor any one else’s ropes, if they may be rendered unbreakable by honesty of make; seeing that more lives hang by them on moving than on motionless seas. The records of the last gale at the Cape may teach us that economy in the manufacture of cables is not always a matter for exultation; and, on the whole, it might even be well in an honest country, sending out, and up and down, various lines east and west, that nothing should break; banks,—words,—nor dredging tackle.

Granting, however, such praise and such sphere of exertion as we thus justly may, to the spirit of adventure, there is one consequence of it, coming directly under my own cognizance, of which I cannot but speak with utter regret,—the loss.
namely, of all real understanding of the character and beauty of Switzerland, by the country's being now regarded as half watering-place, half gymnasmium. It is indeed true that under the influence of pride which gives poignancy to the sensations which others cannot share with us (and a not unjustifiable zest to the pleasure which we have worked for), an ordinary traveller will usually observe and enjoy more on a difficult excursion than on an easy one; and more in objects to which he is unaccustomed than in those with which he is familiar. He will notice with extreme interest that snow is white on the top of a hill in June, though he would have attached little importance to the same peculiarity in a wreath at the bottom of a hill in January. He will generally find more to admire in a cloud under his feet, than in one over his head; and, oppressed by the monotony of a sky which is prevalently blue, will derive extraordinary satisfaction from its approximation to black. Add to such grounds of delight the aid given to the effect of whatever is impressive in the scenery of the high Alps, by the absence of ludicrous or degrading concomitants; and it ceases to be surprising that Alpine excursionists should be greatly pleased, or that they should attribute their pleasure to some true and increased apprehension of the nobleness of natural scenery. But no impression can be more false. The real beauty of the Alps is to be seen, and seen only, where all may see it, the child, the cripple, and the man of gray hairs. There is more true loveliness in a single glade of pasture shadowed by pine, or gleam of rocky brook, or inlet of unsullied lake among the lower Bernese and Savoyard hills, than in the entire field of jagged gneiss which crests the central ridge from the Shreckhorn to the Viso. The valley of Cluse, through which unhappy travellers consent now to be invoiced, packed in baskets like fish, so only that they may cheaply reach, in the feverous haste which has become the law of their being, the glen of Chamouni whose every lovely foreground rock has now been broken up to build hotels for them, contains more beauty in half a league of it, than the entire valley they have devastated, and turned into a casino, did in its uninjured pride; and that passage of the Jura by Olten (between Basle
and Lucerne), which is by the modern tourist triumphantly effected through a tunnel in ten minutes, between two piggish trumpet grunts proclamatory of the ecstatic transit, used to show from every turn and sweep of its winding ascent, up which one sauntered, gathering wild-flowers, for half a happy day, diviner aspects of the distant Alps than ever were achieved by toil of limb, or won by risk of life.

There is indeed a healthy enjoyment both in engineers' work, and in school-boy's play; the making and mending of roads has its true enthusiasms, and I have still pleasure enough in mere scrambling to wonder not a little at the supreme gravity with which apes exercise their superior powers in that kind, as if profitless to them. But neither macadamisation, nor tunnelling, nor rope ladders, will ever enable one human creature to understand the pleasure in natural scenery felt by Theocritus or Virgil; and I believe the athletic health of our schoolboys might be made perfectly consistent with a spirit of more courtesy and reverence, both for men and things, than is recognisable in the behaviour of modern youth. Some year or two back, I was staying at the Montanvert to paint Alpine roses, and went every day to watch the budding of a favorite bed, which was rounding into faultless bloom beneath a cirque of rock, high enough, as I hoped, and close enough, to guard it from rude eyes and plucking hands. But,

"Tra erto e piano era un sentiero ghembo,
Che ne condusse in fianco del a lacca,"

and on the day it reached the fulness of its rubied fire, I was standing near when it was discovered by a forager on the flanks of a travelling school of English and German lads. He shouted to his companions, and they swooped down upon it; threw themselves into it, rolled over and over in it, shrieked, hallooed, and fought in it, trampled it down, and tore it up by the roots; breathless at last with rapture of ravage, they fixed the brightest of the remnant blossoms of it in their caps, and went on their way rejoicing.

They left me much to think upon; partly respecting the e-
sential power of the beauty which could so excite them, and partly respecting the character of the youth which could only be excited to destroy. But the incident was a perfect type of that irreverence for natural beauty with respect to which I said in the text, at the place already indicated, "You make railroads of the aisles of the cathedrals of the earth, and eat off their altars." For indeed all true lovers of natural beauty hold it in reverence so deep, that they would as soon think of climbing the pillars of the choir Beauvais for a gymnastic exercise, as of making a play-ground of Alpine snow: and they would not risk one hour of their joy among the hill meadows on a May morning, for the fame or fortune of having stood on every pinnacle of the silver temple, and beheld the kingdoms of the world from it. Love of excitement is so far from being love of beauty, that it ends always in a joy in its exact reverse; joy in destruction,—as of my poor roses,—or in actual details of death; until, in the literature of the day, "nothing is too dreadful, or too trivial, for the greed of the public."* And in politics, apathy, irreverence, and lust of luxury go hand in hand, until the best solemnization which can be conceived for the greatest event in modern European history, the crowning of Florence capital of Italy, is the accursed and illomened folly of casting down her old walls, and surrounding her with a "boulevard;" and this at the very time when every stone of her ancient cities is more precious to her than the gems of a Urim breastplate, and when every nerve of her heart and brain should have been strained to redeem her guilt and fulfil her freedom. It is not by making roads round Florence, but through Calabria, that she should begin her Roman causeway work again; and her fate points her march, not on boulevards by Arno, but waist-deep in the lagoons at Venice. Not yet, indeed, but five years of patience and discipline of her youth would accomplish her power, and sweep the martello towers from the cliffs of Verona, and the ramparts from the marsh of Mestre. But she will not teach her youth that discipline on boulevards.

Strange, that while we both, French and English, can give

* *Pall Mall Gazette,* August 15th, article on the Forward murders.
lessons in war, we only corrupt other nations when they imitate either our pleasures or our industries. We English, had we loved Switzerland indeed, should have striven to elevate, but not to disturb, the simplicity of her people, by teaching them the sacredness of their fields and waters, the honour of their pastoral and burgher life, and the fellowship in glory of the gray turreted walls round their ancient cities, with their cottages in their fair groups by the forest and lake. Beautiful, indeed, upon the mountains, had been the feet of any who had spoken peace to their children;—who had taught those princely peasants to remember their lineage, and their league with the rocks of the field; that so they might keep their mountain waters pure, and their mountain paths peaceful, and their traditions of domestic life holy. We have taught them (incapable by circumstances and position of ever becoming a great commercial nation) all the foulness of the modern lust of wealth, without its practical intelligences; and we have developed exactly the weakness of their temperament by which they are liable to meanest ruin. Of the ancient architecture and most expressive beauty of their country there is now little vestige left; and it is one of the few reasons which console me for the advance of life, that I am old enough to remember the time when the sweet waves of the Reuss and Limmat (now foul with the refuse of manufacture) were as crystalline as the heaven above them, when her pictured bridges and embattled towers ran unbroken round Lucerne; when the Rhone flowed in deep-green, softly dividing currents round the wooded ramparts of Geneva; and when from the marble roof of the western vault of Milan, I could watch the Rose of Italy flush in the first morning light, before a human foot had sullied its summit, or the reddening dawn on its rocks taken shadow of sadness from the crimson which long ago stained the ripples of Otterburn.
SESAME AND LILIES.

LECTURE I.—SESAME.

OF KINGS' TREASURIES.

"You shall each have a cake of sesame,—and ten pound."
—Lucian: The Fisherman.

I believe, ladies and gentlemen, that my first duty this evening is to ask your pardon for the ambiguity of title under which the subject of lecture has been announced; and for having endeavoured, as you may ultimately think, to obtain your audiences under false pretences. For indeed I am not going to talk of kings, known as regnant, nor of treasuries, understood to contain wealth; but of quite another order of royalty, and material of riches, than those usually acknowledged. And I had even intended to ask your attention for a little while on trust, and (as sometimes one contrives in taking a friend to see a favourite piece of scenery) to hide what I wanted most to show, with such imperfect cunning as I might, until we had unexpectedly reached the best point of view by winding paths. But since my good plain-spoken friend, Canon Anson, has already partly anticipated my reserved "trot for the avenue" in his first advertised title of subject, "How and What to Read;"—and as also I have heard it said, by men practised in public address, that hearers are never so much fatigued as by the endeavour to follow a speaker who gives them no clue to his purpose, I will take the slight mask off at once, and tell you plainly that I want to speak to you about books; and about the way we read them, and could, or should read them. A grave subject, you will say; and a wide one! Yes; so wide
that I shall make no effort to touch the compass of it. I will try only to bring before you a few simple thoughts about reading, which press themselves upon me every day more deeply, as I watch the course of the public mind with respect to our daily enlarging means of education, and the answeringly wider spreading, on the levels, of the irrigation of literature. It happens that I have practically some connection with schools for different classes of youth; and I receive many letters from parents respecting the education of their children. In the mass of these letters, I am always struck by the precedence which the idea of a “position in life” takes above all other thoughts in the parents’—more especially in the mothers’—minds. “The education befitting such and such a station in life”—this is the phrase, this the object, always. They never seek, as far as I can make out, an education good in itself; the conception of abstract rightness in training rarely seems reached by the writers. But an education “which shall keep a good coat on my son’s back;—an education which shall enable him to ring with confidence the visitors’ bell at double-belled doors;—education which shall result ultimately in establishment of a double-belled door to his own house; in a word, which shall lead to “advancement in life.” It never seems to occur to the parents that there may be an education which, in itself, is advancement in Life;—that any other than that may perhaps be advancement in Death; and that this essential education might be more easily got, or given, than they fancy, if they set about it in the right way; while it is for no price, and by no favour, to be got, if they set about it in the wrong.

Indeed, among the ideas most prevalent and effective in the mind of this busiest of countries, I suppose the first—at least that which is confessed with the greatest frankness, and put forward as the fittest stimulus to youthful exertion—is this of “advancement in life.” My main purpose this evening is to determine, with you, what this idea practically includes, and what it should include.

Practically, then, at present, “advancement in life” means becoming conspicuous in life;—obtaining a position which
shall be acknowledged by others to be respectable or honourable. We do not understand by this advancement, in general, the mere making of money, but the being known to have made it; not the accomplishment of any great aim, but the being seen to have accomplished it. In a word, we mean the gratification of our thirst for applause. That thirst, if the last infirmity of noble minds, is also the first infirmity of weak ones; and, on the whole, the strongest impulsive influence of average humanity: the greatest efforts of the race have always been traceable to the love of praise, as its greatest catastrophes to the love of pleasure.

I am not about to attack or defend this impulse. I want you only to feel how it lies at the root of effort; especially of all modern effort. It is the gratification of vanity which is, with us, the stimulus of toil, and balm of repose; so closely does it touch the very springs of life, that the wounding of our vanity is always spoken of (and truly) as in its measure mortal; we call it "mortification," using the same expression which we should apply to a gangrenous and incurable bodily hurt. And although few of us may be physicians enough to recognize the various effect of this passion upon health and energy, I believe most honest men know and would at once acknowledge, its leading power with them as a motive. The seaman does not commonly desire to be made captain only because he knows he can manage the ship better than any other sailor on board. He wants to be made captain that he may be called captain. The clergyman does not usually want to be made a bishop only because he believes no other hand can, as firmly as his, direct the diocese through its difficulties. He wants to be made bishop primarily that he may be called "My Lord." And a prince does not usually desire to enlarge, or a subject to gain, a kingdom, because he believes that no one else can as well serve the state upon the throne; but, briefly, because he wishes to be addressed as "Your Majesty," by as many lips as may be brought to such utterance.

This, then, being the main idea of advancement in life, the force of it applies, for all of us, according to our station, particularly to that secondary result of such advancement which
we call "getting into good society." We want to get into good society, not that we may have it, but that we may be seen in it; and our notion of its goodness depends primarily on its conspicuousness.

Will you pardon me if I pause for a moment to put what I fear you may think an impertinent question? I never can go on with an address unless I feel, or know, that my audience are either with me or against me: (I do not much care which, in beginning;) but I must know where they are; and I would fain find out, at this instant, whether you think I am putting the motives of popular action too low. I am resolved to-night, to state them low enough to be admitted as probable; for whenever, in my writings on Political Economy, I assume that a little honesty, or generosity,—or what used to be called "virtue"—may be calculated upon as a human motive of action, people always answer me, saying, "You must not calculate on that: that is not in human nature: you must not assume anything to be common to men but acquisitiveness and jealousy; no other feeling ever has influence on them, except accidentally, and in matters out of the way of business." I begin accordingly to-night low down in the scale of motives; but I must know if you think me right in doing so. Therefore, let me ask those who admit the love of praise to be usually the strongest motive in men's minds in seeking advancement, and the honest desire of doing any kind of duty to be an entirely secondary one, to hold up their hands. (About a dozen of hands held up—the audience partly not being sure the lecturer is serious, and partly shy of expressing opinion.) I am quite serious—I really do want to know what you think; however, I can judge by putting the reverse question. Will those who think that duty is generally the first, and love of praise the second motive, hold up their hands? (One hand reported to have been held up, behind the lecturer.) Very good; I see you are with me, and that you think I have not begun too near the ground. Now, without teasing you by putting farther question, I venture to assume that you will admit duty as at least a secondary or tertiary motive. You think that the desire of doing something useful, or obtaining some
OF KINGS' TREASURIES.

real good, is indeed an existent collateral idea, though a secondary one, in most men's desire of advancement. You will grant that moderately honest men desire place and office, at least in some measure, for the sake of their beneficent power; and would wish to associate rather with sensible and well-informed persons than with fools and ignorant persons, whether they are seen in the company of the sensible ones or not. And finally, without being troubled by repetition of any common truisms about the preciousness of friends, and the influence of companions, you will admit, doubtless, that according to the sincerity of our desire that our friends may be true, and our companions wise,—and in proportion to the earnestness and discretion with which we choose both, will be the general chances of our happiness and usefulness.

But, granting that we had both the will and the sense to choose our friends well, how few of us have the power! or, at least, how limited, for most, is the sphere of choice! Nearly all our associations are determined by chance or necessity; and restricted within a narrow circle. We cannot know whom we would; and those whom we know, we cannot have at our side when we most need them. All the higher circles of human intelligence are, to those beneath, only momentarily and partially open. We may, by good fortune, obtain a glimpse of a great poet, and hear the sound of his voice; or put a question to a man of science, and be answered good-humoredly. We may intrude ten minutes' talk on a cabinet minister, answered probably with words worse than silence, being deceptive; or snatch, once or twice in our lives, the privilege of throwing a bouquet in the path of a Princess, or arresting the kind glance of a Queen. And yet these momentary chances we covet; and spend our years, and passions, and powers in pursuit of little more than these; while, meantime, there is a society continually open to us, of people who will talk to us as long as we like, whatever our rank or occupation;—talk to us in the best words they can choose, and with thanks if we listen to them. And this society, because it is so numerous and so gentle,—and can be kept waiting round us all day long, not to grant audience, but to gain it;—kings and states-
men lingering patiently in those plainly furnished and narrow anterooms, our bookcase shelves,—we make no account of that company,—perhaps never listen to a word they would say, all day long!

You may tell me, perhaps, or think within yourselves, that the apathy with which we regard this company of the noble, who are praying us to listen to them, and the passion with which we pursue the company, probably of the ignoble, who despise us, or who have nothing to teach us, are grounded in this,—that we can see the faces of the living men, and it is themselves, and not their sayings, with which we desire to become familiar. But it is not so. Suppose you never were to see their faces;—suppose you could be put behind a screen in the statesman's cabinet, or the prince's chamber, would you not be glad to listen to their words, though you were forbidden to advance beyond the screen? And when the screen is only a little less, folded in two, instead of four, and you can be hidden behind the cover of the two boards that bind a book, and listen, all day long, not to the casual talk, but to the studied, determined, chosen addresses of the wisest of men;—this station of audience, and honourable privy council, you despise!

But perhaps you will say that it is because the living people talk of things that are passing, and are of immediate interest to you, that you desire to hear them. Nay; that cannot be so, for the living people will themselves tell you about passing matters, much better in their writings than in their careless talk. But I admit that this motive does influence you, so far as you prefer those rapid and ephemeral writings to slow and enduring writings—books, properly so called. For all books are divisible into two classes, the books of the hour, and the books of all time. Mark this distinction—it is not one of quality only. It is not merely the bad book that does not last, and the good one that does. It is a distinction of species. There are good books for the hour, and good ones for all time; bad books for the hour, and bad ones for all time. I must define the two kinds before I go farther.

The good book of the hour, then,—I do not speak of the
bad ones—is simply the useful or pleasant talk of some person whom you cannot otherwise converse with, printed for you. Very useful often, telling you what you need to know; very pleasant often, as a sensible friend's present talk would be. These bright accounts of travels; good-humoured and witty discussions of question; lively or pathetic story-telling in the form of novel; firm fact-telling, by the real agents concerned in the events of passing history;—all these books of the hour, multiplying among us as education becomes more general, are a peculiar characteristic and possession of the present age; we ought to be entirely thankful for them, and entirely ashamed of ourselves if we make no good use of them. But we make the worst possible use, if we allow them to usurp the place of true books: for, strictly speaking, they are not books at all, but merely letters or newspapers in good print. Our friend's letter may be delightful, or necessary, to-day: whether worth keeping or not, is to be considered. The newspaper may be entirely proper at breakfast time, but assuredly it is not reading for all day. So, though bound up in a volume, the long letter which gives you so pleasant an account of the inns, and roads, and weather last year at such a place, or which tells you that amusing story, or gives you the real circumstances of such and such events, however valuable for occasional reference, may not be, in the real sense of the word, a "book" at all, nor, in the real sense, to be "read." A book is essentially not a talked thing, but a written thing; and written, not with the view of mere communication, but of permanence. The book of talk is printed only because its author cannot speak to thousands of people at once; if he could, he would—the volume is mere multiplication of his voice. You cannot talk to your friend in India; if you could, you would; you write instead: that is mere conveyance of voice. But a book is written, not to multiply the voice merely, not to carry it merely, but to preserve it. The author has something to say which he perceives to be true and useful, or helpfully beautiful. So far as he knows, no one has yet said it; so far as he knows, no one else can say it. He is bound to say it, clearly and melodiously if he may;
clearly, at all events. In the sum of his life he finds this to be the thing, or group of things, manifest to him;—this the piece of true knowledge, or sight, which his share of sunshine and earth has permitted him to seize. He would fain set it down for ever; engrave it on rock, if he could; saying, "This is the best of me; for the rest, I ate, and drank, and slept, loved, and hated, like another; my life was as the vapour, and is not; but this I saw and knew: this, if anything of mine, is worth your memory." That is his "writing;" it is, in his small human way, and with whatever degree of true inspiration is in him, his inscription, or scripture. That is a "Book."

Perhaps you think no books were ever so written?

But, again, I ask you, do you at all believe in honesty, or at all in kindness? or do you think there is never any honesty or benevolence in wise people? None of us, I hope, are so unhappy as to think that. Well, whatever bit of a wise man's work is honestly and benevolently done, that bit is his book, or his piece of art.* It is mixed always with evil fragments—ill-done, redundant, affected work. But if you read rightly, you will easily discover the true bits, and those are the book.

Now books of this kind have been written in all ages by their greatest men;—by great leaders, great statesmen, and great thinkers. These are all at your choice; and life is short. You have heard as much before;—yet have you measured and mapped out this short life and its possibilities? Do you know, if you read this, that you cannot read that—that what you lose to-day you cannot gain to-morrow? Will you go and gossip with your housemaid, or your stable-boy, when you may talk with queens and kings; or flatter yourselves that it is with any worthy consciousness of your own claims to respect that you jostle with the common crowd for entrée here, and audience there, when all the while this eternal court is open to you, with its society wide as the world, multitudinous as its days, the chosen, and the mighty, of every place and time? Into that you may enter always; in that you may take

* Note this sentence carefully, and compare the Queen of the Air, § 106.
fellowship and rank according to your wish; from that, once entered into it, you can never be outcast but by your own fault; by your aristocracy of companionship there, your own inherent aristocracy will be assuredly tested, and the motives with which you strive to take high place in the society of the living, measured, as to all the truth and sincerity that are in them, by the place you desire to take in this company of the Dead.

"The place you desire," and the place you fit yourself for, I must also say; because, observe, this court of the past differs from all living aristocracy in this:—it is open to labour and to merit, but to nothing else. No wealth will bribe, no name overawe, no artifice deceive, the guardian of those Elysian gates. In the deep sense, no vile or vulgar person ever enters there. At the portières of that silent Faubourg St. Germain, there is but brief question, "Do you deserve to enter?" "Pass. Do you ask to be the companion of nobles? Make yourself noble, and you shall be. Do you long for the conversation of the wise? Learn to understand it, and you shall hear it. But on other terms?—no. If you will not rise to us, we cannot stoop to you. The living lord may assume courtesy, the living philosopher explain his thought to you with considerable pain; but here we neither feign nor interpret; you must rise to the level of our thoughts if you would be gladdened by them, and share our feelings, if you would recognize our presence."

This, then, is what you have to do, and I admit that it is much. You must, in a word, love these people, if you are to be among them. No ambition is of any use. They scorn your ambition. You must love them, and show your love in these two following ways.

I. First, by a true desire to be taught by them, and to enter into their thoughts. To enter into theirs, observe; not to find your own expressed by them. If the person who wrote the book is not wiser than you, you need not read it; if he be, he will think differently from you in many respects.

Very ready we are to say of a book, "How good this is—that's exactly what I think!" But the right feeling is, "How
strange that is! I never thought of that before, and yet I see it is true; or if I do not now, I hope I shall, some day.” But whether thus submissively or not, at least be sure that you go to the author to get at his meaning, not to find yours. Judge it afterwards, if you think yourself qualified to do so; but ascertain it first. And be sure also, if the author is worth anything, that you will not get at his meaning all at once;—nay, that at his whole meaning you will not for a long time arrive in any wise. Not that he does not say what he means, and in strong words too; but he cannot say it all; and what is more strange, will not, but in a hidden way and in parables, in order that he may be sure you want it. I cannot quite see the reason of this, nor analyse that cruel reticence in the breasts of wise men which makes them always hide their deeper thought. They do not give it to you by way of help, but of reward, and will make themselves sure that you deserve it before they allow you to reach it. But it is the same with the physical type of wisdom, gold. There seems, to you and me, no reason why the electric forces of the earth should not carry whatever there is of gold within it at once to the mountain tops, so that kings and people might know that all the gold they could get was there; and without any trouble of digging, or anxiety, or chance, or waste of time, cut it away, and coin as much as they needed. But Nature does not manage it so. She puts it in little fissures in the earth, nobody knows where: you may dig long and find none; you must dig painfully to find any.

And it is just the same with men’s best wisdom. When you come to a good book, you must ask yourself, “Am I inclined to work as an Australian miner would? Are my pick-axes and shovels in good order, and am I in good trim myself, my sleeves well up to the elbow, and my breath good, and my temper?” And, keeping the figure a little longer, even at cost of tiresomeness, for it is a thoroughly useful one, the metal you are in search of being the author’s mind or meaning, his words are as the rock which you have to crush and smelt in order to get at it. And your pickaxes are your own care, wit, and learning; your smelting-furnace is your own
thoughtful soul. Do not hope to get at any good author's meaning without those tools and that fire; often you will need sharpest, finest chiselling, and patientest fusing, before you can gather one grain of the metal.

And, therefore, first of all, I tell you, earnestly and authoritatively, (I know I am right in this,) you must get into the habit of looking intensely at words, and assuring yourself of their meaning, syllable by syllable—nay letter by letter. For though it is only by reason of the opposition of letters in the function of signs, to sounds in functions of signs, that the study of books is called "literature," and that a man versed in it is called, by the consent of nations, a man of letters instead of a man of books, or of words, you may yet connect with that accidental nomenclature this real principle;—that you might read all the books in the British Museum (if you could live long enough), and remain an utterly "illiterate," uneducated person; but that if you read ten pages of a good book, letter by letter,—that is to say, with real accuracy,—you are for evermore in some measure an educated person. The entire difference between education and non-education (as regards the merely intellectual part of it), consists in this accuracy. A well-educated gentleman may not know many languages,—may not be able to speak any but his own,—may have read very few books. But whatever language he knows, he knows precisely; whatever word he pronounces he pronounces rightly; above all, he is learned in the _peerage_ of words; knows the words of true descent and ancient blood at a glance, from words of modern canaille; remembers all their ancestry—their inter-marriages, distantest relationships, and the extent to which they were admitted, and offices they held, among the national noblesse of words at any time, and in any country. But an uneducated person may know by memory any number of languages, and talk them all, and yet truly know not a word of any,—not a word even of his own. An ordinarily clever and sensible seaman will be able to make his way ashore at most ports; yet he has only to speak a sentence of any language to be known for an illiterate person: so also the accent, or turn of expression of a single sentence will at once mark a
scholar. And this is so strongly felt, so conclusively admitted by educated persons, that a false accent or a mistaken syllable is enough, in the parliament of any civilized nation, to assign to a man a certain degree of inferior standing for ever. And this is right; but it is a pity that the accuracy insisted on is not greater, and required to a serious purpose. It is right that a false Latin quantity should excite a smile in the House of Commons; but it is wrong that a false English meaning should not excite a frown there. Let the accent of words be watched, by all means, but let their meaning be watched more closely still, and fewer will do the work. A few words well chosen and well distinguished, will do work that a thousand cannot, when every one is acting, equivocally, in the function of another. Yes; and words, if they are not watched, will do deadly work sometimes. There are masked words droning and skulking about us in Europe just now,—(there never were so many, owing to the spread of a shallow, blotching, blundering, infectious "information," or rather deformation, everywhere, and to the teaching of catechisms and phrases at schools instead of human meanings)—there are masked words abroad, I say, which nobody understands, but which everybody uses, and most people will also fight for, live for, or even die for, fancying they mean this, or that, or the other, of things dear to them: for such words wear chamaeleon cloaks—"groundlions" cloaks, of the colour of the ground of any man's fancy: on that ground they lie in wait, and rend him with a spring from it. There were never creatures of prey so mischievous, never diplomatists so cunning, never poisoners so deadly, as these masked words; they are the unjust stewards of all men's ideas: whatever fancy or favourite instinct a man most cherishes, he gives to his favourite masked word to take care of for him; the word at last comes to have an infinite power over him,—you cannot get at him but by its ministry. And in languages so mongrel in breed as the English, there is a fatal power of equivocation put into men's hands, almost whether they will or no, in being able to use Greek or Latin forms for a word when they want it to be respectable, and Saxon or otherwise common forms
when they want to discredit it. What a singular and salutary effect, for instance, would be produced on the minds of people who are in the habit of taking the Form of the words they live by, for the Power of which those words tell them, if we always either retained or refused, the Greek form "bibloos," or "biblion," as the right expression for "book"—instead of employing it only in the one instance in which we wish to give dignity to the idea, and translating it everywhere else. How wholesome it would be for the many simple persons who worship the Letter of God's Word instead of its Spirit, (just as other idolaters worship His picture instead of His presence,) if, in such places (for instance) as Acts xix. 19 we retained the Greek expression, instead of translating it, and they had to read—"Many of them also which used curious arts, brought their Bibles together, and burnt them before all men; and they counted the price of them, and found it fifty thousand pieces of silver!" Or if, on the other hand, we translated instead of retaining it, and always spoke of "The Holy Book," instead of "Holy Bible," it might come into more heads than it does at present that the Word of God, by which the heavens were, of old, and by which they are now kept in store,* cannot be made a present of to anybody in morocco binding; nor sown on any wayside by help either of steam plough or steam press; but is nevertheless being offered to us daily, and by us with contumely refused; and sown in us daily, and by us as instantly as may be, choked.

So, again, consider what effect has been produced on the English vulgar mind by the use of the sonorous Latin form "damno," in translating the Greek κατακρίνω, when people charitably wish to make it forcible; and the substitution of the temperate "condemn" for it, when they choose to keep it gentle. And what notable sermons have been preached by illiterate clergymen on—"He that believeth not shall be damned;" though they would shrink with horror from translating Heb. xi. 7, "The saving of his house, by which he damned the world;" or John viii. 12, "Woman, hath no man

* 2 Peter iii. 5-7.
damned thee? She saith, No man, Lord. Jesus answered her, Neither do I damn thee: go and sin no more." And divisions in the mind of Europe, which have cost seas of blood, and in the defence of which the noblest souls of men have been cast away in frantic desolation, countless as forest leaves—though, in the heart of them, founded on deeper causes—have nevertheless been rendered practicably possible, namely, by the European adoption of the Greek word for a public meeting, to give peculiar respectability to such meetings, when held for religious purposes; and other collateralequivocations, such as the vulgar English one of using the word "priest" as a contraction for "presbyter."

Now, in order to deal with words rightly, this is the habit you must form. Nearly every word in your language has been first a word of some other language—of Saxon, German, French, Latin, or Greek (not to speak of eastern and primitive dialects). And many words have been all these;—that is to say, have been Greek first, Latin next, French or German next, and English last: undergoing a certain change of sense and use on the lips of each nation; but retaining a deep vital meaning which all good scholars feel in employing them, even at this day. If you do not know the Greek alphabet, learn it; young or old—girl or boy—whoever you may be, if you think of reading seriously (which, of course, implies that you have some leisure at command), learn your Greek alphabet; then get good dictionaries of all these languages, and whenever you are in doubt about a word, hunt it down patiently. Read Max Müller's lectures thoroughly, to begin with; and, after that, never let a word escape you that looks suspicious. It is severe work; but you will find it, even at first, interesting, and at last, endlessly amusing. And the general gain to your character, in power and precision, will be quite incalculable.

Mind, this does not imply knowing, or trying to know, Greek, or Latin, or French. It takes a whole life to learn any language perfectly. But you can easily ascertain the meanings through which the English word has passed; and those which in a good writer's work it must still bear.
And now, merely for example's sake, I will, with your permission, read a few lines of a true book with you, carefully; and see what will come out of them. I will take a book perfectly known to you all; no English words are more familiar to us, yet nothing perhaps has been less read with sincerity. I will take these few following lines of Lycidas:

"Last came, and last did go,
The pilot of the Galilean lake;
Two massy keys he bore of metals twain,
(The golden opes, the iron shuts amain),
He shook his mitred locks, and stern bespake,
How well could I have spar'd for thee, young swain,
Enow of such as for their bellies' sake
Creep and intrude, and climb into the fold?
Of other care they little reckoning make,
Than how to scramble at the shearer's feast,
And shove away the worthy bidden guest;
Blind mouths! that scarce themselves know how to hold
A sheep-hook, or have learn'd aught else, the least
That to the faithful herdsman's art belongs!
What recks it them? What need they? They are sped;
And when they list, their lean and flashy songs
Grate on their scrannel pipes of wretched straw;
The hungry sheep look up, and are not fed,
But, swoln with wind, and the rank mist they draw,
Rot inwardly, and foul contagion spread;
Besides what the grim wolf with privy paw
Daily devours apace, and nothing said."

Let us think over this passage, and examine its words.
First, is it not singular to find Milton assigning to St. Peter, not only his full episcopal function, but the very types of it which Protestants usually refuse most passionately? His "mitred" locks! Milton was no Bishop-lover; how comes St. Peter to be "mitred"? "Two massy keys he bore." Is this, then, the power of the keys claimed by the Bishops of Rome, and is it acknowledged here by Milton only in a poetical licence, for the sake of its picturesqueness, that he may get the gleam of the golden keys to help his effect? Do not think it. Great men do not play stage tricks with doctrines of life and death: only little men do that. Milton means what
he says; and means it with his might too—is going to put the whole strength of his spirit presently into the saying of it. For though not a lover of false bishops, he was a lover of true ones; and the Lake-pilot is here, in his thoughts, the type and head of true episcopal power. For Milton reads that text, "I will give unto thee the keys of the kingdom of Heaven" quite honestly. Puritan though he be, he would not blot it out of the book because there have been bad bishops; nay, in order to understand him, we must understand that verse first; it will not do to eye it askance, or whisper it under our breath, as if it were a weapon of an adverse sect. It is a solemn, universal assertion, deeply to be kept in mind by all sects. But perhaps we shall be better able to reason on it if we go on a little farther, and come back to it. For clearly, this marked insistence on the power of the true episcopate is to make us feel more weightily what is to be charged against the false claimants of episcopate; or generally, against false claimants of power and rank in the body of the clergy; they who, "for their bellies' sake, creep, and intrude, and climb into the fold."

Do not think Milton uses those three words to fill up his verse, as a loose writer would. He needs all the three; specially those three, and no more than those—"creep," and "intrude," and "climb;" no other words would or could serve the turn, and no more could be added. For they exhaustively comprehend the three classes, correspondent to the three characters, of men who dishonestly seek ecclesiastical power. First, those who "creep" into the fold; who do not care for office, nor name, but for secret influence, and do all things occultly and cunningly, consenting to any servility of office or conduct, so only that they may intimately discern, and unawares direct, the minds of men. Then those who "intrude" (thrust, that is) themselves into the fold, who by natural insolence of heart, and stout eloquence of tongue, and fearlessly perseverant self-assertion, obtain hearing and authority with the common crowd. Lastly, those who "climb," who by labor and learning, both stout and sound, but selfishly exerted in the cause of their own ambition, gain high dignities
and authorities, and become "lords over the heritage," though not "ensamples to the flock."

Now go on:

"Of other care they little reckoning make,
Than how to scramble at the shearers' feast.
Blind mouths—"

I pause again, for this is a strange expression; a broken metaphor, one might think, careless and unscholarly.

Not so: its very audacity and pithiness are intended to make us look close at the phrase and remember it. Those two monosyllables express the precisely accurate contraries of right character, in the two great offices of the Church—those of bishop and pastor.

A Bishop means a person who sees.
A Pastor means one who feeds.

The most unbishoply character a man can have is therefore to be Blind.
The most unpastoral is, instead of feeding, to want to be fed,—to be a Mouth.

Take the two reverses together, and you have "blind mouths." We may advisably follow out this idea a little. Nearly all the evils in the Church have arisen from bishops desiring power more than light. They want authority, not outlook. Whereas their real office is not to rule; though it may be vigorously to exhort and rebuke; it is the king's office to rule; the bishop's office is to oversee the flock; to number it, sheep by sheep; to be ready always to give full account of it. Now it is clear he cannot give account of the souls, if he has not so much as numbered the bodies of his flock. The first thing, therefore, that a bishop has to do is at least to put himself in a position in which, at any moment, he can obtain the history from childhood of every living soul in his diocese, and of its present state. Down in that back street, Bill, and Nancy, knocking each other's teeth out!—Does the bishop know all about it? Has he his eye upon them? Has he had his eye upon them? Can he circumstentially explain to us how Bill got into the habit of beating
Nancy about the head? If he cannot, he is no bishop, though he had a mitre as high as Salisbury steeple; he is no bishop,—he has sought to be at the helm instead of the mast-head; he has no sight of things. "Nay," you say, it is not his duty to look after Bill in the back street. What! the fat sheep that have full fleeces—you think it is only those he should look after, while (go back to your Milton) "the hungry sheep look up, and are not fed, besides what the grim wolf, with privy paw" (bishops knowing nothing about it) "daily devours apace, and nothing said?"

"But that's not our idea of a bishop."* Perhaps not; but it was St. Paul's; and it was Milton's. They may be right, or we may be; but we must not think we are reading either one or the other by putting our meaning into their words.

I go on.

"But, swollen with wind, and the rank mist they draw."

This is to meet the vulgar answer that "if the poor are not looked after in their bodies, they are in their souls; they have spiritual food."

And Milton says, "They have no such thing as spiritual food; they are only swollen with wind." At first you may think that is a coarse type, and an obscure one. But again, it is a quite literally accurate one. Take up your Latin and Greek dictionaries, and find out the meaning of "Spirit." It is only a contraction of the Latin word "breath," and an indistinct translation of the Greek word for "wind." The same word is used in writing, "The wind bloweth where it listeth;" and in writing, "So is every one that is born of the Spirit;" born of the breath, that is; for it means the breath of God, in soul and body. We have the true sense of it in our words "inspiration" and "expire." Now, there are two kinds of breath with which the flock may be filled; God's breath, and man's. The breath of God is health, and life, and peace to them, as the air of heaven is to the flocks on the hills; but man's breath—the word which he calls spiritual,—is disease and contagion to them, as the fog of the fen. They rot in-

* Compare the 13th Letter in Time and Tide.
wardly with it; they are puffed up by it, as a dead body by the vapours of its own decomposition. This is literally true of all false religious teaching; the first and last, and fatalest sign of it is that "puffing up." Your converted children, who teach their parents; your converted convicts, who teach honest men; your converted dunces, who, having lived in cretinous stupefaction half their lives, suddenly awakening to the fact of there being a God, fancy themselves therefore His peculiar people and messengers; your sectarians of every species, small and great, Catholic or Protestant, of high church or low, in so far as they think themselves exclusively in the right and others wrong; and pre-eminently, in every sect, those who hold that men can be saved by thinking rightly instead of doing rightly, by word instead of act, and wish instead of work:—these are the true fog children—clouds, these, without water; bodies, these, of putrescent vapour and skin, without blood or flesh: blown bag-pipes for the fiends to pipe with—corrupt, and corrupting,—"Swollen with wind, and the rank mist they draw."

Lastly, let us return to the lines respecting the power of the keys, for now we can understand them. Note the difference between Milton and Dante in their interpretation of this power: for once, the latter is weaker in thought; he supposes both the keys to be of the gate of heaven; one is of gold, the other of silver: they are given by St. Peter to the sentinel angel; and it is not easy to determine the meaning either of the substances of the three steps of the gate, or of the two keys. But Milton makes one, of gold, the key of heaven; the other, of iron, the key of the prison, in which the wicked teachers are to be bound who "have taken away the key of knowledge, yet entered not in themselves."

We have seen that the duties of bishop and pastor are to see, and feed; and, of all who do so, it is said, "He that watereth, shall be watered also himself." But the reverse is truth also. He that watereth not, shall be withered himself, and he that seeth not, shall himself be shut out of sight,—shut into the perpetual prison-house. And that prison opens here, as well as hereafter: he who is to be bound in heaven
must first be bound on earth. That command to the strong angels, of which the rock-apostle is the image, "Take him, and bind him hand and foot, and cast him out," issues, in its measure, against the teacher, for every help withheld, and for every truth refused, and for every falsehood enforced; so that he is more strictly fettered the more he fetters, and farther outcast, as he more and more misleads, till at last the bars of the iron cage close upon him, and as "the golden opes, the iron shuts amain."

We have got something out of the lines, I think, and much more is yet to be found in them; but we have done enough by way of example of the kind of word-by-word examination of your author which is rightly called "reading;" watching every accent and expression, and putting ourselves always in the author's place, annihilating our own personality, and seeking to enter into his, so as to be able assuredly to say, "Thus Milton thought," not "Thus I thought, in mis-reading Milton." And by this process you will gradually come to attach less weight to your own "Thus I thought" at other times. You will begin to perceive that what you thought was a matter of no serious importance;—that your thoughts on any subject are not perhaps the clearest and wisest that could be arrived at thereupon:—in fact, that unless you are a very singular person, you cannot be said to have any "thoughts" at all; that you have no materials for them, in any serious matters;*—no right to "think," but only to try to learn more of the facts. Nay, most probably all your life (unless, as I said, you are a singular person) you will have no legitimate right to an "opinion" on any business, except that instantly under your hand. What must of necessity be done, you can always find out, beyond question, how to do. Have you a house to keep in order, a commodity to sell, a field to plough, a ditch to cleanse? There need be no two opinions about these proceedings; it is at your peril if you have not much more than an "opinion" on the way to manage such matters.

* Modern "Education" for the most part signifies giving people the faculty of thinking wrong on every conceivable subject of importance to them.
And also, outside of your own business, there are one or two subjects on which you are bound to have but one opinion. That roguery and lying are objectionable, and are instantly to be flogged out of the way whenever discovered;—that covetousness and love of quarrelling are dangerous dispositions even in children, and deadly dispositions in men and nations;—that in the end, the God of heaven and earth loves active, modest, and kind people, and hates idle, proud, greedy, and cruel ones;—on these general facts you are bound to have but one and that a very strong, opinion. For the rest, respecting religions, governments, sciences, arts, you will find that, on the whole, you can know nothing,—judge nothing; that the best you can do, even though you may be a well-educated person, is to be silent, and strive to be wiser every day, and to understand a little more of the thoughts of others, which so soon as you try to do honestly, you will discover that the thoughts even of the wisest are very little more than pertinent questions. To put the difficulty into a clear shape, and exhibit to you the grounds for indecision, that is all they can generally do for you!—and well for them and for us, if indeed they are able "to mix the music with our thoughts, and sadden us with heavenly doubts." This writer, from whom I have been reading to you, is not among the first or wisest: he sees shrewdly as far as he sees, and therefore it is easy to find out his full meaning; but with the greater men, you cannot fathom their meaning; they do not even wholly measure it themselves,—it is so wide. Suppose I had asked you, for instance, to seek for Shakespeare's opinion, instead of Milton's, on this matter of Church authority?—or for Dante's? Have any of you, at this instant, the least idea what either thought about it? Have you ever balanced the scene with the bishops in Richard III. against the character of Cranmer? the description of St. Francis and St. Dominic against that of him who made Virgil wonder to gaze upon him,—"disteso, tanto vilmente, nell' eterno esilio;" or of him whom Dante stood beside, "come 'l frate che confessa lo perfido assasin?"* Shakespeare and Alighieri knew men better than

*Inf. xix. 71; xxiii. 117.
most of us, I presume! They were both in the midst of the main struggle between the temporal and spiritual powers. They had an opinion, we may guess? But where is it? Bring it into court! Put Shakespeare's or Dante's creed into articles, and send that up into the Ecclesiastical Courts!

You will not be able, I tell you again, for many and many a day, to come at the real purposes and teaching of these great men; but a very little honest study of them will enable you to perceive that what you took for your own "judgment" was mere chance prejudice, and drifted, helpless, entangled weed of castaway thought: nay, you will see that most men's minds are indeed little better than rough heath wilderness, neglected and stubborn, partly barren, partly overgrown with pestilent brakes and venomous windsown herbage of evil surmise; that the first thing you have to do for them, and yourself, is eagerly and scornfully to set fire to this; burn all the jungle into wholesome ash heaps, and then plough and sow. All the true literary work before you, for life, must begin with obedience to that order, "Break up your fallow ground, and sow not among thorns."

II. Having then faithfully listened to the great teachers, that you may enter into their Thoughts, you have yet this higher advance to make;—you have to enter into their Hearts. As you go to them first for clear sight, so you must stay with them that you may share at last their just and mighty Passion. Passion, or "sensation." I am not afraid of the word; still less of the thing. You have heard many outcries against sensation lately; but, I can tell you, it is not less sensation we want, but more. The ennobling difference between one man and another,—between one animal and another,—is precisely in this, that one feels more than another. If we were sponges, perhaps sensation might not be easily got for us; if we were earth-worms, liable at every instant to be cut in two by the spade, perhaps too much sensation might not be good for us. But, being human creatures, it is good for us; nay, we are only human in so far as we are sensitive, and our honour is precisely in proportion to our passion.
You know I said of that great and pure society of the dead, that it would allow "no vain or vulgar person to enter there." What do you think I meant by a "vulgar" person? What do you yourselves mean by "vulgarity?" You will find it a fruitful subject of thought; but, briefly, the essence of all vulgarity lies in want of sensation. Simple and innocent vulgarity is merely an untrained and undeveloped bluntness of body and mind; but in true inbred vulgarity, there is a deathful callousness, which, in extremity, becomes capable of every sort of bestial habit and crime, without fear, without pleasure, without horror, and without pity. It is in the blunt hand and the dead heart, in the diseased conscience, that men become vulgar; they are for ever vulgar, precisely in proportion as they are incapable of sympathy,—of quick understanding,—of all that, in deep insistence on the common, but most accurate term, may be called the "tact" or touch-faculty of body and soul; that tact which the Mimosa has in trees, which the pure woman has above all creatures;—fineness and fulness of sensation, beyond reason;—the guide and sanctifier of reason itself. Reason can but determine what is true:—it is the God-given passion of humanity which alone can recognize what God has made good.

We come then to the great concourse of the Dead, not merely to know from them what is True, but chiefly to feel with them what is Righteous. Now, to feel with them, we must be like them; and none of us can become that without pains. As the true knowledge is disciplined and tested knowledge,—not the first thought that comes,—so the true passion is disciplined and tested passion—not the first passion that comes. The first that come are the vain, the false, the treacherous; if you yield to them they will lead you wildly and far in vain pursuit, in hollow enthusiasm, till you have no true purpose and no true passion left. Not that any feeling possible to humanity is in itself wrong, but only wrong when undisciplined. Its nobility is in its force and justice; it is wrong when it is weak, and felt for paltry cause. There is a mean wonder as of a child who sees a jug-
gler tossing golden balls, and this is base, if you will. But do you think that the wonder is ignoble, or the sensation less, with which every human soul is called to watch the golden balls of heaven tossed through the night by the Hand that made them? There is a mean curiosity, as of a child opening a forbidden door, or a servant prying into her master's business;—and a noble curiosity, questioning, in the front of danger, the source of the great river beyond the sand—the place of the great continents beyond the sea;—a nobler curiosity still, which questions of the source of the River of Life, and of the space of the Continent of Heaven,—things which "the angels desire to look into." So the anxiety is ignoble, with which you linger over the course and catastrophe of an idle tale; but do you think the anxiety is less, or greater, with which you watch, or ought to watch, the dealings of fate and destiny with the life of an agonized nation? Alas! is is the narrowness, selfishness, minuteness, of your sensation that you have to deplore in England at this day;—sensation which spends itself in bouquets and speeches; in revellings and junketings; in sham fights and gay puppet shows, while you can look on and see noble nations murdered, man by man, woman by woman, child by child, without an effort, or a tear.

I said "minuteness" and "selfishness" of sensation, but in a word, I ought to have said "injustice" or "unrighteousness" of sensation. For as in nothing is a gentleman better to be discerned from a vulgar person, so in nothing is a gentle nation (such nations have been) better to be discerned from a mob, than in this,—that their feelings are constant and just, results of due contemplation, and of equal thought. You can talk a mob into anything; its feelings may be—usually are—on the whole generous and right; but it has no foundation for them, no hold of them; you may tease or tickle it into any, at your pleasure; it thinks by infection, for the most part, catching a passion like a cold, and there is nothing so little that it will not roar itself wild about, when the fit is on;—nothing so great but it will forget in an hour, when the fit is past. But a gentleman's or a gentle nation's,
passions are just, measured and continuous. A great nation, for instance, does not spend its entire national wits for a couple of months in weighing evidence of a single Russian's having done a single murder; and for a couple of years, see its own children murder each other by their thousands or tens of thousands a day, considering only what the effect is likely to be on the price of cotton, and caring nowise to determine which side of battle is in the wrong. Neither does a great nation send its poor little boys to jail for stealing six walnuts and allow its bankrupts to steal their hundreds or thousands with a bow, and its bankers, rich with poor men's savings, to close their doors "under circumstances over which they have no control," with a "by your leave;" and large landed estates to be bought by men who have made their money by going with armed steamers up and down the China Seas, selling opium at the cannon's mouth, and altering, for the benefit of the foreign nation, the common highwayman's demand of "your money or your life," into that of "your money and your life." Neither does a great nation allow the lives of its innocent poor to be parched out of them by fog fever, and rotted out of them by dunghill plague, for the sake of sixpence a life extra per week to its landlords; * and then debate,

* See the evidence in the Medical officer's report to the Privy Council, just published. There are suggestions in its preface which will make some stir among us, I fancy, respecting which let me note these points following:—

There are two theories on the subject of land now abroad, and in contention; both false.

The first is that by Heavenly law, there have always existed, and must continue to exist, a certain number of hereditarily sacred persons, to whom the earth, air, and water of the world belong, as personal property; of which earth, air and water these persons may, at their pleasure, permit, or forbid, the rest of the human race to eat, breathe, or to drink. This theory is not for many years longer tenable. The adverse theory is that a division of the land of the world among the mob of the world would immediately elevate the said mob into sacred personages; that houses would then build themselves, and corn grow of itself; and that everybody would be able to live, without doing any work for his living. This theory would also be found highly untenable in practice.

It will, however, require some rough experiments, and rougher catas-
with drivelling tears, and diabolical sympathies, whether it ought not piously to save, and nursingly cherish, the lives of its murderers. Also, a great nation having made up its mind that hanging is quite the wholesomest process for its homicides in general, can yet with mercy distinguish between the degrees of guilt in homicides; and does not yelp like a pack of frost-pinched wolf-cubs on the blood-track of an unhappy crazed boy, or grey-haired elodiate Othello, "perplexed i' the extreme," at the very moment that it is sending a Minister of the Crown to make polite speeches to a man who is bayonet-ing young girls in their father's sight, and killing noble youths in cool blood, faster than a country butcher kills lambs in spring. And, lastly, a great nation does not mock Heaven trophies, even in this magnesium-lighted epoch, before the generality of persons will be convinced that no law concerning anything least of all concerning land, for either holding or dividing it, or renting it high, or renting it low, would be of the smallest ultimate use to the people, so long as the general contest for life, and for the means of life, remains one of mere brutal competition. That contest, in an unprincipled nation, will take one deadly form or another, whatever laws you make for it. For instance, it would be an entirely wholesome law for England, if it could be carried, that maximum limits should be assigned to incomes according to classes; and that every nobleman's income should be paid to him as a fixed salary or pension by the nation; and not squeezed by him in a variable sum, at discretion, out of the tenants of his land. But if you could get such a law passed to-morrow; and if, which would be farther necessary, you could fix the value of the assigned incomes by making a given weight of pure wheat-flour legal tender for a given sum, a twelve-month would not pass before another currency would have been tacitly established, and the power of accumulative wealth would have re-asserted itself in some other article, or some imaginary sign. Forbid men to buy each other's lives for sovereigns, and they will for shells, or slates. There is only one cure for public distress—and that is public education, directed to make men thoughtful, merciful, and just. There are, indeed, many laws conceivable which would gradually bet-ter and strengthen the national temper; but, for the most part, they are such as the national temper must be much bettered before it would bear. A nation in its youth may be helped by laws, as a weak child by back-boards, but when it is old, it cannot that way straighten its crooked spine.

And besides, the problem of land, at its worst, is a bye one; distrib-ute the earth as you will, the principal question remains inexorable,—
and its Powers, by pretending belief in a revelation which asserts the love of money to be the root of all evil, and declaring, at the same time, that it is actuated, and intends to be actuated, in all chief national deeds and measures, by no other love.

My friends, I do not know why any of us should talk about reading. We want some sharper discipline than that of reading; but, at all events, be assured, we cannot read. No reading is possible for a people with its mind in this state. No sentence of any great writer is intelligible to them. It is simply and sternly impossible for the English public, at this moment, to understand any thoughtful writing,—so incapable of thought has it become in its insanity of avarice. Happily, our disease is, as yet, little worse than this incapacity of

Who is to dig it? Which of us, in brief words, is to do the hard and dirty work for the rest—and for what pay? Who is to do the pleasant and clean work, and for what pay? Who is to do no work, and for what pay? And there are curious moral and religious questions connected with these. How far is it lawful to suck a portion of the soul out of a great many persons, in order to put the abstracted psychical quantities together, and make one very beautiful or ideal soul? If we had to deal with mere blood; instead of spirit, and the thing might literally be done (as it has been done with infants before now), so that it were possible, by taking a certain quantity of blood from the arms of a given number of the mob, and putting it all into one person, to make a more azure-blooded gentleman of him; the thing would of course be managed; but secretly, I should conceive. But now, because it is brain and soul that we abstract, not visible blood, it can be done quite openly; and we live, we gentlemen, on delicatest prey, after the manner of weasels; that is to say, we keep a certain number of clowns digging and ditching, and generally stupefied, in order that we, being fed gratis, may have all the thinking and feeling to ourselves. Yet there is a great deal to be said for this. A highly bred and trained English, French, Austrian or Italian gentleman (much more a lady) is a great production; a better production than most statues; being beautifully coloured as well as shaped, and plus all the brains; a glorious thing to look at, a wonderful thing to talk to; and you cannot have it, any more than a pyramid or a church, but by sacrifice of much contributed life. And it is, perhaps, better to build a beautiful human creature than a beautiful dome or steeple, and more delightful to look up reverently to a creature far above us, than to a wall; only the beautiful human creature will have some duties to do in return—duties of living belfry and rampart—of which presently.
thought; it is not corruption of the inner nature; we ring true still, when anything strikes home to us; and though the idea that everything should "pay" has infected our every purpose so deeply, that even when we would play the good Samaritan, we never take out our twopence and give them to the host, without saying, "When I come again, thou shalt give me fourpence," there is a capacity of noble passion left in our hearts' core. We show it in our work—in our war,—even in those unjust domestic affections which make us furious at a small private wrong, while we are polite to a boundless public one: we are still industrious to the last hour of the day, though we add the gambler's fury to the labourer's patience; we are still brave to the death, though incapable of discerning true cause for battle, and are still true in affection to our own flesh, to the death, as the sea-monsters are, and the rock-eagles. And there is hope for a nation while this can be still said of it. As long as it holds its life in its hand, ready to give it for its honour (though a foolish honour), for its love (though a selfish love), and for its business (though a base business), there is hope for it. But hope only; for this instinctive, reckless virtue cannot last. No nation can last, which has made a mob of itself, however generous at heart. It must discipline its passions, and direct them, or they will discipline it, one day, with scorpion whips. Above all, a nation cannot last as a money-making mob: it cannot with impunity,—it cannot with existence,—go on despising literature, despising science, despising art, despising nature, despising compassion, and concentrating its soul on Pence. Do you think these are harsh or wild words? Have patience with me but a little longer. I will prove their truth to you, clause by clause.

I. I say first we have despised literature. What do we, as a nation, care about books? How much do you think we spend altogether on our libraries, public or private, as compared with what we spend on our horses? If a man spends lavishly on his library, you call him mad—a biblio-maniac. But you never call any one a horse-maniac, though men ruin themselves every day by their horses, and you do not hear of
people ruining themselves by their books. Or, to go lower still, how much do you think the contents of the book-shelves of the United Kingdom, public and private, would fetch, as compared with the contents of its wine-cellar? What position would its expenditure on literature take, as compared with its expenditure on luxurious eating? We talk of food for the mind, as of food for the body: now a good book contains such food inexhaustibly; it is a provision for life, and for the best part of us; yet how long most people would look at the best book before they would give the price of a large turbot for it! Though there have been men who have pinched their stomachs and bared their backs to buy a book, whose libraries were cheaper to them, I think, in the end, than most men's dinners are. We are few of us put to such trial, and more the pity; for, indeed, a precious thing is all the more precious to us if it has been won by work or economy; and if public libraries were half as costly as public dinners, or books cost the tenth part of what bracelets do, even foolish men and women might sometimes suspect there was good in reading, as well as in munching and sparkling; whereas the very cheapness of literature is making even wise people forget that if a book is worth reading, it is worth buying. No book is worth anything which is not worth much; nor is it serviceable, until it has been read, and reread, and loved, and loved again; and marked, so that you can refer to the passages you want in it, as a soldier can seize the weapon he needs in an armoury, or a housewife bring the spice she needs from her store. Bread of flour is good: but there is bread, sweet as honey, if we would eat it, in a good book; and the family must be poor indeed which, once in their lives, cannot, for such multipliable barley-loaves, pay their baker's bill. We call ourselves a rich nation, and we are filthy and foolish enough to thumb each other's books out of circulating libraries!

II. I say we have despised science. "What!" (you exclaim) "are we not foremost in all discovery, and is not the whole world giddy by reason, or unreason, of our inventions?" Yes; but do you suppose that is national work? That work is all done in spite of the nation; by private people's zeal and
money. We are glad enough, indeed, to make our profit of science; we snap up anything in the way of a scientific bone that has meat on it, eagerly enough; but if the scientific man comes for a bone or a crust to us, that is another story. What have we publicly done for science? We are obliged to know what o'clock it is, for the safety of our ships, and therefore we pay for an observatory; and we allow ourselves, in the person of our Parliament, to be annually tormented into doing something, in a slovenly way, for the British Museum; sullenly apprehending that to be a place for keeping stuffed birds in, to amuse our children. If anybody will pay for their own telescope, and resolve another nebula, we cackle over the discernment as if it were our own; if one in ten thousand of our hunting squires suddenly perceives that the earth was indeed made to be something else than a portion for foxes, and burrows in it himself, and tells us where the gold is, and where the coals, we understand that there is some use in that; and very properly knight him: but is the accident of his having found out how to employ himself usefully any credit to us? (The negation of such discovery among his brother squires may perhaps be some discredit to us, if we would consider of it.) But if you doubt these generalities, here is one fact for us all to meditate upon, illustrative of our love of science. Two years ago there was a collection of the fossils of Solenhofen to be sold in Bavaria; the best in existence, containing many specimens unique for perfectness, and one, unique as an example of a species (a whole kingdom of unknown living creatures being announced by that fossil). This collection, of which the mere market worth, among private buyers, would probably have been some thousand or twelve hundred pounds, was offered to the English nation for seven hundred: but we would not give seven hundred, and the whole series would have been in the Munich Museum at this moment, if Professor Owen* had not, with

---

* I state this fact without Professor Owen's permission: which of course he could not with propriety have granted, had I asked it; but I consider it so important that the public should be aware of the fact, that I do what seems to be right though rude.
loss of his own time, and patient tormenting of the British public in person of its representatives, got leave to give four hundred pounds at once, and himself become answerable for the other three! which the said public will doubtless pay him eventually, but sulkily, and caring nothing about the matter all the while; only always ready to cackle if any credit comes of it. Consider, I beg of you, arithmetically, what this fact means. Your annual expenditure for public purposes (a third of it for military apparatus) is at least fifty millions. Now 700l is to 50,000,000l. roughly, as seven pence to two thousand pounds. Suppose then, a gentlemen of unknown income, but whose wealth was to be conjectured from the fact that he spent two thousand a year on his park-walls and footmen only, professes himself fond of science; and that one of his servants comes eagerly to tell him that an unique collection of fossils, giving clue to a new era of creation, is to be had for the sum of seven pence sterling; and that the gentleman, who is fond of science, and spends two thousand a year on his park, answers, after keeping his servant waiting several months, "Well! I'll give you four pence for them, if you will be answerable for the extra three pence yourself, till next year!"

III. I say you have despised Art! "What!" you again answer, "have we not Art exhibitions, miles long? and do we not pay thousands of pounds for single pictures? and have we not Art schools and institutions, more than ever nation had before?" Yes, truly, but all that is for the sake of the shop. You would fain sell canvas as well as coals, and crockery as well as iron; you would take every other nation's bread out of its mouth if you could;* not being able to do that, your ideal of life is to stand in the thoroughfares of the world, like Ludgate apprentices, screaming to every passer-by, "What d'ye lack?" You know nothing of your own faculties or circumstances; you fancy that, among your damp, flat, fields of clay, you can have as quick art-fancy as

* That was our real idea of "Free Trade"—"All the trade to myself." You find now that by "competition" other people can manage to sell something as well as you—and now we call for Protection again. Wretches!
the Frenchman among his bronzed vines, or the Italian under his volcanic cliffs;—that Art may be learned as book-keeping is, and when learned will give you more books to keep. You care for pictures, absolutely, no more than you do for the bills pasted on your dead walls. There is always room on the walls for the bills to be read,—never for the pictures to be seen. You do not know what pictures you have (by repute) in the country, nor whether they are false or true, nor whether they are taken care of or not; in foreign countries, you calmly see the noblest existing pictures in the world rotting in abandoned wreck—(and, in Venice, with the Austrian guns deliberately pointed at the palaces containing them), and if you heard that all the Titians in Europe were made sand-bags to-morrow on the Austrian forts, it would not trouble you so much as the chance of a brace or two of game less in your own bags in a day's shooting. That is your national love of Art.

IV. You have despised nature; that is to say, all the deep and sacred sensations of natural scenery. The French revolutionists made stables of the cathedrals of France; you have made racecourses of the cathedrals of the earth. Your one conception of pleasure is to drive in railroad carriages round their aisles, and eat off their altars.* You have put a railroad bridge over the fall of Schaffhausen. You have tunnelled the cliffs of Lucerne by Tell's chapel; you have destroyed the Clarens shore of the Lake of Geneva; there is not a quiet valley in England that you have not filled with bellowing fire; there is no particle left of English land which you have not trampled coal ashes into—nor any foreign city in which the spread of your presence is not marked among its fair old streets and happy gardens by a consuming white leprosy of new hotels and perfumers' shops: the Alps themselves, which your own poets used to love so reverently, you look upon as soaped poles in a bear-garden, which you set

* I meant that the beautiful places of the world—Switzerland, Italy, South Germany, and so on—are, indeed, the truest cathedrals—places to be reverent in, and to worship in; and that we only care to drive through them: and to eat and drink at their most sacred places.
yourselves to climb, and slide down again, with "shrieks of delight." When you are past shrieking, having no human articulate voice to say you are glad with, you fill the quietude of their valleys with gunpowder blasts, and rush home, red with cutaneous eruption of conceit, and voluble with convulsive hiccough of self-satisfaction. I think nearly the two sorrowfullest spectacles I have ever seen in humanity, taking the deep inner significance of them, are the English mobs in the valley of Chamouni, amusing themselves with firing rusty howitzers; and the Swiss vintagers of Zurich expressing their Christian thanks for the gift of the vine, by assembling in knots in the "towers of the vineyards," and slowly loading and firing horse-pistols from morning till evening. It is pitiful to have dim conceptions of beauty; more pitiful, it seems to me, to have conceptions like these, of mirth.

Lastly. You despise compassion. There is no need of words of mine for proof of this. I will merely print one of the newspaper paragraphs which I am in the habit of cutting out and throwing into my store-drawer; here is one from a Daily Telegraph of an early date this year; date which though by me carelessly left unmarked, is easily discoverable, for on the back of the slip there is the announcement that "yesterday the seventh of the special services of this year was performed by the Bishop of Ripon in St. Paul's;" and there is a pretty piece of modern political economy besides, worth preserving note of, I think, so I print it in the note below.* But my business is with the main paragraph, relating one of such facts as happen now daily, which, by chance, has taken a form in which it came before the coroner. I will print the paragraph in

* It is announced that an arrangement has being concluded between the Ministry of Finance and the Bank of Credit for the payment of the eleven millions which the State has to pay to the National Bank by the 14th inst. This sum will be raised as follows:—The eleven commercial members of the committee of the Bank of Credit will each borrow a million of florins for three months of this bank, which will accept their bills, which again will be discounted by the National Bank. By this arrangement the National Bank will itself furnish the funds with which it will be paid.
Be sure, the facts themselves are written in that color, in a book which we shall all of us, literate or illiterate, have to read our page of, some day.

"An inquiry was held on Friday by Mr. Richards, deputy coroner, at the White Horse Tavern, Christ Church, Spitalfields, respecting the death of Michael Collins, aged 58 years. Mary Collins, a miserable-looking woman, said that she lived with the deceased and his son in a room at 2, Cobb's court, Christ Church. Deceased was a 'translator' of boots. Witness went out and bought old boots; deceased and his son made them into good ones, and then witness sold them for what she could get at the shops, which was very little indeed. Deceased and his son used to work night and day to try and get a little bread and tea, and pay for the room (2s. a week), so as to keep the home together. On Friday night week deceased got up from his bench and began to shiver. He threw down the boots, saying, 'Somebody else must finish them when I am gone, for I can do no more.' There was no fire, and he said, 'I would be better if I was warm.' Witness therefore took two pairs of translated boots† to sell at the shop, but she could only get 14d. for the two pairs, for the people at the shop said, 'We must have our profit.' Witness got 14lb. of coal, and a little tea and bread. Her son sat up the whole night to make the 'translations,' to get money, but deceased died on Saturday morning. The family never had enough to eat.—Coroner: 'It seems to me deplorable that you did not go into the workhouse.'—Witness: 'We wanted the comforts of our little home.' A juror asked what the comforts were, for he only saw a little straw in the corner of the room, the windows of which were broken. The witness began to cry, and said that they had a quilt and other little things. The deceased said he never would go into the workhouse. In summer, when the season was good, they sometimes made as much as 10s. profit in the week. They then always saved

* The following extract was printed in red in the English edition.
† One of the things which we must very resolutely enforce, for the good of all classes, in our future arrangements, must be that they wear no "translated" articles of dress. See the preface.
towards the next week, which was generally a bad one. In winter they made not half so much. For three years they had been getting from bad to worse.—Cornelius Collins said that he had assisted his father since 1847. They used to work so far into the night that both nearly lost their eyesight. Witness now had a film over his eyes. Five years ago deceased applied to the parish for aid. The relieving officer gave him a 4lb. loaf, and told him if he came again he should 'get the stones.' * That disgusted deceased, and he would have nothing to do with them since. They got worse and worse until last Friday week, when they had not even a halfpenny to buy a candle. Deceased then lay down on the straw, and said he could not live till morning.—A juror: You are dying of starvation yourself, and you ought to go into the house until the summer. Witness: If we went in we should die.

* This abbreviation of the penalty of useless labour is curiously coincident in verbal form with a certain passage which some of us may remember. It may perhaps be well to preserve beside this paragraph another cutting out of my store-drawer, from the Morning Post, of about a parallel date, Friday, March 10th, 1865: — "The salons of Mme. C——, who did the honours with clever imitative grace and elegance, were crowded with princes, dukes, marquises, and counts— in fact, with the same male company as one meets at the parties of the Princess Metternich and Madame Drouyn de Lhuys. Some English peers and members of Parliament were present, and appeared to enjoy the animated and dazzingly improper scene. On the second floor the supper tables were loaded with every delicacy of the season. That your readers may form some idea of the dainty fare of the Parisian demi monde, I copy the menu of the supper, which was served to all the guests (about 200) seated at four o'clock. Choice Yquem, Johannisberg, Laffitte, Tokay, and Champagne of the finest vintages were served most lavishly throughout the morning. After supper dancing was resumed with increased animation, and the ball terminated with a chaîne diabolique and a concours d'enfer at seven in the morning. (Morning-service—'Ere the fresh lawns appeared, under the opening eyelids of the Morn.—') Here is the menu: —'Consommé de volaille à la Bagration; 16 hors-d'œuvres variés. Bouchées à la Talleyrand. Saumons froids, sauce Ravigote. Filets de bœuf en Bellevue, timbales milanesas chaudfroid de gibier. Dindes truffées. Pâtés de foies gras, buissons d'écrevisses, salades vénitiennes, gelées blanches aux fruits, gateaux mancini, parisiens et parisiennes. Fromages glacés Ananas. Dessert.'"
When we come out in the summer we should be like people dropped from the sky. No one would know us, and we would not have even a room. I could work now if I had food, for my sight would get better. Dr. G. P. Walker said deceased died from syncope, from exhaustion, from want of food. The deceased had had no bedclothes. For four months he had had nothing but bread to eat. There was not a particle of fat in the body. There was no disease, but if there had been medical attendance, he might have survived the syncope or fainting. The coroner having remarked upon the painful nature of the case, the jury returned the following verdict, 'That deceased died from exhaustion from want of food and the common necessaries of life; also through want of medical aid.'"

"Why would witness not go into the workhouse?" you ask. Well, the poor seem to have a prejudice against the workhouse which the rich have not; for of course every one who takes a pension from Government goes into the workhouse on a grand scale: only the workhouses for the rich do not involve the idea of work, and should be called play-houses. But the poor like to die independently, it appears; perhaps if we made the play-houses for them pretty and pleasant enough, or gave them their pensions at home, and allowed them a little introductory peculation with the public money, their minds might be reconciled to it. Meantime, here are the facts: we make our relief either so insulting to them, or so painful, that they rather die than take it at our hands; or, for third alternative, we leave them so untaught and foolish that they starve like brute creatures, wild and dumb, not knowing what to do, or what to ask. I say, you despise compassion; if you did not, such a newspaper paragraph would be as impossible in a Christian country as a deliberate assassination permitted in its public streets.* "Christian"

---

* I am heartily glad to see such a paper as the Pall Mall Gazette established; for the power of the press in the hands of highly-educated men, in independent position, and of honest purpose, may indeed become all that it has been hitherto vainly vaunted to be. Its editor will therefore, I doubt not, pardon me, in that, by very reason of my respect
did I say? Alas, if we were but wholesomely un-Christian, it would be impossible: it is our imaginary Christianity that helps us to commit these crimes, for we revel and luxuriate in our faith, for the lewd sensation of it; dressing it up, like everything else, in fiction. The dramatic Christianity of the organ and aisle, of dawn-service and twilight-revival—the Christianity which we do not fear to mix the mockery of, pictorially, with our play about the devil, in our Satanellas,—Roberts,—Fausts, chanting hymns through tracered windows for back-ground effect, and artistically modulating the "Dio" through variation on variation of mimicked prayer: (while we distribute tracts, next day, for the benefit of uncultivated swearers, upon what we suppose to be the signification of the Third Commandment :)—this gas-lighted, and gas-inspired, Christianity, we are triumphant in, and draw back for the journal, I do not let pass unnoticed an article in its third number, page 5, which was wrong in every word of it, with the intense wrongness which only an honest man can achieve who has taken a false turn of thought in the outset, and is following it, regardless of consequences. It contained at the end this notable passage:—

"The bread of affliction, and the water of affliction—aye, and the bedsteads and blankets of affliction, are the very utmost that the law ought to give to outcasts merely as outcasts." I merely put beside this expression of the gentlemanly mind of England in 1865, a part of the message which Isaiah was ordered to "lift up his voice like a trumpet" in declaring to the gentlemen of his day: "Ye fast for strife, and to smite with the fist of wickedness. Is not this the fast that I have chosen, to deal thy bread to the hungry, and that thou bring the poor that are cast out (margin 'afflicted') to thy house." The falsehood on which the writer had mentally founded himself, as previously stated by him, was this: "To confound the functions of the dispensers of the poor-rates with those of the dispensers of a charitable institution is a great and pernicious error." This sentence is so accurately and exquisitely wrong, that its substance must be thus reversed in our minds before we can deal with any existing problem of national distress. "To understand that the dispensers of the poor-rates are the almoners of the nation, and should distribute its alms with a gentleness and freedom of hand as much greater and franker than that possible to individual charity, as the collective national wisdom and power may be supposed greater than those of any single person, is the foundation of all law respecting pauperism."
the hem of our robes from the touch of the heretics who dispute it. But to do a piece of common Christian righteousness in a plain English word or deed; to make Christian law any rule of life, and found one National act or hope thereon, —we know too well what our faith comes to for that! You might sooner get lightning out of incense smoke than true action or passion out of your modern English religion. You had better get rid of the smoke, and the organ pipes, both: leave them, and the Gothic windows, and the painted glass, to the property man; give up your carburetted hydrogen ghost in one healthy expiration, and look after Lazarus at the doorstep. For there is a true Church wherever one hand meets another helpfully, and that is the only holy or Mother Church which ever was, or ever shall be.

All these pleasures, then, and all these virtues, I repeat, you nationally despise. You have, indeed, men among you who do not; by whose work, by whose strength, by whose life, by whose death, you live, and never thank them. Your wealth, your amusement, your pride, would all be alike impossible, but for those whom you scorn or forget. The policeman, who is walking up and down the black lane all night to watch the guilt you have created there, and may have his brains beaten out and be maimed for life at any moment, and never be thanked; the sailor wrestling with the sea's rage; the quiet student poring over his book or his vial; the common worker, without praise, and nearly without bread, fulfilling his task as your horses drag your carts, hopeless, and spurned of all: these are the men by whom England lives; but they are not the nation; they are only the body and nervous force of it, acting still from old habit in a convulsive perseverance, while the mind is gone. Our National mind and purpose are to be amused; our National religion, the performance of church ceremonies, and preaching of soporific truths (or untruths) to keep the mob quietly at work, while we amuse ourselves; and the necessity for this amusement is fastening on us as a feverous disease of parched throat and wandering eyes—senseless, dissolute, merciless. When men are rightly occupied, their amusement grows out of their
work, as the colour-petals out of a fruitful flower;—when they are faithfully helpful and compassionate, all their emotions become steady, deep, perpetual, and vivifying to the soul as the natural pulse to the body. But now, having no true business, we pour our whole masculine energy into the false business of money-making; and having no true emotion, we must have false emotions dressed up for us to play with, not innocently, as children with dolls, but guiltily and darkly, as the idolatrous Jews with their pictures on cavern walls, which men had to dig to detect. The justice we do not execute, we mimic in the novel and on the stage; for the beauty we destroy in nature, we substitute the metamorphosis of the pantomime, and (the human nature of us imperatively requiring awe and sorrow of some kind) for the noble grief we should have borne with our fellows, and the pure tears we should have wept with them, we gloat over the pathos of the police court, and gather the night-dew of the grave.

It is difficult to estimate the true significance of these things; the facts are frightful enough;—the measure of national fault involved in them is perhaps not as great as it would at first seem. We permit, or cause, thousands of deaths daily, but we mean no harm; we set fire to houses, and ravage peasants' fields; yet we should be sorry to find we had injured anybody. We are still kind at heart; still capable of virtue, but only as children are. Chalmers, at the end of his long life, having had much power with the public, being plagued in some serious matter by a reference to "public opinion," uttered the impatient exclamation, "The public is just a great baby!" And the reason that I have allowed all these graver subjects of thought to mix themselves up with an inquiry into methods of reading, is that, the more I see of our national faults and miseries, the more they resolve themselves into conditions of childish illiterateness, and want of education in the most ordinary habits of thought. It is, I repeat, not vice, not selfishness, not dulness of brain, which we have to lament; but an unreachable schoolboy's recklessness, only differing from the true schoolboy's in its incapacity of being helped, because it acknowledges no master. There is a curious type
of us given in one of the lovely, neglected works of the last of our great painters. It is a drawing of Kirkby Lonsdale churchyard, and of its brook, and valley, and hills, and folded morning sky beyond. And unmindful alike of these, and of the dead who have left these for other valleys and for other skies, a group of schoolboys have piled their little books upon a grave, to strike them off with stones. So do we play with the words of the dead that would teach us, and strike them far from us with our bitter, reckless will, little thinking that those leaves which the wind scatters had been piled, not only upon a gravestone, but upon the seal of an enchanted vault—nay, the gate of a great city of sleeping kings, who would awake for us, and walk with us, if we knew but how to call them by their names. How often, even if we lift the marble entrance gate, do we but wander among those old kings in their repose, and finger the robes they lie in, and stir the crowns on their foreheads; and still they are silent to us, and seem but a dusty imagery; because we know not the incantation of the heart that would wake them;—which, if they once heard, they would start up to meet us in their power of long ago, narrowly to look upon us, and consider us; and, as the fallen kings of Hades meet the newly fallen, saying, "Art thou also become weak as we—art thou also become one of us?" so would these kings, with their undimmed, unshaken diadems, meet us, saying, "Art thou also become pure and mighty of heart as we? art thou also become one of us?"

Mighty of heart, mighty of mind—"magnanimous"—to be this, is indeed to be great in life; to become this increasingly, is, indeed, to "advance in life,"—in life itself—not in the trappings of it. My friends, do you remember that old Scythian custom, when the head of a house died? How he was dressed in his finest dress, and set in his chariot, and carried about to his friends' houses; and each of them placed him at his table's head, and all feasted in his presence? Suppose it were offered to you, in plain words, as it is offered to you in dire facts, that you should gain this Scythian honour, gradually, while you yet thought yourself alive. Suppose the offer were this: "You shall die slowly; your blood shall daily
grow cold, your flesh petrify, your heart beat at last only as a rusted group of iron valves. Your life shall fade from you, and sink through the earth into the ice of Caina; but, day by day, your body shall be dressed more gaily, and set in higher chariots, and have more orders on its breast—crowns on its head, if you will. Men shall bow before it, stare and shout round it, crowd after it up and down the streets; build palaces for it, feast with it at their tables' heads all the night long; your soul shall stay enough within it to know what they do, and feel the weight of the golden dress on its shoulders, and the furrow of the crown-edge on the skull;—no more. Would you take the offer, verbally made by the death-angel? Would the meanest among us take it, think you? Yet practically and verily we grasp at it, every one of us, in a measure; many of us grasp at it in its fulness of horror. Every man accepts it, who desires to advance in life without knowing what life is; who means only that he is to get more horses, and more footmen, and more fortune, and more public honour, and—not more personal soul. He only is advancing in life, whose heart is getting softer, whose blood warmer, whose brain quicker, whose spirit is entering into Living* peace. And the men who have this life in them are the true lords or kings of the earth—they, and they only. All other kingships, so far as they are true, are only the practical issue and expression of theirs; if less than this, they are either dramatic royalties,—costly shows, with real jewels instead of tinsel—the toys of nations; or else, they are no royalties at all, but tyrannies, or the mere active and practical issue of national folly; for which reason I have said of them elsewhere, "Visible governments are the toys of some nations, the diseases of others, the harness of some, the burdens of more."

But I have no words for the wonder with which I hear Kinghood still spoken of, even among thoughtful men, as if governed nations were a personal property, and might be bought and sold, or otherwise acquired, as sheep, of whose flesh their king was to feed, and whose fleece he was to gather; as if Achilles' indignant epithet of base kings, "προ-

* "το δὲ φρόνημα του πνεύματος ζωῆ και εἰρήνη."
ple-eating," were the constant and proper title of all monarchs; and enlargement of a king's dominion meant the same thing as the increase of a private man's estate! Kings who think so, however powerful, can no more be the true kings of the nation than gad-flies are the kings of a horse; they suck it, and may drive it wild, but do not guide it. They, and their courts, and their armies are, if one could see clearly, only a large species of marsh mosquito, with bayonet proboscis and melodious, baud-mastered, trumpeting in the summer air; the twilight being, perhaps, sometimes fairer, but hardly more wholesome, for its glittering mists of midge companies. The true kings, meanwhile, rule quietly, if at all, and hate ruling; too many of them make "il gran resistito;" and if they do not, the mob, as soon as they are likely to become useful to it, is pretty sure to make its "gran resistito" of them.

Yet the visible king may also be a true one, some day, if ever day comes when he will estimate his dominion by the force of it,—not the geographical boundaries. It matters very little whether Trent cuts you a cantel out here, or Rhine rounds you a castle less there. But it does matter to you, king of men, whether you can verily say to this man, "Go," and he goeth; and to another, "Come," and he cometh. Whether you can turn your people as you can Trent—and where it is that you bid them come, and where go. It matters to you, king of men, whether your people hate you, and die by you, or love you, and live by you. You may measure your dominion by multitudes better that by miles; and count degrees of love latitude, not from, but to, a wonderfully warm and infinite equator. Measure! nay you cannot measure. Who shall measure the difference between the power of those who "do and teach," and who are greatest in the kingdoms of earth, as of heaven—and the power of those who undo, and consume—whose power, at the fullest, is only the power of the moth and rust? Strange! to think how the Moth-kings lay up treasures for the moth, and the Rust-kings, who are to their peoples' strength as rust to armour, lay up treasures for the rust; and the Robber-kings, treasures for the robber; but how few kings have ever laid up treasures that
needed no guarding—treasures of which, the more thieves there were, the better! Brodered robe, only to be rent—helm and sword, only to be dimmed; jewel and gold, only to be scattered—there have been three kinds of kings who have gathered these. Suppose there ever should arise a Fourth order of kings, who had read, in some obscure writing of long ago, that there was a Fourth kind of treasure, which the jewel and gold could not equal, neither should it be valued with pure gold. A web more fair in the weaving, by Athena's shuttle; an armour, forged in diviner fire by Vulcanian force—a gold only to be mined in the sun's red heart, where he sets over the Delphian cliffs;—deep-pictured tissue, impenetrable armour, potable gold!—the three great Angels of Conduct, Toil, and Thought, still calling to us, and waiting at the posts of our doors, to lead us, if we would, with their winged power, and guide us, with their inescapable eyes, by the path which no fowl knoweth, and which the vulture's eye has not seen! Suppose kings should ever arise, who heard and believed this word, and at last gathered and brought forth treasures of—Wisdom—for their people?

Think what an amazing business that would be! How inconceivable, in the state of our present national wisdom. That we should bring up our peasants to a book exercise instead of a bayonet exercise!—organize, drill, maintain with pay, and good generalship, armies of thinkers, instead of armies of stabbers!—find national amusement in reading-rooms as well as rifle-grounds; give prizes for a fair shot at a fact, as well as for a leaden splash on a target. What an absurd idea it seems, put fairly in words, that the wealth of the capitalists of civilized nations should ever come to support literature instead of war! Have yet patience with me, while I read you a single sentence out of the only book, properly to be called a book, that I have yet written myself, the one that will stand, (if anything stand,) surest and longest of all work of mine.

"It is one very awful form of the operation of wealth in Europe that it is entirely capitalists' wealth which supports unjust wars. Just wars do not need so much money to sup-
port them; for most of the men who wage such, wage them gratis; but for an unjust war, men's bodies and souls have both to be bought; and the best tools of war for them besides, which makes such war costly to the maximum; not to speak of the cost of base fear, and angry suspicion, between nations which have not grace nor honesty enough in all their multitudes to buy an hour's peace of mind with; as, at present France and England, purchasing of each other ten millions' sterling worth of consternation, annually (a remarkably light crop, half thorns and half aspen leaves, sown, reaped, and granaried by the 'science' of the modern political economist, teaching covetousness instead of truth). And, all unjust war being supportable, if not by pillage of the enemy, only by loans from capitalists, these loans are repaid by subsequent taxation of the people, who appear to have no will in the matter, the capitalists' will being the primary root of the war; but its real root is the covetousness of the whole nation, rendering it incapable of faith, frankness, or justice, and bringing about, therefore, in due time, his own separate loss and punishment to each person."

France and England literally, observe, buy panic of each other; they pay, each of them, for ten thousand thousand pounds' worth of terror, a year. Now suppose, instead of buying these ten millions' worth of panic annually, they made up their minds to be at peace with each other, and buy ten millions' worth of knowledge annually; and that each nation spent its ten thousand thousand pounds a year in founding royal libraries, royal art galleries, royal museums, royal gardens, and places of rest. Might it not be better somewhat for both French and English?

It will be long, yet, before that comes to pass. Nevertheless, I hope it will not be long before royal or national libraries will be founded in every considerable city, with a royal series of books in them; the same series in every one of them, chosen books, the best in every kind, prepared for that national series in the most perfect way possible; their text printed all on leaves of equal size, broad of margin, and divided into pleasant volumes, light in the hand, beautiful, and strong, and thorough as examples of binders' work; and that
these great libraries will be accessible to all clean and orderly persons at all times of the day and evening; strict law being enforced for this cleanliness and quietness.

I could shape for you other plans, for art-galleries, and for natural history galleries, and for many precious, many, it seems to me, needful, things; but this book plan is the easiest and needfullest, and would prove a considerable tonic to what we call our British constitution, which has fallen dropsical of late, and has an evil thirst, and evil hunger, and wants healthier feeding. You have got its corn laws repealed for it; try if you cannot get corn laws established for it, dealing in a better bread;—bread made of that old enchanted Arabian grain, the Sesame, which opens doors;—doors, not of robbers, but of Kings’ Treasuries.

Friends, the treasuries of true kings are the streets of their cities; and the gold they gather, which for others is as the mire of the streets, changes itself, for them and their people, into a crystalline pavement for evermore.
"Be thou glad, oh thirsting Desert; let the desert be made cheerful, and bloom as the lily; and the barren places of Jordan shall run wild with wood."—Isaiah 30, i. (Septuagint.)

It will, perhaps, be well, as this Lecture is the sequel of one previously given, that I should shortly state to you my general intention in both. The questions specially proposed to you in the first, namely, How and What to Read, rose out of a far deeper one, which it was my endeavour to make you propose earnestly to yourselves, namely, Why to Read. I want you to feel, with me, that whatever advantages we possess in the present day in the diffusion of education and of literature, can only be rightly used by any of us when we have apprehended clearly what education is to lead to, and literature to teach. I wish you to see that both well-directed moral training and well-chosen reading lead to the possession of a power over the ill-guided and illiterate, which is, according to the measure of it, in the truest sense, kingly; conferring indeed the purest kingship that can exist among men: too many other kingships (however distinguished by visible insignia or material power) being either spectral, or tyrannous;—Spectral—that is to say, aspects and shadows only of royalty, hollow as death, and which only the "Likeness of a kingly crown have on;" or else tyrannous—that is to say, substituting their own will for the law of justice and love by which all true kings rule.

There is, then, I repeat—and as I want to leave this idea with you, I begin with it, and shall end with it—only one pure kind of kingship; an inevitable and eternal kind, crowned or not: the kingship, namely, which consists in a stronger moral state, and a truer thoughtful state, than that
of others; enabling you, therefore, to guide, or to raise them. Observe that word "State;" we have got into a loose way of using it. It means literally the standing and stability of a thing; and you have the full force of it in the derived word "statue"—"the immovable thing." A king's majesty or "state," then, and the right of his kingdom to be called a state, depends on the movelessness of both:—without tremor, without quiver of balance; established and enthroned upon a foundation of eternal law which nothing can alter nor overthrow.

Believing that all literature and all education are only useful so far as they tend to confirm this calm, beneficent, and therefore kingly, power—first, over ourselves, and, through ourselves, over all around us, I am now going to ask you to consider with me farther, what special portion or kind of this royal authority, arising out of noble education, may rightly be possessed by women; and how far they also are called to a true queenly power. Not in their households merely, but over all within their sphere. And in what sense, if they rightly understood and exercised this royal or gracious influence, the order and beauty induced by such benignant power would justify us in speaking of the territories over which each of them reigned, as "Queens' Gardens."

And here, in the very outset, we are met by a far deeper question, which—strange though this may seem—remains among many of us yet quite undecided, in spite of its infinite importance.

We cannot determine what the queenly power of women should be, until we are agreed what their ordinary power should be. We cannot consider how education may fit them for any widely extending duty, until we are agreed what is their true constant duty. And there never was a time when wilder words were spoken, or more vain imagination permitted, respecting this question—quite vital to all social happiness. The relations of the womanly to the manly nature, their different capacities of intellect or of virtue, seem never to have been yet measured with entire consent. We hear of the mission and of the rights of Woman, as if these could
ever be separate from the mission and the rights of Man;—as if she and her lord were creatures of independent kind and of irreconcileable claim. This, at least, is wrong. And not less wrong—perhaps even more foolishly wrong (for I will anticipate thus far what I hope to prove)—is the idea that woman is only the shadow and attendant image of her lord, owing him a thoughtless and servile obedience, and supported altogether in her weakness by the pre-eminence of his fortitude.

This, I say, is the most foolish of all errors respecting her who was made to be the helpmate of man. As if he could be helped effectively by a shadow, or worthily by a slave!

Let us try, then, whether we cannot get at some clear and harmonious idea (it must be harmonious if it is true) of what womanly mind and virtue are in power and office, with respect to man's; and how their relations, rightly accepted, aid, and increase, the vigour, and honour, and authority of both.

And now I must repeat one thing I said in the last lecture namely, that the first use of education was to enable us to consult with the wisest and the greatest men on all points of earnest difficulty. That to use books rightly, was to go to them for help: to appeal to them, when our own knowledge and power of thought failed; to be led by them into wider sight, purer conception than our own, and receive from them the united sentence of the judges and councils of all time, against our solitary and unstable opinion.

Let us do this now. Let us see whether the greatest, the wisest, the purest-hearted of all ages are agreed in any wise on this point: let us hear the testimony they have left respecting what they held to be the true dignity of woman, and her mode of help to man.

And first let us take Shakespeare.

Note broadly in the outset, Shakespeare has no heroes;—he has only heroines. There is not one entirely heroic figure in all his plays, except the slight sketch of Henry the Fifth, exaggerated for the purposes of the stage; and the still slighter Valentine in The Two Gentlemen of Verona. In his laboured
and perfect plays you have no hero. Othello would have been one, if his simplicity had not been so great as to leave him the prey of every base practice round him; but he is the only example even approximating to the heroic type. Coriolanus—Caesar—Antony, stand in flawed strength, and fall by their vanities;—Hamlet is indolent, and drowsily speculative; Romeo an impatient boy; the Merchant of Venice languidly submissive to adverse fortune; Kent, in King Lear, is entirely noble at heart, but too rough and unpolished to be of true use at the critical time, and he sinks into the office of a servant only. Orlando, no less noble, is yet the despairing toy of chance, followed, comforted, saved, by Rosalind. Whereas there is hardly a play that has not a perfect woman in it, steadfast in grave hope, and errorless purpose; Cordelia, Desdemona, Isabella, Hermione, Imogen, Queen Katherine, Perdita, Sylvia, Viola, Rosalind, Helena, and last, and perhaps loveliest, Virgilia, are all faultless; conceived in the highest heroic type of humanity.

Then observe, secondly,

The catastrophe of every play is caused always by the folly or fault of a man; the redemption, if there be any, is by the wisdom and virtue of a woman, and failing that, there is none. The catastrophe of King Lear is owing to his own want of judgment, his impatient vanity, his misunderstanding of his children; the virtue of his one true daughter would have saved him from all the injuries of the others, unless he had cast her away from him; as it is, she all but saves him.

Of Othello I need not trace the tale;—nor the one weakness of his so mighty love; nor the inferiority of his perceptive intellect to that even of the second woman character in the play, the Emilia who dies in wild testimony against his error:—“Oh, murderous coxcomb! What should such a fool Do with so good a wife?”

In Romeo and Juliet, the wise and entirely brave stratagem of the wife is brought to ruinous issue by the reckless impatience of her husband. In Winter's Tale, and in Cymbeline, the happiness and existence of two princely households, lost through long years, and imperilled to the death by the folly
and obstinacy of the husbands, are redeemed at last by the queenly patience and wisdom of the wives. In Measure for Measure, the injustice of the judges, and the corrupt cowardice of the brother, are opposed to the victorious truth and adamantine purity of a woman. In Coriolanus, the mother's counsel, acted upon in time, would have saved her son from all evil; his momentary forgetfulness of it is his ruin; her prayer at last granted, saves him—not, indeed, from death but from the curse of living as the destroyer of his country.

And what shall I say of Julia, constant against the fickleness of a lover who is a mere wicked child?—of Helena, against the petulance and insult of a careless youth?—of the patience of Hero, the passion of Beatrice, and the calmly devoted wisdom of the "unlessoned girl," who appears among the helplessness, the blindness, and the vindictive passions of men, as a gentle angel, to save merely by her presence, and defeat the worst intensities of crime by her smile?

Observe, further, among all the principal figures in Shakespeare's plays, there is only one weak woman—Ophelia; and it is because she fails Hamlet at the critical moment, and is not, and cannot in her nature be, a guide to him when he needs her most, that all the bitter catastrophe follows. Finally, though there are three wicked women among the principal figures, Lady Macbeth, Regan, and Goneril, they are felt at once to be frightful exceptions to the ordinary laws of life; fatal in their influence also in proportion to the power for good which they have abandoned.

Such, in broad light, is Shakespeare's testimony to the position and character of women in human life. He represents them as infallibly faithful and wise counsellors,—incorruptibly just and pure examples—strong always to sanctify, even when they cannot save.

Not as in any wise comparable in knowledge of the nature of man,—still less in his understanding of the causes and courses of fate,—but only as the writer who has given us the broadest view of the conditions and modes of ordinary thought in modern society, I ask you next to receive the witness of Walter Scott.
I put aside his merely romantic prose writings as of no value: and though the early romantic poetry is very beautiful, its testimony is of no weight, other than that of a boy's ideal. But his true works, studied from Scottish life, bear a true witness, and in the whole range of these there are but three men who reach the heroic type*—Dandie Dinmont, Rob Roy, and Claverhouse: of these, one is a border farmer; another a freebooter; the third a soldier in a bad cause. And these touch the ideal of heroism only in their courage and faith, together with a strong, but uncultivated, or mistakenly applied, intellectual power; while his younger men are the gentlemanly playthings of fantastic fortune, and only by aid (or accident) of that fortune, survive, not vanquish, the trials they involuntarily sustain. Of any disciplined, or consistent character, earnest in a purpose wisely conceived, or dealing with forms of hostile evil, definitely challenged, and resolutely subdued, there is no trace in his conceptions of men. Whereas in his imaginations of women,—in the characters of Ellen Douglas, of Flora MacIvor, Rose Bradwardine, Catherine Seyton, Diana Vernon, Lilias Redgauntlet, Alice Bridgenorth, Alice Lee, and Jeanie Deans,—with endless varieties of grace, tenderness, and intellectual power we find in all a quite infallible and inevitable sense of dignity and justice; a fearless, instant, and untiring self-sacrifice to even the appearance of duty, much more to its real claims; and, finally, a patient wisdom of deeply restrained affection, which does infinitely more than protect its objects from a momentary error; it gradually forms, animates, and exalts the characters of the unworthy lovers, until, at the close of the tale, we are just able, and no more, to take patience in hearing of their unmerited success.

* I ought, in order to make this assertion fully understood, to have noted the various weaknesses which lower the ideal of other great characters of men in the Waverley novels—the selfishness and narrowness of thought in Redgauntlet, the weak religious enthusiasm in Edward Glenvenida, and the like; and I ought to have noticed that there are several quite perfect characters sketched sometimes in the backgrounds: three—let us accept joyously this courtesy to England and her soldiers—are English officers: Colonel Gardiner, Colonel Talbot, and Colonel Mannering.
So that in all cases, with Scott as with Shakespeare, it is the woman who watches over, teaches, and guides the youth; it is never, by any chance, the youth who watches over or educates his mistress.

Next, take, though more briefly, graver and deeper testimony—that of the great Italians and Greeks. You know well the plan of Dante’s great poem—that it is a love-poem to his dead lady, a song of praise for her watch over his soul. Stoop-ing only to pity, never to love, she yet saves him from de-struction—saves him from hell. He is going eternally astray in despair; she comes down from heaven to his help, and throughout the ascents of Paradise is his teacher, interpreting for him the most difficult truths, divine and human, and leading him, with rebuke upon rebuke, from star to star.

I do not insist upon Dante’s conception; if I began I could not cease: besides, you might think this a wild imagination of one poet’s heart. So I will rather read to you a few verses of the deliberate writing of a knight of Pisa to his living lady, wholly characteristic of the feeling of all the noblest men of the thirteenth century, preserved among many other such records of knightly honour and love, which Dante Rossetti has gathered for us from among the early Italian poets.

For lo! thy law is passed
That this my love should manifestly be
To serve and honour thee:
And so I do; and my delight is full,
Accepted for the servant of thy rule.

Without almost, I am all rapturous,
Since thus my will was set
To serve, thou flower of joy, thine excellence:
Nor ever seems it anything could rouse
A pain or regret,
But on thee dwells mine every thought and sense:
Considering that from thee all virtues spread
As from a fountain head,—
That in thy gift is wisdom’s best avail,
And honour without fail;
With whom each sovereign good dwells separate,
Fulfilling the perfection of thy state.
Lady, since I conceived
Thy pleasurable aspect in my heart,
My life has been apart
In shining brightness and the place of truth:
Which till that time, good sooth.
Groped among shadows in a darken’d place,
Where many hours and days
It hardly ever had remember’d good.
But now my servitude
Is thine, and I am full of joy and rest.
A man from a wild beast
Thou maddest me, since for thy love I lived.

You may think, perhaps, a Greek knight would have had a lower estimate of women than this Christian lover. His own spiritual subjection to them was indeed not so absolute; but as regards their own personal character, it was only because you could not have followed me so easily, that I did not take the Greek women instead of Shakespeare’s; and instance, for chief ideal types of human beauty and faith, the simple mother’s and wife’s heart of Andromache; the divine, yet rejected wisdom of Cassandra; the playful kindness and simple princess-life of happy Nausicaa; the housewifely calm of that of Penelope, with its watch upon the sea; the ever-patient, fearless, hopelessly devoted piety of the sister, and daughter, in Antigone; the bowing down of Iphigenia, lamb-like and silent; and, finally, the expectation of the resurrection, made clear to the soul of the Greeks in the return from her grave of that Alcestis, who, to save her husband, had passed calmly through the bitterness of death.

Now I could multiply witness upon witness of this kind upon you if I had time. I would take Chaucer, and show you why he wrote a Legend of Good Women; but no Legend of Good Men. I would take Spenser, and show you how all his fairy knights are sometimes deceived and sometimes vanquished; but the soul of Una is never darkened, and the spear of Britomart is never broken. Nay, I could go back into the mythical teaching of the most ancient times, and show you how the great people,—by one of whose princesses it was appointed that the Lawgiver of all the earth should be
educated, rather than by his own kindred;—how that great Egyptian people, wisest then of nations, gave to their Spirit of Wisdom the form of a woman; and into her hand, for a symbol, the weaver's shuttle: and how the name and the form of that spirit, adopted, believed, and obeyed by the Greeks, became that Athena of the olive-helm, and cloudy shield, to whose faith you owe, down to this date, whatever you hold most precious in art, in literature, or in types of national virtue.

But I will not wander into this distant and mythical element; I will only ask you to give its legitimate value to the testimony of these great poets and men of the world,—consistent as you see it is on this head. I will ask you whether it can be supposed that these men, in the main work of their lives, are amusing themselves with a fictitious and idle view of the relations between man and woman;—nay, worse than fictitious or idle; for a thing may be imaginary, yet desirable, if it were possible; but this, their ideal of women, is, according to our common idea of the marriage relation, wholly undesirable. The woman, we say, is not to guide, nor even to think, for herself. The man is always to be the wiser; he is to be the thinker, the ruler, the superior in knowledge and discretion, as in power. Is it not somewhat important to make up our minds on this matter? Are all these great men mistaken, or are we? Are Shakespeare and Æschylus, Dante and Homer, merely dressing dolls for us; or, worse than dolls, unnatural visions, the realization of which, were it possible, would bring anarchy into all households and ruin into all affections? Nay, if you could suppose this, take lastly the evidence of facts, given by the human heart itself. In all Christian ages which have been remarkable for their purity or progress, there has been absolute yielding of obedient devotion, by the lover, to his mistress. I say obedient—not merely enthusiastic and worshipping in imagination, but entirely subject, receiving from the beloved woman, however young, not only the encouragement, the praise, and the reward of all toil, but so far as any choice is open, or any question difficult of decision, the direction of all toil. That chiv-
alry, to the abuse and dishonour of which are attributable primarily whatever is cruel in war, unjust in peace, or corrup and ignoble in domestic relations, and to the original purity and power of which we owe the defence alike of faith, of law, and of love;—that chivalry, I say, in its very first conception of honourable life, assumes the subjection of the young knight to the command—should it even be the command in caprice—of his lady. It assumes this, because its masters knew that the first and necessary impulse of every truly taught and knightly heart is this of blind service to its lady; that, where that true faith and captivity are not, all wayward and wicked passions must be; and that in this rapturous obedience to the single love of his youth, is the sanctification of all man's strength, and the continuance of all his purposes. And this, not because such obedience would be safe, or honourable, were it ever rendered to the unworthy; but because it ought to be impossible for every noble youth—it is impossible for every one rightly trained—to love any one whose gentle counsel he cannot trust, or whose prayerful command he can hesitate to obey.

I do not insist by any farther argument on this, for I think it should commend itself at once to your knowledge of what has been and to your feelings of what should be. You cannot think that the buckling on of the knight's armour by his lady's hand was a mere caprice of romantic fashion. It is the type of an eternal truth—that the soul's armour is never well set to the heart unless a woman's hand has braced it; and it is only when she braces it loosely that the honour of manhood fails. Know you not those lovely lines—I would they were learned by all youthful ladies of England:—

"Ah, wasteful woman!—she who may
On her sweet self set her own price,
Knowing he cannot choose but pay—
How has she cheapened Paradise?
How given for nought her priceless gift,
How spoiled the bread and spilt the wine,
Which, spent with due, respective thrift,
Had made brutes men, and men divine!"

* Coventry Patmore.
This much, then, respecting the relations of lovers I believe you will accept. But what we too often doubt is the fitness of the continuance of such a relation throughout the whole of human life. We think it right in the lover and mistress, not in the husband and wife. That is to say, we think that a reverent and tender duty is due to one whose affection we still doubt, and whose character we as yet do but partially and distantly discern; and that this reverence and duty are to be withdrawn when the affection has become wholly and limitlessly our own, and the character has been so sifted and tried that we fear not to entrust it with the happiness of our lives.

Do you not see how ignoble this is, as well as how unreasonable? Do you not feel that marriage—when it is marriage at all,—is only the seal which marks the vowed transition of temporary into untiring service, and of fitful into eternal love?

But how, you will ask, is the idea of this guiding function of the woman reconcileable with a true wifely subjection? Simply in that it is a guiding, not a determining, function. Let me try to show you briefly how these powers seem to be rightly distinguishable.

We are foolish, and without excuse foolish, in speaking of the "superiority" of one sex to the other, as if they could be compared in similar things. Each has what the other has not: each completes the other, and is completed by the other: they are in nothing alike, and the happiness and perfection of both depends on each asking and receiving from the other what the other only can give.

Now their separate characters are briefly these. The man's power is active, progressive, defensive. He is eminently the doer, the creator, the discoverer, the defender. His intellect is for speculation and invention; his energy for adventure, for war, and for conquest, wherever war is just, wherever conquest necessary. But the woman's power is for rule, not for battle,—and her intellect is not for invention or creation, but for sweet ordering, arrangement and decision. She sees the qualities of things, their claims and their places. Her great function is Praise: she enters into no contest, but infallibly
OF QUEENS' GARDENS.

judges the crown of contest. By her office, and place, she is protected from all danger and temptation. The man, in his rough work in open world, must encounter all peril and trial: —to him, therefore, the failure, the offence, the inevitable error: often he must be wounded, or subdued, often misled, and always hardened. But he guards the woman from all this; within his house, as ruled by her, unless she herself has sought it, need enter no danger, no temptation, no cause of error or offence. This is the true nature of home—it is the place of Peace; the shelter, not only from all injury, but from all terror, doubt, and division. In so far as it is not this, it is not home: so far as the anxieties of the outer life penetrate into it, and the inconsistently-minded, unknown, unloved, or hostile society of the outer world is allowed by either husband or wife to cross the threshold, it ceases to be home; it is then only a part of that outer world which you have roofed over, and lighted fire in. But so far as it is a sacred place, a vestal temple, a temple of the hearth watched over by Household Gods, before whose faces none may come but those whom they can receive with love,—so far as it is this, and roof and fire are types only of a nobler shade and light,—shade as of the rock in a weary land, and light as of the Pharos in the stormy sea;—so far it vindicates the name, and fulfils the praise, of home.

And wherever a true wife comes, this home is always round her. The stars only may be over her head; the glow-worm in the night-cold grass may be the only fire at her foot: but home is yet wherever she is; and for a noble woman it stretches far round her, better than ceiled with cedar, or painted with vermilion, shedding its quiet light far, for those who else were homeless.

This, then, I believe to be,—will you not admit it to be,—the woman's true place and power? But do not you see that to fulfil this, she must—as far as one can use such terms of a human creature—be incapable of error? So far as she rules, all must be right, or nothing is. She must be enduringly, incorruptibly good; instinctively, infallibly wise—wise, not for self-development, but for self-renunciation: wise, not that
she may set herself above her husband, but that she may
never fail from his side: wise, not with the narrowness of in-
solent and loveless pride, but with the passionate gentleness
of an infinitely variable, because infinitely applicable, modesty
of service—the true changefulness of woman. In that great
sense—"La donna e mobile," not "Qual plùm' al vento;" no,
nor yet "Variable as the shade, by the light quivering aspen
made;" but variable as the light, manifold in fair and serene
division, that it may take the color of all that it falls upon,
and exalt it.

II. I have been trying, thus far, to show you what should
be the place, and what the power of woman. Now, secondly,
we ask, What kind of education is to fit her for these?

And if you indeed think this a true conception of her office
and dignity, it will not be difficult to trace the course of edu-
cation which would fit her for the one, and raise her to the
other.

The first of our duties to her—no thoughtful persons now
doubt this,—is to secure for her such physical training and
exercise as may confirm her health, and perfect her beauty,
the highest refinement of that beauty being unattainable with-
out splendor of activity and of delicate strength. To perfect
her beauty, I say, and increase its power; it cannot be too
powerful, nor shed its sacred light too far: only remember
that all physical freedom is vain to produce beauty without a
corresponding freedom of heart. There are two passages of
that poet who is distinguished, it seems to me, from all others
—not by power, but by exquisite rightness—which point you
to the source, and describe to you, in a few syllables, the com-
pletion of womanly beauty. I will read the introductory stan-
zas, but the last is the one I wish you specially to notice:

"Three years she grew in sun and shower,
Then Nature said, a lovelier flower
On earth was never sown.
This child I to myself will take;
She shall be mine, and I will make
A lady of my own.
"Myself will to my darling be
Both law and impulse; and with me
The girl, in rock and plain,
In earth and heaven, in glade and bower,
Shall feel an overseeing power
To kindle, or restrain.

"The floating clouds their state shall lend
To her, for her the willow bend;
Nor shall she fail to see
Even in the motions of the storm,
Grace that shall mould the maiden's form
By silent sympathy.

"And vital feelings of delight
Shall rear her form to stately height,—
Her virgin bosom swell.
Such thoughts to Lucy I will give,
While she and I together live,
Here in this happy dell."

"Vital feelings of delight," observe. There are deadly feelings of delight; but the natural ones are vital, necessary to very life.

And they must be feelings of delight, if they are to be vital. Do not think you can make a girl lovely, if you do not make her happy. There is not one restraint you put on a good girl's nature—there is not one check you give to her instincts of affection or of effort—which will not be indelibly written on her features, with a hardness which is all the more painful because it takes away the brightness from the eyes of innocence, and the charm from the brow of virtue.

This for the means: now note the end. Take from the same poet, in two lines, a perfect description of womanly beauty—

"A countenance in which did meet
Sweet records, promises as sweet."

The perfect loveliness of a woman's countenance can only consist in that majestic peace, which is founded in the memory of happy and useful years,—full of sweet records; and
from the joining of this with that yet more majestic childishness, which is still full of change and promise;—opening always—modest at once, and bright, with hope of better things to be won, and to be bestowed. There is no old age where there is still that promise—it is eternal youth.

Thus, then, you have first to mould her physical frame, and then, as the strength she gains will permit you, to fill and temper her mind with all knowledge and thoughts which tend to confirm its natural instincts of justice, and refine its natural tact of love.

All such knowledge should be given her as may enable her to understand, and even to aid, the work of men: and yet it should be given, not as knowledge,—not as if it were, or could be, for her an object to know; but only to feel, and to judge. It is of no moment, as a matter of pride or perfectness in herself, whether she knows many languages or one; but it is of the utmost, that she should be able to show kindness to a stranger, and to understand the sweetness of a stranger's tongue. It is of no moment to her own worth or dignity that she should be acquainted with this science or that; but it is of the highest that she should be trained in habits of accurate thought; that she should understand the meaning, the inevitableness, and the loveliness of natural laws, and follow at least some one path of scientific attainment, as far as to the threshold of that bitter Valley of Humiliation, into which only the wisest and bravest of men can descend, owning themselves forever children, gathering pebbles on a boundless shore. It is of little consequence how many positions of cities she knows, or how many dates of events, or how many names of celebrated persons—it is not the object of education to turn a woman into a dictionary; but it is deeply necessary that she should be taught to enter with her whole personality into the history she reads; to picture the passages of it vitally in her own bright imagination; to apprehend, with her fine instincts, the pathetic circumstances and dramatic relations, which the historian too often only eclipses by his reasoning and disconnects by his arrangement: it is for her to trace the hidden equities of divine reward, and catch sight, through
the darkness, of the fateful threads of woven fire that connect error with its retribution. But, chiefly of all, she is to be taught to extend the limits of her sympathy with respect to that history which is being for her determined, as the moments pass in which she draws her peaceful breath: and to the contemporary calamity which, were it but rightly mourned by her, would recur no more hereafter. She is to exercise herself in imagining what would be the effects upon her mind and conduct, if she were daily brought into the presence of the suffering which is not the less real because shut from her sight. She is to be taught somewhat to understand the nothingness of the proportion which that little world in which she lives and loves, bears to the world in which God lives and loves;—and solemnly she is to be taught to strive that her thoughts of piety may not be feeble in proportion to the number they embrace, nor her prayer more languid than it is for the momentary relief from pain of her husband or her child, when it is uttered for the multitudes of those who have none to love them,—and is, "for all who are desolate and oppressed."

Thus far, I think, I have had your concurrence; perhaps you will not be with me in what I believe is most needful for me to say. There is one dangerous science for women—one which let them indeed beware how they profanely touch—that of theology. Strange, and miserably strange, that while they are modest enough to doubt their powers, and pause at the threshold of sciences where every step is demonstrable and sure, they will plunge headlong, and without one thought of incompetency, into that science in which the greatest men have trembled, and the wisest erred. Strange, that they will complacently and pridefully bind up whatever vice or folly there is in them, whatever arrogance, petulance, or blind incomprehensiveness, into one bitter bundle of consecrated myrrh. Strange, in creatures born to be Love visible, that where they can know least, they will condemn first, and think to recommend themselves to their Master by scrambling up the steps of His judgment throne, to divide it with Him. Most strange, that they should think they were led by the Spirit of the
Comforter into habits of mind which have become in them
the unmixed elements of home discomfort; and that they
dare to turn the Household Gods of Christianity into ugly
idols of their own—spiritual dolls, for them to dress accord-
ing to their caprice; and from which their husbands must
turn away in grieved contempt, lest they should be shrieked
at for breaking them.

I believe, then, with this exception, that a girl's education
should be nearly, in its course and material of study, the
same as a boy's; but quite differently directed. A woman,
in any rank of life, ought to know whatever her husband is
likely to know, but to know it in a different way. His com-
mand of it should be foundational and progressive, hers,
general and accomplished for daily and helpful use. Not but
that it would often be wiser in men to learn things in a
womanly sort of way, for present use, and to seek for the dis-
cipline and training of their mental powers in such branches
of study as will be afterwards fittest for social service; but,
speaking broadly, a man ought to know any language or
science he learns, thoroughly, while a woman ought to know
the same language, or science, only so far as may enable her
to sympathise in her husband's pleasures, and in those of his
best friends.

Yet, observe, with exquisite accuracy as far as she reach-
es. There is a wide difference between elementary knowledge
and superficial knowledge—between a firm beginning, and a
feeble smattering. A woman may always help her husband
by what she knows, however little; by what she half-knows,
or mis-knows, she will only tease him.

And, indeed, if there were to be any difference between a
girl's education and a boy's, I should say that of the two
the girl should be earlier led, as her intellect ripens faster,
into deep and serious subjects; and that her range of lit-
erature should be, not more, but less frivolous, calculated
to add the qualities of patience and seriousness to her nat-
ural poignancy of thought and quickness of wit; and also
to keep her in a lofty and pure element of thought. I enter
not now into any question of choice of books; only be sure
that her books are not heaped up in her lap as they fall out of the package of the circulating library, wet with the last and lightest spray of the fountain of folly.

Or even of the fountain of wit; for with respect to that sore temptation of novel-reading, it is not the badness of a novel that we should dread, but its over-wrought interest. The weakest romance is not so stupefying as the lower forms of religious exciting literature, and the worst romance is not so corrupting as false history, false philosophy, or false political essays. But the best romance becomes dangerous, if, by its excitement, it renders the ordinary course of life uninteresting, and increases the morbid thirst for useless acquaintance with scenes in which we shall never be called upon to act.

I speak therefore of good novels only; and our modern literature is particularly rich in types of such. Well read, indeed, these books have serious use, being nothing less than treatises on moral anatomy and chemistry; studies of human nature in the elements of it. But I attach little weight to this function: they are hardly ever read with earnestness enough to permit them to fulfil it. The utmost they usually do is to enlarge somewhat the charity of a kind reader, or the bitterness of a malicious one; for each will gather, from the novel, food for her own disposition. Those who are naturally proud and envious will learn from Thackeray to despise humanity; those who are naturally gentle, to pity it; those who are naturally shallow, to laugh at it. So, also, there might be a serviceable power in novels to bring before us, in vividness, a human truth which we had before dimly conceived; but the temptation to picturesqueness of statement is so great, that often the best writers of fiction cannot resist it; and our views are rendered so violent and one-sided, that their vitality is rather a harm than good.

Without, however, venturing here on any attempt at decision how much novel-reading should be allowed, let me at least clearly assert this, that whether novels, or poetry, or history be read, they should be chosen, not for what is out of them, but for what is in them. The chance and scattered
evil that may here and there haunt, or hide itself in, a powerful book, never does any harm to a noble girl; but the emptiness of an author oppresses her, and his amiable folly degrades her. And if she can have access to a good library of old and classical books, there need be no choosing at all. Keep the modern magazine and novel out of your girl's way: turn her loose into the old library every wet day, and let her alone. She will find what is good for her; you cannot: for there is just this difference between the making of a girl's character and a boy's—you may chisel a boy into shape, as you would a rock, or hammer him into it, if he be of a better kind, as you would a piece of bronze. But you cannot hammer a girl into anything. She grows as a flower does,—she will wither without sun; she will decay in her sheath, as the narcissus does, if you do not give her air enough; she may fall, and defile her head in dust, if you leave her without help at some moments of her life; but you cannot fetter her; she must take her own fair form and way, if she take any, and in mind as in body, must have always

"Her household motions light and free
And steps of virgin liberty."

Let her loose in the library, I say, as you do a fawn in a field. It knows the bad weeds twenty times better than you; and the good ones too, and will eat some bitter and prickly ones, good for it, which you had not the slightest thought were good.

Then, in art, keep the finest models before her, and let her practice in all accomplishments be accurate and thorough, so as to enable her to understand more than she accomplishes. I say the finest models—that is to say, the truest, simplest, usefullest. Note those epithets; they will range through all the arts. Try them in music, where you might think them the least applicable. I say the truest, that in which the notes most closely and faithfully express the meaning of the words, or the character of intended emotion; again, the simplest, that in which the meaning and melody are attained with the fewest and most significant notes possible; and, finally, the
usefullest, that music which makes the best words most beautiful, which enchants them in our memories each with its own glory of sound, and which applies them closest to the heart at the moment we need them.

And not only in the material and in the course, but yet more earnestly in the spirit of it, let a girl’s education be as serious as a boy’s. You bring up your girls as if they were meant for sideboard ornament, and then complain of their frivolity. Give them the same advantages that you give their brothers—appeal to the same grand instincts of virtue in them; teach them also that courage and truth are the pillars of their being: do you think that they would not answer that appeal, brave and true as they are even now, when you know that there is hardly a girl’s school in this Christian kingdom where the children’s courage or sincerity would be thought of half so much importance as their way of coming in at a door; and when the whole system of society, as respects the mode of establishing them in life, is one rotten plague of cowardice and imposture—cowardice, in not daring to let them live, or love, except as their neighbours choose; and imposture, in bringing, for the purpose of our own pride, the full glow of the world’s worst vanity upon a girl’s eyes, at the very period when the whole happiness of her future existence depends upon her remaining undazzled?

And give them, lastly, not only noble teachings, but noble teachers. You consider somewhat, before you send your boy to school, what kind of a man the master is;—whatsoever kind of a man he is, you at least give him full authority over your son, and show some respect for him yourself; if he comes to dine with you, you do not put him at a side table; you know also that, at his college, your child’s immediate tutor will be under the direction of some still higher tutor, for whom you have absolute reverence. You do not treat the Dean of Christ Church or the Master of Trinity as your inferiors.

But what teachers do you give your girls, and what reverence do you show to the teachers you have chosen? Is a girl likely to think her own conduct, or her own intellect, of much
importance, when you trust the entire formation of her character, moral and intellectual, to a person whom you let your servants treat with less respect than they do your housekeeper (as if the soul of your child were a less charge than jams and groceries), and whom you yourself think you confer an honor upon by letting her sometimes sit in the drawing-room in the evening?

Thus, then, of literature as her help, and thus of art. There is one more help which we cannot do without—one which, alone, has sometimes done more than all other influences besides,—the help of wild and fair nature. Hear this of the education of Joan of Arc:

"The education of this poor girl was mean according to the present standard; was ineffably grand, according to a purer philosophic standard; and only not good for our age, because for us it would be unattainable. * * *

"Next after her spiritual advantages, she owed most to the advantages of her situation. The fountain of Domrémy was on the brink of a boundless forest; and it was haunted to that degree by fairies, that the parish priest (curé) was obliged to read mass there once a year, in order to keep them in any decent bounds. * * *

"But the forests of Domrémy—that were the glories of the land, for in them abode mysterious powers and ancient secrets that towered into tragic strength. 'Abbeys there were, and abbey windows,'—'like Moorish temples of the Hindoos,' that exercised even princely power both in Touraine and in the German Diets. These had their sweet bells that pierced the forests for many a league at matins or vespers, and each its own dreamy legend. Few enough, and scattered enough, were these abbeys, so as in no degree to disturb the deep solitude of the region; yet many enough to spread a network or awning of Christian sanctity over what else might have seemed a heathen wilderness." *

Now, you cannot, indeed, have here in England, woods eighteen miles deep to the centre; but you can, perhaps, keep a fairy or two for your children yet, if you wish to keep them.

But do you wish it? Suppose you had each, at the back of your houses, a garden large enough for your children to play in, with just as much lawn as would give them room to run, —no more—and that you could not change your abode; but that, if you chose, you could double your income, or quadruple it, by digging a coal shaft in the middle of the lawn, and turning the flower-beds into heaps of coke. Would you do it? I think not. I can tell you, you would be wrong if you did, though it gave you income sixty-fold instead of four-fold.

Yet this is what you are doing with all England. The whole country is but a little garden, not more than enough for your children to run on the lawns of, if you would let them all run there. And this little garden you will turn into furnace-ground, and fill with heaps of cinders, if you can; and those children of yours, not you, will suffer for it. For the fairies will not be all banished; there are fairies of the furnace as of the wood, and their first gifts seem to be "sharp arrows of the mighty;" but their last gifts are "coals of juniper."

And yet I cannot—though there is no part of my subject that I feel more—press this upon you; for we made so little use of the power of nature while we had it that we shall hardly feel what we have lost. Just on the other side of the Mersey you have your Snowdon, and your Menai Straits, and that mighty granite rock beyond the moors of Anglesea, splendid in its heatherly crest, and foot planted in the deep sea, once thought of as sacred—a divine promontory, looking westward; the Holy Head or Headland, still not without awe when its red light glares first through storm. These are the hills, and these the bays and blue inlets, which, among the Greeks, would have been always loved, always fateful in influence on the national mind. That Snowdon is your Parnassus; but where are its Muses? That Holyhead mountain is your Island of Ægina, but where is its Temple to Minerva?

Shall I read you what the Christian Minerva had achieved under the shadow of our Parnassus, up to the year 1848?—Here is a little account of a Welsh School, from page 261 of the report on Wales, published by the Committee of Council
on Education. This is a School close to a town containing 5,000 persons:

"I then called up a larger class, most of whom had recently come to the school. Three girls repeatedly declared they had never heard of Christ, and two that they had never heard of God. Two out of six thought Christ was on earth now ("they might have had a worse thought, perhaps"); three knew nothing about the crucifixion. Four out of seven did not know the names of the months, nor the number of days in a year. They had no notion of addition beyond two and two, or three and three; their minds were perfect blanks."

Oh, ye women of England! from the Princess of that Wales to the simplest of you, do not think your own children can be brought into their true fold of rest while these are scattered on the hills, as sheep having no shepherd. And do not think your daughters can be trained to the truth of their own human beauty, while the pleasant places, which God made at once for their school-room and their play-ground, lie desolate and defiled. You cannot baptize them rightly in those inch-deep fonts of yours, unless you baptize them also in the sweet waters which the great Lawgiver strikes forth forever from the rocks of your native land—waters which a Pagan would have worshipped in their purity, and you only worship with pollution. You cannot lead your children faithfully to those narrow axe-hewn church altars of yours, while the dark azure altars in heaven—the mountains that sustain your island throne,—mountains on which a Pagan would have seen the powers of heaven rest in every wreathed cloud—remain for you without inscription; altars built, not to, but by, an Unknown God.

III. Thus far, then, of the nature, thus far of the teaching, of woman, and thus of her household office, and queenliness. We come now to our last, our widest question,—What is her queenly office with respect to the state?

Generally we are under an impression that a man's duties are public, and a woman's private. But this is not altogether so. A man has a personal work or duty, relating to his own
home, and a public work or duty, which is the expansion of the other, relating to the state. So a woman has a personal work and duty, relating to her own home, and a public work and duty, which is also the expansion of that.

Now the man's work for his own home is, as has been said, to secure its maintenance, progress, and defence; the woman's to secure its order, comfort and loveliness.

Expand both these functions. The man's duty, as a member of a commonwealth, is to assist in the maintenance, in the advance, in the defence of the state. The woman's duty, as a member of the commonwealth, is to assist in the ordering, in the comforting, and in the beautiful adornment of the state.

What the man is at his own gate, defending it, if need be, against insult and spoil, that also, not in a less, but in a more devoted measure, he is to be at the gate of his country, leaving his home, if need be, even to the spoiler, to do his more incumbent work there.

And, in like manner, what the woman is to be within her gates, as the centre of order, the balm of distress, and the mirror of beauty; that she is also to be without her gates, where order is more difficult distress more imminent, loveliness more rare.

And as within the human heart there is always set an instinct for all its real duties,—an instinct which you cannot quench, but only warp and corrupt if you withdraw it from its true purpose;—as there is the intense instinct of love, which, rightly disciplined, maintains all the sanctities of life and, misdirected, undermines them; and must do either the one or the other; so there is in the human heart an inexinguishable instinct, the love of power, which, rightly directed, maintains all the majesty of law and life, and misdirected, wrecks them.

Deep rooted in the innermost life of the heart of man, and of the heart of woman, God set it there, and God keeps it there. Vainly, as falsely, you blame or rebuke the desire of power!—For Heaven's sake, and for Man's sake, desire it all you can. But what power? That is all the question. Power to destroy? the lion's limb, and the dragon's breath? Not
so. Power to heal, to redeem, to guide and to guard. Power of the sceptre and shield; the power of the royal hand that heals in touching,—that binds the fiend and looses the captive; the throne that is founded on the rock of Justice, and descended from only by steps of mercy. Will you not covet such power as this, and seek such a throne as this, and be no more housewives, but queens?

It is now long since the women of England arrogated, universally, a title which once belonged to nobility only, and having once been in the habit of accepting the simple title of gentlewoman, as correspondent to that of gentleman, insisted on the privilege of assuming the title of "Lady,"* which properly corresponds only to the title of "Lord."

I do not blame them for this; but only for their narrow motive in this. I would have them desire and claim the title of Lady, provided they claim, not merely the title, but the office and duty signified by it. Lady means "bread-giver" or "loaf-giver," and Lord means "maintainer of laws," and both titles have reference, not to the law which is maintained in the house, nor to the bread which is given to the household; but to law maintained for the multitude, and to bread broken among the multitude. So that a Lord has legal claim only to his title in so far as he is the maintainer of the justice of the Lord of Lord's; and a Lady has legal claim to her title, only so far as she communicates that help to the poor representatives of her Master; which women once, ministering to Him of their substance, were permitted to extend to that Master Himself; and when she is known, as He Himself once was, in breaking of bread.

And this beneficent and legal dominion, this power of the Dominus, or House Lord, and of the Domina, or House-Lady,

* I wish there were a true order of chivalry instituted for our English youth of certain ranks, in which both boy and girl should receive, at a given age, their knighthood and ladyhood by true title; attainable only by certain probation and trial both of character and accomplishment; and to be forfeited on conviction, by their peers of any dishonorable act. Such an institution would be entirely, and with all noble results, possible, in a nation which loved honour. That it would not be possible among us is not to the discredit of the scheme.
is great and venerable, not in the number of those through whom it has lineally descended, but in the number of those whom it grasps within its sway; it is always regarded with reverent worship wherever its dynasty is founded on its duty, and its ambition correlative with its beneficence. Your fancy is pleased with the thought of being noble ladies, with a train of vassals. Be it so: you cannot be too noble, and your train cannot be too great; but see to it that your train is of vassals whom you serve and feed, not merely of slaves who serve and feed you; and that the multitude which obeys you is of those whom you have comforted, not oppressed,—whom you have redeemed, not led into captivity.

And this, which is true of the lower or household dominion, is equally true of the queenly dominion;—that highest dignity is open to you, if you will also accept that highest duty. Rex et Regina—Roi et Reine—"Right-doers;" they differ but from the Lady and Lord, in that their power is supreme over the mind as over the person—that they not only feed and clothe, but direct and teach. And whether consciously or not, you must be, in many a heart, enthroned: there is no putting by that crown; queens you must always be; queens to your lovers; queens to your husbands and your sons; queens of higher mystery to the world beyond, which bows itself, and will for ever bow, before the myrtle crown, and the stainless sceptre, of womanhood. But, alas! you are too often idle and careless queens, grasping at majesty in the least things, while you abdicate it in the greatest; and leaving misrule and violence to work their will among men, in defiance of the power, which, holding straight in gift from the Prince of all Peace, the wicked among you betray, and the good forget.

"Prince of Peace." Note that name. When kings rule in that name, and nobles, and the judges of the earth, they also, in their narrow place, and mortal measure, receive the power of it. There are no other rulers than they: other rule than theirs is but misrule; they who govern verily "Dei gratiâ" are all princes, yes, or princesses, of peace. There is not a war in the world, no, nor an injustice, but you women are answerable for it; not in that you have provoked, but in that you have
not hindered. Men, by their nature, are prone to fight; they will fight for any cause, or for none. It is for you to choose their cause for them, and to forbid them when there is no cause. There is no suffering, no injustice, no misery in the earth, but the guilt of it lies lastly with you. Men can bear the sight of it, but you should not be able to bear it. Men may tread it down without sympathy in their own struggle; but men are feeble in sympathy, and contracted in hope; it is you only who can feel the depths of pain; and conceive the way of its healing. Instead of trying to do this, you turn away from it; you shut yourselves within your park walls and garden gates; and you are content to know that there is beyond them a whole world in wilderness—a world of secrets which you dare not penetrate; and of suffering which you dare not conceive.

I tell you that this is to me quite the most amazing among the phenomena of humanity. I am surprised at no depths to which, when once warped from its honor, that humanity can be degraded. I do not wonder at the miser's death, with his hands, as they relax, dropping gold. I do not wonder at the sensualist's life, with the shroud wrapped about his feet. I do not wonder at the single-handed murder of a single victim, done by the assassin in the darkness of the railway, or reed-shadow of the marsh. I do not even wonder at the myriad-handed murder of multitudes, done boastfully in the daylight, by the frenzy of nations, and the immeasurable, unimaginable guilt, heaped up from hell to heaven, of their priests, and kings. But this is wonderful to me—oh, how wonderful!—to see the tender and delicate woman among you, with her child at her breast, and a power, if she would wield it, over it, and over its father, purer than the air of heaven, and stronger than the seas of earth—nay, a magnitude of blessing which her husband would not part with for all that earth itself, though it were made of one entire and perfect chrysolite—to see her abdicate this majesty to play at precedence with her next-door neighbor! This is wonderful—oh, wonderful!—to see her, with every innocent feeling fresh within her, go out in the morning into her garden to play with the
fringes of its guarded flowers, and lift their heads when they are drooping, with her happy smile upon her face, and no cloud upon her brow, because there is a little wall around her place of peace: and yet she knows, in her heart, if she would only look for its knowledge, that, outside of that little rose-covered wall, the wild grass, to the horizon, is torn up by the agony of men, and beat level by the drift of their life-blood.

Have you ever considered what a deep under meaning there lies, or at least may be read, if we choose, in our custom of strewing flowers before those whom we think most happy? Do you suppose it is merely to deceive them into the hope that happiness is always to fall thus in showers at their feet? —that wherever they pass they will tread on herbs of sweet scent, and that the rough ground will be made smooth for them by depth of roses? So surely as they believe that, they will have, instead, to walk on bitter herbs and thorns; and the only softness to their feet will be of snow. But it is not thus intended they should believe; there is a better meaning in that old custom. The path of a good woman is indeed strewn with flowers: but they rise behind her steps, not before them. “Her feet have touched the meadows, and left the daisies rosy.” You think that only a lover’s fancy;—false and vain! How if it could be true? You think this also, perhaps, only a poet’s fancy—

“Even the light harebell raised its head
Elastic from her airy tread.”

But it is little to say of a woman, that she only does not destroy where she passes. She should revive; the harebells should bloom, not stoop, as she passes. You think I am going into wild hyperbole? Pardon me, not a whit—I mean what I say in calm English, spoken in resolute truth. You have heard it said—(and I believe there is more than fancy even in that saying, but let it pass for a fanciful one)—that flowers only flourish rightly in the garden of some one who loves them. I know you would like that to be true; you would think it a pleasant magic if you could flush your flow-
ers into brighter bloom by a kind look upon them: nay, more, if your look had the power, not only to cheer, but to guard them—if you could bid the black blight turn away, and the knotted caterpillar spare—if you could bid the dew fall upon them in the drought, and say to the south wind, in frost—"Come, thou south, and breathe upon my garden, that the spices of it may flow out." This you would think a great thing? And do you think it not a greater thing, that all this (and how much more than this!) you can do, for fairer flowers than these—flowers that could bless you for having blessed them, and will love you for having loved them;—flowers that have eyes like yours, and thoughts like yours, and lives like yours; which, once saved, you save for ever? Is this only a little power? Far among the moorlands and the rocks,—far in the darkness of the terrible streets,—these feeble florets are lying, with all their fresh leaves torn, and their stems broken—will you never go down to them, nor set them in order in their little fragrant beds, nor fence them in their shuddering from the fierce wind? Shall morning follow morning, for you, but not for them; and the dawn rise to watch, far away, those frantic Dances of Death;* but no dawn rise to breathe upon these living banks of wild violet, and woodbine, and rose; nor call to you, through your casement,—call, (not giving you the name of the English poet's lady, but the name of Dante's great Matilda, who on the edge of happy Lethe, stood, wreathing flowers with flowers,) saying:—

"Come into the garden, Maud,
For the black bat, night, has flown,
And the woodbine spices are wafted abroad
And the musk of the roses blown?"

Will you not go down among them?—among those sweet living things, whose new courage, sprung from the earth with the deep colour of heaven upon it, is starting up in strength of goodly spire; and whose purity, washed from the dust, is opening, bud by bud, into the flower of promise;—and still

* See note, p. 57.
OF QUEENS' GARDENS.

They turn to you, and for you, "The Larkspur listens—I hear, I hear! And the Lily whisper—I wait."

Did you notice that I missed two lines when I read you that first stanza; and think that I had forgotten them? Hear them now:

"Come into the garden, Maud,
For the black bat, night, has flown;
Come into the garden, Maud,
I am here at the gate, alone."

Who is it, think you, who stands at the gate of this sweeter garden, alone, waiting for you? Did you ever hear, not of a Maude, but a Madeleine, who went down to her garden in the dawn, and found one waiting at the gate, whom she supposed to be the gardener? Have you not sought Him often;—sought Him in vain, all through the night;—sought Him in vain at the gate of that old garden where the fiery sword is set? He is never there; but at the gate of this garden He is waiting always—waiting to take your hand—ready to go down to see the fruits of the valley, to see whether the vine has flourished, and the pomegranate budded. There you shall see with Him the little tendrils of the vines that His hand is guiding—there you shall see the pomegranate springing where His hand cast the sanguine seed;—more: you shall see the troops of the angel keepers, that, with their wings, wave away the hungry birds from the pathsides where He has sown, and call to each other between the vineyard rows, "Take us the foxes, the little foxes, that spoil the vines, for our vines have tender grapes." Oh—you queens—you queens! among the hills and happy greenwood of this land of yours, shall the foxes have holes, and the birds of the air have nests; and in your cities, shall the stones cry out against you, that they are the only pillows where the Son of Man can lay His head?
LECTURE III.

THE MYSTERY OF LIFE AND ITS ARTS.

Lecture delivered in the theatre of the Royal College of Science, Dublin, 1868.

96. When I accepted the privilege of addressing you to-day, I was not aware of a restriction with respect to the topics of discussion which may be brought before this Society*—a restriction which, though entirely wise and right under the circumstances contemplated in its introduction, would necessarily have disabled me, thinking as I think, from preparing any lecture for you on the subject of art in a form which might be permanently useful. Pardon me, therefore, in so far as I must transgress such limitation; for indeed my infringement will be of the letter—not of the spirit—of your commands. In whatever I may say touching the religion which has been the foundation of art, or the policy which has contributed to its power, if I offend one, I shall offend all; for I shall take no note of any separations in creeds, or antagonisms in parties: neither do I fear that ultimately I shall offend any, by proving—or at least stating as capable of positive proof—the connection of all that is best in the crafts and arts of man, with the simplicity of his faith, and the sincerity of his patriotism.

97. But I speak to you under another disadvantage, by which I am checked in frankness of utterance, not here only, but everywhere; namely, that I am never fully aware how far my audiences are disposed to give me credit for real knowledge of my subject, or how far they grant me attention only because I have been sometimes thought an ingenious or pleasant essayist upon it. For I have had what, in many respects, I boldly call the misfortune, to set my words some-

* That no reference should be made to religious questions.
times prettily together; not without a foolish vanity in the poor knack that I had of doing so; until I was heavily punished for this pride, by finding that many people thought of the words only, and cared nothing for their meaning. Happily, therefore, the power of using such pleasant language—if indeed it ever were mine—is passing away from me; and whatever I am now able to say at all, I find myself forced to say with great plainness. For my thoughts have changed also, as my words have; and whereas in earlier life, what little influence I obtained was due perhaps chiefly to the enthusiasm with which I was able to dwell on the beauty of the physical clouds, and of their colours in the sky; so all the influence I now desire to retain must be due to the earnestness with which I am endeavouring to trace the form and beauty of another kind of cloud than those; the bright cloud, of which it is written—

“What is your life? It is even as a vapour that appeareth for a little time, and then vanisheth away.”

98. I suppose few people reach the middle or latter period of their age, without having, at some moment of change or disappointment, felt the truth of those bitter words; and been startled by the fading of the sunshine from the cloud of their life, into the sudden agony of the knowledge that the fabric of it was as fragile as a dream, and the endurance of it as transient as the dew. But it is not always that, even at such times of melancholy surprise, we can enter into any true perception that this human life shares, in the nature of it, not only the evanescence, but the mystery of the cloud; that its avenues are wreathed in darkness, and its forms and courses no less fantastic, than spectral and obscure; so that not only in the vanity which we cannot grasp, but in the shadow which we cannot pierce, it is true of this cloudy life of ours, that “man walketh in a vain shadow, and disquieteth himself in vain.”

99. And least of all, whatever may have been the eagerness of our passions, or the height of our pride, are we able to understand in its depth the third and most solemn character in which our life is like those clouds of heaven; that to it be-
104. To those among us, however, who have lived long enough to form some just estimate of the rate of the changes which are, hour by hour in accelerating catastrophe, manifesting themselves in the laws, the arts, and the creeds of men, it seems to me, that now at least, if never at any former time, the thoughts of the true nature of our life, and of its powers and responsibilities, should present themselves with absolute sadness and sternness.

And although I know that this feeling is much deepened in my own mind by disappointment, which, by chance, has attended the greater number of my cherished purposes, I do not for that reason distrust the feeling itself, though I am on my guard against an exaggerated degree of it: nay, I rather believe that in periods of new effort and violent change, disappointment is a wholesome medicine; and that in the secret of it, as in the twilight so beloved by Titian, we may see the colours of things with deeper truth than in the most dazzling sunshine. And because these truths about the works of men, which I want to bring to-day before you, are most of them sad ones, though at the same time helpful; and because also I believe that your kind Irish hearts will answer more gladly to the truthful expression of a personal feeling, than to the exposition of an abstract principle, I will permit myself so much unreserved speaking of my own causes of regret, as may enable you to make just allowance for what, ac-
cording to your sympathies, you will call either the bitterness, or the insight, of a mind which has surrendered its best hopes, and been foiled in its favorite aims.

101. I spent the ten strongest years of my life, (from twenty to thirty,) in endeavoring to show the excellence of the work of the man whom I believed, and rightly believed, to be the greatest painter of the schools of England since Reynolds. I had then perfect faith in the power of every great truth or beauty to prevail ultimately, and take its right place in usefulness and honour; and I strove to bring the painter's work into this due place, while the painter was yet alive. But he knew, better than I, the uselessness of talking about what people could not see for themselves. He always discouraged me scornfully, even when he thanked me—and he died before even the superficial effect of my work was visible. I went on, however, thinking I could at least be of use to the public, if not to him, in proving his power. My books got talked about a little. The prices of modern pictures, generally, rose, and I was beginning to take some pleasure in a sense of gradual victory, when, fortunately or unfortunately, an opportunity of perfect trial undeceived me at once, and for ever. The Trustees of the National Gallery commissioned me to arrange the Turner drawings there, and permitted me to prepare three hundred examples of his studies from nature, for exhibition at Kensington. At Kensington they were and are, placed for exhibition; but they are not exhibited, for the room in which they hang is always empty.

102. Well—this showed me at once, that those ten years of my life had been, in their chief purpose, lost. For that, I did not so much care; I had, at least, learned my own business thoroughly, and should be able, as I fondly supposed, after such a lesson, now to use my knowledge with better effect. But what I did care for, was the—to me frightful—discovery, that the most splendid genius in the arts might be permitted by Providence to labour and perish uselessly; that in the very fineness of it there might be something rendering it invisible to ordinary eyes; but, that with this strange ex-
cellence, faults might be mingled which would be as deadly as its virtues were vain; that the glory of it was perishable, as well as invisible, and the gift and grace of it might be to us, as snow in summer, and as rain in harvest.

103. That was the first mystery of life to me. But, while my best energy was given to the study of painting, I had put collateral effort, more prudent, if less enthusiastic, into that of architecture; and in this I could not complain of meeting with no sympathy. Among several personal reasons which caused me to desire that I might give this my closing lecture on the subject of art here, in Ireland, one of the chief was, that in reading it, I should stand near the beautiful building,—the engineers' school of your college,—which was the first realization I had the joy to see, of the principles I had, until then, been endeavouring to teach; but which alas, is now, to me, no more than the richly canopied monument of one of the most earnest souls that ever gave itself to the arts, and one of my truest and most loving friends, Benjamin Woodward. Nor was it here in Ireland only that I received the help of Irish sympathy and genius. When, to another friend, Sir Thomas Deane, with Mr. Woodward, was entrusted the building of the museum at Oxford, the best details of the work were executed by sculptors who had been born and trained here; and the first window of the façade of the building, in which was inaugurated the study of natural science in England, in true fellowship with literature, was carved from my design by an Irish sculptor.

104. You may perhaps think that no man ought to speak of disappointment, to whom, even in one branch of labour, so much success was granted. Had Mr. Woodward now been beside me, I had not so spoken; but his gentle and passionate spirit was cut off from the fulfilment of its purposes, and the work we did together is now become vain. It may not be so in future; but the architecture we endeavoured to introduce is inconsistent alike with the reckless luxury, the deforming mechanism, and the squalid misery of modern cities; among the formative fashions of the day, aided, especially in England, by ecclesiastical sentiment, it indeed obtained notoriety; and
sometimes behind an engine furnace, or a railroad bank, you may detect the pathetic discord of its momentary grace, and, with toil, decipher its floral carvings choked with soot. I felt answerable to the schools I loved, only for their injury. I perceived that this new portion of my strength had also been spent in vain; and from amidst streets of iron, and palaces of crystal, shrank back at last to the carving of the mountain and colour of the flower.

105. And still I could tell of failure, and failure repeated as years went on; but I have trespassed enough on your patience to show you, in part, the causes of my discouragement. Now let me more deliberately tell you its results. You know there is a tendency in the minds of many men, when they are heavily disappointed in the main purposes of their life, to feel, and perhaps in warning, perhaps in mockery, to declare, that life itself is a vanity. Because it has disappointed them, they think its nature is of disappointment always, or at best, of pleasure that can be grasped by imagination only; that the cloud of it has no strength nor fire within; but is a painted cloud only, to be delighted in, yet despised. You know how beautifully Pope has expressed this particular phase of thought:

"Meanwhile opinion gilds, with varying rays,
These painted clouds that beautify our days;
Each want of happiness by hope supplied,
And each vacuity of sense, by pride.

Hope builds as fast as Knowledge can destroy;
In Folly's cup, still laughs the bubble joy.
One pleasure past, another still we gain,
And not a vanity is given in vain."

But the effect of failure upon my own mind has been just the reverse of this. The more that my life disappointed me, the more solemn and wonderful it became to me. It seemed, contrarily to Pope's saying, that the vanity of it was indeed given in vain; but that there was something behind the veil of it, which was not vanity. It became to me not a painted cloud, but a terrible and impenetrable one: not a mirage,
which vanished as I drew near, but a pillar of darkness, to which I was forbidden to draw near. For I saw that both my own failure, and such success in petty things as in its poor triumph seemed to me worse than failure, came from the want of sufficiently earnest effort to understand the whole law and meaning of existence, and to bring it to noble and due end; as, on the other hand, I saw more and more clearly that all enduring success in the arts, or in any other occupation, had come from the ruling of lower purposes, not by a conviction of their nothingness, but by a solemn faith in the advancing power of human nature, or in the promise, however dimly apprehended, that the mortal part of it would one day be swallowed up in immortality; and that, indeed, the arts themselves never had reached any vital strength or honour but in the effort to proclaim this immortality, and in the service either of great and just religion, or of some unselfish patriotism, and law of such national life as must be the foundation of religion.

106. Nothing that I have ever said is more true or necessary—nothing has been more misunderstood or misapplied—than my strong assertion, that the arts can never be right themselves, unless their motive is right. It is misunderstood this way: weak painters, who have never learned their business, and cannot lay a true line, continually come to me, crying out—"Look at this picture of mine; it must be good, I had such a lovely motive. I have put my whole heart into it, and taken years to think over its treatment." Well, the only answer for these people is—if one had the cruelty to make it—"Sir, you cannot think over anything in any number of years,—you haven't the head to do it; and though you had fine motives, strong enough to make you burn yourself in a slow fire, if only first you could paint a picture, you can't paint one, nor half an inch of one; you haven't the hand to do it."

But, far more decisively we have to say to the men who do know their business, or may know it if they choose—"Sir, you have this gift and a mighty one; see that you serve your nation faithfully with it. It is a greater trust than ships and armies: you might cast them away, if you were their captain,
with less treason to your people than in casting your own glorious power away, and serving the devil with it instead of men. Ships and armies you may replace if they are lost, but a great intellect, once abused, is a curse to the earth for ever."

107. This, then, I meant by saying that the arts must have noble motive. This also I said respecting them, that they never had prospered, nor could prosper, but when they had such true purpose, and were devoted to the proclamation of divine truth or law. And yet I saw also that they had always failed in this proclamation—that poetry, and sculpture, and painting, though only great when they strove to teach us something about the gods, never had taught us anything trustworthy about the gods, but had always betrayed their trust in the crisis of it, and, with their powers at the full reach, became ministers to pride and to lust. And I felt also, with increasing amazement, the unconquerable apathy in ourselves the hearers, no less than in these the teachers; and that, while the wisdom and rightness of every act and art of life could only be consistent with a right understanding of the ends of life, we were all plunged as in a languid dream—our heart fat, and our eyes heavy, and our ears closed, lest the inspiration of hand or voice should reach us—lest we should see with our eyes, and understand with our hearts, and be healed.

108. This intense apathy in all of us is the first great mystery of life; it stands in the way of every perception, every virtue. There is no making ourselves feel enough astonishment at it. That the occupations or pastimes of life should have no motive, is understandable; but—that life itself should have no motive—that we neither care to find out what it may lead to, nor to guard against its being for ever taken away from us—here is a mystery indeed. For, just suppose I were able to call at this moment to any one in this audience by name, and to tell him positively that I knew a large estate had been lately left to him on some curious conditions; but that, though I knew it was large, I did not know how large, nor even where it was—whether in the East Indies or the West, or in England, or at the Antipodes. I only knew it
was a vast estate, and that there was a chance of his losing it altogether if he did not soon find out on what terms it had been left to him. Suppose I were able to say this positively to any single man in this audience, and he knew that I did not speak without warrant, do you think that he would rest content with that vague knowledge, if it were anywise possible to obtain more? Would he not give every energy to find some trace of the facts, and never rest till he had ascertained where this place was, and what it was like? And suppose he were a young man, and all he could discover by his best endeavour was, that the estate was never to be his at all unless he persevered, during certain years of probation, in an, orderly and industrious life; but that, according to the rightness of his conduct, the portion of the estate assigned to him would be greater or less, so that it literally depended on his behaviour from day to day whether he got ten thousand a year, or thirty thousand a year, or nothing whatever—would you not think it strange if the youth never troubled himself to satisfy the conditions in any way, nor even to know what was required of him, but lived exactly as he chose, and never inquired whether his chances of the estate were increasing or passing away? Well, you know that this is actually and literally so with the greater number of the educated persons now living in Christian countries. Nearly every man and woman, in any company such as this, outwardly professes to believe—and a large number unquestionably think they believe—much more than this; not only that a quite unlimited estate is in prospect for them if they please the Holder of it, but that the infinite contrary of such a possession—an estate of perpetual misery, is in store for them if they displease this great Land-Holder, this great Heaven-Holder. And yet there is not one in a thousand of these human souls that cares to think, for ten minutes of the day, where this estate is, or how beautiful it is, or what kind of life they are to lead in it, or what kind of life they must lead to obtain it.

109. You fancy that you care to know this: so little do you care that, probably, at this moment many of you are displeased with me for talking of the matter! You came to hear
about the Art of this world, not about the Life of the next, and you are provoked with me for talking of what you can hear any Sunday in church. But do not be afraid. I will tell you something before you go about pictures, and carvings, and pottery, and what else you would like better to hear of than the other world. Nay, perhaps you say, "We want you to talk of pictures and pottery, because we are sure that you know something of them, and you know nothing of the other world." Well—I don't. That is quite true. But the very strangeness and mystery of which I urge you to take notice is in this—that I do not;—nor you either. Can you answer a single bold question unflinchingly about that other world—Are you sure there is a heaven? Sure there is a hell? Sure that men are dropping before your faces through the pavements of these streets into eternal fire, or sure that they are not? Sure that at your own death you are going to be delivered from all sorrow, to be endowed with all virtue, to be gifted with all felicity, and raised into perpetual companionship with a King, compared to whom the kings of the earth are as grasshoppers, and the nations as the dust of His feet? Are you sure of this? or, if not sure, do any of us so much as care to make it sure? and, if not, how can anything that we do be right—how can anything we think be wise; what honor can there be in the arts that amuse us, or what profit in the possessions that please?

Is not this a mystery of life?

110. But farther, you may, perhaps, think it a beneficent ordinance for the generality of men that they do not, with earnestness or anxiety, dwell on such questions of the future; because the business of the day could not be done if this kind of thought were taken by all of us for the morrow. Be it so: but at least we might anticipate that the greatest and wisest of us, who were evidently the appointed teachers of the rest, would set themselves apart to seek out whatever could be surely known of the future destinies of their race; and to teach this in no rhetorical or ambiguous manner, but in the plainest and most severely earnest words.

Now, the highest representatives of men who have thus en-
deavoured, during the Christian era, to search out these deep things, and relate them, are Dante and Milton. There are none who for earnestness of thought, for mastery of word, can be classed with these. I am not at present, mind you, speaking of persons set apart in any priestly or pastoral office, to deliver creeds to us, or doctrines; but of men who try to discover and set forth, as far as by human intellect is possible, the facts of the other world. Divines may perhaps teach us how to arrive there, but only these two poets have in any powerful manner striven to discover, or in any definite words professed to tell, what we shall see and become there: or how those upper and nether worlds are, and have been, inhabited.

111. And what have they told us? Milton’s account of the most important event in his whole system of the universe, the fall of the angels, is evidently unbelievable to himself; and the more so, that it is wholly founded on, and in a great part spoiled and degraded from, Hesiod’s account of the decisive war of the younger gods with the Titans. The rest of his poem is a picturesque drama, in which every artifice of invention is visibly and consciously employed, not a single fact being, for an instant, conceived as tenable by any living faith. Dante’s conception is far more intense, and, by himself, for the time, not to be escaped from; it is indeed a vision, but a vision only, and that one of the wildest that ever entranced a soul—a dream in which every grotesque type or phantasy of heathen tradition is renewed, and adorned; and the destinies of the Christian Church, under their most sacred symbols, become literally subordinate to the praise, and are only to be understood by the aid, of one dear Florentine maiden.

112. I tell you truly that, as I strive more with this strange lethargy and trance in myself, and awake to the meaning and power of life, it seems daily more amazing to me that men such as these should dare to play with the most precious truths (or the most deadly untruths), by which the whole human race listening to them could be informed, or deceived;—all the world their audiences for ever, with pleased ear, and passionate heart;—and yet, to this submissive infinitude of
souls, and evermore succeeding and succeeding multitude, hungry for bread of life, they do but play upon sweetly modulated pipes; with pompous nomenclature adorn the councils of hell; touch a troubadour's guitar to the courses of the suns; and fill the openings of eternity, before which prophets have veiled their faces, and which angels desire to look into, with idle puppets of their scholastic imagination, and melancholy lights of frantic faith in their lost mortal love.

Is not this a mystery of life?

113. But more. We have to remember that these two great teachers were both of them warped in their temper, and thwarted in their search for truth. They were men of intellectual war, unable, through darkness of controversy, or stress of personal grief, to discern where their own ambition modified their utterances of the moral law; or their own agony mingled with their anger at its violation. But greater men than these have been—innocent-hearted—too great for contest. Men, like Homer and Shakespeare, of so unrecognized personality, that it disappears in future ages, and becomes ghostly, like the tradition of a lost heathen god. Men, therefore, to whose unoffended, uncondemning sight, the whole of human nature reveals itself in a pathetic weakness, with which they will not strive; or in mournful and transitory strength, which they dare not praise. And all Pagan and Christian civilization thus becomes subject to them. It does not matter how little, or how much, any of us have read, either of Homer or Shakespeare: everything round us, in substance, or in thought, has been moulded by them. All Greek gentlemen were educated under Homer. All Roman gentlemen, by Greek literature. All Italian, and French, and English gentlemen, by Roman literature, and by its principles. Of the scope of Shakespeare, I will say only, that the intellectual measure of every man since born, in the domains of creative thought, may be assigned to him, according to the degree in which he has been taught by Shakespeare. Well, what do these two men, centres of moral intelligence, deliver to us of conviction respecting what it most behoves that intelligence to grasp? What is their hope; their crown of rejoicing?
what manner of exhortation have they for us, or of rebuke? what lies next their own hearts, and dictates their undying words? Have they any peace to promise to our unrest—any redemption to our misery?

114. Take Homer first, and think if there is any sadder image of human fate than the great Homeric story. The main features in the character of Achilles are its intense desire of justice, and its tenderness of affection. And in that bitter song of the Iliad, this man, though aided continually by the wisest of the gods, and burning with the desire of justice in his heart, becomes yet, through ill-governed passion, the most unjust of men: and, full of the deepest tenderness in his heart, becomes yet, through ill-governed passion, the most cruel of men. Intense alike in love and in friendship, he loses, first his mistress, and then his friend; for the sake of the one, he surrenders to death the armies of his own land; for the sake of the other, he surrenders all. Will a man lay down his life for his friend? Yea—even for his dead friend, this Achilles, though goddess-born, and goddess-taught, gives up his kingdom, his country, and his life—casts alike the innocent and guilty, with himself, into one gulf of slaughter, and dies at last by the hand of the basest of his adversaries. Is not this a mystery of life?

115. But what, then, is the message to us of our own poet, and searcher of hearts, after fifteen hundred years of Christian faith have been numbered over the graves of men? Are his words more cheerful than the heathen's—is his hope more near—his trust more sure—his reading of fate more happy? Ah, no! He differs from the Heathen poet chiefly in this—that he recognizes, for deliverance, no gods nigh at hand; and that, by petty chance—by momentary folly—by broken message—by fool's tyranny—or traitor's snare, the strongest and most righteous are brought to their ruin, and perish without word of hope. He indeed, as part of his rendering of character, ascribes the power and modesty of habitual devotion, to the gentle and the just. The death-bed of Katharine is bright with vision of angels; and the great soldier-king, standing by his few dead, acknowledges the pres-
ence of the hand that can save alike by many or by few. But observe that from those who with deepest spirit, meditate, and with deepest passion, mourn, there are no such words as these; nor in their hearts are any such consolations. Instead of the perpetual sense of the helpful presence of the Deity, which, through all heathen tradition, is the source of heroic strength, in battle, in exile, and in the valley of the shadow of death, we find only in the great Christian poet, the consciousness of a moral law, through which "the gods are just, and of our pleasant vices make instruments to scourge us;" and of the resolved arbitration of the destinies, that conclude into precision of doom what we feebly and blindly began; and force us, when our indiscretion serves us, and our deepest plots do pall, to the confession, that "there's a divinity that shapes our ends, rough hew them how we will."

Is not this a mystery of life?

116. Be it so then. About this human life that is to be, or that is, the wise religious men tell us nothing that we can trust; and the wise contemplative men, nothing that can give us peace. But there is yet a third class, to whom we may turn—the wise practical men. We have sat at the feet of the poets who sang of heaven, and they have told us their dreams. We have listened to the poets who sang of earth, and they have chanted to us dirges, and words of despair. But there is one class of men more:—men, not capable of vision, nor sensitive to sorrow, but firm of purpose—practised in business: learned in all that can be, (by handling,—) known. Men whose hearts and hopes are wholly in this present world, from whom, therefore, we may surely learn, at least, how, at present, conveniently to live in it. What will they say to us, or show us by example? These kings—these councillors—these statesmen and builders of kingdoms—these capitalists and men of business, who weigh the earth, and the dust of it, in a balance. They know the world, surely; and what is the mystery of life to us, is none to them. They can surely show us how to live, while we live, and to gather out of the present world what is best.

117. I think I can best tell you their answer, by telling you
a dream I had once. For though I am no poet, I have dreams sometimes:—I dreamed I was at a child's May-day party, in which every means of entertainment had been provided for them, by a wise and kind host. It was in a stately house, with beautiful gardens attached to it; and the children had been set free in the rooms and gardens, with no care whatever but how to pass their afternoon rejoicingly. They did not, indeed, know much about what was to happen next day; and some of them, I thought, were a little frightened, because there was a chance of their being sent to a new school where there were examinations; but they kept the thoughts of that out of their heads as well as they could, and resolved to enjoy themselves. The house, I said, was in a beautiful garden, and in the garden were all kinds of flowers; sweet grassy banks for rest; and smooth lawns for play; and pleasant streams and woods; and rocky places for climbing. And the children were happy for a little while, but presently they separated themselves into parties; and then each party declared, it would have a piece of the garden for its own, and that none of the others should have anything to do with that piece. Next, they quarrelled violently, which pieces they would have; and at last the boys took up the thing, as boys should do, "practically," and fought in the flower-beds till there was hardly a flower left standing; then they trampled down each other's bits of the garden out of spite; and the girls cried till they could cry no more; and so they all lay down at last breathless in the ruin, and waited for the time when they were to be taken home in the evening.*

118. Meanwhile, the children in the house had been making themselves happy also in their manner. For them, there had been provided every kind of in-doors pleasure: there was music for them to dance to; and the library was open, with all manner of amusing books; and there was a museum, full of the most curious shells, and animals, and birds; and there was a workshop, with lathes and carpenter's tools, for the in-

* I have sometimes been asked what this means. I intended it to set forth the wisdom of men in war contending for kingdoms, and what follows to set forth their wisdom in peace, contending for wealth.
genious boys; and there were pretty fantastic dresses, for the girls to dress in; and there were microscopes, and kaleidoscopes; and whatever toys a child could fancy; and a table, in the dining-room, loaded with everything nice to eat.

But, in the midst of all this, it struck two or three of the more "practical" children, that they would like some of the brass-headed nails that studded the chairs; and so they set to work to pull them out. Presently, the others, who were reading, or looking at shells, took a fancy to do the like; and, in a little while, all the children, nearly, were spraining their fingers, in pulling out brass-headed nails. With all that they could pull out, they were not satisfied; and then, everybody wanted some of somebody else's. And at last the really practical and sensible ones declared, that nothing was of any real consequence, that afternoon, except to get plenty of brass-headed nails; and that the books, and the cakes, and the microscopes were of no use at all in themselves, but only, if they could be exchanged for nail-heads. And, at last they began to fight for nail-heads, as the others fought for the bits of garden. Only here and there, a despised one shrank away into a corner, and tried to get a little quiet with a book, in the midst of the noise; but all the practical ones thought of nothing else but counting nail-heads all the afternoon—even though they knew they would not be allowed to carry so much as one brass knob away with them. But no—it was—"who has most nails? I have a hundred, and you have fifty; or, I have a thousand and you have two. I must have as many as you before I leave the house, or I cannot possibly go home in peace." At last, they made so much noise that I awoke, and thought to myself, "What a false dream that is, of children." The child is the father of the man; and wiser. Children never do such foolish things. Only men do.

119. But there is yet one last class of persons to be interrogated. The wise religious men we have asked in vain; the wise contemplative men, in vain; the wise worldly men, in vain. But there is another group yet. In the midst of this vanity of empty religion—of tragic contemplation—of wrathful and wretched ambition, and dispute for dust, there is yet
one great group of persons, by whom all these disputers live—the persons who have determined, or have had it by a beneficent Providence determined for them, that they will do something useful; that whatever may be prepared for them hereafter, or happen to them here, they will, at least, deserve the food that God gives them by winning it honourably; and that, however fallen from the purity, or far from the peace, of Eden, they will carry out the duty of human dominion, though they have lost its felicity; and dress and keep the wilderness, though they no more can dress or keep the garden.

These,—hewers of wood, and drawers of water—these bent under burdens, or torn of scourges—these, that dig and weave—that plant and build; workers in wood, and in marble, and in iron—by whom all food, clothing, habitation, furniture, and means of delight are produced, for themselves, and for all men beside; men, whose deeds are good, though their words may be few; men, whose lives are serviceable, be they never so short, and worthy of honour, be they never so humble;—from these, surely at least, we may receive some clear message of teaching: and pierce, for an instant, into the mystery of life, and of its arts.

120. Yes; from these, at last, we do receive a lesson. But I grieve to say, or rather—for that is the deeper truth of the matter—I rejoice to say—this message of theirs can only be received by joining them—not by thinking about them.

You sent for me to talk to you of art; and I have obeyed you in coming. But the main thing I have to tell you is,—that art must not be talked about. The fact that there is talk about it all, signifies that it is ill done, or cannot be done. No true painter ever speaks, or ever has spoken, much of his art. The greatest speak nothing. Even Reynolds is no exception, for he wrote of all that he could not himself do, and was utterly silent respecting all that he himself did.

The moment a man can really do his work, he becomes speechless about it. All words become idle to him—all theories.
121. Does a bird need to theorize about building its nest, or boast of it when built? All good work is essentially done that way—without hesitation, without difficulty, without boasting; and in the doers of the best, there is an inner and involuntary power which approximates literally to the instinct of an animal—nay, I am certain that in the most perfect human artists, reason does not supersede instinct, but is added to an instinct as much more divine than that of the lower animals as the human body is more beautiful than theirs; that a great singer sings not with less instinct than the nightingale, but with more—only more various, applicable, and governable; that a great architect does not build with less instinct than the beaver or the bee, but with more—with an innate cunning of proportion that embraces all beauty, and a divine ingenuity of skill that improvises all construction. But be that as it may—be the instinct less or more than that of inferior animals—like or unlike theirs, still the human art is dependent on that first, and then upon an amount of practice, of science,—and of imagination disciplined by thought, which the true possessor of it knows to be incommunicable, and the true critic of it, inexplicable, except through long process of laborious years. That journey of life's conquest, in which hills over hills, and Alps on Alps arose, and sank,—do you think you can make another trace it painlessly, by talking? Why, you cannot even carry us up an Alp, by talking. You can guide us up it, step by step, no otherwise—even so, best silently. You girls, who have been among the hills, know how the bad guide chatters and gesticulates, and it is "put your foot here," and "mind how you balance yourself there;" but the good guide walks on quietly, without a word, only with his eyes on you when need is, and his arm like an iron bar, if need be.

122. In that slow way, also, art can be taught—if you have faith in your guide, and will let his arm be to you as an iron bar when need is. But in what teacher of art have you such faith? Certainly not in me; for, as I told you at first, I know we'll enough it is only because you think I can talk, not because you think I know my business, that you let me speak to you at all. If I were to tell you anything that seemed
to you strange, you would not believe it, and yet it would only be in telling you strange things that I could be of use to you. I could be of great use to you—infinitude use, with brief saying, if you would believe it; but you would not, just because the thing that would be of real use would displease you. You are all wild, for instance, with admiration of Gustave Doré. Well, suppose I were to tell you in the strongest terms I could use, that Gustave Doré's art was bad—bad, not in weakness, —not in failure,—but bad with dreadful power—the power of the Furies and the Harpies mingled, enraged, and polluting; that so long as you looked at it, no perception of pure or beautiful art was possible for you. Suppose I were to tell you that! What would be the use? Would you look at Gustave Doré less? Rather more, I fancy. On the other hand, I could soon put you into good humour with me, if I chose. I know well enough what you like, and how to praise it to your better liking. I could talk to you about moonlight, and twilight, and spring flowers, and autumn leaves, and the Madonnas of Raphael—how motherly! and the Sibyls of Michael Angelo—how majestic! and the saints of Angelico—how pious! and the Cherubs of Correggio—how delicious! Old as I am, I could play you a tune on the harp yet, that you would dance to. But neither you nor I should be a bit the better or wiser; or, if we were, our increased wisdom could be of no practical effect. For, indeed, the arts, as regards teachableness, differ from the sciences also in this, that their power is founded not merely on facts which can be communicated, but on dispositions which require to be created. Art is neither to be achieved by effort of thinking, nor explained by accuracy of speaking. It is the instinctive and necessary result of powers which can only be developed through the mind of successive generations, and which finally burst into life under social conditions as slow of growth as the faculties they regulate. Whole æras of mighty history are summed, and the passions of dead myriads are concentrated, in the existence of a noble art; and if that noble art were among us, we should feel it and rejoice; not caring in the least to hear lectures on it; and since it is not among us, be assured we have to go
back to the root of it, or, at least, to the place where the stock of it is yet alive, and the branches began to die.

123. And now, may I have your pardon for pointing out, partly with reference to matters which are at this time of greater moment than the arts—that if we undertook such recession to the vital germ of national arts that have decayed, we should find a more singular arrest of their power in Ireland than in any other European country. For in the eighth century, Ireland possessed a school of art in her manuscripts and sculpture, which, in many of its qualities—apparently in all essential qualities of decorative invention—was quite without rival; seeming as if it might have advanced to the highest triumphs in architecture and in painting. But there was one fatal flaw in its nature, by which it was stayed, and stayed with a conspicuousness of pause to which there is no parallel: so that, long ago, in tracing the progress of European schools from infancy to strength, I chose for the students of Kensington, in a lecture since published, two characteristic examples of early art, of equal skill; but in the one case, skill which was progressive—in the other, skill which was at pause. In the one case, it was work receptive of correction—hungry for correction—and in the other, work which inherently rejected correction. I chose for them a corrigible Eve, and an incorrigible Angel, and I grieve to say that the incorrigible Angel was also an Irish angel! *

124. And the fatal difference lay wholly in this. In both pieces of art there was an equal falling short of the needs of fact; but the Lombardic Eve knew she was in the wrong, and the Irish Angel thought himself all right. The eager Lombardic sculptor, though firmly insisting on his childish idea, yet showed in the irregular broken touches of the features, and the imperfect struggle for softer lines in the form, a perception of beauty and law that he could not render; there was the strain of effort, under conscious imperfection, in every line. But the Irish missal-painter had drawn his angel with no sense of failure, in happy complacency, and put red dots into the palms of each hand, and rounded the eyes into

* See The Two Paths, p. 27.
perfect circles, and, I regret to say, left the mouth out altogether, with perfect satisfaction to himself.

125. May I without offence ask you to consider whether this mode of arrest in ancient Irish art may not be indicative of points of character which even yet, in some measure, arrest your national power? I have seen much of Irish character, and have watched it closely, for I have also much loved it. And I think the form of failure to which it is most liable is this, that being generous-hearted, and wholly intending always to do right, it does not attend to the external laws of right, but thinks it must necessarily do right because it means to do so, and therefore does wrong without finding it out; and then when the consequences of its wrong come upon it, or upon others connected with it, it cannot conceive that the wrong is in anywise of its causing or of its doing, but flies into wrath, and a strange agony of desire for justice, as feeling itself wholly innocent, which leads it farther astray, until there is nothing that it is not capable of doing with a good conscience.

126. But mind, I do not mean to say that, in past or present relations between Ireland and England, you have been wrong, and we right. Far from that, I believe that in all great questions of principle, and in all details of administration of law, you have been usually right, and we wrong; sometimes in misunderstanding you, sometimes in resolute iniquity to you. Nevertheless, in all disputes between states, though the strongest is nearly always mainly in the wrong, the weaker is often so in a minor degree; and I think we sometimes admit the possibility of our being in error, and you never do.

127. And now, returning to the broader question what these arts and labours of life have to teach us of its mystery, this is the first of their lessons—that the more beautiful the art, the more it is essentially the work of people who feel themselves wrong;—who are striving for the fulfilment of a law, and the grasp of a loveliness, which they have not yet attained, which they feel even farther and farther from attaining, the more they strive for it. And yet, in still deeper
The very sense of inevitable error from their purpose marks the perfectness of that purpose, and the continued sense of failure arises from the continued opening of the eyes more clearly to all the sacredest laws of truth.

128. This is one lesson. The second is a very plain, and greatly precious one, namely:—that whenever the arts and labours of life are fulfilled in this spirit of striving against misrule, and doing whatever we have to do, honourably and perfectly, they invariably bring happiness, as much as seems possible to the nature of man. In all other paths, by which that happiness is pursued, there is disappointment, or destruction: for ambition and for passion there is no rest—no fruition; the fairest pleasures of youth perish in a darkness greater than their past light; and the loftiest and purest love too often does but inflame the cloud of life with endless fire of pain. But, ascending from lowest to highest, through every scale of human industry, that industry worthily followed, gives peace. Ask the labourer in the field, at the forge, or in the mine; ask the patient, delicate-fingered artisan, or the strong-armed, fiery-hearted worker in bronze, and in marble, and with the colours of light; and none of these, who are true workmen, will ever tell you, that they have found the law of heaven an unkind one—that in the sweat of their face they should eat bread, till they return to the ground; nor that they ever found it an unrewarded obedience, if, indeed, it was rendered faithfully to the command—“Whatsoever thy hand findeth to do—do it with thy might.”

129. These are the two great and constant lessons which our labourers teach us of the mystery of life. But there is another, and a sadder one, which they cannot teach us, which we must read on their tombstones.

“Do it with thy might.” There have been myriads upon myriads of human creatures who have obeyed this law—who have put every breath and nerve of their being into its toil—who have devoted every hour, and exhausted every faculty—who have bequeathed their unaccomplished thoughts at death
—who being dead, have yet spoken, by majesty of memory, and strength of example. And, at last, what has all this "Might" of humanity accomplished, in six thousand years of labour and sorrow? What has it done? Take the three chief occupations and arts of men, one by one, and count their achievements. Begin with the first—the lord of them all—agriculture. Six thousand years have passed since we were set to till the ground, from which we were taken. How much of it is tilled? How much of that which is, wisely or well? In the very centre and chief garden of Europe—where the two forms of parent Christianity have had their fortresses—where the noble Catholics of the Forest Cantons, and the noble Protestants of the Vaudois valleys, have maintained, for dateless ages, their faiths and liberties—there the unchecked Alpine rivers yet run wild in devastation: and the marshes, which a few hundred men could redeem with a year's labour, still blast their helpless inhabitants into fevered idiotism. That is so, in the centre of Europe! While, on the near coast of Africa, once the Garden of the Hesperides, an Arab woman, but a few sunsets since, ate her child, for famine. And, with all the treasures of the East at our feet, we, in our own dominion, could not find a few grains of rice, for a people that asked of us no more; but stood by, and saw five hundred thousand of them perish of hunger.

130. Then, after agriculture, the art of kings, take the next head of human arts— weaving; the art of queens, honoured of all noble Heathen women, in the person of their virgin goddess—honoured of all Hebrew women, by the word of their wisest king—"She layeth her hands to the spindle, and her hands hold the distaff; she stretcheth out her hand to the poor. She is not afraid of the snow for her household, for all her household are clothed with scarlet. She maketh herself covering of tapestry, her clothing is silk and purple. She maketh fine linen, and selleth it, and delivereth girdles to the merchant." What have we done in all these thousands of years with this bright art of Greek maid and Christian matron? Six thousand years of weaving, and have we learned to weave? Might not every naked wall have been purple
with tapestry, and every feeble breast fenced with sweet
colours from the cold? What have we done? Our fingers
are too few, it seems, to twist together some poor covering
for our bodies. We set our streams to work for us, and
choke the air with fire, to turn our spinning-wheels—and,—
are we yet clothed? Are not the streets of the capitals of
Europe foul with the sale of cast clouts and rotten rags? Is
not the beauty of your sweet children left in wretchedness
of disgrace, while, with better honour, nature clothes the
brood of the bird in its nest, and the suckling of the wolf in
her den? And does not every winter's snow robe what you
have not robed, and shroud what you have not shrouded; and
every winter's wind bear up to heaven its wasted souls, to
witness against you hereafter, by the voice of their Christ,—
"I was naked, and ye clothed me not?"

131. Lastly—take the Art of Building—the strongest—
proudest—most orderly—most enduring of the arts of man,
that, of which the produce is in the surest manner accumula-
tive, and need not perish, or be replaced; but if once well
done, will stand more strongly than the unbalanced rocks—
more prevalently than the crumbling hills. The art which is
associated with all civic pride and sacred principle; with
which men record their power—satisfy their enthusiasm—
make sure their defence—define and make dear their habita-
tion. And, in six thousand years of building, what have we
done? Of the greater part of all that skill and strength,
no vestige is left, but fallen stones, that encumber the fields
and impede the streams. But, from this waste of disorder,
and of time, and of rage, what is left to us? Constructive
and progressive creatures, that we are, with ruling brains, and
forming hands, capable of fellowship, and thirsting for fame,
can we not contend, in comfort, with the insects of the forest,
or, in achievement, with the worm of the sea. The white surf
rages in vain against the ramparts built by poor atoms of
scarcely nascent life; but only ridges of formless ruin mark
the places where once dwelt our noblest multitudes. The ant
and the moth have cells for each of their young, but our lit-
tle ones lie in festering heaps, in homes that consume them
like graves; and night by night, from the corners of our streets, rises up the cry of the homeless—"I was a stranger, and ye took me not in."

132. Must it be always thus? Is our life for ever to be without profit—without possession? Shall the strength of its generations be as barren as death; or cast away their labour, as the wild figtree casts her untimely figs? Is it all a dream then—the desire of the eyes and the pride of life—or, if it be, might we not live in nobler dream than this? The poets and prophets, the wise men, and the scribes, though they have told us nothing about a life to come, have told us much about the life that is now. They have had—they also—their dreams, and we have laughed at them. They have dreamed of mercy, and of justice; they have dreamed of peace and good-will; they have dreamed of labour undisappointed, and of rest undisturbed; they have dreamed of fulness in harvest, and overflowing in store; they have dreamed of wisdom in council, and of providence in law; of gladness of parents, and strength of children, and glory of grey hairs. And at these visions of theirs we have mocked, and held them for idle and vain, unreal and unaccomplishable. What have we accomplished with our realities? Is this what has come of our worldly wisdom, tried against their folly? this our mightiest possible, against their impotent ideal? or have we only wandered among the spectra of a baser felicity, and chased phantoms of the tombs, instead of visions of the Almighty; and walked after the imaginations of our evil hearts, instead of after the counsels of Eternity, until our lives—not in the likeness of the cloud of heaven, but of the smoke of hell—have become "as a vapour, that appeareth for a little time, and then vanisheth away?"

133. Does it vanish then? Are you sure of that?—sure, that the nothingness of the grave will be a rest from this troubled nothingness; and that the coiling shadow, which disquiets itself in vain, cannot change into the smoke of the torment that ascends for ever? Will any answer that they are sure of it, and that there is no fear, nor hope, nor desire, nor labour, whither they go? Be it so; will you not, then,
make as sure of the Life, that now is, as you are of the Death that is to come? Your hearts are wholly in this world—will you not give them to it wisely, as well as perfectly? And see, first of all, that you have hearts, and sound hearts, too, to give. Because you have no heaven to look for, is that any reason that you should remain ignorant of this wonderful and infinite earth, which is firmly and instantly given you in possession? Although your days are numbered, and the following darkness sure, is it necessary that you should share the degradation of the brute, because you are condemned to its mortality; or live the life of the moth, and of the worm, because you are to companion them in the dust? Not so; we may have but a few thousands of days to spend, perhaps hundreds only—perhaps tens; nay, the longest of our time and best, looked back on, will be but as a moment, as the twinkling of an eye; still, we are men, not insects; we are living spirits, not passing clouds. "He maketh the winds His messengers; the momentary fire, His minister;" and shall we do less than these? Let us do the work of men while we bear the form of them; and, as we snatch our narrow portion of time out of Eternity, snatch also our narrow inheritance of passion out of Immortality—even though our lives be as a vapour, that appeareth for a little time, and then vanisheth away.

134. But there are some of you who believe not this—who think this cloud of life has no such close—that it is to float, revealed and illumined, upon the floor of heaven, in the day when He cometh with clouds, and every eye shall see Him. Some day, you believe, within these five, or ten, or twenty years, for every one of us the judgment will be set, and the books opened. If that be true, far more than that must be true. Is there but one day of judgment? Why, for us every day is a day of judgment—every day is a Dies Irae, and writes its irrevocable verdict in the flame of its West. Think you that judgment waits till the doors of the grave are opened? It waits at the doors of your houses—it waits at the corners of your streets; we are in the midst of judgment—the insects that we crush are our judges—the moments we fret away are
our judges—the elements that feed us, judge, as they min-
ister—and the pleasures that deceive us, judge as they in-
dulge. Let us, for our lives, do the work of Men while we
bear the Form of them, if indeed those lives are Not as a
vapour, and do Not vanish away.

135. "The work of men"—and what is that? Well, we
may any of us know very quickly, on the condition of being
wholly ready to do it. But many of us are for the most part
thinking, not of what we are to do, but of what we are to get;
and the best of us are sunk into the sin of Ananias, and it is
a mortal one—we want to keep back part of the price; and we
continually talk of taking up our cross, as if the only harm in
a cross was the weight of it—as if it was only a thing to be
carried, instead of to be—crucified upon. "They that are
His have crucified the flesh, with the affections and lusts."
Does that mean, think you, that in time of national distress,
of religious trial, of crisis for every interest and hope of
humanity—none of us will cease jesting, none cease idling,
none put themselves to any wholesome work, none take so
much as a tag of lace off their footman's coats, to save the
world? Or does it rather mean, that they are ready to leave
houses, lands and kindreds—yes, and life, if need be? Life!
—some of us are ready enough to throw that away, joyless as
we have made it. But "station in Life"—how many of us
are ready to quit that? Is it not always the great objection,
where there is question of finding something useful to do—
"We cannot leave our stations in Life?"

Those of us who really cannot—that is to say, who can only
maintain themselves by continuing in some business or
salaried office, have already something to do; and all that
they have to see to, is that they do it honestly and with all
their might. But with most people who use that apology,
"remaining in the station of life to which Providence has
called them," means keeping all the carriages, and all the
footmen and large houses they can possibly pay for; and,
once for all, I say that if ever Providence did put them into
stations of that sort—which is not at all a matter of certainty
—Providence is just now very distinctly calling them out
again. Levi's station in life was the receipt of custom; and Peter's, the shore of Galilee; and Paul's, the ante-chambers of the High Priest,—which "station in life" each had to leave, with brief notice.

And, whatever our station in life may be, at this crisis, those of us who mean to fulfill our duty ought, first, to live on as little as we can; and, secondly, to do all the wholesome work for it we can, and to spend all we can spare in doing all the sure good we can.

And sure good is first in feeding people, then in dressing people, then in lodging people, and lastly in rightly pleasing people, with arts, or sciences, or any other subject of thought.

136. I say first in feeding; and, once for all, do not let yourselves be deceived by any of the common talk of "indiscriminate charity." The order to us is not to feed the deserving hungry, nor the industrious hungry, nor the amiable and well-intentioned hungry, but simply to feed the hungry. It is quite true, infallibly true, that if any man will not work, neither should he eat—think of that, and every time you sit down to your dinner, ladies and gentlemen, say solemnly, before you ask a blessing, "How much work have I done today for my dinner?" But the proper way to enforce that order on those below you, as well as on yourselves, is not to leave vagabonds and honest people to starve together, but very distinctly to discern and seize your vagabond; and shut your vagabond up out of honest people's way, and very sternly than see that, until he has worked, he does not eat. But the first thing is to be sure you have the food to give; and, therefore, to enforce the organization of vast activities in agriculture and in commerce, for the production of the wholesomest food, and proper storing and distribution of it, so that no famine shall anymore be possible among civilized beings. There is plenty of work in this business alone, and at once, for any number of people who like to engage in it.

137. Secondly, dressing people—that is to say, urging every one within reach of your influence to be always neat and clean, and giving them means of being so. In so far as they
absolutely refuse, you must give up the effort with respect to them, only taking care that no children within your sphere of influence shall any more be brought up with such habits; and that every person who is willing to dress with propriety shall have encouragement to do so. And the first absolutely necessary step towards this is the gradual adoption of a consistent dress for different ranks of persons, so that their rank shall be known by their dress; and the restriction of the changes of fashion within certain limits. All which appears for the present quite impossible; but it is only so far as even difficult as it is difficult to conquer our vanity, frivolity, and desire to appear what we are not. And it is not, nor ever shall be, creed of mine, that these mean and shallow vices are unconquerable by Christian women.

138. And then, thirdly, lodging people, which you may think should have been put first, but I put it third, because we must feed and clothe people where we find them, and lodge them afterwards. And providing lodgment for them means a great deal of vigorous legislation, and cutting down of vested interests that stand in the way, and after that, or before that, so far as we can get it, thorough sanitary and remedial action in the houses that we have; and then the building of more, strongly, beautifully, and in groups of limited extent, kept in proportion to their streams, and walled round, so that there may be no festering and wretched suburb anywhere, but clean and busy street within, and the open country without, with a belt of beautiful garden and orchard round the walls, so that from any part of the city perfectly fresh air and grass, and sight of far horizon might be reachable in a few minutes' walk. This the final aim; but in immediate action every minor and possible good to be instantly done, when, and as, we can; roofs mended that have holes in them—fences patched that have gaps in them—walls buttressed that totter—and floors propped that shake; cleanliness and order enforced with our own hands and eyes, till we are breathless, every day. And all the fine arts will healthily follow. I myself have washed a flight of stone stairs all down, with bucket and broom, in a Savoy inn, where they
hadn't washed their stairs since they first went up them? and I never made a better sketch than that afternoon.

139. These, then, are the three first needs of civilized life; and the law for every Christian man and woman is, that they shall be in direct service towards one of these three needs, as far as is consistent with their own special occupation, and if they have no special business, then wholly in one of these services. And out of such exertion in plain duty all other good will come; for in this direct contention with material evil, you will find out the real nature of all evil; you will discern by the various kinds of resistance, what is really the fault and main antagonism to good; also you will find the most unexpected helps and profound lessons given, and truths will come thus down to us which the speculation of all our lives would never have raised us up to. You will find nearly every educational problem solved, as soon as you truly want to do something; everybody will become of use in their own fittest way, and will learn what is best for them to know in that use. Competitive examination will then, and not till then, be wholesome, because it will be daily, and calm, and in practice; and on these familiar arts, and minute, but certain and serviceable knowledges, will be surely edified and sustained the greater arts and splendid theoretical sciences.

140. But much more than this. On such holy and simple practice will be founded, indeed, at last, an infallible religion. The greatest of all the mysteries of life, and the most terrible, is the corruption of even the sincerest religion, which is not daily founded on rational, effective, humble, and helpful action. Helpful action, observe! for there is just one law, which obeyed, keeps all religions pure—forgotten, makes them all false. Whenever in any religious faith, dark or bright, we allow our minds to dwell upon the points in which we differ from other people, we are wrong, and in the devil's power. That is the essence of the Pharisee's thanksgiving—"Lord, I thank thee that I am not as other men are." At every moment of our lives we should be trying to find out, not in what we differ with other people, but in what we agree with them; and the moment we find we can agree as to any-
thing that should be done, kind or good, (and who but fools couldn’t?) then do it; push at it together; you can’t quarrel in a side-by-side push; but the moment that even the best men stop pushing, and begin talking, they mistake their pugnacity for piety, and it’s all over. I will not speak of the crimes which in past times have been committed in the name of Christ, nor of the follies which are at this hour held to be consistent with obedience to Him; but I will speak of the morbid corruption and waste of vital power in religious sentiment, by which the pure strength of that which should be the guiding soul of every nation, the splendour of its youthful manhood, and spotless light of its maidenhood, is averted or cast away. You may see continually girls who have never been taught to do a single useful thing thoroughly; who cannot sew, who cannot cook, who cannot cast an account, nor prepare a medicine, whose whole life has been passed either in play or in pride; you will find girls like these when they are earnest-hearted, cast all their innate passion of religious spirit, which was meant by God to support them through the irksomeness of daily toil, into grievous and vain meditation over the meaning of the great Book, of which no syllable was ever yet to be understood but through a deed; all the instinctive wisdom and mercy of their womanhood made vain, and the glory of their pure consciences warped into fruitless agony concerning questions which the laws of common serviceable life would have either solved for them in an instant, or kept out of their way. Give such a girl any true work that will make her active in the dawn, and weary at night, with the consciousness that her fellow-creatures have indeed been the better for her day, and the powerless sorrow of her enthusiasm will transform itself into a majesty of radiant and beneficent peace.

So with our youths. We once taught them to make Latin verses, and called them educated; now we teach them to leap and to row, to hit a ball with a bat, and call them educated. Can they plow, can they sow, can they plant at the right time, or build with a steady hand? Is it the effort of their lives to be chaste, knightly, faithful, holy in thought, lovely in word
and deed? Indeed it is, with some, nay with many, and the strength of England is in them, and the hope; but we have to turn their courage from the toil of war to the toil of mercy; and their intellect from dispute of words to discernment of things; and their knighthood from the errantry of adventure to the state and fidelity of a kingly power. And then, indeed, shall abide, for them, and for us an incorruptible felicity, and an infallible religion; shall abide for us Faith, no more to be assailed by temptation, no more to be defended by wrath and by fear;—shall abide with us Hope, no more to be quenched by the years that overwhelm, or made ashamed by the shadows that betray; shall abide for us, and with us, the greatest of these; the abiding will, the abiding name, of our Father. For the greatest of these, is Charity.
"UNTO THIS LAST"

FOUR ESSAYS

ON THE FIRST PRINCIPLES OF

POLITICAL ECONOMY

BY

"FRIEND, I DO THEE NO WRONG. DID' ST NOT THOU AGREE WITH ME FOR A PENNY? TAKE THAT THINE IS, AND GO THY WAY. I WILL GIVE UNTO THIS LAMB EVEN AS UNTO THEE."

"IF YE THINK GOOD, GIVE ME MY PRICE; AND IF NOT, FORBEAR. SO THEY WERE HED FOR MY PRICE THIRTY PIECES OF SILVER."
The four following essays were published eighteen months ago in the Cornhill Magazine, and were reprobated in a violent manner, as far as I could hear, by most of the readers they met with.

Not a whit the less, I believe them to be the best, that is to say, the truest, rightest-worded, and most serviceable things I have ever written; and the last of them, having had especial pains spent on it, is probably the best I shall ever write.

"This," the reader may reply, "it might be, yet not therefore well written." Which, in no mock humility, admitting, I yet rest satisfied with the work, though with nothing else that I have done; and purposing shortly to follow out the subjects opened in these papers, as I may find leisure, I wish the introductory statements to be within the reach of any one who may care to refer to them. So I republish the essays as they appeared. One word only is changed, correcting the estimate of a weight; and no word is added.

Although, however, I find nothing to modify in these papers, it is matter of regret to me that the most startling of all the statements in them,—that respecting the necessity of the organization of labour, with fixed wages,—should have found its way into the first essay; it being quite one of the least important, though by no means the least certain, of the positions to be defended. The real gist of these papers, their central meaning and aim, is to give, as I believe for the first time in plain English,—it has often been incidentally given in good Greek by Plato and Xenophon, and good Latin by Cicero and Horace,—a logical definition of wealth: such definition being absolutely needed for a basis of economical science. The most reputed essay
on that subject which has appeared in modern times, after
opening with the statement that "writers on political econ-
omy profess to teach, or to investigate,* the nature of wealth,"
thus follows up the declaration of its thesis—"Every one has
a notion, sufficiently correct for common purposes, of what is
meant by wealth." . . . "It is is no part of the design of this
treatise to aim at metaphysical nicety of definition.†"

Metaphysical nicety, we assuredly do not need; but physi-
cal nicety, and logical accuracy, with respect to a physical
subject, we as assuredly do.

Suppose the subject of inquiry, instead of being House law
(Oikonomia), had been Star-law (Astronomia), and that, ignor-
ing distinction between stars fixed and wandering, as here
between wealth radiant and wealth reflective, the writer had
begun thus: "Every one has a notion, sufficiently correct for
common purposes, of what is meant by stars. Metaphysical
nicety in the definition of a star is not the object of this treat-
ise;"—the essay so opened might yet have been far more true
in its final statements, and a thousand-fold more serviceable
to the navigator, than any treatise on wealth, which founds
its conclusions on the popular conception of wealth, can ever
become to the economist.

It was, therefore, the first object of these following papers
to give an accurate and stable definition of wealth. Their
second object was to show that the acquisition of wealth was
finally possible only under certain moral conditions of society, of
which quite the first was a belief in the existence and even,
for practical purposes, in the attainability of honesty.

Without venturing to pronounce—since on such a matter
human judgment is by no means conclusive—what is, or is
not, the noblest of God's works, we may yet admit so much
of Pope's assertion as that an honest man is among His best
works presently visible, and, as things stand, a somewhat rare

* Which ? for where investigation is necessary, teaching is impos-
sible.
† Principles of Political Economy. By J. S. Mill. Preliminary re-
marks, p. 2.
one; but not an incredible or miraculous work; still less an abnormal one. Honesty is not a disturbing force, which rearranges the orbits of economy; but a consistent and commanding force, by obedience to which—and by no other obedience—those orbits can continue clear of chaos.

It is true, I have sometimes heard Pope condemned for the lowness, instead of the height, of his standard:—"Honesty is indeed a respectable virtue; but how much higher may men attain! Shall nothing more be asked of us than that we be honest?"

For the present, good friends, nothing. It seems that in our aspirations to be more than that, we have to some extent lost sight of the propriety of being so much as that. What else we may have lost faith in, there shall be here no question; but assuredly we have lost faith in common honesty, and in the working power of it. And this faith, with the facts on which it may rest, it is quite our first business to recover and keep: not only believing, but even by experience assuring ourselves, that there are yet in the world men who can be restrained from fraud otherwise than by the fear of losing employment;* nay, that it is even accurately in proportion to the number of such men in any State, that the said State does or can prolong its existence.

To these two points, then, the following essays are mainly directed. The subject of the organization of labour is only casually touched upon; because, if we once can get a sufficient quantity of honesty in our captains, the organization of labour is easy, and will develop itself without quarrel or difficulty; but if we cannot get honesty in our captains, the organization of labour is for evermore impossible.

The several conditions of its possibility I purpose to examine at length in the sequel. Yet, lest the reader should be alarmed by the hints thrown out during the following investigation of first principles, as if they were leading him into

* "The effectual discipline which is exercised over a workman is not that of his corporation, but of his customers. It is the fear of losing their employment which restrains his frauds, and corrects his negligence." (Wealth of Nations, Book I. chap. 10.)
unexpectedly dangerous ground, I will, for his better assurance, state at once the worst of the political creed at which I wish him to arrive.

1. First,—that there should be training schools for youth established, at Government cost,* and under Government discipline, over the whole country; that every child born in the country should, at the parent’s wish, be permitted (and, in certain cases, be under penalty required) to pass through them; and that, in these schools, the child should (with other minor pieces of knowledge hereafter to be considered) imperatively be taught, with the best skill of teaching that the country could produce, the following three things:

(a) the laws of health, and the exercises enjoined by them;
(b) habits of gentleness and justice; and
(c) the calling by which he is to live.

2. Secondly,—that, in connection with these training schools, there should be established, also entirely under Government regulation, manufactories and workshops, for the production and sale of every necessary of life, and for the exercise of every useful art. And that, interfering no whit with private enterprise, nor setting any restraints or tax on private trade, but leaving both to do their best, and beat the Government if they could,—there should, at these Government manufactories and shops, be authoritatively good and exemplary work done, and pure and true substance sold; so that a man could be sure, if he chose to pay the Government price, that he got for his money bread that was bread, ale that was ale, and work that was work.

3. Thirdly,—that any man, or woman, or boy, or girl, out of employment, should be at once received at the nearest

* It will probably be inquired by near-sighted persons, out of what funds such schools could be supported. The expedient modes of direct provision for them I will examine hereafter; indirectly, they would be far more than self-supporting. The economy in crime alone, quite one of the most costly articles of luxury in the modern European market, which such schools would induce, would suffice to support them ten times over. Their economy of labour would be pure gain, and that too large to be presently calculable.
Government school, and set to such work as it appeared, on trial, they were fit for, at a fixed rate of wages determinable every year:—that, being found incapable of work through ignorance, they should be taught, or being found incapable of work through sickness, should be tended; but that being found objecting to work, they should be set, under compulsion of the strictest nature, to the more painful and degrading forms of necessary toil, especially to that in mines and other places of danger (such danger being, however, diminished to the utmost by careful regulation and discipline) and the due wages of such work be retained—cost of compulsion first abstracted—to be at the workman's command, so soon as he has come to sounder mind respecting the laws of employment.

4. Lastly,—that for the old and destitute, comfort and home should be provided; which provision, when misfortune had been by the working of such a system sifted from guilt, would be honourable instead of disgraceful to the receiver. For (I repeat this passage out of my *Political Economy of Art*, to which the reader is referred for farther detail *) "a labourer serves his country with his spade, just as a man in the middle ranks of life serves it with sword, pen, or lancet. If the service be less, and, therefore, the wages during health less, then the reward when health is broken may be less, but not less honourable; and it ought to be quite as natural and straightforward a matter for a labourer to take his pension from his parish, because he has deserved well of his parish, as for a man in higher rank to take his pension from his country, because he has deserved well of his country."

To which statement, I will only add, for conclusion, respecting the discipline and pay of life and death, that, for both high and low, Livy's last words touching Valerius Publicola, "*de publico est elatus*," † ought not to be a dishonourable close of epitaph.

*Addenda, p. 102.
† "P. Valerius, omnium consensu princeps belli pacisque artibus, anno post moritur; gloría ingenti, copiis familiaribus adeo exignis, ut funeri sumtus deesset: de publico est elatus. Luxère matronæ ut Brutum."—Lib. II. c. xvi.
These things, then, I believe, and am about, as I find power, to explain and illustrate in their various bearings; following out also what belongs to them of collateral inquiry. Here I state them only in brief, to prevent the reader casting about in alarm for my ultimate meaning; yet requesting him, for the present, to remember, that in a science dealing with so subtle elements as those of human nature, it is only possible to answer for the final truth of principles, not for the direct success of plans: and that in the best of these last, what can be immediately accomplished is always questionable, and what can be finally accomplished, inconceivable.

ESSAY

I.—The Roots of Honour ........................................ 13
II.—The Veins of Wealth ........................................ 30
III.—Qui Judicatis Terram ....................................... 43
IV.—Ad Valorem .................................................. 60
Among the delusions which at different periods have possessed themselves of the minds of large masses of the human race, perhaps the most curious—certainly the least creditable—is the modern *soi-disant* science of political economy, based on the idea that an advantageous code of social action may be determined irrespectively of the influence of social affection.

Of course, as in the instances of alchemy, astrology, witchcraft, and other such popular creeds, political economy has a plausible idea at the root of it. "The social affections," says the economist, "are accidental and disturbing elements in human nature; but avarice and the desire of progress are constant elements. Let us eliminate the inconstants, and, considering the human being merely as a covetous machine, examine by what laws of labour, purchase, and sale, the greatest accumulative result in wealth is attainable. Those laws once determined, it will be for each individual afterwards to introduce as much of the disturbing affectionate element as he chooses, and to determine for himself the result on the new conditions supposed."

This would be a perfectly logical and successful method of analysis, if the accidentals afterwards to be introduced were of the same nature as the powers first examined. Supposing a body in motion to be influenced by constant and inconstant forces, it is usually the simplest way of examining its course to trace it first under the persistent conditions, and after-
wards introduce the causes of variation. But the disturbing elements in the social problem are not of the same nature as the constant ones; they alter the essence of the creature under examination the moment they are added; they operate, not mathematically, but chemically, introducing conditions which render all our previous knowledge unavailable. We made learned experiments upon pure nitrogen, and have convinced ourselves that it is a very manageable gas: but behold! the thing which we have practically to deal with is its chloride; and this, the moment we touch it on our established principles, sends us and our apparatus through the ceiling.

Observe, I neither impugn nor doubt the conclusions of the science, if its terms are accepted. I am simply uninterested in them, as I should be in those of a science of gymnastics which assumed that men had no skeletons. It might be shown, on that supposition, that it would be advantageous to roll the students up into pellets, flatten them into cakes, or stretch them into cables; and that when these results were effected, the re-insertion of the skeleton would be attended with various inconveniences to their constitution. The reasoning might be admirable, the conclusions true, and the science deficient only in applicability. Modern political economy stands on a precisely similar basis. Assuming, not that the human being has no skeleton, but that it is all skeleton, it founds an ossifant theory of progress on this negation of a soul; and having shown the utmost that may be made of bones, and constructed a number of interesting geometrical figures with death's-heads and humeri, successfully proves the inconvenience of the reappearance of a soul among these corpuscular structures. I do not deny the truth of this theory: I simply deny its applicability to the present phase of the world.

This inapplicability has been curiously manifested during the embarrassment caused by the late strikes of our workmen. Here occurs one of the simplest cases, in a pertinent and positive form, of the first vital problem which political economy has to deal with (the relation between employer and employed); and at a severe crisis, when lives in multitudes, and
wealth in masses, are at stake, the political economists are helpless—practically mute; no demonstrable solution of the difficulty can be given by them, such as may convince or calm the opposing parties. Obstinately the masters take one view of the matter; obstinately the operatives another; and no political science can set them at one.

It would be strange if it could, it being not by "science" of any kind that men were ever intended to be set at one. Disputant after disputant vainly strives to show that the interests of the masters are, or are not, antagonistic to those of the men: none of the pleaders ever seeming to remember that it does not absolutely or always follow that the persons must be antagonistic because their interests are. If there is only a crust of bread in the house, and mother and children are starving, their interests are not the same. If the mother eats it, the children want it; if the children eat it, the mother must go hungry to her work. Yet it does not necessarily follow that there will be "antagonism" between them, that they will fight for the crust, and that the mother, being strongest, will get it, and eat it. Neither, in any other case, whatever the relations of the persons may be, can it be assumed for certain that, because their interests are diverse, they must necessarily regard each other with hostility, and use violence or cunning to obtain the advantage.

Even if this were so, and it were as just as it is convenient to consider men as actuated by no other moral influences than those which affect rats or swine, the logical conditions of the question are still indeterminable. It can never be shown generally either that the interests of master and labourer are alike, or that they are opposed; for, according to circumstances, they may be either. It is, indeed, always the interest of both that the work should be rightly done, and a just price obtained for it; but, in the division of profits, the gain of the one may or may not be the loss of the other. It is not the master's interest to pay wages so low as to leave the men sickly and depressed, nor the workman's interest to be paid high wages if the smallness of the master's profit hinders him from enlarging his business, or conducting it in
a safe and liberal way. A stoker ought not to desire high pay if the company is too poor to keep the engine-wheels in repair.

And the varieties of circumstances which influence these reciprocal interests are so endless, that all endeavour to deduce rules of action from balance of expediency is in vain. And it is meant to be in vain. For no human actions ever were intended by the Maker of men to be guided by balances of expediency, but by balances of justice. He has therefore rendered all endeavours to determine expediency futile for evermore. No man ever knew, or can know, what will be the ultimate result to himself, or to others, of any given line of conduct. But every man may know, and most of us do know, what is a just and unjust act. And all of us may know also, that the consequences of justice will be ultimately the best possible, both to others and ourselves, though we can neither say what is best, nor how it is likely to come to pass.

I have said balances of justice, meaning, in the term justice, to include affection,—such affection as one man owes to another. All right relations between master and operative, and all their best interests, ultimately depend on these.

We shall find the best and simplest illustration of the relations of master and operative in the position of domestic servants.

We will suppose that the master of a household desires only to get as much work out of his servants as he can, at the rate of wages he gives. He never allows them to be idle; feeds them as poorly and lodges them as ill as they will endure, and in all things pushes his requirements to the exact point beyond which he cannot go without forcing the servant to leave him. In doing this, there is no violation on his part of what is commonly called "justice." He agrees with the domestic for his whole time and service, and takes them; the limits of hardship in treatment being fixed by the practice of other masters in his neighbourhood; that is to say, by the current rate of wages for domestic labour. If the servant can get a better place, he is free to take one, and the
master can only tell what is the real market value of his labour, by requiring as much as he will give.

This is the politico-economical view of the case, according to the doctors of that science; who assert that by this procedure the greatest average of work will be obtained from the servant, and therefore, the greatest benefit to the community, and through the community, by reversion, to the servant himself.

That, however, is not so. It would be so if the servant were an engine of which the motive power was steam, magnetism, gravitation, or any other agent of calculable force. But he being, on the contrary, an engine whose motive power is a Soul, the force of this very peculiar agent, as an unknown quantity, enters into all the political economist's equations, without his knowledge, and falsifies every one of their results. The largest quantity of work will not be done by this curious engine for pay, or under pressure, or by help of any kind of fuel which may be applied by the chaldron. It will be done only when the motive force, that is to say, the will or spirit of the creature, is brought to its greatest strength by its own proper fuel; namely, by the affections.

It may indeed happen, and does happen often, that if the master is a man of sense and energy, a large quantity of material work may be done under mechanical pressure, enforced by strong will and guided by wise method; also it may happen, and does happen often, that if the master is indolent and weak (however good-natured), a very small quantity of work, and that bad, may be produced by the servant's undirected strength, and contemptuous gratitude. But the universal law of the matter is that, assuming any given quantity of energy and sense in master and servant, the greatest material result obtainable by them will be, not through antagonism to each other, but through affection for each other; and that if the master, instead of endeavouring to get as much work as possible from the servant, seeks rather to render his appointed and necessary work beneficial to him, and to forward his interests in all just and wholesome ways, the real amount of work ultimately done, or of good rendered,
by the person so cared for, will indeed be the greatest possible.

Observe, I say, "of good rendered," for a servant's work is not necessarily or always the best thing he can give his master. But good of all kinds, whether in material service, in protective watchfulness of his master's interest and credit, or in joyful readiness to seize unexpected and irregular occasions of help.

Nor is this one whit less generally true because indulgence will be frequently abused, and kindness met with ingratitude. For the servant who, gently treated, is ungrateful, treated un-gently, will be revengeful; and the man who is dishonest to a liberal master will be injurious to an unjust one.

In any case, and with any person, this unselfish treatment will produce the most effective return. Observe, I am here considering the affections wholly as a motive power; not at all as things in themselves desirable or noble, or in any other way abstractedly good. I look at them simply as an anomalous force, rendering every one of the ordinary political economist's calculations nugatory; while, even if he desired to introduce this new element into his estimates, he has no power of dealing with it; for the affections only become a true motive power when they ignore every other motive and condition of political economy. Treat the servant kindly, with the idea of turning his gratitude to account, and you will get, as you deserve, no gratitude, nor any value for your kindness; but treat him kindly without any economical purpose, and all economical purposes will be answered; in this, as in all other matters, whosoever will save his life shall lose it, and whoso loses it shall find it.*

* The difference between the two modes of treatment, and between their effective material results, may be seen very accurately by a comparison of the relations of Esther and Charlie in Bleak House, with those of Miss Brass and the Marchioness in Master Humphrey's Clock.

The essential value and truth of Dickens's writings have been unwisely lost sight of by many thoughtful persons, merely because he presents his truth with some colour of caricature. Unwisely, because Dickens's caricature, though often gross, is never mistaken. Allowing for his manner of telling them the things he tells us are always true. I wish
The next clearest and simplest example of relation between master and operative is that which exists between the commander of a regiment and his men.

Supposing the officer only desires to apply the rules of discipline so as, with least trouble to himself, to make the regiment most effective, he will not be able, by any rules, or administration of rules, on this selfish principle, to develop the full strength of his subordinates. If a man of sense and firmness, he may, as in the former instance, produce a better result than would be obtained by the irregular kindness of a weak officer; but let the sense and firmness be the same in both cases, and assuredly the officer who has the most direct personal relations with his men, the most care for their interests, and the most value for their lives, will develop their effective strength, through their affection for his own person, and trust in his character, to a degree wholly unattainable by other means. The law applies still more stringently as the numbers concerned are larger; a charge may often be successful, though the men dislike their officers; a battle has rarely been won, unless they loved their general.

Passing from these simple examples to the more complicated relations existing between a manufacturer and his workmen, we are met first by certain curious difficulties, resulting; that he could think it right to limit his brilliant exaggeration to works written only for public amusement; and when he takes up a subject of high national importance, such as that which he handled in *Hard Times*, that he would use severer and more accurate analysis. The usefulness of that work (to my mind, in several respects, the greatest he has written) is with many persons seriously diminished because Mr. Bounderby is a dramatic monster, instead of a characteristic example of a worldly master; and Stephen Blackpool a dramatic perfection, instead of a characteristic example of an honest workman. But let us not lose the use of Dickens's wit and insight, because he chooses to speak in a circle of stage fire. He is entirely right in his main drift and purpose in every book he has written; and all of them, but especially *Hard Times*, should be studied with close and earnest care by persons interested in social questions. They will find much that is partial, and, because partial, apparently unjust; but if they examine all the evidence on the other side, which Dickens seems to overlook, it will appear, after all their trouble, that his view was the finally right one, grossly and sharply told.
apparently, from a harder and colder state of moral elements. It is easy to imagine an enthusiastic affection existing among soldiers for the colonel. Not so easy to imagine an enthusiastic affection among cotton-spinners for the proprietors of the mill. A body of men associated for purposes of robbery (as a Highland clan in ancient times) shall be animated by perfect affection, and every member of it be ready to lay down his life for the life of his chief. But a band of men associated for purposes of legal production and accumulation is usually animated, it appears, by no such emotions, and none of them are in anywise willing to give his life for the life of his chief. Not only are we met by this apparent anomaly, in moral matters, but by others connected with it, in administration of system. For a servant or a soldier is engaged at a definite rate of wages, for a definite period; but a workman at a rate of wages variable according to the demand for labour, and with the risk of being at any time thrown out of his situation by chances of trade. Now, as, under these contingencies, no action of the affections can take place, but only an explosive action of disaffections, two points offer themselves for consideration in the matter:

The first—How far the rate of wages may be so regulated as not to vary with the demand for labour.

The second—How far it is possible that bodies of workmen may be engaged and maintained at such fixed rate of wages (whatever the state of trade may be), without enlarging or diminishing their number, so as to give them permanent interest in the establishment with which they are connected, like that of the domestic servants in an old family, or an esprit de corps, like that of the soldiers in a crack regiment.

The first question is, I say, how far it may be possible to fix the rate of wages irrespectively of the demand for labour.

Perhaps one of the most curious facts in the history of human error is the denial by the common political economist of the possibility of thus regulating wages; while for all the important, and much of the unimportant, labour on the earth, wages are already so regulated.

We do not sell our prime-ministership by Dutch auction;
nor, on the decease of a bishop, whatever may be the general advantages of simony, do we (yet) offer his diocese to the clergyman who will take the episcopacy at the lowest contract. We (with exquisite sagacity of political economy!) do indeed sell commissions, but not openly, generalships: sick, we do not inquire for a physician who takes less than a guinea; litigious, we never think of reducing six-and-eighthpence to four-and-sixpence; caught in a shower, we do not canvass the cabmen, to find out who values his driving at less than sixpence a mile.

It is true that in all these cases there is, and in every conceivable case there must be, ultimate reference to the presumed difficulty of the work, or number of candidates for the office. If it were thought that the labour necessary to make a good physician would be gone through by a sufficient number of students with the prospect of only half-guinea fees, public consent would soon withdraw the unnecessary half-guinea. In this ultimate sense, the price of labour is indeed always regulated by the demand for it; but so far as the practical and immediate administration of the matter is regarded, the best labour always has been, and is, as all labour ought to be, paid by an invariable standard.

"What!" the reader, perhaps, answers amazedly: "pay good and bad workmen alike?"

Certainly. The difference between one prelate's sermons and his successor's,—or between one physician's opinion and another's,—is far greater, as respects the qualities of mind involved, and far more important in result to you personally, than the difference between good and bad laying of bricks (though that is greater than most people suppose). Yet you pay with equal fee, contentedly, the good and bad workmen upon your soul, and the good and bad workmen upon your body; much more may you pay, contentedly, with equal fees, the good and bad workmen upon your house.

"Nay, but I choose my physician and (?) my clergyman, thus indicating my sense of the quality of their work." By all means, also, choose your bricklayer; that is the proper reward of the good workman, to be "chosen." The natural and
right system respecting all labour is, that it should be paid at a fixed rate, but the good workman employed, and the bad workman unemployed. The false, unnatural, and destructive system is when the bad workman is allowed to offer his work at half-price, and either take the place of the good, or force him by his competition to work for an inadequate sum.

This equality of wages, then, being the first object towards which we have to discover the directest available road; the second is, as above stated, that of maintaining constant numbers of workmen in employment, whatever may be the accidental demand for the article they produce.

I believe the sudden and extensive inequalities of demand which necessarily arise in the mercantile operations of an active nation, constitute the only essential difficulty which has to be overcome in a just organization of labour. The subject opens into too many branches to admit of being investigated in a paper of this kind; but the following general facts bearing on it may be noted.

The wages which enable any workman to live are necessarily higher, if his work is liable to intermission, than if it is assured and continuous; and however severe the struggle for work may become, the general law will always hold, that men must get more daily pay if, on the average, they can only calculate on work three days a week, than they would require if they were sure of work six days a week. Supposing that a man cannot live on less than a shilling a day, his seven shillings he must get, either for three days' violent work, or six days' deliberate work. The tendency of all modern mercantile operations is to throw both wages and trade into the form of a lottery, and to make the workman's pay depend on intermittent exertion, and the principal's profit on dexterously used chance.

In what partial degree, I repeat, this may be necessary, in consequence of the activities of modern trade, I do not here investigate; contenting myself with the fact, that in its fatallest aspects it is assuredly unnecessary, and results merely from love of gambling on the part of the masters, and from ignorance and sensuality in the men. The masters cannot bear to let any opportunity of gain escape them, and franti-
cally rush at every gap and breach in the walls of Fortune, raging to be rich, and affronting, with impatient covetousness, every risk of ruin; while the men prefer three days of violent labour, and three days of drunkenness, to six days of moderate work and wise rest. There is no way in which a principal, who really desires to help his workmen, may do it more effectually than by checking these disorderly habits both in himself and them; keeping his own business operations on a scale which will enable him to pursue them securely, not yielding to temptations of precarious gain; and, at the same time, leading his workmen into regular habits of labour and life, either by inducing them rather to take low wages in the form of a fixed salary, than high wages, subject to the chance of their being thrown out of work; or, if this be impossible, by discouraging the system of violent exertion for nominally high day wages, and leading the men to take lower pay for more regular labour.

In effecting any radical changes of this kind, doubtless there would be great inconvenience and loss incurred by all the originators of movement. That which can be done with perfect convenience and without loss, is not always the thing that most needs to be done, or which we are most imperatively required to do.

I have already alluded to the difference hitherto existing between regiments of men associated for purposes of violence, and for purposes of manufacture; in that the former appear capable of self-sacrifice—the latter, not; which singular fact is the real reason of the general lowness of estimate in which the profession of commerce is held, as compared with that of arms. Philosophically, it does not, at first sight, appear reasonable (many writers have endeavoured to prove it unreasonable) that a peaceable and rational person, whose trade is buying and selling, should be held in less honour than an unpeaceable and often irrational person, whose trade is slaying. Nevertheless, the consent of mankind has always, in spite of the philosophers, given precedence to the soldier.

And this is right.

For the soldier's trade, verily and essentially, is not slay-
ing, but being slain. This, without well knowing its own meaning, the world honours it for. A bravo's trade is slaying; but the world has never respected bravos more than merchants: the reason it honours the soldier is, because he holds his life at the service of the State. Reckless he may be—fond of pleasure or of adventure—all kinds of bye-motives and mean impulses may have determined the choice of his profession, and may affect (to all appearance exclusively) his daily conduct in it; but our estimate of him is based on this ultimate fact—of which we are well assured—that, put him in a fortress breach, with all the pleasures of the world behind him, and only death and his duty in front of him, he will keep his face to the front; and he knows that this choice may be put to him at any moment, and has beforehand taken his part—virtually takes such part continually—does, in reality, die daily.

Not less is the respect we pay to the lawyer and physician, founded ultimately on their self-sacrifice. Whatever the learning or acuteness of a great lawyer, our chief respect for him depends on our belief that, set in a judge's seat, he will strive to judge justly, come of it what may. Could we suppose that he would take bribes, and use his acuteness and legal knowledge to give plausibility to iniquitous decisions, no degree of intellect would win for him our respect. Nothing will win it, short of our tacit conviction, that in all important acts of his life justice is first with him; his own interest, second.

In the case of a physician, the ground of the honour we render him is clearer still. Whatever his science, we should shrink from him in horror if we found him regard his patients merely as subjects to experiment upon; much more, if we found that, receiving bribes from persons interested in their deaths, he was using his best skill to give poison in the mask of medicine.

Finally, the principle holds with utmost clearness as it respects clergymen. No goodness of disposition will excuse want of science in a physician or of shrewdness in an advocate; but a clergyman, even though his power of intellect be small, is respected on the presumed ground of his unselfishness and serviceableness.
Now there can be no question but that the tact, foresight, decision, and other mental powers, required for the successful management of a large mercantile concern, if not such as could be compared with those of a great lawyer, general, or divine, would at least match the general conditions of mind required in the subordinate officers of a ship, or of a regiment, or in the curate of a country parish. If, therefore, all the efficient members of the so-called liberal professions are still, somehow, in public estimate of honour, preferred before the head of a commercial firm, the reason must lie deeper than in the measurement of their several powers of mind.

And the essential reason for such preference will be found to lie in the fact that the merchant is presumed to act always selfishly. His work may be very necessary to the community; but the motive of it is understood to be wholly personal. The merchant's first object in all his dealings must be (the public believe) to get as much for himself, and leave as little to his neighbour (or customer) as possible. Enforcing this upon him, by political statute, as the necessary principle of his action; recommending it to him on all occasions, and themselves reciprocally adopting it; proclaiming vociferously, for law of the universe, that a buyer's function is to cheapen, and a seller's to cheat,—the public, nevertheless, involuntarily condemn the man of commerce for his compliance with their own statement, and stamp him for ever as belonging to an inferior grade of human personality.

This they will find, eventually, they must give up doing. They must not cease to condemn selfishness; but they will have to discover a kind of commerce which is not exclusively selfish. Or, rather, they will have to discover that there never was, or can be, any other kind of commerce; that this which they have called commerce was not commerce at all, but cozening; and that a true merchant differs as much from a merchant according to laws of modern political economy, as the hero of the Excursion from Autolycus. They will find that commerce is an occupation which gentlemen will every day see more need to engage in, rather than in the businesses of talking to men, or slaying them; that, in true com-
merce, as in true preaching, or true fighting, it is necessary to admit the idea of occasional voluntary loss;—that sixpences have to be lost, as well as lives, under a sense of duty; that the market may have its martyrdoms as well as the pulpit; and trade its heroisms, as well as war.

May have—in the final issue, must have—and only has not had yet, because men of heroic temper have always been misguided in their youth into other fields, not recognizing what is in our days, perhaps, the most important of all fields; so that, while many a zealous person loses his life in trying to teach the form of a gospel, very few will lose a hundred pounds in showing the practice of one.

The fact is, that people never have had clearly explained to them the true functions of a merchant with respect to other people. I should like the reader to be very clear about this.

Five great intellectual professions, relating to daily necessities of life, have hitherto existed—three exist necessarily, in every civilized nation:

The Soldier's profession is to defend it.
The Pastor's, to teach it.
The Physician's, to keep it in health.
The Lawyer's, to enforce justice.
The Merchant's, to provide for it.

And the duty of all these men is, on due occasion, to die for it.

"On due occasion," namely:—
The Soldier, rather than leave his post in battle.
The Physician, rather than leave his post in plague.
The Pastor, rather than teach Falsehood.
The Lawyer, rather than countenance Injustice.
The Merchant—What is his "due occasion" of death?

It is the main question for the merchant, as for all of us. For, truly, the man who does not know when to die, does not know how to live.

Observe, the merchant's function (or manufacturer's, for in the broad sense in which it is here used the word must be understood to include both) is to provide for the nation. It
is no more his function to get profit for himself out of that provision than it is a clergymen's function to get his stipend. The stipend is a due and necessary adjunct, but not the object, of his life, if he be a true clergymen, any more than his fee (or honorarium) is the object of life to a true physician. Neither is his fee the object of life to a true merchant. All three, if true men, have a work to be done irrespective of fee—to be done even at any cost, or for quite the contrary of fee; the pastor's function being to teach, the physician's to heal, and the merchant's, as I have said, to provide. That is to say, he has to understand to their very root the qualities of the thing he deals in, and the means of obtaining or producing it; and he has to apply all his sagacity and energy to the producing or obtaining it in perfect state, and distributing it at the cheapest possible price where it is most needed.

And because the production or obtaining of any commodity involves necessarily the agency of many lives and hands, the merchant becomes in the course of his business the master and governor of large masses of men in a more direct, though less confessed way, than a military officer or pastor; so that on him falls, in great part, the responsibility for the kind of life they lead: and it becomes his duty, not only to be always considering how to produce what he sells in the purest and cheapest forms, but how to make the various employments involved in the production, or transference of it, most beneficial to the men employed.

And as into these two functions, requiring for their right exercise the highest intelligence, as well as patience, kindness, and tact, the merchant is bound to put all his energy, so for their just discharge he is bound, as soldier or physician is bound, to give up, if need be, his life, in such way as may be demanded of him. Two main points he has in his providing function to maintain: first, his engagements (faithfulness to engagements being the real root of all possibilities in commerce); and, secondly, the perfectness and purity of the thing provided; so that, rather than fail in any engagement, or consent to any deterioration, adulteration, or unjust
and exorbitant price of that which he provides, he is bound to meet fearlessly any form of distress, poverty, or labour, which may, through maintenance of these points, come upon him.

Again: in his office as governor of the men employed by him, the merchant or manufacturer is invested with a distinctly paternal authority and responsibility. In most cases, a youth entering a commercial establishment is withdrawn altogether from home influence; his master must become his father, else he has, for practical and constant help, no father at hand: in all cases the master's authority, together with the general tone and atmosphere of his business, and the character of the men with whom the youth is compelled in the course of it to associate, have more immediate and pressing weight than the home influence, and will usually neutralize it either for good or evil; so that the only means which the master has of doing justice to the men employed by him is to ask himself sternly whether he is dealing with such subordinate as he would with his own son, if compelled by circumstances to take such a position.

Supposing the captain of a frigate saw it right, or were by any chance obliged, to place his own son in the position of a common sailor; as he would then treat his son, he is bound always to treat every one of the men under him. So, also, supposing the master of a manufactory saw it right, or were by any chance obliged, to place his own son in the position of an ordinary workman; as he would then treat his son, he is bound always to treat every one of his men. This is the only effective, true, or practical Rule which can be given on this point of political economy.

And as the captain of a ship is bound to be the last man to leave his ship in case of wreck, and to share his last crust with the sailors in case of famine, so the manufacturer, in any commercial crisis or distress, is bound to take the suffering of it with his men, and even to take more of it for himself than he allows his men to feel; as a father would in a famine, shipwreck, or battle, sacrifice himself for his son.

All which sounds very strange; the only real strangeness
in the matter being, nevertheless, that it should so sound. For all this is true, and that not partially nor theoretically, but everlastingly and practically: all other doctrine than this respecting matters political being false in premises, absurd in deduction, and impossible in practice, consistently with any progressive state of national life; all the life which we now possess as a nation showing itself in the resolute denial and scorn, by a few strong minds and faithful hearts, of the economic principles taught to our multitudes, which principles, so far as accepted, lead straight to national destruction. Respecting the modes and forms of destruction to which they lead, and, on the other hand, respecting the farther practical working of true polity, I hope to reason further in a following paper.
The answer which would be made by any ordinary political economist to the statements contained in the preceding paper, is in few words as follows:—

"It is indeed true that certain advantages of a general nature may be obtained by the development of social affections. But political economists never professed, nor profess, to take advantages of a general nature into consideration. Our science is simply the science of getting rich. So far from being a fallacious or visionary one, it is found by experience to be practically effective. Persons who follow its precepts do actually become rich, and persons who disobey them become poor. Every capitalist of Europe has acquired his fortune by following the known laws of our science, and increases his capital daily by an adherence to them. It is vain to bring forward tricks of logic, against the force of accomplished facts. Every man of business knows by experience how money is made, and how it is lost."

Pardon me. Men of business do indeed know how they themselves made their money, or how, on occasion, they lost it. Playing a long-practised game, they are familiar with the chances of its cards, and can rightly explain their losses and gains. But they neither know who keeps the bank of the gambling-house, nor what other games may be played with the same cards, nor what other losses and gains, far away among the dark streets, are essentially, though invisibly, dependent on theirs in the lighted rooms. They have learned a few, and only a few, of the laws of mercantile economy; but not one of those of political economy.

Primarily, which is very notable and curious, I observe that men of business rarely know the meaning of the word
At least if they know, they do not in their reasonings allow for the fact, that it is a relative word, implying its opposite "poor" as positively as the word "north" implies its opposite "south." Men nearly always speak and write as if riches were absolute, and it were possible, by following certain scientific precepts, for everybody to be rich. Whereas riches are a power like that of electricity, acting only through inequalities or negations of itself. The force of the guinea you have in your pocket depends wholly on the default of a guinea in your neighbour's pocket. If he did not want it, it would be of no use to you; the degree of power it possesses depends accurately upon the need or desire he has for it,—and the art of making yourself rich, in the ordinary mercantile economist's sense, is therefore equally and necessarily the art of keeping your neighbour poor.

I would not contend in this matter (and rarely in any matter), for the acceptance of terms. But I wish the reader clearly and deeply to understand the difference between the two economies, to which the terms "Political" and "Mercantile" might not unadvisably be attached.

Political economy (the economy of a State, or of citizens) consists simply in the production, preservation, and distribution, at fittest time and place, of useful or pleasurable things. The farmer who cuts his hay at the right time; the shipwright who drives his bolts well home in sound wood; the builder who lays good bricks in well-tempered mortar; the housewife who takes care of her furniture in the parlour, and guards against all waste in her kitchen; and the singer who rightly disciplines, and never overstrains her voice: are all political economists in the true and final sense; adding continually to the riches and well-being of the nation to which they belong.

But mercantile economy, the economy of "merces" or of "pay," signifies the accumulation, in the hands of individuals, of legal or moral claim upon, or power over, the labour of others; every such claim implying precisely as much poverty or debt on one side, as it implies riches or right on the other.

It does not, therefore, necessarily involve an addition to
the actual property, or well-being, of the State in which it exists. But since this commercial wealth, or power over labour, is nearly always convertible at once into real property, while real property is not always convertible at once into power over labour, the idea of riches among active men in civilized nations, generally refers to commercial wealth; and in estimating their possessions, they rather calculate the value of their horses and fields by the number of guineas they could get for them, than the value of their guineas by the number of horses and fields they could buy with them.

There is, however, another reason for this habit of mind; namely, that an accumulation of real property is of little use to its owner, unless, together with it, he has commercial power over labour. Thus, suppose any person to be put in possession of a large estate of fruitful land, with rich beds of gold in its gravel, countless herds of cattle in its pastures; houses, and gardens, and storehouses full of useful stores, but suppose, after all, that he could get no servants? In order that he may be able to have servants, some one in his neighbourhood must be poor, and in want of his gold—or his corn. Assume that no one is in want of either, and that no servants are to be had. He must, therefore, bake his own bread, make his own clothes, plough his own ground, and shepherd his own flocks. His gold will be as useful to him as any other yellow pebbles on his estate. His stores must rot, for he cannot consume them. He can eat no more than another man could eat, and wear no more than another man could wear. He must lead a life of severe and common labour to procure even ordinary comforts; he will be ultimately unable to keep either houses in repair, or fields in cultivation; and forced to content himself with a poor man's portion of cottage and garden, in the midst of a desert of waste land, trampled by wild cattle, and encumbered by ruins of palaces, which he will hardly mock at himself by calling "his own."

The most covetous of mankind, with small exultation, I presume, accept riches of this kind on these terms. What is really desired, under the name of riches, is, essentially, power over men; in its simplest sense, the power of obtaining for
our own advantage the labour of servant, tradesman, and artist; in wider sense, authority of directing large masses of the nation to various ends (good, trivial, or hurtful, according to the mind of the rich person). And this power of wealth of course is greater or less in direct proportion to the poverty of the men over whom it is exercised, and in inverse proportion to the number of persons who are as rich as ourselves, and who are ready to give the same price for an article of which the supply is limited. If the musician is poor, he will sing for small pay, as long as there is only one person who can pay him; but if there be two or three, he will sing for the one who offers him most. And thus the power of the riches of the patron (always imperfect and doubtful, as we shall see presently, even when most authoritative) depends first on the poverty of the artist, and then on the limitation of the number of equally wealthy persons, who also want seats at the concert. So that, as above stated, the art of becoming "rich," in the common sense, is not absolutely nor finally the art of accumulating much money for ourselves, but also of contriving that our neighbours shall have less. In accurate terms, it is "the art of establishing the maximum inequality in our own favour."

Now the establishment of such inequality cannot be shown in the abstract to be either advantageous or disadvantageous to the body of the nation. The rash and absurd assumption that such inequalities are necessarily advantageous, lies at the root of most of the popular fallacies on the subject of political economy. For the eternal and inevitable law in this matter is, that the beneficialness of the inequality depends, first, on the methods by which it was accomplished, and, secondly, on the purposes to which it is applied. Inequalities of wealth, unjustly established, have assuredly injured the nation in which they exist during their establishment; and, unjustly directed, injure it yet more during their existence. But inequalities of wealth justly established, benefit the nation in the course of their establishment; and nobly used, aid it yet more by their existence. That is to say, among every active and well-governed people, the various strength of individuals, tested by
full exertion and specially applied to various need, issues in unequal, but harmonious results, receiving reward or authority according to its class and service;* while in the inactive or ill-governed nation, the gradations of decay and the victories of treason work out also their own rugged system of subjection and success; and substitute, for the melodious inequalities of concurrent power, the iniquitous dominances and depressions of guilt and misfortune.

Thus the circulation of wealth in a nation resembles that of the blood in the natural body. There is one quickness of the current which comes of cheerful emotion or wholesome exercise; and another which comes of shame or of fever.

* I have been naturally asked several times, with respect to the sentence in the first of these papers, "the bad workmen unemployed," "But what are you to do with your bad unemployed workmen?" Well, it seems to me the question might have occurred to you before. Your housemaid's place is vacant—you give twenty pounds a year—two girls come for it, one neatly dressed, the other dirtily; one with good recommendations, the other with none. You do not, under these circumstances, usually ask the dirty one if she will come for fifteen pounds, or twelve; and, on her consenting, take her instead of the well-recommended one. Still less do you try to beat both down by making them bid against each other, till you can hire both, one at twelve pounds a year, and the other at eight. You simply take the one fittest for the place, and send away the other, not perhaps concerning yourself quite as much as you should with the question which you now impatiently put to me, "What is to become of her?" For all that I advise you to do, is to deal with workmen as with servants; and verily the question is of weight: "Your bad workman, idler, and rogue—what are you to do with him?"

We will consider of this presently: remember that the administration of a complete system of national commerce and industry cannot be explained in full detail within the space of twelve pages. Meantime, consider whether, there being confessedly some difficulty in dealing with rogues and idlers, it may not be advisable to produce as few of them as possible. If you examine into the history of rogues, you will find they are as truly manufactured articles as anything else, and it is just because our present system of political economy gives so large a stimulus to that manufacture that you may know it to be a false one. We had better seek for a system which will develop honest men, than for one which will deal cunningly with vagabonds. Let us reform our schools, and we shall find little reform needed in our prisons.
There is a flush of the body which is full of warmth and life; and another which will pass in to putrefaction.

The analogy will hold, down even to minute particulars. For as diseased local determination of the blood involves depression of the general health of the system, all morbid local action of riches will be found ultimately to involve a weakening of the resources of the body politic.

The mode in which this is produced may be at once understood by examining one or two instances of the development of wealth in the simplest possible circumstances.

Suppose two sailors cast away on an uninhabited coast, and obliged to maintain themselves there by their own labour for a series of years.

If they both kept their health, and worked steadily, and in amity with each other, they might build themselves a convenient house, and in time come to possess a certain quantity of cultivated land, together with various stores laid up for future use. All these things would be real riches or property; and supposing the men both to have worked equally hard, they would each have right to equal share or use of it. Their political economy would consist merely in careful preservation and just division of these possessions. Perhaps, however, after some time one or other might be dissatisfied with the results of their common farming; and they might in consequence agree to divide the land they had brought under the spade into equal shares, so that each might thenceforward work in his own field and live by it. Suppose that after this arrangement had been made, one of them were to fall ill, and be unable to work on his land at a critical time—say of sowing or harvest.

He would naturally ask the other to sow or reap for him.

Then his companion might say, with perfect justice, "I will do this additional work for you; but if I do it, you must promise to do as much for me at another time. I will count how many hours I spend on your ground, and you shall give me a written promise to work for the same number of hours on mine, whenever I need your help, and you are able to give it."
Suppose the disabled man’s sickness to continue, and that under various circumstances, for several years, requiring the help of the other, he on each occasion gave a written pledge to work, as soon as he was able, at his companion’s orders, for the same number of hours which the other had given up to him. What will the positions of the two men be when the invalid is able to resume work?

Considered as a “Polis,” or state, they will be poorer than they would have been otherwise: poorer by the withdrawal of what the sick man’s labour would have produced in the interval. His friend may perhaps have toiled with an energy quickened by the enlarged need, but in the end his own land and property must have suffered by the withdrawal of so much of his time and thought from them; and the united property of the two men will be certainly less than it would have been if both had remained in health and activity.

But the relations in which they stand to each other are also widely altered. The sick man has not only pledged his labour for some years, but will probably have exhausted his own share of the accumulated stores, and will be in consequence for some time dependent on the other for food, which he can only “pay” or reward him for by yet more deeply pledging his own labour.

Supposing the written promises to be held entirely valid (among civilized nations their validity is secured by legal measures*), the person who had hitherto worked for both

* The disputes which exist respecting the real nature of money arise more from the disputants examining its functions on different sides, than from any real dissent in their opinions. All money, properly so called, is an acknowledgment of debt; but as such, it may either be considered to represent the labour and property of the creditor, or the idleness and penury of the debtor. The intricacy of the question has been much increased by the (hitherto necessary) use of marketable commodities, such as gold, silver, salt, shells, &c., to give intrinsic value or security to currency; but the final and best definition of money is that it is a documentary promise ratified and guaranteed by the nation to give or find a certain quantity of labour on demand. A man’s labour for a day is a better standard of value than a measure of any produce, because no produce ever maintains a consistent rate of productibility.
might now, if he chose, rest altogether, and pass his time in idleness, not only forcing his companion to redeem all the engagements he had already entered into, but exacting from him pledges for further labour, to an arbitrary amount, for what food he had to advance to him.

There might not, from first to last, be the least illegality (in the ordinary sense of the word) in the arrangement; but if a stranger arrived on the coast at this advanced epoch of their political economy, he would find one man commercially Rich; the other commercially Poor. He would see, perhaps with no small surprise, one passing his days in idleness; the other labouring for both, and living sparely, in the hope of recovering his independence, at some distant period.

This is, of course, an example of one only out of many ways in which inequality of possession may be established between different persons, giving rise to the mercantile forms of Riches and Poverty. In the instance before us, one of the men might from the first have deliberately chosen to be idle, and to put his life in pawn for present ease; or he might have mismanaged his land, and been compelled to have recourse to his neighbour for food and help, pledging his future labour for it. But what I want the reader to note especially is the fact, common to a large number of typical cases of this kind, that the establishment of the mercantile wealth which consists in a claim upon labour, signifies a political diminution of the real wealth which consists in substantial possessions.

Take another example, more consistent with the ordinary course of affairs of trade. Suppose that three men, instead of two, formed the little isolated republic, and found themselves obliged to separate in order to farm different pieces of land at some distance from each other along the coast; each estate furnishing a distinct kind of produce, and each more or less in need of the material raised on the other. Suppose that the third man, in order to save the time of all three, undertakes simply to superintend the transference of commodities from one farm to the other; on condition of receiving some sufficiently remunerative share of every parcel of goods cons-
veyed, or of some other parcel received in exchange for it.

If this carrier or messenger always brings to each estate, from the other, what is chiefly wanted, at the right time, the operations of the two farmers will go on prosperously, and the largest possible result in produce, or wealth, will be attained by the little community. But suppose no intercourse between the land owners is possible, except through the travelling agent; and that, after a time, this agent, watching the course of each man's agriculture, keeps back the articles with which he has been entrusted, until there comes a period of extreme necessity for them, on one side or other, and then exacts in exchange for them all that the distressed farmer can spare of other kinds of produce; it is easy to see that by ingeniously watching his opportunities, he might possess himself regularly of the greater part of the superfluous produce of the two estates, and at last, in some year of severest trial or scarcity, purchase both for himself, and maintain the former proprietors thenceforward as his labourers or his servants.

This would be a case of commercial wealth acquired on the exactest principles of modern political economy. But more distinctly even than in the former instance, it is manifest in this that the wealth of the State, or of the three men considered as a society, is collectively less than it would have been had the merchant been content with juster profit. The operations of the two agriculturists have been cramped to the utmost; and the continual limitations of the supply of things they wanted at critical times, together with the failure of courage consequent on the prolongation of a struggle for mere existence, without any sense of permanent gain, must have seriously diminished the effective results of their labour; and the stores finally accumulated in the merchant's hands will not in anywise be of equivalent value to those which, had his dealings been honest, would have filled at once the granaries of the farmers and his own.

The whole question, therefore, respecting not only the advantage, but even the quantity, of national wealth, resolves itself finally into one of abstract justice. It is impossible to
THE VEINS OF WEALTH.

39

conclude, of any given mass of acquired wealth, merely by
the fact of its existence, whether it signifies good or evil to
the nation in the midst of which it exists. Its real value de-
pends on the moral sign attached to it, just as sternly as that
of a mathematical quantity depends on the algebraical sign
attached to it. Any given accumulation of commercial wealth
may be indicative, on the one hand, of faithful industries,
progressive energies, and productive ingenuities; or, on the
other, it may be indicative of mortal luxury, merciless tyranny,
ruinous chicane. Some treasures are heavy with human tears,
as an ill-stored harvest with untimely rain; and some gold is
brighter in sunshine than it is in substance.

And these are not, observe, merely moral or pathetic attri-
butes of riches, which the seeker of riches may, if he chooses,
despise; they are literally and sternly, material attributes of
riches, depreciating or exalting, incalculably, the monetary
signification of the sum in question. One mass of money is
the outcome of action which has created,—another, of action
which has annihilated,—ten times as much in the gathering
of it; such and such strong hands have been paralyzed, as if
they had been numbed by nightshade: so many strong men’s
courage broken, so many productive operations hindered;
this and the other false direction given to labour, and lying
image of prosperity set up, on Dura plains dug into seven-
times-heated furnaces. That which seems to be wealth may
in verity be only the gilded index of far-reaching ruin; a
wrecker’s handful of coin gleaned from the beach to which he
has beguiled an argosy; a camp-follower’s bundle of rags un-
wrapped from the breasts of goodly soldiers dead; the pur-
chase-pieces of potter’s fields, wherein shall be buried to-
gether the citizen and the stranger.

And therefore, the idea that directions can be given for the
gaining of wealth, irrespectively of the consideration of its
moral sources, or that any general and technical law of pur-
chase and gain can be set down for national practice, is per-
haps the most insolently futile of all that ever beguiled men
through their vices. So far as I know, there is not in history
record of anything so disgraceful to the human intellect as the
modern idea that the commercial text, "Buy in the cheapest market and sell in the dearest," represents, or under any circumstances could represent, an available principle of national economy. 

Buy in the cheapest market?—yes; but what made your market cheap? Charcoal may be cheap among your roof timbers after a fire, and bricks may be cheap in your streets after an earthquake; but fire and earthquake may not therefore be national benefits. Sell in the dearest?—yes, truly; but what made your market dear? You sold your bread well to-day; was it to a dying man who gave his last coin for it, and will never need bread more, or to a rich man who to-morrow will buy your farm over your head; or to a soldier on his way to pillage the bank in which you have put your fortune?

None of these things you can know. One thing only you can know, namely, whether this dealing of yours is a just and faithful one, which is all you need concern yourself about respecting it; sure thus to have done your own part in bringing about ultimately in the world a state of things which will not issue in pillage or in death. And thus every question concerning these things merges itself ultimately in the great question of justice, which, the ground being thus far cleared for it, I will enter upon in the next paper, leaving only, in this, three final points for the reader's consideration.

It has been shown that the chief value and virtue of money consists in its having power over human beings; that, without this power, large material possessions are useless, and to any person possessing such power, comparatively unnecessary. But power over human beings is attainable by other means than by money. As I said a few pages back, the money power is always imperfect and doubtful; there are many things which cannot be retained by it. Many joys may be given to men which cannot be bought for gold, and many fidelities found in them which cannot be rewarded with it.

Trite enough,—the reader thinks. Yes: but it is not so trite,—I wish it were,—that in this moral power, quite inscrutable and immeasurable though it be, there is a monetary value just as real as that represented by more ponderous cur-
rencies. A man's hand may be full of invisible gold, and the wave of it, or the grasp, shall do more than another's with a shower of bullion. This invisible gold, also, does not necessarily diminish in spending. Political economists will do well some day to take heed of it, though they cannot take measure.

But farther. Since the essence of wealth consists in its authority over men, if the apparent or nominal wealth fail in this power, it fails in essence; in fact, ceases to be wealth at all. It does not appear lately in England, that our authority over men is absolute. The servants show some disposition to rush riotously upstairs, under an impression that their wages are not regularly paid. We should augur ill of any gentleman's property to whom this happened every other day in his drawing-room.

So also, the power of our wealth seems limited as respects the comfort of the servants, no less than their quietude. The persons in the kitchen appear to be ill-dressed, squalid, half-starved. One cannot help imagining that the riches of the establishment must be of a very theoretical and documentary character.

Finally. Since the essence of wealth consists in power over men, will it not follow that the nobler and the more in number the persons are over whom it has power, the greater the wealth? Perhaps it may even appear after some consideration, that the persons themselves are the wealth—that these pieces of gold with which we are in the habit of guiding them, are, in fact, nothing more than a kind of Byzantine harness or trappings, very glittering and beautiful in barbaric sight, wherewith we bridle the creatures; but that if these same living creatures could be guided without the fretting and jingling of the Byzyants in their mouths and ears, they might themselves be more valuable than their bridles. In fact, it may be discovered that the true veins of wealth are purple—and not in Rock, but in Flesh—perhaps even that the final outcome and consummation of all wealth is in the producing as many as possible full-breathed, bright-eyed, and happy-hearted human creatures. Our modern wealth, I
think, has rather a tendency the other way;—most political economists appearing to consider multitudes of human creatures not conducive to wealth, or at best conducive to it only by remaining in a dim-eyed and narrow-chested state of being.

Nevertheless, it is open, I repeat, to serious question, which I leave to the reader's pondering, whether, among national manufactures, that of Souls of a good quality may not at last turn out a quite leadingly lucrative one? Nay, in some far-away and yet undreamt-of hour, I can even imagine that England may cast all thoughts of possessive wealth back to the barbaric nations among whom they first arose; and that, while the sands of the Indus and adamant of Golconda may yet stiffen the housings of the charger, and flash from the turban of the slave, she, as a Christian mother, may at last attain to the virtues and the treasures of a Hea-
then one, and be able to lead forth her Sons, saying,—

"These are my Jewels."
Some centuries before the Christian era, a Jew merchant largely engaged in business on the Gold Coast, and reported to have made one of the largest fortunes of his time (held also in repute for much practical sagacity), left among his ledgers some general maxims concerning wealth, which have been preserved, strangely enough, even to our own days. They were held in considerable respect by the most active traders of the middle ages, especially by the Venetians, who even went so far in their admiration as to place a statue of the old Jew on the angle of one of their principal public buildings. Of late years these writings have fallen into disrepute, being opposed in every particular to the spirit of modern commerce. Nevertheless I shall reproduce a passage or two from them here, partly because they may interest the reader by their novelty; and chiefly because they will show him that it is possible for a very practical and acquisitive tradesman to hold, through a not unsuccessful career, that principle of distinction between well-gotten and ill-gotten wealth, which, partially insisted on in my last paper, it must be our work more completely to examine in this.

He says, for instance, in one place: "The getting of treasure by a lying tongue is a vanity tossed to and fro of them that seek death:" adding in another, with the same meaning (he has a curious way of doubling his sayings): "Treasures of wickedness profit nothing; but justice delivers from death." Both these passages are notable for their assertion of death as the only real issue and sum of attainment by any unjust scheme of wealth. If we read, instead of "lying tongue," "lying label, title, pretence, or advertisement," we shall more clearly perceive the bearing of the words on mod-
ern business. The seeking of death is a grand expression of the true course of men’s toil in such business. We usually speak as if death pursued us, and we fled from him; but that is only so in rare instances. Ordinarily, he masks himself—makes himself beautiful—all-glorious; not like the King’s daughter, all-glorious within, but outwardly: his clothing of wrought gold. We pursue him frantically all our days, he flying or hiding from us. Our crowning success at three-score and ten is utterly and perfectly to seize, and hold him in his eternal integrity—robes, ashes, and sting.

Again: the merchant says, “He that oppresseth the poor to increase his riches, shall surely come to want.” And again, more strongly: “Rob not the poor because he is poor; neither oppress the afflicted in the place of business. For God shall spoil the soul of those that spoiled them.”

This “robbing the poor because he is poor,” is especially the mercantile form of theft, consisting in taking advantage of a man’s necessities in order to obtain his labour or property at a reduced price. The ordinary highwayman’s opposite form of robbery—of the rich, because he is rich—does not appear to occur so often to the old merchant’s mind; probably because, being less profitable and more dangerous than the robbery of the poor, it is rarely practised by persons of discretion.

But the two most remarkable passages in their deep general significance are the following:—

“The rich and the poor have met. God is their maker.”

“They rich and the poor have met. God is their light.”

They “have met:” more literally, have stood in each other way (obviaverunt). That is to say, as long as the world lasts, the action and counteraction of wealth and poverty, the meeting, face to face, of rich and poor, is just as appointed and necessary a law of that world as the flow of stream to sea, or the interchange of power among the electric clouds:—“God is their maker.” But, also, this action may be either gentle and just, or convulsive and destructive: it may be by rage of devouring flood, or by lapse of serviceable wave;—in blackness of thunderstroke, or continual force of vital fire, soft, and
shapeable into love-syllables from far away. And which of these it shall be depends on both rich and poor knowing that God is their light; that in the mystery of human life, there is no other light than this by which they can see each other's faces, and live;—light, which is called in another of the books among which the merchant's maxims have been preserved, the "sun of justice,"* of which it is promised that it shall rise at last with "healing" (health-giving or helping, making whole or setting at one) in its wings. For truly this healing is only possible by means of justice; no love, no faith, no hope will do it; men will be unwisely fond—vainly faithful, unless primarily they are just; and the mistake of the best men through generation after generation, has been that great one of thinking to help the poor by almsgiving, and by preaching of patience or of hope, and by every other means, emollient or consolatory, except the one thing which God orders for them, justice. But this justice, with its accompanying holiness or helpfulness, being even by the best men denied in its trial time, is by the mass of men hated wherever it appears: so that, when the choice was one day fairly put to them, they denied the Helpful One and the Just;† and desired a murderer, sedition-raiser, and robber, to be granted to them;—the murderer instead of the Lord of Life, the sedition-raiser instead

* More accurately, Sun of Justness; but, instead of the harsh word "Justness," the old English "Righteousness" being commonly employed, has, by getting confused with "godliness," or attracting about it various vague and broken meanings, prevented most persons from receiving the force of the passages in which it occurs. The word "righteousness" properly refers to the justice of rule, or right, as distinguished from "equity," which refers to the justice of balance. More broadly, Righteousness is King's justice; and Equity, Judge's justice; the King guiding or ruling all, the Judge dividing or discerning between opposites (therefore, the double question, "Man, who made me a ruler—λικστής—or a divider—μεριστής—over you?") Thus, with respect to the Justice of Choice (selection, the feebler and passive justice), we have from lego,—lex, legal, loi, and loyal; and with respect to the Justice of Rule (direction, the stronger and active justice), we have from rego,—rex, regal, roi, and royal.

† In another place written with the same meaning, "Just, and having salvation."
of the Prince of Peace, and the robber instead of the Just Judge of all the world.

I have just spoken of the flowing of streams to the sea as a partial image of the action of wealth. In one respect it is not a partial, but a perfect image. The popular economist thinks himself wise in having discovered that wealth, or the forms of property in general, must go where they are required; that where demand is, supply must follow. He farther declares that this course of demand and supply cannot be forbidden by human laws. Precisely in the same sense, and with the same certainty, the waters of the world go where they are required. Where the land falls, the water flows. The course neither of clouds nor rivers can be forbidden by human will. But the disposition and administration of them can be altered by human forethought. Whether the stream shall be a curse or a blessing, depends upon man's labour, and administering intelligence. For centuries after centuries, great districts of the world, rich in soil, and favoured in climate, have lain desert under the rage of their own rivers; nor only desert, but plague-struck. The stream which, rightly directed, would have flowed in soft irrigation from field to field—would have purified the air, given food to man and beast, and carried their burdens for them on its bosom—now overwhelms the plain, and poisons the wind; its breath pestilence, and its work famine. In like manner this wealth "goes where it is required." No human laws can withstand its flow. They can only guide it: but this, the leading trench and limiting mound can do so thoroughly, that it shall become water of life—the riches of the hand of wisdom;* or, on the contrary, by leaving it to its own lawless flow, they may make it, what it has been too often, the last and deadliest of national plagues: water of Marah—the water which feeds the roots of all evil.

The necessity of these laws of distribution or restraint is curiously overlooked in the ordinary political economist's definition of his own "science." He calls it, shortly, the "science of getting rich." But there are many sciences, as well as many arts, of getting rich. Poisoning people of large

* "Length of days in her right hand; in her left, riches and honour."
estates, was one employed largely in the middle ages; adulteration of food of people of small estates, is one employed largely now. The ancient and honourable Highland method of blackmail; the more modern and less honourable system of obtaining goods on credit, and the other variously improved methods of appropriation—which, in major and minor scales of industry, down to the most artistic pocket-picking, we owe to recent genius,—all come under the general head of sciences, or arts, of getting rich.

So that it is clear the popular economist, in calling his science the science par excellence of getting rich, must attach some peculiar ideas of limitation to its character. I hope I do not misrepresent him, by assuming that he means his science to be the science of “getting rich by legal or just means.” In this definition, is the word “just,” or “legal,” finally to stand? For it is possible among certain nations, or under certain rulers, or by help of certain advocates, that proceedings may be legal which are by no means just. If, therefore, we leave at last only the word “just” in that place of our definition, the insertion of this solitary and small word will make a notable difference in the grammar of our science. For then it will follow that, in order to grow rich scientifically, we must grow rich justly; and, therefore, know what is just; so that our economy will no longer depend merely on prudence, but on jurisprudence—and that of divine, not human law. Which prudence is indeed of no mean order, holding itself, as it were, high in the air of heaven, and gazing for ever on the light of the sun of justice; hence the souls which have excelled in it are represented by Dante as stars forming in heaven for ever the figure of the eye of an eagle: they having been in life the discerners of light from darkness; or to the whole human race, as the light of the body, which is the eye; while those souls which form the wings of the bird (giving power and dominion to justice, “healing in its wings”) trace also in light the inscription in heaven: “DILIGITE JUSTITIAM QUI JUDICATIS TERRAM.” “Ye who judge the earth, give” (not, observe, merely love, but) “diligent love to justice:” the love which seeks diligently, that is to say, choosingly, and by
preference to all things else. Which judging or doing judgment in the earth is, according to their capacity and position, required not of judges only, nor of rulers only, but of all men: * a truth sorrowfully lost sight of even by those who are ready enough to apply to themselves passages in which Christian men are spoken of as called to be "saints" (i.e. to helpful or healing functions); and "chosen to be kings" (i.e. to knowing or directing functions); the true meaning of these titles having been long lost through the pretences of unhelpful and unable persons to saintly and kingly character; also through the once popular idea that both the sanctity and royalty are to consist in wearing long robes and high crowns, instead of in mercy and judgment; whereas all true sanctity is saving power, as all true royalty is ruling power; and injustice is part and parcel of the denial of such power, which "makes men as the creeping things, as the fishes of the sea, that have no ruler over them." †

Absolute justice is indeed no more attainable than absolute truth; but the righteous man is distinguished from the unrighteous by his desire and hope of justice, as the true man from the false by his desire and hope of truth. And though absolute justice be unattainable, as much justice as we need for all practical use is attainable by all those who make it their aim.

We have to examine, then, in the subject before us, what are the laws of justice respecting payment of labour—no small part, these, of the foundations of all jurisprudence.

* I hear that several of our lawyers have been greatly amused by the statement in the first of these papers that a lawyer's function was to do justice. I do not intend it for a jest; nevertheless it will be seen that in the above passage neither the determination nor doing of justice are contemplated as functions wholly peculiar to the lawyer. Possibly, the more our standing armies, whether of soldiers, pastors, or legislators (the generic term "pastor" including all teachers, and the generic term "lawyer" including makers as well as interpreters of law), can be superseded by the force of national heroism, wisdom, and honesty, the better it may be for the nation.

† It being the privilege of the fishes, as it is of rats and wolves, to live by the laws of demand and supply; but the distinction of humanity, to live by those of right.
I reduced, in my last paper, the idea of money payment to its simplest or radical terms. In those terms its nature, and the conditions of justice respecting it, can be best ascertained.

Money payment, as there stated, consists radically in a promise to some person working for us, that for the time and labour he spends in our service to-day we will give or procure equivalent time and labour in his service at any future time when he may demand it.*

If we promise to give him less labour than he has given us, we under-pay him. If we promise to give him more labour than he has given us, we over-pay him. In practice, according to the laws of demand and supply, when two men are ready to do the work, and only one man wants to have it done, the two men underbid each other for it; and the one who gets it to do, is under-paid. But when two men want the work done, and there is only one man ready to do it, the two men who want it done over-bid each other, and the workman is over-paid.

I will examine these two points of injustice in succession; but first I wish the reader to clearly understand the central principle, lying between the two, of right or just payment.

When we ask a service of any man, he may either give it us freely, or demand payment for it. Respecting free gift of service, there is no question at present, that being a matter of affection—not of traffic. But if he demand payment for it, and we wish to treat him with absolute equity, it is evident that this equity can only consist in giving time for time,

* It might appear at first that the market price of labour expressed such an exchange: but this is a fallacy, for the market price is the momentary price of the kind of labour required, but the just price is its equivalent of the productive labour of mankind. This difference will be analyzed in its place. It must be noted also that I speak here only of the exchangeable value of labour, not of that of commodities. The exchangeable value of a commodity is that of the labour required to produce it, multiplied into the force of the demand for it. If the value of the labour = \( x \) and the force of the demand = \( y \), the exchangeable value of the commodity is \( xy \), in which if either \( x = 0 \), or \( y = 0 \), \( xy = 0 \).
strength for strength, and skill for skill. If a man works an hour for us, and we only promise to work half-an-hour for him in return, we obtain an unjust advantage. If, on the contrary, we promise to work an hour and a half for him in return, he has an unjust advantage. The justice consists in absolute exchange; or, if there be any respect to the stations of the parties, it will not be in favour of the employer: there is certainly no equitable reason in a man's being poor, that if he give me a pound of bread to-day, I should return him less than a pound of bread to-morrow; or any equitable reason in a man's being uneducated, that if he uses a certain quantity of skill and knowledge in my service, I should use a less quantity of skill and knowledge in his. Perhaps, ultimately, it may appear desirable, or, to say the least, gracious, that I should give in return somewhat more than I received. But at present, we are concerned on the law of justice only, which is that of perfect and accurate exchange;—one circumstance only interfering with the simplicity of this radical idea of just payment—that inasmuch as labour (rightly directed) is fruitful just as seed is, the fruit (or "interest," as it is called) of the labour first given, or "advanced," ought to be taken into account, and balanced by an additional quantity of labour in the subsequent repayment. Supposing the repayment to take place at the end of a year, or of any other given time, this calculation could be approximately made; but as money (that is to say, cash) payment involves no reference to time (it being optional with the person paid to spend what he receives at once or after any number of years), we can only assume, generally, that some slight advantage must in equity be allowed to the person who advances the labour, so that the typical form of bargain will be: If you give me an hour to-day, I will give you an hour and five minutes on demand. If you give me a pound of bread to-day, I will give you seventeen ounces on demand, and so on. All that it is necessary for the reader to note is, that the amount returned is at least in equity not to be less than the amount given.

The abstract idea, then, of just or due wages, as respects the labourer, is that they will consist in a sum of money which
will at any time procure for him at least as much labour as he has given, rather more than less. And this equity or justice of payment is, observe, wholly independent of any reference to the number of men who are willing to do the work. I want a horseshoe for my horse. Twenty smiths, or twenty thousand smiths, may be ready to forge it; their number does not in one atom's weight affect the question of the equitable payment of the one who does forge it. It costs him a quarter of an hour of his life, and so much skill and strength of arm to make that horseshoe for me. Then at some future time I am bound in equity to give a quarter of an hour, and some minutes more, of my life (or of some other person's at my disposal), and also as much strength of arm and skill, and a little more, in making or doing what the smith may have need of.

Such being the abstract theory of just remunerative payment, its application is practically modified by the fact that the order for labour, given in payment, is general, while labour received is special. The current coin or document is practically an order on the nation for so much work of any kind; and this universal applicability to immediate need renders it so much more valuable than special labour can be, that an order for a less quantity of this general toil will always be accepted as a just equivalent for a greater quantity of special toil. Any given craftsman will always be willing to give an hour of his own work in order to receive command over half-an-hour, or even much less, of national work. This source of uncertainty, together with the difficulty of determining the monetary value of skill,* renders the ascertainment (even approximate) of

* Under the term "skill" I mean to include the united force of experience, intellect, and passion in their operation on manual labour: and under the term "passion," to include the entire range and agency of the moral feelings; from the simple patience and gentleness of mind which will give continuity and fineness to the touch, or enable one person to work without fatigue, and with good effect, twice as long as another, up to the qualities of character which render science possible—(the retardation of science by envy is one of the most tremendous losses in the economy of the present century)—and to the incommunicable emotion
the proper wages of any given labour in terms of a currency, matter of considerable complexity. But they do not affect the principle of exchange. The worth of the work may not be easily known; but it has a worth, just as fixed and real as the specific gravity of a substance, though such specific gravity may not be easily ascertained when the substance is united with many others. Nor is there any difficulty or chance in determining it as in determining the ordinary maxima and minima of vulgar political economy. There are few bargains in which the buyer can ascertain with anything like precision that the seller would have taken no less; or the seller acquire more than a comfortable faith that the purchaser would have given no more. This impossibility of precise knowledge prevents neither from striving to attain the desired point of

and imagination which are the first and mightiest sources of all value in art.

It is highly singular that political economists should not yet have perceived, if not the moral, at least the passionate element, to be an inextricable quantity in every calculation. I cannot conceive, for instance, how it was possible that Mr. Mill should have followed the true clue so far as to write.—"No limit can be set to the importance—even in a purely productive and material point of view—of mere thought," without seeing that it was logically necessary to add also, "and of mere feeling." And this the more, because in his first definition of labour he includes in the idea of it "all feelings of a disagreeable kind connected with the employment of one's thoughts in a particular occupation." True; but why not also, "feelings of an agreeable kind?" It can hardly be supposed that the feelings which retard labour are more essentially a part of the labour than those which accelerate it. The first are paid for as pain, the second as power. The workman is merely indemnified for the first; but the second both produce a part of the exchangeable value of the work, and materially increase its actual quantity.

"Fritz is with us. He is worth fifty thousand men." Truly, a large addition to the material force;—consisting, however, be it observed, not more in operations carried on in Fritz's head, than in operations carried on in his armies' heart. "No limit can be set to the importance of mere thought." Perhaps not! Nay, suppose some day it should turn out that "mere" thought was in itself a recommendable object of production, and that all material production was only a step towards this more precious immaterial one?
greatest vexation and injury to the other, nor from accepting it for a scientific principle that he is to buy for the least and sell for the most possible, though what the real least or most may be he cannot tell. In like manner, a just person lays it down for a scientific principle that he is to pay a just price, and, without being able precisely to ascertain the limits of such a price, will nevertheless strive to attain the closest possible approximation to them. A practically serviceable approximation he can obtain. It is easier to determine scientifically what a man ought to have for his work, than what his necessities will compel him to take for it. His necessities can only be ascertained by empirical, but his due by analytical investigation. In the one case, you try your answer to the sum like a puzzled schoolboy—till you find one that fits; in the other, you bring out your result within certain limits, by process of calculation.

Supposing, then, the just wages of any quantity of given labour to have been ascertained, let us examine the first results of just and unjust payment, when in favour of the purchaser or employer; i.e. when two men are ready to do the work, and only one wants to have it done.

The unjust purchaser forces the two to bid against each other till he has reduced their demand to its lowest terms. Let us assume that the lowest bidder offers to do the work at half its just price.

The purchaser employs him, and does not employ the other. The first or apparent result is, therefore, that one of the two men is left out of employ, or to starvation, just as definitely as by the just procedure of giving fair price to the best workman. The various writers who endeavoured to invalidate the positions of my first paper never saw this, and assumed that the unjust hirer employed both. He employs both no more than the just hirer. The only difference (in the outset) is that the just man pays sufficiently, the unjust man insufficiently, for the labour of the single person employed.

I say, "in the outset;" for this first or apparent difference is not the actual difference. By the unjust procedure, half the proper price of the work is left in the hands of the employer.
This enables him to hire another man at the same unjust rate, on some other kind of work; and the final result is that he has two men working for him at half price, and two are out of employ.

By the just procedure, the whole price of the first piece of work goes in the hands of the man who does it. No surplus being left in the employer's hands, he cannot hire another man for another piece of labour. But by precisely so much as his power is diminished, the hired workman's power is increased; that is to say, by the additional half of the price he has received; which additional half he has the power of using to employ another man in his service. I will suppose, for the moment, the least favourable, though quite probable, case—that, though justly treated himself, he yet will act unjustly to his subordinate; and hire at half-price, if he can. The final result will then be, that one man works for the employer, at just price; one for the workman, at half-price; and two, as in the first case, are still out of employ. These two, as I said before, are out of employ in both cases. The difference between the just and unjust procedure does not lie in the number of men hired, but in the price paid to them, and the persons by whom it is paid. The essential difference, that which I want the reader to see clearly, is, that in the unjust case, two men work for one, the first hirer. In the just case, one man works for the first hirer, one for the person hired, and so on, down or up through the various grades of service; the influence being carried forward by justice, and arrested by injustice. The universal and constant action of justice in this matter is therefore to diminish the power of wealth, in the hands of one individual, over masses of men, and to distribute it through a chain of men. The actual power exerted by the wealth is the same in both cases; but by injustice it is put all in one man's hands, so that he directs at once and with equal force the labour of a circle of men about him; by the just procedure, he is permitted to touch the nearest only, through whom, with diminished force, modified by new minds, the energy of the wealth passes on to others, and so till it exhausts itself.
The immediate operation of justice in this respect is therefore to diminish the power of wealth, first in acquisition of luxury, and, secondly, in exercise of moral influence. The employer cannot concentrate so multitudinous labour on his own interests, nor can he subdue so multitudinous mind to his own will. But the secondary operation of justice is not less important. The insufficient payment of the group of men working for one, places each under a maximum of difficulty in rising above his position. The tendency of the system is to check advancement. But the sufficient or just payment, distributed through a descending series of offices or grades of labour,* gives each subordinated person fair and sufficient means of rising in the social scale, if he chooses to use them; and thus not only diminishes the immediate power of wealth, but removes the worst disabilities of poverty.

It is on this vital problem that the entire destiny of the labourer is ultimately dependent. Many minor interests may sometimes appear to interfere with it, but all branch from it.

* I am sorry to lose time by answering, however curtly, the equivocations of the writers who sought to obscure the instances given of regulated labour in the first of these papers, by confusing kinds, ranks, and quantities of labour with its qualities. I never said that a colonel should have the same pay as a private, nor a bishop the same pay as a curate. Neither did I say that more work ought to be paid as less work (so that the curate of a parish of two thousand souls should have no more than the curate of a parish of five hundred). But I said that, so far as you employ it at all, bad work should be paid no less than good work; as a bad clergyman yet takes his tithes, a bad physician takes his fee, and a bad lawyer his costs. And this, as will be further shown in the conclusion, I said, and say, partly because the best work never was nor ever will be, done for money at all; but chiefly because, the moment people know they have to pay the bad and good alike, they will try to discern the one from the other, and not use the bad. A sagacious writer in the Scotsman asks me if I should like any common scribbler to be paid by Messrs Smith, Elder and Co. as their good authors are. I should, if they employed him—but would seriously recommend them, for the scribbler's sake, as well as their own, not to employ him. The quantity of its money which the country at present invests in scribbling is not, in the outcome of it, economically spent; and even the highly ingenious person to whom this question occurred, might perhaps have been more beneficially employed than in printing it.
For instance, considerable agitation is often caused in the minds of the lower classes when they discover the share which they nominally, and, to all appearance, actually, pay out of their wages in taxation (I believe thirty-five or forty per cent.). This sounds very grievous; but in reality the labourer does not pay it, but his employer. If the workman had not to pay it, his wages would be less by just that sum: competition would still reduce them to the lowest rate at which life was possible. Similarly the lower orders agitated for the repeal of the corn laws,* thinking they would be bet-

* I have to acknowledge an interesting communication on the subject of free trade from Paisley (for a short letter from "A Well-wisher" at —, my thanks are yet more due). But the Scottish writer will, I fear, be disagreeably surprised to hear, that I am, and always have been, an utterly fearless and unscrupulous free-trader. Seven years ago, speaking of the various signs of insanity in the European mind (Stones of Venice, vol. iii. p. 168), I wrote: "The first principles of commerce were acknowledged by the English parliament only a few months ago, and in its free-trade measures, and are still so little understood by the million, that no nation dares to abolish its custom-houses."

It will be observed that I do not admit even the idea of reciprocity. Let other nations, if they like, keep their ports shut; every wise nation will throw its own open. It is not the opening them, but a sudden, inconsiderate, and blunderingly experimental manner of opening them, which does the harm. If you have been protecting a manufacture for long series of years, you must not take protection off in a moment, so as to throw every one of its operatives at once out of employ, any more than you must take all its wrappings off a feeble child at once in cold weather, though the number of them may have been radically injuring its health. Little by little, you must restore it to freedom and to air.

Most people's minds are in curious confusion on the subject of free trade, because they suppose it to imply enlarged competition. On the contrary, free trade puts an end to all competition. "Protection" (among various other mischievous functions) endeavours to enable one country to compete with another in the production of an article at a disadvantage. When trade is entirely free, no country can be competed with in the articles for the production of which it is naturally calculated; nor can it compete with any other in the production of articles for which it is not naturally calculated. Tuscany, for instance, cannot compete with England in steel, nor England with Tuscany in oil. They must exchange their steel and oil. Which exchange should be as frank and free as honesty and the sea-winds can make it. Competition, in-
ter off if bread were cheaper; never perceiving that as soon as bread was permanently cheaper, wages would permanently fall in precisely that proportion. The corn laws were rightly repealed; not, however, because they directly oppressed the poor, but because they indirectly oppressed them in causing a large quantity of their labour to be consumed unproductively. So also unnecessary taxation oppresses them, through destruction of capital, but the destiny of the poor depends primarily always on this one question of dueness of wages. Their distress (irrespective of that caused by sloth, minor error, or crime) arises on the grand scale from the two reacting forces of competition and oppression. There is not yet, nor will yet for ages be, any real over-population in the world; but a local over-population, or, more accurately, a degree of population locally unmanageable under existing circumstances for want of forethought and sufficient machinery, necessarily shows itself by pressure of competition; and the taking advantage of this competition by the purchaser to obtain their labour unjustly cheap, consummates at once their suffering and his own; for in this (as I believe in every other kind of slavery) the oppressor suffers at last more than the oppressed, and those magnificent lines of Pope, even in all their force, fall short of the truth—

"Yet, to be just to these poor men of pelf,
Each does but hate his neighbour as himself:
Damned to the mines, an equal fate betides
The slave that digs it, and the slave that hides."

The collateral and reversionary operations of justice in this matter I shall examine hereafter (it being needful first to define the nature of value); proceeding then to consider within what practical terms a juster system may be established; and ultimately the vexed question of the destinies of the unemployed workmen.* Lest, however, the reader should be

deed, arises at first, and sharply, in order to prove which is strongest in any given manufacture possible to both; this point once ascertained, competition is at an end.

* I should be glad if the reader would first clear the ground for himself so far as to determine whether the difficulty lies in getting the work
alarmed at some of the issues to which our investigations seem to be tending, as if in their bearing against the power of wealth they had something in common with those of socialism, I wish him to know, in accurate terms, one or two of the main points which I have in view.

Whether socialism has made more progress among the army and navy (where payment is made on my principles), or among the manufacturing operatives (who are paid on my opponents' principles), I leave it to those opponents to ascertain and declare. Whatever their conclusion may be, I think it necessary to answer for myself only this: that if there be any one point insisted on throughout my works more frequently than another, that one point is the impossibility of Equality. My continual aim has been to show the eternal superiority of some men to others, sometimes even of one man to all others; and to show also the advisability of appointing more such persons or person to guide, to lead, or on occasion even to compel and subdue, their inferiors, according to their own better knowledge and wiser will. My principles of Political Economy were all involved in a single phrase spoken three years ago at

or getting the pay for it. Does he consider occupation itself to be an expensive luxury, difficult of attainment, of which too little is to be found in the world? or is it rather that, while in the enjoyment even of the most athletic delight, men must nevertheless be maintained, and this maintenance is not always forthcoming? We must be clear on this head before going farther, as most people are loosely in the habit of talking of the difficulty of "finding employment." Is it employment that we want to find, or support during employment? Is it idleness we wish to put an end to, or hunger? We have to take up both questions in succession, only not both at the same time. No doubt that work is a luxury, and a very great one. It is, indeed, at once a luxury and a necessity; no man can retain either health of mind or body without it. So profoundly do I feel this, that, as will be seen in the sequel, one of the principal objects I would recommend to benevolent and practical persons, is to induce rich people to seek for a larger quantity of this luxury than they at present possess. Nevertheless, it appears by experience that even this healthiest of pleasures may be indulged in to excess, and that human beings are just as liable to surfeit of labour as to surfeit of meat; so that, as on the one hand, it may be charitable to provide, for some people, lighter dinner, and more work,—for others it may be equally expedient to provide lighter work, and more dinner.
Manchester: “Soldiers of the Ploughshare as well as soldiers of the Sword:” and they were all summed in a single sentence in the last volume of Modern Painters—“Government and co-operation are in all things the Laws of Life; Anarchy and competition the Laws of Death.”

And with respect to the mode in which these general principles affect the secure possession of property, so far am I from invalidating such security, that the whole gist of these papers will be found ultimately to aim at an extension in its range; and whereas it has long been known and declared that the poor have no right to the property of the rich, I wish it also to be known and declared that the rich have no right to the property of the poor.

But that the working of the system which I have undertaken to develop would in many ways shorten the apparent and direct, though not the unseen and collateral, power, both of wealth, as the Lady of Pleasure, and of capital as the Lord of Toil, I do not deny: on the contrary, I affirm it in all joyfulness; knowing that the attraction of riches is already too strong, as their authority is already too weighty, for the reason of mankind. I said in my last paper that nothing in history had ever been so disgraceful to human intellect as the acceptance among us of the common doctrines of political economy as a science. I have many grounds for saying this, but one of the chief may be given in few words. I know no previous instance in history of a nation’s establishing a systematic disobedience to the first principles of its professed religion. The writings which we (verbally) esteem as divine, not only denounce the love of money as the source of all evil, and as an idolatry abhorred of the Deity, but declare mammon service to be the accurate and irreconcileable opposite of God’s service: and, whenever they speak of riches absolute, and poverty absolute, declare woe to the rich, and blessing to the poor. Whereupon we forthwith investigate a science of becoming rich, as the shortest road to national prosperity.

“Tai Cristian dannerà l’Etiòpe,
Quando si partiranno i due colleghi,
L’UNO IN ETERNO RICCO, E L’ALTRO INÒPE.”
ESSAY IV.

AD VALOREM.

In the last paper we saw that just payment of labour consisted in a sum of money which would approximately obtain equivalent labour at a future time: we have now to examine the means of obtaining such equivalence. Which question involves the definition of Value, Wealth, Price, and Produce.

None of these terms are yet defined so as to be understood by the public. But the last, Produce, which one might have thought the clearest of all, is, in use, the most ambiguous; and the examination of the kind of ambiguity attendant on its present employment will best open the way to our work.

In his chapter on Capital, Mr. J. S. Mill instances, as a capitalist, a hardware manufacturer, who, having intended to spend a certain portion of the proceeds of his business in buying plate and jewels, changes his mind, and "pays it as wages to additional workpeople." The effect is stated by Mr. Mill to be, that "more food is appropriated to the consumption of productive labourers."

Now, I do not ask, though, had I written this paragraph, it would surely have been asked of me, What is to become of the silversmiths? If they are truly unproductive persons, we will acquiesce in their extinction. And though in another part of the same passage, the hardware merchant is supposed also to dispense with a number of servants, whose "food is thus set free for productive purposes," I do not inquire what will be the effect, painful or otherwise, upon the servants, of

* Book I. chap. iv. s. 1. To save space, my future references to Mr. Mill's work will be by numerals only, as in this instance, I. iv. 1. Ed. in 2 vols. 8vo. Parker, 1848.
this emmacipation of their food. But I very seriously inquire why ironware is produce, and silverware is not? That the merchant consumes the one, and sells the other, certainly does not constitute the difference, unless it can be shown (which, indeed, I perceive it to be becoming daily more and more the aim of tradesmen to show) that commodities are made to be sold, and not to be consumed. The merchant is an agent of conveyance to the consumer in one case, and is himself the consumer in the other: * but the labourers are in either case equally productive, since they have produced goods to the same value, if the hardware and the plate are both goods.

And what distinction separates them? It is indeed possible that in the "comparative estimate of the moralist," with which Mr. Mill says political economy has nothing to do (III. i. 2) a steel fork might appear a more substantial production than a silver one: we may grant also that knives, no less than forks, are good produce; and scythes and ploughshares serviceable articles. But, how of bayonets? Supposing the hardware merchant to effect large sales of these, by help of the "setting free" of the food of his servants and his silversmith,—is he still employing productive labourers, or, in Mr. Mill’s words, labourers who increase "the stock of permanent means of enjoyment" (I. iii. 4). Or if, instead of bayonets, he supply bombs, will not the absolute and final "enjoyment" of even these energetically productive articles (each of which costs ten pounds) † be dependent on a proper choice of time and

* If Mr. Mill had wished to show the difference in result between consumption and sale, he should have represented the hardware merchant as consuming his own goods instead of selling them; similarly, the silver merchant as consuming his own goods instead of selling them. Had he done this, he would have made his position clearer, though less tenable; and perhaps this was the position he really intended to take, tacitly involving his theory, elsewhere stated, and shown in the sequel of this paper to be false, that demand for commodities is not demand for labour. But by the most diligent scrutiny of the paragraph now under examination, I cannot determine whether it is a fallacy pure and simple, or the half of one fallacy supported by the whole of a greater one; so that I treat it here on the kinder assumption that it is one fallacy only.

† I take Mr. Helps’ estimate in his essay on War.
place for their *enfantement*; choice, that is to say, depending on those philosophical considerations with which political economy has nothing to do? *

I should have regretted the need of pointing out inconsistency in any portion of Mr. Mill's work, had not the value of his work proceeded from its inconsistencies. He deserves honour among economists by inadvertently disclaiming the principles which he states, and tacitly introducing the moral considerations with which he declares his science has no connection. Many of his chapters are, therefore, true and valuable; and the only conclusions of his which I have to dispute are those which follow from his premises.

Thus, the idea which lies at the root of the passage we have just been examining, namely, that labour applied to produce luxuries will not support so many persons as labour applied to produce useful articles, is entirely true; but the instance given fails—and in four directions of failure at once—because Mr. Mill has not defined the real meaning of usefulness. The definition which he has given—"capacity to satisfy a desire, or serve a purpose" (III. i. 2)—applies equally to the iron and silver; while the true definition—which he has not given, but which nevertheless underlies the false verbal definition in his mind, and comes out once or twice by accident (as in the words "any support to life or strength" in I. i. 5)—applies to some articles of iron, but not to others, and to some articles of silver, but not to others. It applies to ploughs, but not to bayonets; and to forks, but not to filigree.†

The eliciting of the true definition will give us the reply to

* Also when the wrought silver vases of Spain were dashed to fragments by our custom-house officers, because bullion might be imported free of duty, but not brains, was the axe that broke them productive?—the artist who wrought them unproductive? Or again. If the woodman's axe is productive, is the executioner's? As also, if the hemp of a cable be productive, does not the productiveness of hemp in a halter depend on its moral more than on its material application?

† Filigree: that is to say, generally, ornament dependent on complexity, not on art.
our first question, "What is value?" respecting which, however, we must first hear the popular statements.

"The word 'value,' when used without adjunct, always means, in political economy, value in exchange" (Mill, III. i. 3). So that, if two ships cannot exchange their rudders, their rudders are, in politico-economic language, of no value to either.

But "the subject of political economy is wealth."—(Preliminary remarks, page 1.)

And wealth "consists of all useful and agreeable objects which possess exchangeable value."—(Preliminary remarks, page 10.)

It appears, then, according to Mr. Mill, that usefulness and agreeableness underlie the exchange value, and must be ascertained to exist in the thing, before we can esteem it an object of wealth.

Now, the economical usefulness of a thing depends not merely on its own nature, but on the number of people who can and will use it. A horse is useless, and therefore unsaleable, if no one can ride,—a sword if no one can strike, and meat, if no one can eat. Thus every material utility depends on its relative human capacity.

Similarly: The agreeableness of a thing depends not merely on its own likeableness, but on the number of people who can be got to like it. The relative agreeableness, and therefore saleableness, of "a pot of the smallest ale," and of "Adonis painted by a running brook," depends virtually on the opinion of Demos, in the shape of Christopher Sly. That is to say, the agreeableness of a thing depends on its relative human disposition.* Therefore, political economy, being a science of

* These statements sound crude in their brevity; but will be found of the utmost importance when they are developed. Thus, in the above instance, economists have never perceived that disposition to buy is a wholly moral element in demand: that is to say, when you give a man half-a-crown, it depends on his disposition whether he is rich or poor with it—whether he will buy disease, ruin, and hatred, or buy health, advancement, and domestic love. And thus the agreeableness or exchange value of every offered commodity depends on production, not merely of the commodity, but of buyers of it; therefore on the educa-
wealth, must be a science respecting human capacities and dispositions. But moral considerations have nothing to do with political economy (III. i. 2). Therefore, moral considerations have nothing to do with human capacities and dispositions.

I do not wholly like the look of this conclusion from Mr. Mill's statements:—let us try Mr. Ricardo's.

"Utility is not the measure of exchangeable value, though it is absolutely essential to it."—(Chap. I. sect. i.) Essential in what degree, Mr. Ricardo? There may be greater and less degrees of utility. Meat, for instance, may be so good as to be fit for any one to eat, or so bad as to be fit for no one to eat. What is the exact degree of goodness which is "essential" to its exchangeable value, but not "the measure" of it? How good must the meat be, in order to possess any exchangeable value; and how bad must it be—(I wish this were a settled question in London markets)—in order to possess none?

There appears to be some hitch, I think, in the working even of Mr. Ricardo's principles; but let him take his own example. "Suppose that in the early stages of society the bows and arrows of the hunter were of equal value with the implements of the fisherman. Under such circumstances the value of the deer, the produce of the hunter's day's labour, would be exactly" (italics mine) "equal to the value of the fish, the product of the fisherman's day's labour. The comparative value of the fish and game would be entirely regulated by the quantity of labour realized in each." (Ricardo, chap. iii. On Value).

Indeed! Therefore, if the fisherman catches one sprat, and the huntsman one deer, one sprat will be equal in value to one

...
deer; but if the fisherman catches no sprat, and the hunter two deer, no sprat will be equal in value to two deer?

Nay; but—Mr. Ricardo's supporters may say—he means, on an average;—if the average product of a day's work of fisher and hunter be one fish and one deer, the one fish will always be equal in value to the one deer.

Might I inquire the species of fish. Whale? or whitebait?*

It would be waste of time to pursue these fallacies farther; we will seek for a true definition.

* Perhaps it may be said, in farther support of Mr. Ricardo, that he meant, "when the utility is constant or given, the price varies as the quantity of labour." If he meant this, he should have said it; but, had he meant it, he could have hardly missed the necessary result, that utility would be one measure of price (which he expressly denies it to be); and that, to prove saleableness, he had to prove a given quantity of utility, as well as a given quantity of labour; to wit, in his own instance, that the deer and fish would each feed the same number of men, for the same number of days, with equal pleasure to their palates. The fact is, he did not know what he meant himself. The general idea which he had derived from commercial experience, without being able to analyse it, was, that when the demand is constant, the price varies as the quantity of labour required for production; or,—using the formula I gave in last paper—when \( y \) is constant, \( xy \) varies as \( x \). But demand never is, nor can be, ultimately constant, if \( x \) varies distinctly; for, as price rises, consumers fall away; and as soon as there is a monopoly (and all scarcity is a form of monopoly; so that every commodity is affected occasionally by some colour of monopoly), \( y \) becomes the most influential condition of the price. Thus the price of a painting depends less on its merits than on the interest taken in it by the public; the price of singing less on the labour of the singer than the number of persons who desire to hear him; and the price of gold less on the scarcity which affects it in common with cerium or iridium, than on the sunlight colour and unalterable purity by which it attracts the admiration and answers the trusts of mankind.

It must be kept in mind, however, that I use the word "demand" in a somewhat different sense from economists usually. They mean by it "the quantity of a thing sold." I mean by it "the force of the buyer's capable intention to buy." In good English, a person's "demand" signifies, not what he gets, but what he asks for.

Economists also do not notice that objects are not valued by absolute bulk or weight, but by such bulk and weight as is necessary to bring them into use. They say, for instance, that water bears no price in the
Much store has been set for centuries upon the use of our English classical education. It were to be wished that our well-educated merchants recalled to mind always this much of their Latin schooling,—that the nominative of *valorem* (a word already sufficiently familiar to them) is *valor*; a word which, therefore, ought to be familiar to them. *Valor*, from *valere*, to be well, or strong (*θυαίω*)—strong, *in* life (if a man), or valiant; strong, *for* life (if a thing), or valuable. To be "valuable," therefore, is to "avail towards life." A truly valuable or availing thing is that which leads to life with its whole strength. In proportion as it does not lead to life, or as its strength is broken, it is less valuable; in proportion as it leads away from life, it is invaluable or malignant.

The value of a thing, therefore, is independent of opinion, and of quantity. Think what you will of it, gain how much you may of it, the value of the thing itself is neither greater nor less. For ever it avails, or avails not; no estimate can raise, no disdain depress, the power which it holds from the Maker of things and of men.

The real science of political economy, which has yet to be distinguished from the bastard science, as medicine from witchcraft, and astronomy from astrology, is that which teaches nations to desire and labour for the things that lead to life; and which teaches them to scorn and destroy the things that lead to destruction. And if, in a state of infancy, they suppose indifferent things, such as excrescences of shell-fish, and pieces of blue and red stone, to be valuable, and spend large measure of the labour which ought to be employed for the extension and ennobling of life, in diving or digging for them, and cutting them into various shapes,—or if, in the same state of infancy, they imagine precious and beneficent things, such as air, light, and cleanliness, to be valueless,—or if, finally, they imagine the conditions of their market. It is true that a cupful does not, but a lake does; just as a handful of dust does not, but an acre does. And were it possible to make even the possession of the cupful or handful permanent (*i.e.* to find a place for them,) the earth and sea would be bought up by handfuls and cupfuls.
own existence, by which alone they can truly possess or use anything, such, for instance, as peace, trust, and love, to be prudently exchangeable, when the market offers, for gold, iron, or excrescences of shells—the great and only science of Political Economy teaches them, in all these cases, what is vanity, and what substance; and how the service of Death, the Lord of Waste, and of eternal emptiness, differs from the service of Wisdom, the Lady of Saving, and of eternal fulness; she who has said, "I will cause those that love me to inherit substance; and I will fill their treasures."

The "Lady of Saving," in a profounder sense than that of the savings' bank, though that is a good one: Madonna della Salute,—Lady of Health—which, though commonly spoken of as if separate from wealth, is indeed a part of wealth. This word, "wealth," it will be remembered, is the next we have to define.

"To be wealthy," says Mr. Mill, is "to have a large stock of useful articles."

I accept this definition. Only let us perfectly understand it. My opponents often lament my not giving them enough logic: I fear I must at present use a little more than they will like; but this business of Political Economy is no light one, and we must allow no loose terms in it.

We have, therefore, to ascertain in the above definition, first, what is the meaning of "having," or the nature of Possession. Then what is the meaning of "useful," or the nature of Utility.

And first of possession. At the crossing of the transepts of Milan Cathedral has lain, for three hundred years, the embalmed body of St. Carlo Borromeo. It holds a golden crosier, and has a cross of emeralds on its breast. Admitting the crosier and emeralds to be useful articles, is the body to be considered as "having" them? Do they, in the politico-economical sense of property, belong to it? If not, and if we may, therefore, conclude generally that a dead body cannot possess property, what degree and period of animation in the body will render possession possible?

As thus: lately in a wreck of a Californian ship, one of the
passengers fastened a belt about him with two hundred pounds of gold in it, with which he was found afterwards at the bottom. Now, as he was sinking—had he the gold? or had the gold him?*

And if, instead of sinking him in the sea by its weight, the gold had struck him on the forehead, and thereby caused incurable disease—suppose palsy or insanity,—would the gold in that case have been more a "possession" than in the first? Without pressing the inquiry up through instances of gradual increasing vital power over the gold (which I will, however, give, if they are asked for), I presume the reader will see that possession, or "having," is not an absolute, but a gradated, power; and consists not only in the quantity or nature of the thing possessed, but also (and in a greater degree) in its suitability to the person possessing it, and in his vital power to use it.

And our definition of Wealth, expanded, becomes: "The possession of useful articles, which we can use." This is a very serious change. For wealth, instead of depending merely on a "have," is thus seen to depend on a "can." Gladiator's death, on a "habet;" but soldier's victory, and state's salvation, on a "quo plurimum posset." (Liv. VII. 6.) And what we reasoned of only as accumulation of material, is seen to demand also accumulation of capacity.

So much for our verb. Next for our adjective. What is the meaning of "useful?"

The inquiry is closely connected with the last. For what is capable of use in the hands of some persons, is capable, in the hands of others, of the opposite of use, called commonly, "from-use or ab-use." And it depends on the person, much more than on the article, whether its usefulness or ab-usefulness will be the quality developed in it. Thus, wine, which the Greeks, in their Bacchus, made, rightly, the type of all passion, and which, when used, "cheereth god and man" (that is to say, strengthens both the divine life, or reasoning power, and the earthly, or carnal power, of man); yet, when abused, becomes "Dionysus," hurtful especially to the divine

* Compare GEORGE HERBERT, The Church Porch, Stanza 28.
part of man, or reason. And again, the body itself, being equally liable to use and to abuse, and, when rightly disciplined, serviceable to the State, both for war and labour;—but when not disciplined, or abused, valueless to the State, and capable only of continuing the private or single existence of the individual (and that but feebly)—the Greeks called such a body an "idiotic" or "private" body, from their word signifying a person employed in no way directly useful to the State; whence, finally, our "idiot," meaning a person entirely occupied with his own concerns.

Hence, it follows, that if a thing is to be useful, it must be not only of an availing nature, but in availing hands. Or, in accurate terms, usefulness is value in the hands of the valiant; so that this science of wealth, being, as we have just seen, when regarded as the science of Accumulation, accumulative of capacity as well as of material,—when regarded as the Science of Distribution, is distribution not absolute, but discriminate; not of every thing to every man, but of the right thing to the right man. A difficult science, dependent on more than arithmetic.

Wealth, therefore, is "the possession of the valuable by the valiant;" and in considering it as a power existing in a nation, the two elements, the value of the thing, and the valour of its possessor, must be estimated together. Whence it appears that many of the persons commonly considered wealthy, are in reality no more wealthy than the locks of their own strong boxes are; they being inherently and eternally incapable of wealth; and operating for the nation, in an economical point of view, either as pools of dead water, and eddies in a stream (which, so long as the stream flows, are useless, or serve only to drown people, but may become of importance in a state of stagnation, should the stream dry); or else, as dams in a river, of which the ultimate service depends not on the dam, but the miller; or else, as mere accidental stays and impediments, acting, not as wealth, but (for we ought to have a correspondent term) as "illth," causing various devastation and trouble around them in all directions; or lastly, act not at all, but are merely animated conditions of
delay, (no use being possible of anything they have until they are dead,) in which last condition they are nevertheless often useful as delays, and "impedimenta," if a nation is apt to move too fast.

This being so, the difficulty of the true science of Political Economy lies not merely in the need of developing manly character to deal with material value, but in the fact, that while the manly character and material value only form wealth by their conjunction, they have nevertheless a mutually destructive operation on each other. For the manly character is apt to ignore, or even cast away, the material value:—whence that of Pope:—

"Sure, of qualities demanding praise
More go to ruin fortunes, than to raise,"

And on the other hand, the material value is apt to undermine the manly character; so that it must be our work, in the issue, to examine what evidence there is of the effect of wealth on the minds of its possessors; also, what kind of person it is who usually sets himself to obtain wealth, and succeeds in doing so; and whether the world owes more gratitude to rich or to poor men, either for their moral influence upon it, or for chief goods, discoveries, and practical advancements. I may, however, anticipate future conclusion so far as to state that in a community regulated only by laws of demand and supply, and protected from open violence, the persons who become rich are, generally speaking, industrious, resolute, proud, covetous, prompt, methodical, sensible, unimaginitative, insensitive, and ignorant. The persons who remain poor are the entirely foolish, the entirely wise,* the idle, the reckless, the humble, the thoughtful, the dull, the imaginative, the sensitive, the well-informed, the improvident, the irregularly and impulsively wicked, the clumsy knave, the open thief, and the entirely merciful, just, and godly person.

Thus far then of wealth. Next, we have to ascertain the

* "δ Ζεύς δήπου πένεται."—Arist. Plut. 582. It would but weaken the grand words to lean on the preceding ones:—"καὶ τὴν γνώμην, καὶ τὴν ἴδεαν."
nature of Price; that is to say, of exchange value, and its expression by currencies.

Note first, of exchange, there can be no profit in it. It is only in labour there can be profit—that is to say a "making in advance," or "making in favour of" (from proficio). In exchange, there is only advantage, i.e. a bringing of vantage or power to the exchanging persons. Thus, one man, by sowing and reaping, turns one measure of corn into two measures. That is Profit. Another by digging and forging, turns one spade into two spades. That is Profit. But the man who has two measures of corn wants sometimes to dig; and the man who has two spades wants sometimes to eat:—They exchange the gained grain for the gained tool; and both are the better for the exchange; but though there is much advantage in the transaction, there is no profit. Nothing is constructed or produced. Only that which had been before constructed is given to the person by whom it can be used. If labour is necessary to effect the exchange, that labour is in reality involved in the production, and, like all other labour, bears profit. Whatever number of men are concerned in the manufacture, or in the conveyance, have share in the profit; but neither the manufacture nor the conveyance are the exchange, and in the exchange itself there is no profit.

There may, however, be acquisition, which is a very different thing. If, in the exchange, one man is able to give what cost him little labour for what has cost the other much, he "acquires" a certain quantity of the produce of the other's labour. And precisely what he acquires, the other loses. In mercantile language, the person who thus acquires is commonly said to have "made a profit;" and I believe that many of our merchants are seriously under the impression that it is possible for everybody, somehow, to make a profit in this manner. Whereas, by the unfortunate constitution of the world we live in, the laws both of matter and motion have quite rigorously forbidden universal acquisition of this kind. Profit, or material gain, is attainable only by construction or by discovery; not by exchange. Whenever material gain fol-
allows exchange, for every plus there is a precisely equal minus.

Unhappily for the progress of the science of Political Economy, the plus quantities, or,—if I may be allowed to coin an awkward plural—the pluses, make a very positive and venerable appearance in the world, so that every one is eager to learn the science which produces results so magnificent; whereas the minuses have, on the other hand, a tendency to retire into back streets, and other places of shade,—or even to get themselves wholly and finally put out of sight in graves: which renders the algebra of this science peculiar, and difficultly legible: a large number of its negative signs being written by the account-keeper in a kind of red ink, which starvation thins, and makes strangely pale, or even quite invisible, for the present.

The Science of Exchange, or, as I hear it has been proposed to call it, of “Catallactics,” considered as one of gain, is, therefore, simply nugatory; but considered as one of acquisition, it is a very curious science, differing in its data and basis from every other science known. Thus:—If I can exchange a needle with a savage for a diamond, my power of doing so depends either on the savage’s ignorance of social arrangements in Europe, or on his want of power to take advantage of them, by selling the diamond to any one else for more needles. If, farther, I make the bargain as completely advantageous to myself as possible, by giving to the savage a needle with no eye in it (reaching, thus, a sufficiently satisfactory type of the perfect operation of catallactic science), the advantage to me in the entire transaction depends wholly upon the ignorance, powerlessness, or heedlessness of the person dealt with. Do away with these, and catallactic advantage becomes impossible. So far, therefore, as the science of exchange relates to the advantage of one of the exchanging persons only, it is founded on the ignorance or incapacity of the opposite person. Where these vanish, it also vanishes. It is therefore a science founded on nescience, and an art founded on artlessness. But all other sciences and arts, except this, have for their object the doing away with their opposite nescience and artlessness. This science, alone of sciences, must,
by all available means, promulgate and prolong its opposite nescience; otherwise the science itself is impossible. It is, therefore, peculiarly and alone, the science of darkness; probably a bastard science—not by any means a *divina scientia*, but one begotten of another father, that father who, advising his children to turn stones into bread, is himself employed in turning bread into stones, and who, if you ask a fish of him (fish not being producible on his estate), can but give you a serpent.

The general law, then, respecting just or economical exchange, is simply this:—There must be advantage on both sides (or if only advantage on one, at least no disadvantage on the other) to the persons exchanging; and just payment for his time, intelligence, and labour, to any intermediate person effecting the transaction (commonly called a merchant): and whatever advantage there is on either side, and whatever pay is given to the intermediate person, should be thoroughly known to all concerned. All attempt at concealment implies some practice of the opposite, or undivine science, founded on nescience. Whence another saying of the Jew merchant's—"As a nail between the stone joints, so doth sin stick fast between buying and selling." Which peculiar riveting of stone and timber, in men's dealings with each other, is again set forth in the house which was to be destroyed—timber and stones together—when Zechariah's roll (more probably "curved sword") flew over it: "the curse that goeth forth over all the earth upon every one that stealeth and holdeth himself guiltless," instantly followed by the vision of the Great Measure; —the measure "of the injustice of them in all the earth" (αὐρή ἡ ἀδικία αὐρῶν ἐν πάσῃ τῇ γῇ), with the weight of lead for its lid, and the woman, the spirit of wickedness, within it; —that is to say, Wickedness hidden by Dulness, and formalized, outwardly, into ponderously established cruelty. "It shall be set upon its own base in the land of Babel."*

I have hitherto carefully restricted myself, in speaking of exchange, to the use of the term "advantage;" but that term includes two ideas; the advantage, namely, of getting what

*Zech. v. 11. See note on the passage, at page 120.*
we need, and that of getting what we wish for. Three-fourths of the demands existing in the world are romantic; founded on visions, idealisms, hopes, and affections; and the regulation of the purse is, in its essence, regulation of the imagination and the heart. Hence, the right discussion of the nature of price is a very high metaphysical and physical problem; sometimes to be solved only in a passionate manner, as by David in his counting the price of the water of the well by the gate of Bethlehem; but its first conditions are the following:—The price of anything is the quantity of labour given by the person desiring it, in order to obtain possession of it. This price depends on four variable quantities. A. The quantity of wish the purchaser has for the thing; opposed to $a$, the quantity of wish the seller has to keep it. B. The quantity of labour the purchaser can afford, to obtain the thing; opposed to $\beta$, the quantity of labour the seller can afford, to keep it. These quantities are operative only in excess; i.e. the quantity of wish ($A$) means the quantity of wish for this thing, above wish for other things; and the quantity of work ($B$) means the quantity which can be spared to get this thing from the quantity needed to get other things.

Phenomena of price, therefore, are intensely complex, curious, and interesting—too complex, however, to be examined yet; every one of them, when traced far enough, showing itself at last as a part of the bargain of the Poor of the Flock (or "flock of slaughter"), "If ye think good give me my price, and if not, forbear"—Zech. xi. 12; but as the price of everything is to be calculated finally in labour, it is necessary to define the nature of that standard.

Labour is the contest of the life of man with an opposite; —the term "life" including his intellect, soul, and physical power, contending with question, difficulty, trial, or material force.

Labour is of a higher or lower order, as it includes more or fewer of the elements of life: and labour of good quality, in any kind, includes always as much intellect and feeling as will fully and harmoniously regulate the physical force.
In speaking of the value and price of labour, it is necessary always to understand labour of a given rank and quality, as we should speak of gold or silver of a given standard. Bad (that is, heartless, inexperienced, or senseless) labour cannot be valued; it is like gold of uncertain alloy, or flawed iron. *

The quality and kind of labour being given, its value, like that of all other valuable things, is invariable. But the quantity of it which must be given for other things is variable; and in estimating this variation, the price of other things must always be counted by the quantity of labour; not the price of labour by the quantity of other things.

Thus, if we want to plant an apple sapling in rocky ground, it may take two hours' work; in soft ground, perhaps only half an hour. Grant the soil equally good for the tree in each case. Then the value of the sapling planted by two hours' work is nowise greater than that of the sapling planted in half an hour. One will bear no more fruit than the other. Also, one half-hour of work is as valuable as another half-hour; nevertheless the one sapling has cost four such pieces of work, the other only one. Now the proper statement of this fact is, not that the labour on the hard ground is cheaper than on the soft; but that the tree is dearer. The exchange value may, or may not, afterwards depend on this fact. If other people have plenty of soft ground to plant in, they will take no cognizance of our two hours' labour, in the price they will offer for the plant on the rock. And if, through want of

* Labour which is entirely good of its kind, that is to say, effective, or efficient, the Greeks called "weighable," or ἀγαθός, translated usually "worthy," and because thus substantial and true, they called its price τιμή, the "honourable estimate" of it (honorarium): this word being founded on their conception of true labour as a divine thing, to be honoured with the kind of honour given to the gods; whereas the price of false labour, or of that which led away from life, was to be, not honour, but vengeance; for which they reserved another word, attributing the exaction of such price to a peculiar goddess, called Tisiphone, the "requiter (or quittance-taker) of death;" a person versed in the highest branches of arithmetic, and punctual in her habits; with whom accounts current have been opened also in modern days.
sufficient botanical science, we have planted an upas-tree instead of an apple, the exchange-value will be a negative quantity; still less proportionate to the labour expended.

What is commonly called cheapness of labour, signifies, therefore, in reality, that many obstacles have to be overcome by it; so that much labour is required to produce a small result. But this should never be spoken of as cheapness of labour, but as dearness of the object wrought for. It would be just as rational to say that walking was cheap, because we had ten miles to walk home to our dinner, as that labour was cheap, because we had to work ten hours to earn it.

The last word which we have to define is “Production.”

I have hitherto spoken of all labour as profitable; because it is impossible to consider under one head the quality or value of labour, and its aim. But labour of the best quality may be various in aim. It may be either constructive (“gathering,” from con and struo), as agriculture; nugatory, as jewel-cutting; or destructive (“scattering,” from de and struo), as war. It is not, however, always easy to prove labour, apparently nugatory, to be actually so;* generally, the formula holds good: “he that gathereth not, scattereth;” thus, the jeweller’s art is probably very harmful in its ministering to a clumsy and inelegant pride. So that, finally, I believe nearly all labour may be shortly divided into positive and negative labour: positive, that which produces life; negative, that which produces death; the most directly negative labour being murder, and the most directly positive, the bearing and rearing of children; so that in the precise degree which murder is

* The most accurately nugatory labour is, perhaps, that of which not enough is given to answer a purpose effectually, and which, therefore, has all to be done over again. Also, labour which fails of effect through non-co-operation. The curé of a little village near Bellinzona, to whom I had expressed wonder that the peasants allowed the Ticino to flood their fields, told me that they would not join to build an effectual embankment high up the valley, because everybody said “that would help his neighbours as much as himself.” So every proprietor built a bit of low embankment about his own field; and the Ticino, as soon as it had a mind, swept away and swallowed all up together.
hateful, on the negative side of idleness, in that exact degree child-rearing is admirable, on the positive side of idleness. For which reason, and because of the honour that there is in rearing* children, while the wife is said to be as the vine (for cheering), the children are as the clive-branch, for praise; nor for praise only, but for peace (because large families can only be reared in times of peace): though since, in their spreading and voyaging in various directions, they distribute strength, they are, to the home strength, as arrows in the hand of a giant—striking here and there, far away.

Labour being thus various in its result, the prosperity of any nation is in exact proportion to the quantity of labour which it spends in obtaining and employing means of life. Observe,—I say, obtaining and employing; that is to say, not merely wisely producing, but wisely distributing and consuming. Economists usually speak as if there were no good in consumption absolute.† So far from this being so, consumption absolute is the end, crown, and perfection of production; and wise consumption is a far more difficult art than wise production. Twenty people can gain money for one who can use it; and the vital question, for individual and for nation, is, never “how much do they make?” but “to what purpose do they spend?”

The reader may, perhaps, have been surprised at the slight reference I have hitherto made to “capital,” and its functions. It is here the place to define them.

Capital signifies “head, or source, or root material”—it is material by which some derivative or secondary good, is pro-

*Observe, I say, “rearing,” not “begetting.” The praise is in the seventh season, not in σπορτήσ, nor in φυτλαία, but in ὀπάρα. It is strange that men always praise enthusiastically any person who, by a momentary exertion, saves a life; but praise very hesitatingly a person who, by exertion and self-denial prolonged through years, creates one. We give the crown “ob civem servatum;”—why not “ob civem natum?” Born, I mean, to the full, in soul as well as body. England has oak enough, I think, for both chaplets.

†When Mr. Mill speaks of productive consumption, he only means consumption which results in increase of capital, or material wealth. See I. iii, 4, and I. ii. 5.
duced. It is only capital proper (caput vivum, not caput mortuum) when it is thus producing something different from itself. It is a root, which does not enter into vital function till it produces something else than a root; namely, fruit. That fruit will in time again produce roots; and so all living capital issues in reproduction of capital; but capital which produces nothing but capital is only root producing root; bulb issuing in bulb, never in tulip; seed issuing in seed, never in bread. The Political Economy of Europe has hitherto devoted itself wholly to the multiplication, or (less even) the aggregation, of bulbs. It never saw nor conceived such a thing as a tulip. Nay, boiled bulbs they might have been—glass bulbs—Prince Rupert's drops, consummated in powder (well, if it were glass-powder and not gunpowder), for any end or meaning the economists had in defining the laws of aggregation. We will try and get a clearer notion of them.

The best and simplest general type of capital is a well-made ploughshare. Now, if that ploughshare did nothing but beget other ploughshares, in a polyposous manner,—however the great cluster of polyposous plough might glitter in the sun, it would have lost its function of capital. It becomes true capital only by another kind of splendour,—when it is seen, "splendescere sulco," to grow bright in the furrow; rather with diminution of its substance, than addition, by the noble friction. And the true home question, to every capitalist and to every nation, is not, "how many ploughs have you?"—but, "where are your furrows?" not—"how quickly will this capital reproduce itself?"—but, "what will it do during reproduction?" What substance will it furnish, good for life? what work construct, protective of life? if none, its own reproduction is useless—if worse than none,—(for capital may destroy life as well as support it), its own reproduction is worse than useless; it is merely an advance from Tisiphone, on mortgage—not a profit by any means.

Not a profit, as the ancients truly saw, and showed in the type of Ixion; for capital is the head, or fountain head, of wealth—the "well-head" of wealth, as the clouds are the well-
heads of rain: but when clouds are without water, and only beget clouds, they issue in wrath at last, instead of rain, and in lightning instead of harvest; whence Ixion is said first to have invited his guests to a banquet, and then made them fall into a pit filled with fire; which is the type of the temptation of riches issuing in imprisoned torment,—torment in a pit, (as also Demas' silver mine,) after which, to show the rage of riches passing from lust of pleasure to lust of power, yet power not truly understood, Ixion is said to have desired Juno, and instead, embracing a cloud (or phantasm), to have begotten the Centaurs; the power of mere wealth being, in itself, as the embrace of a shadow,—comfortless (so also "Ephraim feedeth on wind and followeth after the east wind;" or "that which is not"—Prov. xxiii. 5; and again Dante's Geryon, the type of avaricious fraud, as he flies, gathers the air up with retractile claws,—"l'aer a se raccolse,"*) but in its offspring, a mingling of the brutal with the human nature: human in sagacity—using both intellect and arrow; but brutal in its body and hoof, for consuming and trampling down. For which sin Ixion is at last bound upon a wheel—fiery and toothed, and rolling perpetually in the air;—the type of human labour when selfish and fruitless (kept far into the middle ages in their wheel of fortune); the wheel which has in it no breath or spirit, but is whirled by chance only; whereas of

* So also in the vision of the women bearing the ephah, before quoted, "the wind was in their wings," not wings "of a stork," as in our version; but "milvi," of a kite, in the Vulgate, or perhaps more accurately still in the Septuagint, "hoopoe," a bird connected typically with the power of riches by many traditions, of which that of its petition for a crest of gold is perhaps the most interesting. The "Birds" of Aristophanes, in which its part is principal, are full of them; note especially the "fortification of the air with baked bricks, like Babylon," l. 550; and, again, compare the Plutus of Dante, who (to show the influence of riches in destroying the reason) is the only one of the powers of the Inferno who cannot speak intelligibly; and also the cowardliest; he is not merely quelled or restrained, but literally "collapses" at a word; the sudden and helpless operation of mercantile panic being all told in the brief metaphor, "as the sails, swollen with the wind, fall; when the mast breaks."
all true work the Ezekiel vision is true, that the spirit of the
living creature is in the wheels, and where the angels go, the
wheels go by them; but move no otherwise.

This being the real nature of capital, it follows that there
are two kinds of true production, always going on in an active
State; one of seed, and one of food or production for the
Ground, and for the Mouth; both of which are by covetous
persons thought to be production only for the granary; where-
as the function of the granary is but intermediate and conser-
vative, fulfilled in distribution; else it ends in nothing but
mildew, and nourishment of rats and worms. And since pro-
duction for the Ground is only useful with future hope of har-
vest, all essential production is for the Mouth; and is finally
measured by the mouth; hence, as I said above, consumption
is the crown of production; and the wealth of a nation is only
to be estimated by what it consumes.

The want of any clear sight of this fact is the capital error,
issuing in rich interest and revenue of error, among the po-
litical economists. Their minds are continually set on money-
gain, not on mouth gain; and they fall into every sort of net
and snare, dazzled by the coin-glitter as birds by the fowler’s
glass; or rather (for there is not much else like birds in them)
they are like children trying to jump on the heads of their own
shadows; the money-gain being only the shadow of the true
gain, which is humanity.

The final object of political economy, therefore, is to get
good method of consumption, and great quantity of consump-
tion: in other words, to use everything, and to use it nobly;
whether it be substance, service, or service perfecting sub-
stance. The most curious error in Mr. Mill’s entire work
(provided for him originally by Ricardo), is his endeavour to
distinguish between direct and indirect service, and consequent
assertion that a demand for commodities is not demand for
labour (I. v. 9, et seq.). He distinguishes between labourers
employed to lay out pleasure grounds, and to manufacture
velvet; declaring that it makes material difference to the la-
bouring classes in which of these two ways a capitalist spends
his money; because the employment of the gardeners is a de-
mand for labour, but the purchase of velvet is not. Error colossal as well as strange. It will, indeed, make a difference to the labourer whether he bid him swing his scythe in the spring winds, or drive the loom in pestilential air; but, so far as his pocket is concerned, it makes to him absolutely no difference whether we order him to make green velvet, with seed and a scythe, or red velvet, with silk and scissors. Neither does it anywise concern him whether, when the velvet is made, we consume it by walking on it, or wearing it, so long as our consumption of it is wholly selfish. But if our consumption is to be in anywise unselfish, not only our mode of consuming the articles we require interests him, but also the kind of article we require with a view to consumption. As thus (returning for a moment to Mr. Mill's great hardware theory †): it matters, so far as the labourer's immediate profit is concerned, not an iron filing whether I employ him in growing a peach, or forging a bombshell; but my probable mode of consumption of those articles matters seriously. Admit that it is to be in both cases "unselfish," and the difference, to him, is final, whether when his child is ill, I walk it into his cottage and give it the

*The value of raw material, which has, indeed, to be deducted from the price of the labour, is not contemplated in the passages referred to, Mr. Mill having fallen into the mistake solely by pursuing the collateral results of the payment of wages to middlemen. He says—"The consumer does not, with his own funds, pay the weaver for his day's work." Pardon me; the consumer of the velvet pays the weaver with his own funds as much as he pays the gardener. He pays, probably, an intermediate ship-owner, velvet merchant, and shopman; pays carriage money, shop rent, damage money, time money, and care money; all these are above and beside the velvet price (just as the wages of a head gardener would be above the grass price); but the velvet is as much produced by the consumer's capital, though he does not pay for it till six months after production, as the grass is produced by his capital, though he does not pay the man who mowed and rolled it on Monday, till Saturday afternoon. I do not know if Mr. Mill's conclusion,—"the capital cannot be dispensed with, the purchasers can" (p. 98), has yet been reduced to practice in the City on any large scale.

† Which, observe, is the precise opposite of the one under examination. The hardware theory required us to discharge our gardeners and engage manufacturers; the velvet theory requires us to discharge our manufacturers and engage gardeners.
peach, or drop the shell down his chimney, and blow his roof off.

The worst of it, for the peasant, is, that the capitalist's consumption of the peach is apt to be selfish, and of the shell, distributive;* but, in all cases, this is the broad and general fact, that on due catalallactic commercial principles, somebody's roof must go off in fulfilment of the bomb's destiny. You may grow for your neighbour, at your liking, grapes or grapeshot; he will also, catalallactically, grow grapes or grapeshot for you, and you will each reap what you have sown.

It is, therefore, the manner and issue of consumption which are the real tests of production. Production does not consist in things laboriously made, but in things serviceably consumable; and the question for the nation is not how much labour it employs, but how much life it produces. For as consumption is the end and aim of production, so life is the end and aim of consumption.

I left this question to the reader's thought two months ago, choosing rather that he should work it out for himself than have it sharply stated to him. But now, the ground being sufficiently broken (and the details into which the sev-

* It is one very awful form of the operation of wealth in Europe that it is entirely capitalists' wealth which supports unjust wars. Just wars do not need so much money to support them; for most of the men who wage such, wage them gratis; but for an unjust war, men's bodies and souls have both to be bought; and the best tools of war for them besides; which makes such war costly to the maximum; not to speak of the cost of base fear, and angry suspicion, between nations which have not grace nor honesty enough in all their multitudes to buy an hour's peace of mind with: as, at present, France and England, purchasing of each other ten millions sterling worth of consternation annually, (a remarkably light crop, half thorns and half aspen leaves,—sown, reaped, and granaried by the "science" of the modern political economist, teaching covetousness instead of truth.) And all unjust war being supportable, if not by pillage of the enemy, only by loans from capitalists, these loans are repaid by subsequent taxation of the people, who appear to have no will in the matter, the capitalists' will being the primary root of the war: but its real root is the covetousness of the whole nation, rendering it incapable of faith, frankness, or justice, and bringing about, therefore, in due time, his own separate loss and punishment to each person.
eral questions, here opened, must lead us, being too complex for discussion in the pages of a periodical, so that I must pursue them elsewhere), I desire, in closing the series of introductory papers, to leave this one great fact clearly stated. **There is no Wealth but Life.** Life, including all its powers of love, of joy, and of admiration. That country is the richest which nourishes the greatest number of noble and happy human beings; that man is richest who, having perfected the functions of his own life to the utmost, has also the widest helpful influence, both personal, and by means of his possessions, over the lives of others.

A strange political economy; the only one, nevertheless, that ever was or can be: all political economy founded on self-interest* being but the fulfilment of that which once brought schism into the Policy of angels, and ruin into the Economy of Heaven.

"The greatest number of human beings noble and happy." But is the nobleness consistent with the number? Yes, not only consistent with it, but essential to it. The maximum of life can only be reached by the maximum of virtue. In this respect the law of human population differs wholly from that of animal life. The multiplication of animals is checked only by want of food, and by the hostility of races; the population of the gnat is restrained by the hunger of the swallow, and that of the swallow by the scarcity of gnats. Man, considered as an animal, is indeed limited by the same laws; hunger, or plague, or war, are the necessary and only restraints upon his increase,—effectual restraints hitherto,—his principal study having been how most swiftly to destroy himself, or ravage his dwelling-places, and his highest skill directed to give range to the famine, seed to the plague, and sway to the sword. But, considered as other than an animal, his increase is not limited by these laws. It is limited only by the limits of his courage and his love. Both of these have their bounds; and

* "In all reasoning about prices, the proviso must be understood, 'supposing all parties to take care of their own interest'"—Mill, III i. 5.
ought to have: his race has its bounds also; but these have not yet been reached, nor will be reached for ages.

In all the ranges of human thought I know none so melancholy as the speculations of political economists on the population question. It is proposed to better the condition of the labourer by giving him higher wages. "Nay," says the economist, "if you raise his wages, he will either people down to the same point of misery at which you found him, or drink your wages away." He will. I know it. Who gave him this will? Suppose it were your own son of whom you spoke, declaring to me that you dared not take him into your firm, nor even give him his just labourer's wages, because if you did, he would die of drunkenness, and leave half a score of children to the parish. "Who gave your son these dispositions?"—I should inquire. Has he them by inheritance or by education? By one or other they must come; and as in him, so also in the poor. Either these poor are of a race essentially different from ours, and unredeemable (which, however often implied, I have heard none yet openly say), or else by such care as we have ourselves received, we may make them continent and sober as ourselves—wise and dispassionate as we are—models arduous of imitation. "But," it is answered, "they cannot receive education." Why not? That is precisely the point at issue. Charitable persons suppose the worst fault of the rich is to refuse the people meat; and the people cry for their meat, kept back by fraud, to the Lord of Multitudes.* Alas! it is not meat of which the refusal is

* James v. 4. Observe, in these statements I am not taking up, nor countenancing one whit, the common socialist idea of division of property; division of property is its destruction; and with it the destruction of all hope, all industry, and all justice: it is simply chaos—a chaos towards which the believers in modern political economy are fast tending, and from which I am striving to save them. The rich man does not keep back meat from the poor by retaining his riches; but by basely using them. Riches are a form of strength; and a strong man does not injure others by keeping his strength, but by using it injuriously. The socialist, seeing a strong man oppress a weak one, cries out—"Break the strong man's arms;" but I say, "Teach him to use them to better purpose." The fortitude and intelligence which acquire riches are in-
cruelest, or to which the claim is validest. The life is more than the meat. The rich not only refuse food to the poor; they refuse wisdom; they refuse virtue; they refuse salvation. Ye sheep without shepherd, it is not the pasture that has been shut from you, but the presence. Meat! perhaps your right to that may be pleadable; but other rights have to be pleaded first. Claim your crumbs from the table, if you will; but claim them as children, not as dogs; claim your right to be fed, but claim more loudly your right to be holy, perfect, and pure.

Strange words to be used of working people: "What! holy; without any long robes nor anointing oils; these rough-jacketed, rough-worded persons; set to nameless and dishonoured service? Perfect!—these, with dim eyes and cramped limbs, and slowly wakening minds? Pure—these, with sensual desire and grovelling thought; foul of body, and coarse of soul?" It may be so; nevertheless, such as they are, they are the holiest, perfectest, purest persons the earth can at present show. They may be what you have said; but if so, they yet are holier than we, who have left them thus.

But what can be done for them? Who can clothe—who teach—who restrain their multitudes? What end can there be for them at last, but to consume one another?

I hope for another end, though not, indeed, from any of
the three remedies for over-population commonly suggested by economists.

These three are, in brief—Colonization; Bringing in of waste lands; or Discouragement of Marriage.

The first and second of these expedients merely evade or delay the question. It will, indeed, be long before the world has been all colonized, and its deserts all brought under cultivation. But the radical question is not how much habitable land is in the world, but how many human beings ought to be maintained on a given space of habitable land.

Observe, I say, ought to be, not how many can be. Ricardo, with his usual inaccuracy, defines what he calls the "natural rate of wages" as "that which will maintain the labourer." Maintain him! yes; but how?—the question was instantly thus asked of me by a working girl, to whom I read the passage. I will amplify her question for her. "Maintain him, how?" As first, to what length of life? Out of a given number of fed persons how many are to be old—how many young; that is to say, will you arrange their maintenance so as to kill them early—say at thirty or thirty-five on the average, including deaths of weakly or ill-fed children?—or so as to enable them to live out a natural life? You will feed a greater number, in the first case,* by rapidity of succession; probably a happier number in the second: which does Mr. Ricardo mean to be their natural state, and to which state belongs the natural rate of wages?

Again: A piece of land which will only support ten idle, ignorant, and improvident persons, will support thirty or forty intelligent and industrious ones. Which of these is their natural state, and to which of them belongs the natural rate of wages?

Again: If a piece of land support forty persons in industrious ignorance; and if, tired of this ignorance, they set apart ten of their number to study the properties of cones, and the sizes of stars; the labour of these ten, being withdrawn from the ground, must either tend to the increase of food in some

*The quantity of life is the same in both cases; but it is differently allotted.
transitional manner, or the persons set apart for siderial and conic purposes must starve, or some one else starve instead of them. What is, therefore, the rate natural of wages of the scientific persons, and how does this rate relate to, or measure, their reverted or transitional productiveness?

Again: If the ground maintains, at first, forty labourers in a peaceable and pious state of mind, but they become in a few years so quarrelsome and impious that they have to set apart five, to meditate upon and settle their disputes;—ten, armed to the teeth with costly instruments, to enforce the decisions; and five to remind everybody in an eloquent manner of the existence of a God;—what will be the result upon the general power of production, and what is the "natural rate of wages" of the meditative, muscular, and oracular labourers?

Leaving these questions to be discussed, or waived, at their pleasure, by Mr. Ricardo's followers, I proceed to state the main facts bearing on that probable future of the labouring classes which has been partially glanced at by Mr. Mill. That chapter and the preceding one differ from the common writing of political economists in admitting some value in the aspect of nature, and expressing regret at the probability of the destruction of natural scenery. But we may spare our anxieties on this head. Men can neither drink steam, nor eat stone. The maximum of population on a given space of land implies also the relative maximum of edible vegetable, whether for men or cattle; it implies a maximum of pure air; and of pure water. Therefore: a maximum of wood, to transmute the air, and of sloping ground, protected by herbage from the extreme heat of the sun, to feed the streams. All England may, if it so chooses, become one manufacturing town; and Englishmen, sacrificing themselves to the good of general humanity, may live diminished lives in the midst of noise, of darkness, and of deadly exhalation. But the world cannot become a factory, nor a mine. No amount of ingenuity will ever make iron digestible by the million, nor substitute hydrogen for wine. Neither the avarice nor the rage of men will ever feed them, and however the apple of Sodom and the grape of Gomorrah may spread their table for a time with
dainties of ashes, and nectar of asps,—so long as men live by bread, the far away valleys must laugh as they are covered with the gold of God, and the shouts of His happy multitudes ring round the wine-press and the well.

Nor need our more sentimental economists fear the too wide spread of the formalities of a mechanical agriculture. The presence of a wise population implies the search for felicity as well as for food; nor can any population reach its maximum but through that wisdom which "rejoices" in the habitable parts of the earth. The desert has its appointed place and work; the eternal engine, whose beam is the earth's axle, whose beat is its year, and whose breath is its ocean, will still divide imperiously to their desert kingdoms, bound with unfurrowable rock, and swept by unarrested sand, their powers of frost and fire: but the zones and lands between, habitable, will be loveliest in habitation. The desire of the heart is also the light of the eyes. No scene is continually and untiringly loved, but one rich by joyful human labour; smooth in field, fair in garden; full in orchard; trim, sweet, and frequent in homestead; ringing with voices of vivid existence. No air is sweet that is silent; it is only sweet when full of low currents of under sound—triplets of birds, and murmur and chirp of insects, and deep-toned words of men, and wayward trebles of childhood. As the art of life is learned, it will be found at last that all lovely things are also necessary:—the wild flower by the wayside, as well as the tended corn; and the wild birds and creatures of the forest, as well as the tended cattle; because man doth not live by bread only, but also by the desert manna; by every wondrous word and unknowable work of God. Happy, in that he knew them not, nor did his fathers know; and that round about him reaches yet into the infinite, the amazement of his existence.

Note, finally, that all effectual advancement towards this true felicity of the human race must be by individual, not public effort. Certain general measures may aid, certain revised laws guide, such advancement; but the measure and law which have first to be determined are those of each man's home. We continually hear it recommended by sagacious
people to complaining neighbours (usually less well placed in the world than themselves), that they should “remain content in the station in which Providence has placed them.” There are perhaps some circumstances of life in which Providence has no intention that people should be content. Nevertheless, the maxim is on the whole a good one; but it is peculiarly for home use. That your neighbour should, or should not, remain content, with his position, is not your business; but it is very much your business to remain content with your own. What is chiefly needed in England at the present day is to show the quantity of pleasure that may be obtained by a consistent, well-administered competence, modest, confessed, and laborious. We need examples of people who, leaving Heaven to decide whether they are to rise in the world, decide for themselves that they will be happy in it, and have resolved to seek—not greater wealth, but simpler pleasure; nor higher fortune, but deeper felicity; making the first of possessions, self-possession; and honouring themselves in the harmless pride and calm pursuits of peace.

Of which lowly peace it is written that “justice and peace have kissed each other;” and that the fruit of justice is “sown in peace of them that make peace;” not “peacemakers” in the common understanding—reconcilers of quarrels; (though that function also follows on the greater one;) but peace-Creators; Givers of Calm. Which you cannot give, unless you first gain; nor is this gain one which will follow assuredly on any course of business, commonly so called. No form of gain is less probable, business being (as is shown in the language of all nations—πωλεῖν from πέλω, πράσεις from περάω, venire, vendre, and venal, from venio, &c.) essentially restless—and probably contentious;—having a raven-like mind to the motion to and fro, as to the carrion food; whereas the olive-feeding and bearing birds look for rest for their feet: thus it is said of Wisdom that she “hath builded her house, and hewn out her seven pillars;” and even when, though apt to wait long at the doorposts, she has to leave her house and go abroad, her paths are peace also.

For us, at all events, her work must begin at the entry of
the doors: all true economy is "Law of the house." Strive to make that law strict, simple, generous: waste nothing, and grudge nothing. Care in nowise to make more of money, but care to make much of it; remembering always the great, palpable, inevitable fact—the rule and root of all economy—that what one person has, another cannot have; and that every atom of substance, of whatever kind, used or consumed, is so much human life spent; which, if it issue in the saving present life, or gaining more, is well spent, but if not, is either so much life prevented, or so much slain. In all buying, consider, first, what condition of existence you cause in the producers of what you buy; secondly, whether the sum you have paid is just to the producer, and in due proportion, lodged in his hands;* thirdly, to how much clear use, for food, knowledge, or joy, this that you have bought can be put; and fourthly, to whom and in what way it can be most speedily and serviceably distributed: in all dealings whatsoever insisting on entire openness and stern fulfilment; and in all doings, on perfection and loveliness of accomplishment; especially on fineness and purity of all marketable commodity: watching at the same time for all ways of gaining, or teaching, powers of simple pleasure; and of showing " הדיון אין אָדוֹפָדוֹדְלָחָ נָגְיִיו נְשָׁאַר "—the sum of enjoyment depending not on the quantity of things tasted, but on the vivacity and patience of taste.

And if, on due and honest thought over these things, it seems that the kind of existence to which men are now summoned by every plea of pity and claim of right, may, for some time at least, not to be a luxurious one;—consider whether, even supposing it guiltless, luxury would be desired by any of us,

* The proper offices of middle-men, namely, overseers (or authoritative workmen), conveyancers (merchants, sailors, retail dealers, &c.), and ordertakers (persons employed to receive directions from the consumer), must, of course, be examined before I can enter farther into the question of just payment of the first producer. But I have not spoken of them in these introductory papers, because the evils attendant on the abuse of such intermediate functions result not from any alleged principle of modern political economy, but from private carelessness or iniquity.
if we saw clearly at our sides the suffering which accompanies it in the world. Luxury is indeed possible in the future—innocent and exquisite; luxury for all, and by the help of all: but luxury at present can only be enjoyed by the ignorant; the cruelest man living could not sit at his feast, unless he sat blindfold. Raise the veil boldly; face the light; and if, as yet, the light of the eye can only be through tears, and the light of the body through sackcloth, go thou forth weeping, bearing precious seed, until the time come, and the kingdom, when Christ's gift of bread and bequest of peace shall be Unto this last as unto thee; and when, for earth's severed multitudes of the wicked and the weary, there shall be holier reconciliation than that of the narrow home, and calm economy, where the Wicked cease—not from trouble, but from troubling—and the Weary are at rest.

THE END.

A Study of the Greek Myths

of

Cloud and Storm

by

John Ruskin, LL.D.

New York
John W. Lovell Company
150 Worth Street, corner Mission Place
My days and strength have lately been much broken; and I never more felt the insufficiency of both than in preparing for the press the following desultory memoranda on a most noble subject. But I leave them now as they stand, for no time nor labour would be enough to complete them to my contentment; and I believe that they contain suggestions which may be followed with safety, by persons who are beginning to take interest in the aspects of mythology, which only recent investigation has removed from the region of conjecture into that of rational inquiry. I have some advantage, also, from my field work, in the interpretation of myths relating to natural phenomena; and I have had always near me, since we were at college together, a sure, and unweariedly kind, guide, in my friend Charles Newton, to whom we owe the finding of more treasure in mines of marble, than, were it rightly estimated, all California could buy. I must not, however, permit the chance of his name being in any wise associated with my errors. Much of my work has been done obstinately in my own way; and he is never responsible for me, though he has often kept me right, or at least enabled me to advance in a right direction. Absolutely right no one can be in such matters; nor does a day pass without convincing every honest student of antiquity of some partial error, and showing him better how to think, and where to look. But I knew that there was no hope of my being able to enter with advantage on the fields of history opened by the splendid investigation of recent philologists; though I could qualify myself, by attention and sympathy, to understand here and there, a verse of Homer’s or Hesiod’s, as the simple people did for whom they sang.
Even while I correct these sheets for press, a lecture by Professor Tyndall has been put into my hands, which I ought to have heard last 16th of January, but was hindered by mischance; and which, I now find, completes, in two important particulars, the evidence of an instinctive truth in ancient symbolism; showing, first, that the Greek conception of an aetherial element pervading space is justified by the closest reasoning of modern physicists; and, secondly, that the blue of the sky, hitherto thought to be caused by watery vapour, is, indeed, reflected from the divided air itself; so that the bright blue of the eyes of Athena, and the deep blue of her ægis, prove to be accurate mythic expressions of natural phenomena which it is an uttermost triumph of recent science to have revealed.

Indeed, it would be very difficult to imagine triumph more complete. To form, "within an experimental tube, a bit of more perfect sky than the sky itself!" here is magic of the finest sort! singularly reversed from that of old time, which only asserted its competency to enclose in bottles elemental forces that were—not of the sky.

Let me, in thanking Professor Tyndall for the true wonder of this piece of work, ask his pardon, and that of all masters in physical science, for any words of mine, either in the following pages or elsewhere, that may ever seem to fail in the respect due to their great powers of thought, or in the admiration due to the far scope of their discovery. But I will be judged by themselves, if I have not bitter reason to ask them to teach us more than yet they have taught.

This first day of May, 1869, I am writing where my work was begun thirty-five years ago,—within sight of the snows of the higher Alps. In that half of the permitted life of man, I have seen strange evil brought upon every scene that I best loved, or tried to make beloved by others. The light which once flushed those pale summits with its rose at dawn, and purple at sunset, is now umbered and faint; the air which once inlaid the clefts of all their golden crags with azure, is now defiled with languid coils of smoke, belched from worse than volcanic fires; their very glacier waves are, ebbing, and
their snows fading, as if Hell had breathed on them; the waters that once sank at their feet into crystalline rest, are now dimmed and foul, from deep to deep, and shore to shore. These are no careless words—they are accurately—horribly—true. I know what the Swiss lakes were; no pool of Alpine fountain at its source was clearer. This morning, on the Lake of Geneva, at half a mile from the beach, I could scarcely see my oar-blade a fathom deep.

The light, the air, the waters, all defiled! How of the earth itself? Take this one fact for type of honour done by the modern Swiss to the earth of his native land. There used to be a little rock at the end of the avenue by the port of Neuchâtel; there, the last marble of the foot of Jura, sloping to the blue water, and (at this time of year) covered with bright pink tufts of Saponaria. I went, three days since, to gather a blossom at the place. The goodly native rock and its flowers were covered with the dust and refuse of the town; but, in the middle of the avenue, was a newly-constructed artificial rockery, with a fountain twisted through a spinning spout, and an inscription on one of its loose-tumbled stones,—

"Aux Botanistes,
Le club Jurassique."

Ah, masters of modern science, give me back my Athena out of your vials, and seal, if it may be, once more, Asmodeus therein. You have divided the elements, and united them; enslaved them upon the earth, and discerned them in the stars. Teach us, now, but this of them, which is all that man need know,—that the Air is given to him for his life; and the Rain to his thirst, and for his baptism; and the Fire for warmth; and the Sun for sight; and the Earth for his meat—and his Rest.

Vevay, May 1, 1869.
The Queen of the Air.

I.

Athena Chalinitis.*

(Athena in the Heavens.)

Lecture on the Greek Myths of Storm, given (partly) in University College, London, March 9th, 1869.

I. I will not ask your pardon for endeavouring to interest you in the subject of Greek Mythology; but I must ask your permission to approach it in a temper differing from that in which it is frequently treated. We cannot justly interpret the religion of any people, unless we are prepared to admit that we ourselves, as well as they, are liable to error in matters of faith; and that the convictions of others, however singular, may in some points have been well founded, while our own, however reasonable, may in some particulars be mistaken. You must forgive me, therefore, for not always distinctively calling the creeds of the past "superstition," and the creeds of the present day "religion;" as well as for assuming that a faith now confessed may sometimes be superficial, and that a faith long forgotten may once have been sincere. It is the task of the Divine to condemn the errors of antiquity, and of the Philologist to account for them: I will only pray you to read, with patience, and human sympathy, the thoughts of men who lived without blame in a darkness they could not dispel; and to remember that, whatever charge of folly may justly attach to the saying,—"There is no God," the folly is

* "Athena the Restrainer." The name is given to her as having helped Bellerophon to bridle Pegasus, the flying cloud.
prouder, deeper, and less pardonable, in saying, "There is no God but for me."

2. A Myth, in its simplest definition, is a story with a meaning attached to it, other than it seems to have at first; and the fact that it has such a meaning is generally marked by some of its circumstances being extraordinary, or, in the common use of the word, unnatural. Thus, if I tell you that Hercules killed a water-serpent in the lake of Lerna, and if I mean, and you understand, nothing more than that fact, the story, whether true or false, is not a myth. But if by telling you this, I mean that Hercules purified the stagnation of many streams from deadly miasmata, my story, however simple, is a true myth; only, as, if I left it in that simplicity, you would probably look for nothing beyond, it will be wise in me to surprise your attention by adding some singular circumstance; for instance, that the water-snake had several heads, which revived as fast as they were killed, and which poisoned even the foot that trode upon them as they slept. And in proportion to the fulness of intended meaning I shall probably multiply and refine upon these improbabilities; as, suppose, if, instead of desiring only to tell you that Hercules purified a marsh, I wished you to understand that he contended with the venom and vapour of envy and evil ambition, whether in other men's souls or in his own, and choked that malaria only by supreme toil,—I might tell you that this serpent was formed by the Goddess whose pride was in the trial of Hercules; and that its place of abode was by a palm-tree; and that for every head of it that was cut off, two rose up with renewed life; and that the hero found at last he could not kill the creature at all by cutting its heads off or crushing them; but only by burning them down; and that the midst of them could not be killed even that way, but had to be buried alive. Only in proportion as I mean more, I shall certainly appear more absurd in my statement; and at last, when I get unendurably significant, all practical persons will agree that I was talking mere nonsense from the beginning, and never meant anything at all.

3. It is just possible, however, also, that the story-teller
may all along have meant nothing but what he said; and that, incredible as the events may appear, he himself literally believed—and expected you also to believe—all this about Hercules, without any latent moral or history whatever. And it is very necessary, in reading traditions of this kind, to determine, first of all, whether you are listening to a simple person, who is relating what, at all events, he believes to be true (and may, therefore, possibly have been so to some extent), or to a reserved philosopher, who is veiling a theory of the universe under the grotesque of a fairy tale. It is, in general, more likely that the first supposition should be the right one:—simple and credulous persons are, perhaps fortunately, more common than philosophers: and it is of the highest importance that you should take their innocent testimony as it was meant, and not efface, under the graceful explanation which your cultivated ingenuity may suggest, either the evidence their story may contain (such as it is worth) of an extraordinary event having really taken place, or the unquestionable light which it will cast upon the character of the person by whom it was frankly believed. And to deal with Greek religion honestly, you must at once understand that this literal belief was, in the mind of the general people, as deeply rooted as ours in the legends of our own sacred book; and that a basis of unmiraculous event was as little suspected, and an explanatory symbolism as rarely traced, by them, as by us.

You must, therefore, observe that I deeply degrade the position which such a myth as that just referred to occupied in the Greek mind, by comparing it (for fear of offending you) to our story of St. George and the Dragon. Still, the analogy is perfect in minor respects; and though it fails to give you any notion of the vitally religious earnestness of the Greek faith, it will exactly illustrate the manner in which faith laid hold of its objects.

4. This story of Hercules and the Hydra, then, was to the general Greek mind, in its best days, a tale about a real hero and a real monster. Not one in a thousand knew anything of the way in which the story had arisen, any more than the English peasant generally is aware of the plebeian origin of
St. George; or supposes that there were once alive in the world, with sharp teeth and claws, real, and very ugly, flying dragons. On the other hand, few persons traced any moral or symbolical meaning in the story, and the average Greek was as far from imagining any interpretation like that which I have just given you, as an average Englishman is from seeing in St. George the Red Cross Knight of Spenser, or in the Dragon the Spirit of Infidelity. But, for all that, there was a certain undercurrent of consciousness in all minds, that the figures meant more than they at first showed; and, according to each man's own faculties of sentiment, he judged and read them; just as a Knight of the Garter reads more in the jewel on his collar than the George and Dragon of a public-house expresses to the host or to his customers. Thus, to the mean person the myth always meant little; to the noble person, much: and the greater their familiarity with it, the more contemptible it became to the one, and the more sacred to the other: until vulgar commentators explained it entirely away, while Virgil made it the crowning glory of his choral hymn to Hercules—

"Around thee, powerless to infect thy soul,
Rose, in his crested crowd, the Lerna worm."

"Non te rationis egentem
Lernæus turbâ capitum circumstetit anguis."

And although, in any special toil of the hero's life, the moral interpretation was rarely with definiteness attached to its event, yet in the whole course of the life, not only a symbolical meaning, but the warrant for the existence of a real spiritual power, was apprehended of all men. Hercules was no dead hero, to be remembered only as a victor over monsters of the past—harmless now, as slain. He was the perpetual type and mirror of heroism, and its present and living aid against every ravenous form of human trial and pain.

5. But, if we seek to know more than this, and to ascertain the manner in which the story first crystallized into its shape, we shall find ourselves led back generally to one or other of two sources—either to actual historical events, represented by
Athena in the Heavens.

The fancy under figures personifying them; or else to natural phenomena similarly endowed with life by the imaginative power, usually more or less under the influence of terror. The historical myths we must leave the masters of history to follow; they, and the events they record, being yet involved in great, though attractive and penetrable, mystery. But the stars, and hills, and storms are with us now, as they were with others of old; and it only needs that we look at them with the earnestness of those childish eyes to understand the first words spoken of them by the children of men. And then, in all the most beautiful and enduring myths, we shall find, not only a literal story of a real person,—not only a parallel imagery of moral principle,—but an underlying worship of natural phenomena, out of which both have sprung, and in which both forever remain rooted. Thus, from the real sun, rising and setting; from the real atmosphere, calm in its dominion of unfading blue, and fierce in its descent of tempest,—the Greek forms first the idea of two entirely personal and corporeal gods, whose limbs are clothed in divine flesh, and whose brows are crowned with divine beauty; yet so real that the quiver rattles at their shoulder, and the chariot bends beneath their weight. And, on the other hand, collaterally with these corporeal images, and never for one instant separated from them, he conceives also two omnipresent spiritual influences, of which one illuminates, as the sun, with a constant fire, whatever in humanity is skilful and wise; and the other, like the living air, breathes the calm of heavenly fortitude, and strength of righteous anger, into every human breast that is pure and brave.

6. Now, therefore, in nearly every myth of importance, and certainly in every one of those of which I shall speak to-night, you have to discern these three structural parts—the root and the two branches:—the root, in physical existence, sun, or sky, or cloud, or sea; then the personal incarnation of that; becoming a trusted and companionable deity, with whom you may walk hand in hand, as a child with its brother or its sister; and, lastly, the moral significance of the image, which is in all the great myths eternally and beneficently true.
7. The great myths; that is to say, myths made by great people. For the first plain fact about myth-making is one which has been most strangely lost sight of,—that you cannot make a myth unless you have something to make it of. You cannot tell a secret which you don’t know. If the myth is about the sky, it must have been made by somebody who had looked at the sky. If the myth is about justice and fortitude, it must have been made by some one who knew what it was to be just or patient. According to the quantity of understanding in the person will be the quantity of significance in his fable; and the myth of a simple and ignorant race must necessarily mean little, because a simple and ignorant race have little to mean. So the great question in reading a story is always, not what wild hunter dreamed, or what childish race first dreaded it; but what wise man first perfectly told, and what strong people first perfectly lived by it. And the real meaning of any myth is that which it has at the noblest age of the nation among whom it is current. The farther back you pierce, the less significance you will find, until you come to the first narrow thought, which, indeed, contains the germ of the accomplished tradition; but only as the seed contains the flower. As the intelligence and passion of the race develop, they cling to and nourish their beloved and sacred legend; leaf by leaf it expands under the touch of more pure affections, and more delicate imagination, until at last the perfect fable burgeons out into symmetry of milky stem, and honied bell.

8. But through whatever changes it may pass, remember that our right reading of it is wholly dependent on the materials we have in our own minds for an intelligent answering sympathy. If it first arose among a people who dwelt under stainless skies, and measured their journeys by ascending and declining stars, we certainly cannot read their story, if we have never seen anything above us in the day, but smoke; nor anything round us in the night but candles. If the tale goes on to change clouds or planets into living creatures,—to invest them with fair forms—and inflame them with mighty passions, we can only understand the story of the human-hearted
things, in so far as we ourselves take pleasure in the perfection of visible form, or can sympathize, by an effort of imagination, with the strange people who had other loves than that of wealth, and other interests than those of commerce. And, lastly, if the myth complete itself to the fulfilled thoughts of the nation, by attributing to the gods, whom they have carved out of their fantasy, continual presence with their own souls; and their every effort for good is finally guided by the sense of the companionship, the praise, and the pure will of Immortals, we shall be able to follow them into this last circle of their faith only in the degree in which the better parts of our own beings have been also stirred by the aspects of nature, or strengthened by her laws. It may be easy to prove that the ascent of Apollo in his chariot signifies nothing but the rising of the sun. But what does the sunrise itself signify to us? If only languid return to frivolous amusement, or fruitless labour, it will, indeed, not be easy for us to conceive the power, over a Greek, of the name of Apollo. But if, for us also, as for the Greek, the sunrise means daily restoration to the sense of passionate gladness and of perfect life—if it means the thrilling of new strength through every nerve,—the shedding over us of a better peace than the peace of night, in the power of the dawn,—and the purging of evil vision and fear by the baptism of its dew;—if the sun itself is an influence, to us also, of spiritual good—and becomes thus in reality, not in imagination, to us also, a spiritual power,—we may then soon over-pass the narrow limit of conception which kept that power impersonal, and rise with the Greek to the thought of an angel who rejoiced as a strong man to run his course, whose voice, calling to life and to labour, rang round the earth, and whose going forth was to the ends of heaven.

9. The time, then, at which I shall take up for you, as well as I can decipher it, the tradition of the Gods of Greece, shall be near the beginning of its central and formed faith,—about 500 B.C.,—a faith of which the character is perfectly represented by Pindar and Æschylus, who are both of them outspokenly religious, and entirely sincere men; while we may always look back to find the less developed thought of the
preceding epoch given by Homer, in a more occult, subtle, half-instinctive and involuntary way.

10. Now, at that culminating period of the Greek religion we find, under one governing Lord of all things, four subordinate elemental forces, and four spiritual powers living in them, and commanding them. The elements are of course the well-known four of the ancient world—the earth, the waters, the fire, and the air; and the living powers of them are Demeter, the Latin Ceres; Poseidon, the Latin Neptune; Apollo, who has retained always his Greek name; and Athena, the Latin Minerva. Each of these are descended from, or changed from, more ancient, and therefore more mystic deities of the earth and heaven, and of a finer element of æther supposed to be beyond the heavens; * but at this time we find the four quite definite, both in their kingdoms and in their personalities. They are the rulers of the earth that we tread upon, and the air that we breathe; and are with us as closely, in their vivid humanity, as the dust that they animate, and the winds that they bridle. I shall briefly define for you the range of their separate dominions, and then follow, as far as we have time, the most interesting of the legends which relate to the queen of the air.

11. The rule of the first spirit, Demeter, the earth mother, is over the earth, first, as the origin of all life—the dust from whence we were taken; secondly, as the receiver of all things back at last into silence—"Dust thou art, and unto dust shalt thou return." And, therefore, as the most tender image of this appearing and fading life, in the birth and fall of flowers, her daughter Proserpine plays in the fields of Sicily, and thence is torn away into darkness, and becomes the Queen of Fate—not merely of death, but of the gloom which closes over and ends, not beauty only, but sin; and chiefly of sins the sin against the life she gave: so that she is, in her highest power, Persephone, the avenger and purifier of blood, —"The voice of thy brother's blood cries to me out of the ground." Then, side by side with this queen of the earth, we

* And by modern science now also asserted, and with probability argued, to exist.
find a demigod of agriculture by the plough—the lord of grain, or of the thing ground by the mill. And it is a singular proof of the simplicity of Greek character at this noble time, that of all representations left to us of their deities by their art, few are so frequent, and none perhaps so beautiful, as the symbol of this spirit of agriculture.

12. Then the dominant spirit of the element of water is Neptune, but subordinate to him are myriads of other water spirits, of whom Nereus is the chief, with Palæmon, and Leucothea, the "white lady" of the sea; and Thetis, and nymphs innumerable, who, like her, could "suffer a sea change," while the river deities had each independent power, according to the preciousness of their streams to the cities fed by them,—the "fountain Arethuse, and thou, honored flood, smooth sliding Mincius, crowned with vocal reeds." And, spiritually, this king of the waters is lord of the strength and daily flow of human life—he gives it material force and victory; which is the meaning of the dedication of the hair, as the sign of the strength of life, to the river of the native land.

13. Demeter, then, over the earth, and its giving and receiving of life. Neptune over the waters, and the flow and force of life,—always among the Greeks typified by the horse, which was to them as a crested sea-wave, animated and bridled. Then the third element, fire, has set over it two powers: over earthly fire, the assistant of human labour, is set Hephaestus, lord of all labour in which is the flush and the sweat of the brow; and over heavenly fire, the source of day, is set Apollo, the spirit of all kindling, purifying, and illuminating intellectual wisdom; each of these gods having also their subordinate or associated powers—servant, or sister, or companion muse.

14. Then, lastly, we come to the myth which is to be our subject of closer inquiry—the story of Athena and of the deities subordinate to her. This great goddess, the Neith of the Egyptians, the Athena or Athenaia of the Greeks, and, with broken power, half usurped by Mars, the Minerva of the Latins, is, physically, the queen of the air; having supreme
power both over its blessing of calm, and wrath of storm; and, spiritually, she is the queen of the breath of man, first of the bodily breathing which is life to his blood, and strength to his arm in battle; and then of the mental breathing, or inspiration, which is his moral health and habitual wisdom; wisdom of conduct and of the heart, as opposed to the wisdom of imagination and the brain; moral, as distinct from intellectual; inspired, as distinct from illuminated.

15. By a singular, and fortunate, though I believe wholly accidental coincidence, the heart-virtue, of which she is the spirit, was separated by the ancients into four divisions, which have since obtained acceptance from all men as rightly discerned, and have received, as if from the quarters of the four winds of which Athena is the natural queen, the name of "Cardinal" virtues: namely, Prudence, (the right seeing, and foreseeing, of events through darkness); Justice, (the righteous bestowal of favour and of indignation); Fortitude, (patience under trial by pain); and Temperance, (patience under trial by pleasure). With respect to these four virtues, the attributes of Athena are all distinct. In her prudence, or sight in darkness, she is "Glaukopis," "owl-eyed."* In her justice, which is the dominant virtue, she wears two robes, one of light and one of darkness; the robe of light, saffron colour, or the colour of the daybreak, falls to her feet, covering her wholly with favour and love,—the calm of the sky in blessing; it is embroidered along its edge with her victory over the giants, (the troublous powers of the earth,) and the likeness of it was woven yearly by the Athenian maidens and carried to the temple of their own Athena,—not to the Parthenon, that was the temple of all the world's Athena,—but this they carried to the temple of their own only one, who loved them, and stayed with them always. Then her robe of indignation is worn on her breast and left arm only, fringed with fatal serpents, and fastened with Gorgonian cold, turning men to stone; physically, the lightning and the hail of chastisement by storm. Then in her fortitude she

* There are many other meanings in the epithet; see, farther on, § 91, p. 71.
wears the crested and unstooping helmet;* and lastly, in her temperance, she is the queen of maidenhood—stainless as the air of heaven.

16. But all these virtues mass themselves in the Greek mind into the two main ones—of Justice, or noble passion, and Fortitude, or noble patience; and of these, the chief powers of Athena, the Greeks had divinely written for them, and for all men after them, two mighty songs,—one, of the Menis,† mens, passion, or zeal, of Athena, breathed into a mortal whose name is “Ache of heart,” and whose short life is only the incarnate brooding and burst of storm; and the other is of the foresight and fortitude of Athena, maintained by her in the heart of a mortal whose name is given to him from a longer grief, Odysseus, the full of sorrow, the much-enduring, and the long-suffering.

17. The minor expressions by the Greeks in word, in symbol, and in religious service, of this faith, are so many and so beautiful, that I hope some day to gather at least a few of them into a separate body of evidence respecting the power of Athena, and its relations to the ethical conception of the Homeric poems, or, rather, to their ethical nature; for they are not conceived didactically, but are didactic in their essence, as all good art is. There is an increasing insensibility to this character, and even an open denial of it, among us, now, which is one of the most curious errors of modernism,—the peculiar and judicial blindness of an age which, having long practised art and poetry for the sake of pleasure only, has become incapable of reading their language when they were both didactic: and also, having been itself accustomed to a professedly didactic teaching, which yet, for private interests, studiously avoids collision with every prevalent vice of its day, (and especially with avarice), has become equally

* I am compelled, for clearness’ sake, to mark only one meaning at a time. Athena’s helmet is sometimes a mask—sometimes a sign of anger—sometimes of the highest light of aether; but I cannot speak of all this at once.

† This first word of the Iliad, Menis, afterwards passes into the Latin Mens; is the root of the Latin name for Athena, “Minerva,” and so of the English “mind.”
dead to the intensely ethical conceptions of a race which habitually divided all men into two broad classes of worthy or worthless;—good, and good for nothing. And even the celebrated passage of Horace about the Iliad is now misread or disbelieved, as if it was impossible that the Iliad could be instructive because it is not like a sermon. Horace does not say that it is like a sermon, and would have been still less likely to say so, if he ever had had the advantage of hearing a sermon. "I have been reading that story of Troy again" (thus he writes to a noble youth of Rome whom he cared for), "quietly at Praeneste, while you have been busy at Rome; and truly I think that what is base and what is noble, and what useful and useless, may be better learned from that, than from all Chrysippus' and Crantor's talk put together."* Which is profoundly true, not of the Iliad only, but of all other great art whatsoever; for all pieces of such art are didactic in the purest way, indirectly and occultly, so that, first, you shall only be bettered by them if you are already hard at work in bettering yourself; and when you are bettered by them, it shall be partly with a general acceptance of their influence, so constant and subtle that you shall be no more conscious of it than of the healthy digestion of food; and partly by a gift of unexpected truth, which you shall only find by slow mining for it;—which is withheld on purpose, and close-locked, that you may not get it till you have forged the key of it in a furnace of your own heating. And this withholding of their meaning is continual, and confessed, in the great poets. Thus Pindar says of himself: "There is many an arrow in my quiver, full of speech to the wise, but, for the many, they need interpreters." And neither Pindar, nor Æschylus, nor Hesiod, nor Homer, nor any of the greater poets or teachers of any nation or time, ever spoke but with intentional reservation: nay, beyond this, there is often a meaning which they themselves cannot interpret,—which it may be for ages long after them to interpret,—in what they

*Note, once for all, that unless when there is question about some particular expression, I never translate literally, but give the real force of what is said, as I best can, freely.
said, so far as it recorded true imaginative vision. For all the greatest myths have been seen, by the men who tell them, involuntarily and passively,—seen by them with as great distinctness (and in some respects, though not in all, under conditions as far beyond the control of their will) as a dream sent to any of us by night when we dream clearest; and it is this veracity of vision that could not be refused, and of moral that could not be foreseen, which in modern historical inquiry has been left wholly out of account: being indeed the thing which no merely historical investigator can understand, or even believe; for it belongs exclusively to the creative or artistic group of men, and can only be interpreted by those of their race, who themselves in some measure also see visions and dream dreams.

So that you may obtain a more truthful idea of the nature of Greek religion and legend from the poems of Keats, and the nearly as beautiful, and, in general grasp of subject, far more powerful, recent work of Morris, than from frigid scholarship, however extensive. Not that the poet's impressions or renderings of things are wholly true, but their truth is vital, not formal. They are like sketches from the life by Reynolds or Gainsborough, which may be demonstrably inaccurate or imaginary in many traits, and indistinct in others, yet will be in the deepest sense like, and true; while the work of historical analysis is too often weak with loss, through the very labour of its miniature touches, or useless in clumsy and vapid veracity of externals, and complacent security of having done all that is required for the portrait, when it has measured the breadth of the forehead, and the length of the nose.

18. The first of requirements, then, for the right reading of myths, is the understanding of the nature of all true vision by noble persons; namely, that it is founded on constant laws common to all human nature; that it perceives, however darkly, things which are for all ages true;—that we can only understand it so far as we have some perception of the same truth;—and that its fulness is developed and manifested more and more by the reverberation of it from minds of the same
mirror-temper, in succeeding ages. You will understand Homer better by seeing his reflection in Dante, as you may trace new forms and softer colours in a hill-side, redoubled by a lake.

I shall be able partly to show you, even to-night, how much, in the Homeric vision of Athena, has been made clearer by the advance of time, being thus essentially and eternally true; but I must in the outset indicate the relation to that central thought of the imagery of the inferior deities of storm.

19. And first I will take the myth of Æolus, (the "sage Hippotades" of Milton), as it is delivered pure by Homer from the early times.

Why do you suppose Milton calls him "sage?" One does not usually think of the winds as very thoughtful or deliberate powers. But hear Homer: "Then we came to the Æolian island, and there dwelt Æolus Hippotades, dear to the deathless gods: there he dwelt in a floating island, and around it was a wall of brass that could not be broken; and the smooth rock of it ran up sheer. To whom twelve children were born in the sacred chambers—six daughters and six strong sons; and they dwell for ever with their beloved father, and their mother strict in duty; and with them are laid up a thousand benefits; and the misty house around them rings with fluting all the day long." Now, you are to note first, in this description, the wall of brass and the sheer rock. You will find, throughout the fables of the tempest-group, that the brazen wall and precipice (occurring in another myth as the brazen tower of Danae) are always connected with the idea of the towering cloud lighted by the sun, here truly described as a floating island. Secondly, you hear that all treasures were laid up in them; therefore, you know this Æolus is lord of the beneficent winds ("he bringeth the wind out of his treasuries"); and presently afterwards Homer calls him the "steward" of the winds, the master of the storehouse of them. And this idea of gifts and preciousness in the winds of heaven is carried out in the well-known sequel of the fable:—Æolus gives them to Ulysses, all but one, bound in leathern bags, with a glittering cord of silver; and so like bags of treasure
that the sailors think they are so, and open them to see. And when Ulysses is thus driven back to Æolus, and prays him again to help him, note the deliberate words of the King's refusal,—"Did I not," he says, "send thee on thy way heartily, that thou mightest reach thy country, thy home, and whatever is dear to thee? It is not lawful for me again to send forth favourably on his journey a man hated by the happy gods." This idea of the beneficence of Æolus remains to the latest times, though Virgil, by adopting the vulgar change of the cloud island into Lipari, has lost it a little; but even when it is finally explained away by Diodorus, Æolus is still a kind-hearted monarch, who lived on the coast of Sorrento, invented the use of sails, and established a system of storm signals.

20. Another beneficent storm-power, Boreas, occupies an important place in early legend, and a singularly principal one in art; and I wish I could read to you a passage of Plato about the legend of Boreas and Oreithyia,* and the breeze and shade of the Æolus—notwithstanding its severe reflection upon persons who waste their time on mythological studies: but I must go on at once to the fable with which you are all generally familiar, that of the Harpies.

This is always connected with that of Boreas or the north wind, because the two sons of Boreas are enemies of the Harpies, and drive them away into frantic flight. The myth in its first literal form means only the battle between the fair north wind and the foul south one: the two Harpies, "Storm-swift" and "Swiftfoot," are the sisters of the rainbow—that is to say, they are the broken drifts of the showery south wind, and the clear north wind drives them back; but they quickly take a deeper and more malignant significance. You know the short, violent, spiral gusts that lift the dust before coming rain: the Harpies get identified first with these, and then with more violent whirlwinds, and so they are called "Harpies," "the Snatchers," and are thought of as entirely destructive; their manner of destroying being twofold—by snatching

* Translated by Max Müller in the opening of his essay on "Comparative Mythology." (Chips from a German Workshop, vol. ii.)
away, and by defiling and polluting. This is a month in which you may really see a small Harpy at her work almost whenever you choose. The first time that there is threatening of rain after two or three days of fine weather, leave your window well open to the street, and some books or papers on the table; and if you do not, in a little while, know what the Harpies mean; and how they snatch, and how they defile, I'll give up my Greek myths.

21. That is the physical meaning. It is now easy to find the mental one. You must all have felt the expression of ignoble anger in those fitful gusts of sudden storm. There is a sense of provocation and apparent bitterness of purpose in their thin and senseless fury, wholly different from the noble anger of the greater tempests. Also, they seem useless and unnatural, and the Greek thinks of them always as vile in malice, and opposed, therefore, to the sons of Boreas, who are kindly winds, that fill sails, and wave harvests,—full of bracing health and happy impulses. From this lower and merely malicious temper, the Harpies rise into a greater terror, always associated with their whirling motion, which is indeed indicative of the most destructive winds: and they are thus related to the nobler tempests, as Charybdis to the sea; they are devouring and desolating, merciless, making all things disappear that come in their grasp: and so, spiritually, they are the gusts of vexatious, fretful, lawless passion, vain and overshadowing, discontented and lamenting, meagre and insane,—spirits of wasted energy, and wandering disease, and unappeased famine, and unsatisfied hope. So you have, on the one side, the winds of prosperity and health, on the other, of ruin and sickness. Understand that, once, deeply,—any who have ever known the weariness of vain desires; the pitiful, unconquerable, coiling and recoiling and self-involved returns of some sickening famine and thirst of heart:—and you will know what was in the sound of the Harpy Celæno's shriek from her rock; and why, in the seventh circle of the "Inferno," the Harpies make their nests in the warped branches of the trees that are the souls of suicides.

22. Now you must always be prepared to read Greek le-
gends as you trace threads through figures on a silken damask: the same thread runs through the web, but it makes part of different figures. Joining with other colours you hardly recognize it, and in different lights, it is dark or light. Thus the Greek fables blend and cross curiously in different directions, till they knit themselves into an arabesque where sometimes you cannot tell black from purple, nor blue from emerald—they being all the truer for this, because the truths of emotion they represent are interwoven in the same way, but all the more difficult to read, and to explain in any order.

Thus the Harpies, as they represent vain desire, are connected with the Sirens, who are the spirits of constant desire: so that it is difficult sometimes in early art to know which are meant, both being represented alike as birds with women's heads; only the Sirens are the great constant desires—the infinite sicknesses of heart—which, rightly placed, give life, and wrongly placed, waste it away; so that there are two groups of Sirens, one noble and saving, as the other is fatal. But there are no animating or saving Harpies; their nature is always vexing and full of weariness, and thus they are curiously connected with the whole group of legends about Tantalus.

23. We all know what it is to be tantalized; but we do not often think of asking what Tantalus was tantalized for—what he had done, to be for ever kept hungry in sight of food? Well; he had not been condemned to this merely for being a glutton. By Dante the same punishment is assigned to simple gluttony, to purge it away;—but the sins of Tantalus were of a much wider and more mysterious kind. There are four great sins attributed to him—one, stealing the food of the Gods to give it to men; another, sacrificing his son to feed the Gods themselves (it may remind you for a moment of what I was telling you of the earthly character of Demeter, that, while the other Gods all refuse, she, dreaming about her lost daughter, eats part of the shoulder of Pelops before she knows what she is doing); another sin is, telling the secrets of the Gods; and only the fourth—stealing the golden dog of Pandareos—is connected with gluttony. The special sense
of this myth is marked by Pandareos receiving the happy
privilege of never being troubled with indigestion; the dog,
in general, however, mythically represents all utterly senseless
and carnal desires; mainly that of gluttony; and in the
mythic sense of Hades—that is to say, so far as it represents
spiritual ruin in this life, and not a literal hell—the dog Cer-
berus is its gate-keeper—with this special marking of his
character of sensual passion, that he fawns on all those who
descend, but rages against all who would return, (the Virgilian
“facilis descensus” being a later recognition of this mythic
character of Hades:) the last labour of Hercules is the drag-
ging him up to the light; and in some sort, he represents the
voracity or devouring of Hades itself; and the mediaeval rep-
resentation of the mouth of hell perpetuates the same thought.
Then, also, the power of evil passion is partly associated with
the red and scorching light of Sirius, as opposed to the pure
light of the sun:—he is the dog-star of ruin; and hence the
continual Homeric dwelling upon him, and comparison of the
flame of anger to his swarthy light; only, in his scorching, it
is thirst, not hunger, over which he rules physically; so that
the fable of Icarius, his first master, corresponds, among the
Greeks, to the legend of the drunkenness of Noah.

The story of Actæon, the raging death of Hecuba, and the
tradition of the white dog which ate part of Hercules’ first
sacrifice, and so gave name to the Cynosarges, are all various
phases of the same thought—the Greek notion of the dog
being throughout confused between its serviceable fidelity, its
watchfulness, its foul voracity, shamelessness, and deadly mad-
ness, while, with the curious reversal or recoil of the meaning
which attaches itself to nearly every great myth—and which
we shall presently see notably exemplified in the relations of
the serpent to Athena,—the dog becomes in philosophy a
type of severity and abstinence.

24. It would carry us too far aside were I to tell you the
story of Pandareos’ dog—or rather, of Jupiter’s dog, for Pan-
dareos was its guardian only; all that bears on our present
purpose is that the guardian of this golden dog had three
daughters, one of whom was subject to the power of the Si-
rens, and is turned into the nightingale; and the other two were subject to the power of the Harpies, and this was what happened to them. They were very beautiful, and they were beloved by the gods in their youth, and all the great goddesses were anxious to bring them up rightly. Of all types of young ladies' education, there is nothing so splendid as that of the younger daughters of Pandareos. They have literally the four greatest goddesses for their governesses. Athena teaches them domestic accomplishments; how to weave, and sew, and the like; Artemis teaches them to hold themselves up straight; Hera, how to behave proudly and oppressively to company; and Aphrodite—delightful governess—feeds them with cakes and honey all day long. All goes well, until just the time when they are going to be brought out; then there is a great dispute whom they are to marry, and in the midst of it they are carried off by the Harpies, given by them to be slaves to the Furies, and never seen more. But of course there is nothing in Greek myths; and one never heard of such things as vain desires, and empty hopes, and clouded passions, defiling and snatching away the souls of maidens, in a London season.

I have no time to trace for you any more harpy legends, though they are full of the most curious interest; but I may confirm for you my interpretation of this one, and prove its importance in the Greek mind, by noting that Polygnotus painted these maidens, in his great religious series of paintings at Delphi, crowned with flowers, and playing at dice; and that Penelope remembers them in her last fit of despair, just before the return of Ulysses; and prays bitterly that she may be snatched away at once into nothingness by the Harpies, like Pandareos' daughters, rather than be tormented longer by her deferred hope, and anguish of disappointed love.

25. I have hitherto spoken only of deities of the winds. We pass now to a far more important group, the Deities of Cloud. Both of these are subordinate to the ruling power of the air, as the demigods of the fountains and minor seas are to the great deep: but, as the cloud-firmament detaches itself
more from the air, and has a wider range of ministry than the minor streams and seas, the highest cloud deity, Hermes, has a rank more equal with Athena than Nereus or Proteus with Neptune; and there is greater difficulty in tracing his character, because his physical dominion over the clouds can, of course, be asserted only where clouds are; and, therefore, scarcely at all in Egypt: * so that the changes which Hermes undergoes in becoming a Greek from an Egyptian and Phoenician god, are greater than in any other case of adopted tradition. In Egypt Hermes is a deity of historical record, and a conductor of the dead to judgment; the Greeks take away much of this historical function, assigning it to the Muses; but, in investing him with the physical power over clouds, they give him that which the Muses disdain, the power of concealment, and of theft. The snatching away by the Harpies is with brute force; but the snatching away by the clouds is connected with the thought of hiding, and of making things seem to be what they are not; so that Hermes is the god of lying, as he is of mist; and yet with this ignoble function of making things vanish and disappear, is connected the remnant of his grand Egyptian authority of leading away souls in the cloud of death (the actual dimness of sight caused by mortal wounds physically suggesting the darkness and descent of clouds, and continually being so described in the Iliad), while the sense of the need of guidance on the untrodden road follows necessarily. You cannot but remember how this thought of cloud guidance, and cloud receiving of souls at death, has been elsewhere ratified.

26. Without following that higher clue, I will pass to the lovely group of myths connected with the birth of Hermes on the Greek mountains. You know that the valley of Sparta is

* I believe that the conclusions of recent scholarship are generally opposed to the Herodotean ideas of any direct acceptance by the Greeks of Egyptian myths: and very certainly, Greek art is developed by giving the veracity and simplicity of real life to Eastern savage grotesque; and not by softening the severity of pure Egyptian design. But it is of no consequence whether one conception was, or was not, in this case, derived from the other: my object is only to mark the essential differences between them.
one of the noblest mountain ravines in the world, and that the western flank of it is formed by an unbroken chain of crags, forty miles long, rising, opposite Sparta, to a height of 8,000 feet, and known as the chain of Taygetus. Now, the nymph from whom that mountain ridge is named, was the mother of Lacedæmon; therefore, the mythic ancestress of the Spartan race. She is the nymph Taygeta, and one of the seven stars of spring; one of those Pleiades of whom is the question to Job,—"Canst thou bind the sweet influences of Pleiades, or loose the bands of Orion?" "The sweet influences of Pleiades," of the stars of spring,—nowhere sweeter than among the pine-clad slopes of the hills of Sparta and Arcadia, when the snows of their higher summits, beneath the sunshine of April, fell into fountains, and rose into clouds; and in every ravine was a newly-awakened voice of waters,—soft increase of whisper among its sacred stones: and on every crag its forming and fading veil of radiant cloud; temple above temple, of the divine marble that no tool can pollute, nor ruin undermine. And, therefore, beyond this central valley, this great Greek vase of Arcadia, on the "hollow" mountain, Cyllene, or "pregnant" mountain, called also "cold," because there the vapours rest,* and born of the eldest of those stars of Spring, that Maia, from whom your own month of May has its name, bringing to you, in the green of her garlands, and the white of her hawthorn, the unrecognized symbols of the pastures and the wreathed snows of Arcadia, where long ago she was queen of stars: there, first cradled and wrapt in swaddling-clothes; then raised, in a moment of surprise, into his wandering power,—is born the shepherd of the clouds, winged-footed and deceiving,—blinding the eyes of Argus,—escaping from the grasp of Apollo—restless messenger between the highest sky and topmost earth—"the herald Mercury, new lighted on a heaven-kissing hill."

27. Now, it will be wholly impossible, at present, to trace for you any of the minor Greek expressions of this thought,

* On the altar of Hermes on its summit, as on that of the Lacinian Hera, no wind ever stirred the ashes. By those altars, the Gods of Heaven were appeased; and all their storms at rest.
except only that Mercury, as the cloud shepherd, is especially called Eriophoros, the wool-bearer. You will recollect the name from the common woolly rush "eriophorum" which has a cloud of silky seed; and note also that he wears distinctively the flat cap, _petasos_, named from a word meaning to expand; which shaded from the sun, and is worn on journeys. You have the epithet of mountains "cloud-capped" as an established form with every poet, and the Mont Pilate of Lucerne is named from a Latin word signifying specially a _woollen_ cap; but Mercury has, besides, a general Homeric epithet, curiously and intensely concentrated in meaning, "the profitable or serviceable by wool," * that is to say, by shepherd wealth; hence, "pecuniarily," rich, or serviceable, and so he passes at last into a general mercantile deity; while yet the cloud sense of the wool is retained by Homer always, so that he gives him this epithet when it would otherwise have been quite meaningless, (in Iliad, xxiv. 440,) when he drives Priam's chariot, and breathes force into his horses, precisely as we shall find Athena drive Diomed: and yet the serviceable and profitable sense,—and something also of gentle and soothing character in the mere wool-softness, as used for dress, and religious rites,—is retained also in the epithet, and thus the gentle and serviceable Hermes is opposed to the deceitful one.

28. In connection with this driving of Priam's chariot, remember that as Autolycus is the son of Hermes the Deceiver, Myrtilus (the Auriga of the Stars) is the son of Hermes the Guide. The name Hermes itself means Impulse; and he is especially the shepherd of the flocks of the sky, in driving, or guiding, or stealing them; and yet his great name, Argeiphontes, not only—as in different passages of the olden poets—means "Shining White," which is said of him as being himself the silver cloud lighted by the sun; but "Argus-Killer," the killer of brightness, which is said of him as he

---

* I am convinced that the _ερι_ in _εριούνιος_ is not intensive; but retained from _εριού_: but even if I am wrong in thinking this, the mistake is of no consequence with respect to the general force of the term as meaning the _profitableness_ of Hermes. Athena's epithet of _ἀγελεία_ has a parallel significance.
veils the sky, and especially the stars, which are the eyes of Argus; or, literally, eyes of brightness, which Juno, who is, with Jupiter, part of the type of highest heaven, keeps in her peacock's train. We know that this interpretation is right, from a passage in which Euripides describes the shield of Hippomedon, which bore for its sign, "Argus the all-seeing, covered with eyes; open towards the rising of the stars, and closed towards their setting."

And thus Hermes becomes the spirit of the movement of the sky or firmament; not merely the fast flying of the transitory cloud, but the great motion of the heavens and stars themselves. Thus, in his highest power, he corresponds to the "primo mobile" of the later Italian philosophy, and, in his simplest, is the guide of all mysterious and cloudy movement, and of all successful subtleties. Perhaps the prettiest minor recognition of his character is when, on the night foray of Ulysses and Diomed, Ulysses wears the helmet stolen by Autolycus, the son of Hermes.

29. The position in the Greek mind of Hermes as the Lord of cloud is, however, more mystic and ideal than that of any other deity, just on account of the constant and real presence of the cloud itself under different forms, giving rise to all kinds of minor fables. The play of the Greek imagination in this direction is so wide and complex, that I cannot even give you an outline of its range in my present limits. There is first a great series of storm-legends connected with the family of the historic Æolus, centralized by the story of Athamas, with his two wives, "the Cloud" and the "White Goddess," ending in that of Phrixus and Helle, and of the golden fleece (which is only the cloud-burden of Hermes Eriophoros). With this, there is the fate of Salmoneus, and the destruction of Glaucus by his own horses; all these minor myths of storm concentrating themselves darkly into the legend of Bellerophon and the Chimæra, in which there is an under story about the vain subduing of passion and treachery, and the end of life in fading melancholy,—which, I hope, not many of you could understand even were I to show it you: (the merely physical meaning of the Chimæra is the cloud of volcanic lightning,
connected wholly with earth-fire, but resembling the heavenly cloud in its height and its thunder). Finally, in the Æolie group, there is the legend of Sisyphus, which I mean to work out thoroughly by itself: its root is in the position of Corinth as ruling the isthmus and the two seas—the Corinthian Acropolis, two thousand feet high, being the centre of the crossing currents of the winds, and of the commerce of Greece. Therefore, Athena, and the fountain cloud Pegasus, are more closely connected with Corinth than even with Athens in their material, though not in their moral power; and Sisyphus founds the Isthmian games in connection with a melancholy story about the sea gods; but he himself is κέρδιστος ἄνδρῶν, the most "gaining" and subtle of men; who, having the key of the Isthmus, becomes the type of transit, transfer, or trade, as such:; and of the apparent gain from it, which is not gain: and this is the real meaning of his punishment in hell—eternal toil and recoil (the modern idol of capital being, indeed, the stone of Sisyphus with a vengeance, crushing in its recoil). But, throughout, the old ideas of the cloud power and cloud feebleness,—the deceit of its hiding,—and the emptiness of its vanishing,—the Autolycus enchantment of making black seem white,—and the disappointed fury of Ixion (taking shadow for power), mingle in the moral meaning of this and its collateral legends; and give an aspect, at last, not only of foolish cunning, but of impiety or literal "idolatry," "imagination worship," to the dreams of avarice and injustice, until this notion of atheism and insolent blindness becomes principal; and the "Clouds" of Aristophanes, with the personified "just" and "unjust" sayings in the latter part of the play, foreshadow, almost feature by feature, in all that they were written to mock and to chastise, the worst elements of the impious "δίνως," and tumult in men's thoughts, which have followed on their avarice in the present day, making them alike forsake the laws of their ancient gods, and misapprehend or reject the true words of their existing teachers.

30. All this we have from the legends of the historic Æolus only; but, besides these, there is the beautiful story of Semele, the Mother of Bacchus. She is the cloud with the
strength of the vine in its bosom, consumed by the light
which matures the fruit; the melting away of the cloud into
the clear air at the fringe of its edges being exquisitely ren-
dered by Pindar's epithet for her, Semele, "with the stretched-
out hair" (τανυθέδεια). Then there is the entire tradition of
the Danaides, and of the tower of Danae and golden shower;
the birth of Perseus connecting this legend with that of the
Gorgons and Graïæ, who are the true clouds of thunderous
and ruinous tempest. I must, in passing, mark for you that
the form of the sword or sickle of Perseus, with which he kills
Medusa, is another image of the whirling harpy vortex, and
belongs especially to the sword of destruction or annihilation;
whence it is given to the two angels who gather for destruc-
tion the evil harvest and evil vintage of the earth (Rev. xiv.
15). I will collect afterwards and complete what I have
already written respecting the Pegasean and Gorgonian le-
gends, noting here only what is necessary to explain the cen-
tral myth of Athena herself, who represents the ambient air,
which included all cloud, and rain, and dew, and darkness,
and peace, and wrath of heaven. Let me now try to give you,
however briefly, some distinct idea of the several agencies of
this great goddess.

31. I. She is the air giving life and health to all animals.

II. She is the air giving vegetative power to the earth.

III. She is the air giving motion to the sea, and render-
ing navigation possible.

IV. She is the air nourishing artificial light, torch or
lamplight; as opposed to that of the sun, on one
hand, and of consuming* fire on the other.

V. She is the air conveying vibration of sound.

I will give you instances of her agency in all these functions.

32. First, and chiefly, she is air as the spirit of life, giving
vitality to the blood. Her psychic relation to the vital force
in matter lies deeper, and we will examine it afterwards; but
a great number of the most interesting passages in Homer
regard her as flying over the earth in local and transitory
strength, simply and merely the goddess of fresh air.

* Not a scientific, but a very practical and expressive distinction.
It is curious that the British city which has somewhat saucily styled itself the Modern Athens, is indeed more under her especial tutelage and favour in this respect than perhaps any other town in the island. Athena is first simply what in the Modern Athens you so practically find her, the breeze of the mountain and the sea; and wherever she comes, there is purification, and health, and power. The sea-beach round this isle of ours is the frieze of our Parthenon; every wave that breaks on it thunders with Athena's voice; nay, whenever you throw your window wide open in the morning, you let in Athena, as wisdom and fresh air at the same instant; and whenever you draw a pure, long, full breath of right heaven, you take Athena into your heart, through your blood; and, with the blood, into the thoughts of your brain.

Now this giving of strength by the air, observe, is mechanical as well as chemical. You cannot strike a good blow but with your chest full; and in hand to hand fighting, it is not the muscle that fails first, it is the breath; the longest-breathed will, on the average, be the victor,—not the strongest. Note how Shakspeare always leans on this. Of Mortimer, in "changing hardiment with great Glendower":—

"Three times they breathed, and three times did they drink,  
Upon agreement, of swift Severn's flood."

And again, Hotspur sending challenge to Prince Harry:—

"That none might draw short breath to-day  
But I and Harry Monmouth."

Again, of Hamlet, before he receives his wound:—

"He's fat, and scant of breath."

Again, Orlando in the wrestling:—

"Yes; I beseech your grace  
I am not yet well breathed."

Now of all people that ever lived, the Greeks knew best what breath meant, both in exercise and in battle; and therefore the queen of the air becomes to them at once the queen of bodily strength in war; not mere brutal muscular strength,
--that belongs to Ares,—but the strength of young lives passed in pure air and swift exercise,—Camilla’s virginal force, that “flies o’er the unbending corn, and skims along the main.”

33. Now I will rapidly give you two or three instances of her direct agency in this function. First, when she wants to make Penelope bright and beautiful; and to do away with the signs of her waiting and her grief. “Then Athena thought of another thing; she laid her into deep sleep, and loosed all her limbs, and made her taller, and made her smoother, and fatter, and whiter than swan ivory; and breathed ambrosial brightness over her face; and so she left her and went up to heaven.” Fresh air and sound sleep at night, young ladies! You see you may have Athena for lady’s maid whenever you choose. Next, hark how she gives strength to Achilles when he is broken with fasting and grief. Jupiter pities him and says to her,—“‘Daughter mine, are you forsaking your own soldier, and don’t you care for Achilles any more? see how hungry and weak he is,—go and feed him with ambrosia.’ So he urged the eager Athena; and she leaped down out of heaven like a harpy falcon, shrill voiced; and she poured nectar and ambrosia, full of delight, into the breast of Achilles, that his limbs might not fail with famine: then she returned to the solid dome of her strong father.” And then comes the great passage about Achilles arming—for which we have no time. But here is again Athena giving strength to the whole Greek army. She came as a falcon to Achilles, straight at him;—a sudden drift of breeze; but to the army she must come widely,—she sweeps round them all. “As when Jupiter spreads the purple rainbow over heaven, portending battle or cold storm, so Athena, wrapping herself round with a purple cloud, stooped to the Greek soldiers, and raised up each of them.” Note that purple, in Homer’s use of it, nearly always means “fiery,” “full of light.” It is the light of the rainbow, not the colour of it, which Homer means you to think of.

34. But the most curious passage of all, and fullest of meaning, is when she gives strength to Menelaus, that he may stand unwearied against Hector. He prays to her: “And blue-eyed
Athena was glad that he prayed to her, first; and she gave him strength in his shoulders, and in his limbs, and she gave him the courage"—of what animal, do you suppose? Had it been Neptune or Mars, they would have given him the courage of a bull, or a lion; but Athena gives him the courage of the most fearless in attack of all creatures—small or great—and very small it is, but wholly incapable of terror,—she gives him the courage of a fly.

35. Now this simile of Homer's is one of the best instances I can give you of the way in which great writers seize truths unconsciously which are for all time. It is only recent science which has completely shown the perfectness of this minute symbol of the power of Athena; proving that the insect's flight and breath are co-ordinated; that its wings are actually forcing-pumps, of which the stroke compels the thoracic respiration; and that it thus breathes and flies simultaneously by the action of the same muscles, so that respiration is carried on most vigorously during flight, "while the air-vessels, supplied by many pairs of lungs instead of one, traverse the organs of flight in far greater numbers than the capillary blood-vessels of our own system, and give enormous and un-tiring muscular power, a rapidity of action measured by thousands of strokes in the minute, and an endurance, by miles and hours of flight." *

Homer could not have known this; neither that the buzzing of the fly was produced as in a wind instrument, by a constant current of air through the trachea. But he had seen, and, doubtless, meant us to remember, the marvellous strength and swiftness of the insect's flight (the glance of the swallow itself is clumsy and slow compared to the darting of common house-flies at play); he probably attributed its murmur to the wings, but in this also there was a type of what we shall presently find recognized in the name of Pallas,—the vibratory power of the air to convey sound,—while, as a purifying creature, the fly holds its place beside the old symbol of Athena in Egypt, the vulture; and as a venomous and tormenting creature, has more than the strength of the serpent in propor-

* Ormerod. *Natural History of Wasps.*
tion to its size, being thus entirely representative of the influence of the air both in purification and pestilence; and its courage is so notable that, strangely enough, forgetting Homer's simile, I happened to take the fly for an expression of the audacity of freedom in speaking of quite another subject.* Whether it should be called courage, or mere mechanical instinct, may be questioned, but assuredly no other animal, exposed to continual danger, is so absolutely without sign of fear.

36. You will, perhaps, have still patience to hear two instances, not of the communication of strength, but of the personal agency of Athena as the air. When she comes down to help Diomed against Ares, she does not come to fight instead of him, but she takes his charioteer's place.

"She snatched the reins, she lashed with all her force,
And full on Mars impelled the foaming horse."

Ares is the first to cast his spear; then, note this, Pope says:

"Pallas opposed her hand, and caused to glance,
Far from the car, the strong immortal lance."

She does not oppose her hand in the Greek—the wind could not meet the lance straight—she catches it in her hand, and throws it off. There is no instance in which a lance is so parried by a mortal hand in all the Iliad, and it is exactly the way the wind would parry it, catching it, and turning it aside. If there are any good rifleshots here—they know something about Athena's parrying—and in old times the English masters of feathered artillery knew more yet. Compare also the turning of Hector's lance from Achilles: Iliad xx. 439.

37. The last instance I will give you is as lovely as it is subtle. Throughout the Iliad, Athena is herself the will or Menis of Achilles. If he is to be calmed, it is she who calms him; if angered, it is she who inflames him. In the first quarrel with Atrides, when he stands at pause, with the great sword half drawn, "Athena came from heaven, and stood behind him, and caught him by the yellow hair." Another god

* See farther on, § 148, pp. 112, 113.
would have stayed his hand upon the hilt, but Athena only lifts his hair. "And he turned and knew her, and her dreadful eyes shone upon him." There is an exquisite tenderness in this laying her hand upon his hair, for it is the talisman of his life, vowed to his own Thessalian river if he ever returned to its shore, and cast upon Patroclus' pile, so ordaining that there should be no return.

38. Secondly—Athena is the air giving vegetative impulse to the earth. She is the wind and the rain—and yet more the pure air itself, getting at the earth fresh turned by spade or plough—and, above all, feeding the fresh leaves; for though the Greeks knew nothing about carbonic acid, they did know that trees fed on the air.

Now, note first in this, the myth of the air getting at ploughed ground. You know I told you the Lord of all labour by which man lived was Hephaestus; therefore Athena adopts a child of his, and of the Earth,—Erichthonius,—literally, "the tearer up of the ground"—who is the head (though not in direct line,) of the kings of Attica; and having adopted him, she gives him to be brought up by the three nymphs of the dew. Of these, Aglauros, the dweller in the fields, is the envy or malice of the earth; she answers nearly to the envy of Cain, the tiller of the ground, against his shepherd brother, in her own envy against her two sisters, Herse, the cloud dew, who is the beloved of the shepherd Mercury; and Pandrosos, the diffused dew, or dew of heaven. Literally, you have in this myth the words of the blessing of Esau—"Thy dwelling shall be of the fatness of the earth, and of the dew of heaven from above." Aglauros is for her envy turned into a black stone; and hers is one of the voices,—the other being that of Cain,—which haunts the circle of envy in the Purgatory:

"Io sono Aglauro, chi divenne sasso."

But to her two sisters, with Erichthonius, (or the hero Erechtheus,) is built the most sacred temple of Athena in Athens; the temple to their own dearest Athena—to her, and to the dew together: so that it was divided into two parts: one,
the temple of Athena of the city, and the other that of the
dew. And this expression of her power, as the air bringing
the dew to the hill pastures, in the central temple of the cen-
tral city of the heathen, dominant over the future intellectual
world, is, of all the facts connected with her worship as the
spirit of life, perhaps the most important. I have no time now
to trace for you the hundredth part of the different ways in
which it bears both upon natural beauty, and on the best or-
der and happiness of men's lives. I hope to follow out some
of these trains of thought in gathering together what I have to
say about field herbage; but I must say briefly here that the
great sign, to the Greeks, of the coming of spring in the past-
ures, was not, as with us, in the primrose, but in the various
flowers of the asphodel tribe (of which I will give you some
separate account presently); therefore it is that the earth an-
swers with crocus flame to the cloud on Ida; and the power
of Athena in eternal life is written by the light of the asphodel
on the Elysian fields.

But farther, Athena is the air, not only to the lilies of the
field, but to the leaves of the forest. We saw before the
reason why Hermes is said to be the son of Maia, the eldest of
the sister stars of spring. Those stars are called not only
Pleiades, but Vergiliae, from a word mingling the ideas of the
turning or returning of spring-time with the outpouring of
rain. The mother of Virgil bearing the name of Maia, Virgil
himself received his name from the seven stars; and he, in
forming, first, the mind of Dante, and through him that of
Chaucer (besides whatever special minor influence came from
the Pastorals and Georgics), became the fountain-head of all
the best literary power connected with the love of vegetative
nature among civilized races of men. Take the fact for what
it is worth; still it is a strange seal of coincidence, in word
and in reality, upon the Greek dream of the power over human
life, and its purest thoughts, in the stars of spring. But the
first syllable of the name of Virgil has relation also to another
group of words, of which the English ones, virtue, and virgin,
bring down the force to modern days. It is a group contain-
ing mainly the idea of "spring," or increase of life in vege-
tion—the rising of the new branch of the tree out of the bud, and of the new leaf out of the ground. It involves, secondarily, the idea of greenness and of strength, but primarily, that of living increase of a new rod from a stock, stem, or root; (“There shall come forth a rod out of the stem of Jesse;”) and chiefly the stem of certain plants—either of the rose tribe, as in the budding of the almond rod of Aaron; or of the olive tribe, which has triple significance in this symbolism, from the use of its oil for sacred anointing, for strength in the gymnasium, and for light. Hence, in numberless divided and reflected ways, it is connected with the power of Hercules and Athena: Hercules plants the wild olive, for its shade, on the course of Olympia, and it thenceforward gives the Olympic crown, of consummate honour and rest; while the prize at the Panathenaic games is a vase of its oil, (meaning encouragement to continuance of effort); and from the paintings on these Panathenaic vases we get the most precious clue to the entire character of Athena. Then to express its propagation by slips, the trees from which the oil was to be taken were called “Moriai,” trees of division (being all descendants of the sacred one in the Erechtheum). And thus, in one direction, we get to the “children like olive plants round about thy table” and the olive grafting of St. Paul; while the use of the oil for anointing gives chief name to the rod itself of the stem of Jesse, and to all those who were by that name signed for his disciples first in Antioch. Remember, farther, since that name was first given, the influence of the symbol, both in extreme unction, and in consecration of priests and kings to their “divine right;” and think, if you can reach with any grasp of thought, what the influence on the earth has been, of those twisted branches whose leaves give grey bloom to the hill-sides under every breeze that blows from the midland sea. But, above and beyond all, think how strange it is that the chief Agonia of humanity, and the chief giving of strength from heaven for its fulfilment, should have been under its night shadow in Palestine.

39. Thirdly—Athena is the air in its power over the sea. On the earliest Panathenaic vase known—the “Burgon”
vase in the British Museum—Athena has a dolphin on her shield. The dolphin has two principal meanings in Greek symbolism. It means, first, the sea; secondarily, the ascending and descending course of any of the heavenly bodies from one sea horizon to another—the dolphins’ arching rise and plunge (in a summer evening, out of calm sea, their black backs roll round with exactly the slow motion of a water-wheel; but I do not know how far Aristotle’s exaggerated account of their leaping or their swiftness has any foundation,) being taken as a type of the emergence of the sun or stars from the sea in the east, and plunging beneath in the west. Hence, Apollo, when in his personal power he crosses the sea, leading his Cretan colonists to Pytho, takes the form of a dolphin, becomes Apollo Delphinius, and names the founded colony “Delphi.” The lovely drawing of the Delphic Apollo on the hydria of the Vatican (Le Normand and De Witte, vol. ii. p. 6), gives the entire conception of this myth. Again, the beautiful coins of Tarentum represent Taras coming to found the city, riding on a dolphin, whose leaps and plunges have partly the rage of the sea in them, and partly the spring of the horse, because the splendid riding of the Tarentines had made their name proverbial in Magna Graecia. The story of Arion is a collateral fragment of the same thought; and, again, the plunge before their transformation, of the ships of Æneas. Then, this idea of career upon, or conquest of the sea, either by the creatures themselves, or by dolphin-like ships, (compare the Merlin prophecy,—

"They shall ride
Over ocean wide
With hempen bridle, and horse of tree,"
connects itself with the thought of undulation, and of the wave-power in the sea itself, which is always expressed by the serpentine bodies either of the sea-gods or of the sea-horse; and when Athena carries, as she does often in later work, a serpent for her shield-sign, it is not so much the repetition of her own aegis-snakes as the farther expression of her power over the sea-wave; which, finally, Virgil gives in its perfect
unity with her own anger, in the approach of the serpents against Laocoon from the sea; and then, finally, when her own storm-power is fully put forth on the ocean also, and the madness of the ægis-snake is given to the wave-snake, the sea-wave becomes the devouring hound at the waist of Scylla, and Athena takes Scylla for her helmet-crest; while yet her beneficent and essential power on the ocean, in making navigation possible, is commemorated in the Panathenaic festival by her peplos being carried to the Erechtheum suspended from the mast of a ship.

In Plate cxv. of vol. ii., Le Normand, are given two sides of a vase, which, in rude and childish way, assembles most of the principal thoughts regarding Athena in this relation. In the first, the sunrise is represented by the ascending chariot of Apollo, foreshortened; the light is supposed to blind the eyes, and no face of the god is seen (Turner, in the Ulysses and Polyphemus sunrises, loses the form of the god in light, giving the chariot-horses only; rendering in his own manner, after 2,200 years of various fall and revival of the arts, precisely the same thought as the old Greek potter). He ascends out of the sea; but the sea itself has not yet caught the light. In the second design, Athena as the morning breeze, and Hermes as the morning cloud, fly over the sea before the sun. Hermes turns back his head; his face is unseen in the cloud, as Apollo’s in the light; the grotesque appearance of an animal’s face is only the cloud-phantasm modifying a frequent form of the hair of Hermes beneath the back of his cap. Under the morning breeze, the dolphins leap from the rippled sea, and their sides catch the light.

The coins of the Lucanian Heracleia give a fair representation of the helmed Athena, as imagined in later Greek art, with the embossed Scylla.

40. Fourthly—Athena is the air nourishing artificial light—unconsuming fire. Therefore, a lamp was always kept burning in the Erechtheum; and the torch-race belongs chiefly to her festival, of which the meaning is to show the danger of the perishing of the light even by excess of the air that nourishes it; and so that the race is not to the swift, but
to the wise. The household use of her constant light is symbolized in the lovely passage, in the Odyssey, where Ulysses and his son move the armour while the servants are shut in their chambers, and there is no one to hold torches for them; but Athena herself, "having a golden lamp," fills all the rooms with light. Her presence in war-strength with her favourite heroes is always shown by the "unwearied" fire hovering on their helmets and shields; and the image gradually becomes constant and accepted, both for the maintenance of household watchfulness, as in the parable of the ten virgins, or as the symbol of direct inspiration, in the rushing wind and divided flames of Pentecost: but, together with this thought of unconsuming and constant fire, there is always mingled in the Greek mind the sense of the consuming by excess, as of the flame by the air; so also of the inspired creature by its own fire (thus, again, "the zeal of thine house hath eaten me up"—"my zeal hath consumed me, because of thine enemies," and the like); and especially Athena has this aspect towards the truly sensual and bodily strength; so that to Ares, who is himself insane and consuming, the opposite wisdom seems to be insane and consuming: "All we the other gods have thee against us, O Jove! when we would give grace to men; for thou hast begotten the maid without a mind—the mischievous creature, the doer of unseemly evil. All we obey thee, and are ruled by thee. Her only thou wilt not resist in anything she says or does, because thou didst bear her—consuming child as she is."

41. Lastly—Athena is the air, conveying vibration of sound.

In all the loveliest representations in central Greek art of the birth of Athena, Apollo stands close to the sitting Jupiter, singing, with a deep, quiet joyfulness, to his lyre. The sun is always thought of as the master of time and rhythm, and as the origin of the composing and inventive discovery of melody; but the air, as the actual element and substance of the voice, the prolonging and sustaining power of it, and the symbol of its moral passion. Whatever in music is measured and designed, belongs therefore to Apollo and the Muses;
whatever is impulsive and passionate, to Athena: hence her constant strength of voice or cry (as when she aids the shout of Achilles) curiously opposed to the dumbness of Demeter. The Apolline lyre, therefore, is not so much the instrument producing sound, as its measurer and divider by length or tension of string into given notes; and I believe it is, in a double connection with its office as a measurer of time or motion, and its relation to the transit of the sun in the sky, that Hermes forms it from the tortoise-shell, which is the image of the dappled concave of the cloudy sky. Thenceforward all the limiting or restraining modes of music belong to the Muses; but the passionate music is wind music, as in the Doric flute. Then, when this inspired music becomes degraded in its passion, it sinks into the pipe of Pan, and the double pipe of Marsyas, and is then rejected by Athena. The myth which represents her doing so is that she invented the double pipe from hearing the hiss of the Gorgonian serpents; but when she played upon it, chancing to see her face reflected in the water, she saw that it was distorted, whereupon she threw down the flute, which Marsyas found. Then, the strife of Apollo and Marsyas represents the enduring contest between music in which the words and thought lead, and the lyre measures or melodizes them, (which Pindar means when he calls his hymns "kings over the lyre," ) and music in which the words are lost, and the wind or impulse leads,—generally, therefore, between intellectual, and brutal, or meaningless, music. Therefore, when Apollo prevails, he flays Marsyas, taking the limit and external bond of his shape from him, which is death, without touching the mere muscular strength; yet shameful and dreadful in dissolution.

42. And the opposition of these two kinds of sound is continually dwelt upon by the Greek philosophers, the real fact at the root of all their teaching being this,—that true music is the natural expression of a lofty passion for a right cause; that in proportion to the kinglyness and force of any personality, the expression either of its joy or suffering becomes measured, chastened, calm, and capable of interpretation only by the majesty of ordered, beautiful, and worded sound. Ex-
actly in proportion to the degree in which we become narrow in the cause and conception of our passions, incontinent in the utterance of them, feeble of perseverance in them, sullied or shameful in the indulgence of them, their expression by musical sound becomes broken, mean, fatuitous, and at last impossible; the measured waves of the air of heaven will not lend themselves to expression of ultimate vice, it must be forever sunk into discordance or silence. And since, as before stated, every work of right art has a tendency to reproduce the ethical state which first developed it, this, which of all the arts is most directly ethical in origin, is also the most direct in power of discipline; the first, the simplest, the most effective of all instruments of moral instruction; while in the failure and betrayal of its functions, it becomes the subtlest aid of moral degradation. Music is thus, in her health, the teacher of perfect order, and is the voice of the obedience of angels, and the companion of the course of the spheres of heaven; and in her depravity she is also the teacher of perfect disorder and disobedience, and the Gloria in Excelsis becomes the Marseillaise. In the third section of this volume, I reprint two chapters from another essay of mine, ("The Cestus of Aglaia," ) on modesty or measure, and on liberty, containing farther reference to music in her two powers; and I do this now, because, among the many monstrous and misbegotten fantasies which are the spawn of modern licence, perhaps the most impishly opposite to the truth is the conception of music which has rendered possible the writing, by educated persons, and, more strangely yet, the tolerant criticism, of such words as these:—"This so persuasive art is the only one that has no didactic efficacy, that engenders no emotions save such as are without issue on the side of moral truth, that expresses nothing of God, nothing of reason, nothing of human liberty." I will not give the author's name; the passage is quoted in the Westminster Review for last January, p. 153.

43. I must also anticipate something of what I have to say respecting the relation of the power of Athena to organic life, so far as to note that her name, Pallas, probably refers to
the quivering or vibration of the air; and to its power, whether as vital force, or communicated wave, over every kind of matter, in giving it vibratory movement; first, and most intense, in the voice and throat of the bird; which is the air incarnate; and so descending through the various orders of animal life to the vibrating and semi-voluntary murmur of the insect; and, lower still, to the hiss, or quiver of the tail, of the half-lunged snake and deaf adder; all these, nevertheless, being wholly under the rule of Athena as representing either breath, or vital nervous power; and, therefore, also, in their simplicity, the "oaten pipe and pastoral song," which belong to her dominion over the asphodel meadows, and breathe on, their banks of violets.

Finally, is it not strange to think of the influence of this one power of Pallas in vibration; (we shall see a singular mechanical energy of it presently in the serpent's motion;) in the voices of war and peace? How much of the repose—how much of the wrath, folly, and misery of men, has literally depended on this one power of the air;—on the sound of the trumpet and of the bell—on the lark's song, and the bee's murmur.

44. Such is the general conception in the Greek mind of the physical power of Athena. The spiritual power associated with it is of two kinds;—first, she is the Spirit of Life in material organism; not strength in the blood only, but formative energy in the clay: and, secondly, she is inspired and impulsive wisdom in human conduct and human art, giving the instinct of infallible decision, and of faultless invention.

It is quite beyond the scope of my present purpose—and, indeed, will only be possible for me at all after marking the relative intention of the Apolline myths—to trace for you the Greek conception of Athena as the guide of moral passion. But I will at least endeavor, on some near occasion,* to define some of the actual truths respecting the vital force in created organism, and inventive fancy in the works of man, which are

* I have tried to do this in mere outline in the two following sections of this volume.
ATHENA IN THE HEAVENS. 45

more or less expressed by the Greeks, under the personality of Athena. You would, perhaps, hardly bear with me if I endeavoured farther to show you — what is nevertheless perfectly true — the analogy between the spiritual power of Athena in her gentle ministry, yet irresistible anger, with the ministry of another Spirit whom we also, holding for the universal power of life, are forbidden, at our worst peril, to quench or to grieve.

45. But, I think, to-night, you should not let me close, without requiring of me an answer on one vital point, namely, how far these imaginations of Gods — which are vain to us— were vain to those who had no better trust? and what real belief the Greek had in these creations of his own spirit, practical and helpful to him in the sorrow of earth? I am able to answer you explicitly in this. The origin of his thoughts is often obscure, and we may err in endeavouring to account for their form of realization; but the effect of that realization on his life is not obscure at all. The Greek creed was, of course, different in its character, as our own creed is, according to the class of persons who held it. The common people's was quite literal, simple, and happy: their idea of Athena was as clear as a good Roman Catholic peasant's idea of the Madonna. In Athens itself, the centre of thought and refinement, Pisistratus obtained the reins of government through the ready belief of the populace that a beautiful woman, armed like Athena, was the goddess herself. Even at the close of the last century some of this simplicity remained among the inhabitants of the Greek islands; and when a pretty English lady first made her way into the grotto of Antiparos, she was surrounded, on her return, by all the women of the neighbouring village, believing her to be divine, and praying her to heal them of their sicknesses.

46. Then, secondly, the creed of the upper classes was more refined and spiritual, but quite as honest, and even more forcible in its effect on the life. You might imagine that the employment of the artifice just referred to implied utter unbelief in the persons contriving it; but it really meant only that the more worldly of them would play with a popular faith for
their own purposes, as doubly-minded persons have often done since, all the while sincerely holding the same ideas themselves in a more abstract form; while the good and unworldly men, the true Greek heroes, lived by their faith as firmly as St. Louis, or the Cid, or the Chevalier Bayard.

47. Then, thirdly, the faith of the poets and artists was, necessarily, less definite, being continually modified by the involuntary action of their own fancies; and by the necessity of presenting, in clear verbal or material form, things of which they had no authoritative knowledge. Their faith was, in some respects, like Dante’s or Milton’s: firm in general conception, but not able to vouch for every detail in the forms they gave it: but they went considerably farther, even in that minor sincerity, than subsequent poets; and strove with all their might to be as near the truth as they could. Pindar says, quite simply, “I cannot think so-and-so of the Gods. It must have been this way—it cannot have been, that way—that the thing was done.” And as late among the Latins as the days of Horace, this sincerity remains. Horace is just as true and simple in his religion as Wordsworth; but all power of understanding any of the honest classic poets has been taken away from most English gentlemen by the mechanical drill in verse-writing at school. Throughout the whole of their lives afterwards, they never can get themselves quit of the notion that all verses were written as an exercise, and that Minerva was only a convenient word for the last of an hexameter, and Jupiter for the last but one.

48. It is impossible that any notion can be more fallacious or more misleading in its consequences. All great-song, from the first day when human lips contrived syllables, has been sincere song. With deliberate didactic purpose the tragedians—with pure and native passion the lyricists—fitted their perfect words to their dearest faiths. “Operosa parvus carmina fingo.” “I, little thing that I am, weave my laborious songs” as earnestly as the bee among the bells of thyme on the Matin mountains. Yes, and he dedicates his favourite pine to Diana, and he chants his autumnal hymn to the Faun that guards his fields, and he guides the noble youths and
maids of Rome in their choir to Apollo, and he tells the farmer's little girl that the Gods will love her, though she has only a handful of salt and meal to give them—just as earnestly as ever English gentleman taught Christian faith to English youth in England's truest days.

49. Then, lastly, the creed of the philosophers or sages varied according to the character and knowledge of each;—their relative acquaintance with the secrets of natural science—their intellectual and sectarian egotism—and their mystic or monastic tendencies, for there is a classic as well as a mediaeval monasticism. They ended in losing the life of Greece in play upon words; but we owe to their early thought some of the soundest ethics, and the foundation of the best practical laws, yet known to mankind.

50. Such was the general vitality of the heathen creed in its strength. Of its direct influence on conduct, it is, as I said, impossible for me to speak now; only, remember always, in endeavouring to form a judgment of it, that what of good or right the heathens did, they did looking for no reward. The purest forms of our own religion have always consisted in sacrificing less things to win greater;—time, to win eternity,—the world, to win the skies. The order, "sell that thou hast," is not given without the promise,—"thou shalt have treasure in heaven;" and well for the modern Christian if he accepts the alternative as his Master left it—and does not practically read the command and promise thus: "Sell that thou hast in the best market, and thou shalt have treasure in eternity also." But the poor Greeks of the great ages expected no reward from heaven but honour, and no reward from earth but rest;—though, when, on those conditions, they patiently, and proudly, fulfilled their task of the granted day, an unreasoning instinct of an immortal benediction broke from their lips in song: and they, even they, had sometimes a prophet to tell them of a land "where there is sun alike by day, and alike by night—where they shall need no more to trouble the earth by strength of hands for daily bread—but the ocean breezes blow around the blessed islands, and golden flowers burn on their bright trees for evermore."
II.

ATHENA KERAMITIS.*

*(Athena in the Earth.)*

Study, supplementary to the preceding lecture, of the supposed, and actual relations of Athena to the vital force in material organism.

51. It has been easy to decipher approximately the Greek conception of the physical power of Athena in cloud and sky, because we know ourselves what clouds and skies are, and what the force of the wind is in forming them. But it is not at all easy to trace the Greek thoughts about the power of Athena in giving life, because we do not ourselves know clearly what life is, or in what way the air is necessary to it, or what there is, besides the air, shaping the forms that it is put into. And it is comparatively of small consequence to find out what the Greeks thought or meant, until we have determined what we ourselves think, or mean, when we translate the Greek word for "breathing" into the Latin-English word "spirit."

52. But it is of great consequence that you should fix in your minds—and hold, against the baseness of mere materialism on the one hand, and against the fallacies of controversial speculation on the other—the certain and practical sense of this word "spirit;"—the sense in which you all know that its reality exists, as the power which shaped you into your shape, and by which you love, and hate, when you have received that shape. You need not fear, on the one hand, that either the sculpturing or the loving power can ever be beaten down by the philosophers into a metal, or evolved by them into a gas: but on the other hand, take care that you yourselves, in trying to elevate your conception of it, do not lose

* "Athena, fit for being made into pottery." I coin the expression as a counterpart of γόνατηθέντια, "Clay intact."
its truth in a dream, or even in a word. Beware always of contending for words: you will find them not easy to grasp, if you know them in several languages. This very word, which is so solemn in your mouths, is one of the most doubtful. In Latin it means little more than breathing, and may mean merely accent; in French it is not breath, but wit, and our neighbours are therefore obliged, even in their most solemn expressions, to say "wit" when we say "ghost." In Greek, "pneuma," the word we translate "ghost," means either wind or breath, and the relative word "psyche" has, perhaps, a more subtle power; yet St. Paul's words "pneumatic body" and "psychic body" involve a difference in his mind which no words will explain. But in Greek and in English, and in Saxon and in Hebrew, and in every articulate tongue of humanity the "spirit of man" truly means his passion and virtue, and is stately according to the height of his conception, and stable according to the measure of his endurance.

53. Endurance, or patience, that is the central sign of spirit; a constancy against the cold and agony of death; and as, physically, it is by the burning power of the air that the heat of the flesh is sustained, so this Athena, spiritually, is the queen of all glowing virtue, the unConsuming fire and inner lamp of life. And thus, as Hephaestus is lord of the fire of the hand and Apollo of the fire of the brain, so Athena of the fire of the heart; and as Hercules wears for his chief armour the skin of the Nemean lion, his chief enemy, whom he slew; and Apollo has for his highest name "the Pythian," from his chief enemy, the Python, slain; so Athena bears always on her breast the deadly face of her chief enemy slain, the Gorgonian cold, and venomous agony, that turns living men to stone.

54. And so long as you have that fire of the heart within you, and know the reality of it, you need be under no alarm as to the possibility of its chemical or mechanical analysis. The philosophers are very humorous in their ecstasy of hope about it; but the real interest of their discoveries in this direction is very small to human-kind. It is quite true that the tympanum of the ear vibrates under sound, and that the
surface of the water in a ditch vibrates too: but the ditch hears nothing for all that; and my hearing is still to me as blessed a mystery as ever, and the interval between the ditch and me, quite as great. If the trembling sound in my ears was once of the marriage-bell which began my happiness, and is now of the passing-bell which ends it, the difference between those two sounds to me cannot be counted by the number of concussions. There have been some curious speculations lately as to the conveyance of mental consciousness by "brain-waves." What does it matter how it is conveyed? The consciousness itself is not a wave. It may be accompanied here or there by any quantity of quivers and shakes, up or down, of anything you can find in the universe that is shakeable—what is that to me? My friend is dead, and my—according to modern views—vibratory sorrow is not one whit less, or less mysterious, to me, than my old quiet one.

55. Beyond, and entirely unaffected by, any questionings of this kind, there are, therefore, two plain facts which we should all know: first, that there is a power which gives their several shapes to things, or capacities of shape; and, secondly, a power which gives them their several feelings, or capacities of feeling; and that we can increase or destroy both of these at our will. By care and tenderness, we can extend the range of lovely life in plants and animals; by our neglect and cruelty, we can arrest it, and bring pestilence in its stead. Again, by right discipline we can increase our strength of noble will and passion, or destroy both. And whether these two forces are local conditions of the elements in which they appear, or are part of a great force in the universe, out of which they are taken, and to which they must be restored, is not of the slightest importance to us in dealing with them; neither is the manner of their connection with light and air. What precise meaning we ought to attach to expressions such as that of the prophecy to the four winds that the dry bones might be breathed upon, and might live, or why the presence of the vital power should be dependent on the chemical action of the air, and its awful passing away materially signified by the rendering up of that breath or ghost, we cannot at pres-
ent know, and need not at any time dispute. What we assuredly know is that the states of life and death are different, and the first more desirable than the other, and by effort attainable, whether we understand being “born of the spirit” to signify having the breath of heaven in our flesh, or its power in our hearts.

56. As to its power on the body, I will endeavor to tell you, having been myself much led into studies involving necessary reference both to natural science and mental phenomena, what, at least, remains to us after science has done its worst;—what the Myth of Athena, as a Formative and Decisive power—a Spirit of Creation and Volition, must eternally mean for all of us.

57. It is now (I believe I may use the strong word) “ascertained” that heat and motion are fixed in quantity, and measurable in the portions that we deal with. We can measure out portions of power, as we can measure portions of space; while yet, as far as we know, space may be infinite, and force infinite. There may be heat as much greater than the sun’s, as the sun’s heat is greater than a candle’s; and force as much greater than the force by which the world swings, as that is greater than the force by which a cobweb trembles. Now, on heat and force, life is inseparably dependent; and I believe, also, on a form of substance, which the philosophers call “protoplasm.” I wish they would use English instead of Greek words. When I want to know why a leaf is green, they tell me it is coloured by “chlorophyll,” which at first sounds very instructive; but if they would only say plainly that a leaf is coloured green by a thing which is called “green leaf,” we should see more precisely how far we had got. However, it is a curious fact that life is connected with a cellular structure called protoplasm, or, in English, “first stuck together:” whence, conceivably through deuteroplasms, or second stickings, and tritoplasms, or third stickings,* we reach the high-

* Or, perhaps, we may be indulged with one consummating gleam of “glycasms”—visible “Sweetness,”—according to the good old monk “Full moon,” or “All moonshine.” I cannot get at his original Greek, but am content with M. Durand’s clear French (Manuel d’Iconographie
est plastic phase in the human pottery, which differs from common chinaware, primarily, by a measurable degree of heat, developed in breathing, which it borrows from the rest of the universe while it lives, and which it as certainly returns to the rest of the universe, when it dies.

58. Again, with this heat certain assimilative powers are connected, which the tendency of recent discovery is to simplify more and more into modes of one force; or finally into mere motion, communicable in various states, but not destructible. We will assume that science has done its utmost; and that every chemical or animal force is demonstrably resolvable into heat or motion, reciprocally changing into each other. I would myself like better, in order of thought, to consider motion as a mode of heat than heat as a mode of motion: still, granting that we have got thus far, we have yet to ask, What is heat? or what motion? What is this "primo mobile," this transitional power, in which all things live, and move, and have their being? It is by definition something different from matter, and we may call it as we choose—"first cause," or "first light," or "first heat;" but we can show no scientific proof of its not being personal, and coinciding with the ordinary conception of a supporting spirit in all things.

59. Still, it is not advisable to apply the word "spirit" or "breathing" to it, while it is only enforcing chemical affinities; but, when the chemical affinities are brought under the influence of the air, and of the sun's heat, the formative force enters an entirely different phase. It does not now merely crystallize indefinite masses, but it gives to limited portions of matter the power of gathering, selectively, other elements proper to them, and binding these elements into their own peculiar and adopted form.

This force, now properly called life, or breathing, or spirit,
is continually creating its own shells of definite shape out of the wreck round it; and this is what I meant by saying, in the "Ethics of the Dust:" — "you may always stand by form against force." For the mere force of junction is not spirit; but the power that catches out of chaos charcoal, water, lime, or what not and fastens them down into a given form, is properly called "spirit;" and we shall not diminish, but strengthen our conception of this creative energy by recognizing its presence in lower states of matter than our own; — such recognition being enforced upon us by a delight we instinctively receive from all the forms of matter which manifest it; and yet more, by the glorifying of those forms, in the parts of them that are most animated, with the colours that are pleasantest to our senses. The most familiar instance of this is the best, and also the most wonderful : the blossoming of plants.

60. The Spirit in the plant,—that is to say, its power of gathering dead matter out of the wreck round it, and shaping it into its own chosen shape,—is of course strongest at the moment of its flowering, for it then not only gathers, but forms, with the greatest energy.

And where this Life is in it at full power, its form becomes invested with aspects that are chiefly delightful to our own human passions; namely, first, with the loveliest outlines of shape; and, secondly, with the most brilliant phases of the primary colours, blue, yellow, and red or white, the unison of all; and, to make it all more strange, this time of peculiar and perfect glory is associated with relations of the plants or blossoms to each other, correspondent to the joy of love in human creatures, and having the same object in the continuance of the race. Only, with respect to plants, as animals, we are wrong in speaking as if the object of this strong life were only the bequeathing of itself. The flower is the end or proper object of the seed, not the seed of the flower. The reason for seeds is that flowers may be; not the reason of flowers that seeds may be. The flower itself is the creature which the spirit makes; only, in connection with its perfectness, is placed the giving birth to its successor.

61. The main fact, then, about a flower is that it is the part
of the plant's form developed at the moment of its intensest life: and this inner rapture is usually marked externally for us by the flush of one or more of the primary colours. What the character of the flower shall be, depends entirely upon the portion of the plant into which this rapture of spirit has been put. Sometimes the life is put into its outer sheath, and then the outer sheath becomes white and pure, and full of strength and grace; sometimes the life is put into the common leaves, just under the blossom, and they become scarlet or purple; sometimes the life is put into the stalks of the flower, and they flush blue; sometimes into its outer enclosure or calyx; mostly into its inner cup; but, in all cases, the presence of the strongest life is asserted by characters in which the human sight takes pleasure, and which seem prepared with distinct reference to us, or rather, bear, in being delightful, evidence of having been produced by the power of the same spirit as our own.

62. And we are led to feel this still more strongly, because all the distinctions of species,* both in plants and animals, appear to have similar connection with human character. Whatever the origin of species may be, or however those species, once formed, may be influenced by external accident, the groups into which birth or accident reduce them have distinct relation to the spirit of man. It is perfectly possible, and ultimately conceivable, that the crocodile and the lamb may have descended from the same ancestral atom of protoplasm; and that the physical laws of the operation of calcareous slime and of meadow grass, on that protoplasm, may in time have developed the opposite natures and aspects of the living frames; but the practically important fact for us is the existence of a power which creates that calcareous earth itself;—which creates, that separately—and quartz, separately; and

* The facts on which I am about to dwell are in nowise antagonistic to the theories which Mr. Darwin's unwearied and unerring investigations are every day rendering more probable. The aesthetic relations of species are independent of their origin. Nevertheless, it has always seemed to me, in what little work I have done upon organic forms, as if the species mocked us by their deliberate imitation of each other when they met: yet did not pass one into another
gold, separately; and charcoal, separately; and then so directs the relation of these elements as that the gold shall destroy the souls of men by being yellow; and the charcoal destroy their souls by being hard and bright; and the quartz represent to them an ideal purity; and the calcareous earth, soft, shall beget crocodiles, and dry and hard, sheep; and that the aspects and qualities of these two products, crocodiles and lambs, shall be, the one repellent to the spirit of man, the other attractive to it, in a quite inevitable way; representing to him states of moral evil and good; and becoming myths to him of destruction or redemption, and, in the most literal sense, "words" of God.

63. And the force of these facts cannot be escaped from by the thought that there are species innumerable, passing into each other by regular gradations, out of which we choose what we most love or dread, and say they were indeed prepared for us. Species are not innumerable; neither are they now connected by consistent gradation. They touch at certain points only; and even then are connected, when we examine them deeply, in a kind of reticulated way, not in chains, but in chequers; also, however connected, it is but by a touch of the extremities, as it were, and the characteristic form of the species is entirely individual. The rose nearly sinks into a grass in the sanguisorba; but the formative spirit does not the less clearly separate the ear of wheat from the dog-rose, and oscillate with tremulous constancy round the central forms of both, having each their due relation to the mind of man. The great animal kingdoms are connected in the same way. The bird through the penguin drops towards the fish, and the fish in the cetacean reascends to the mammal, yet there is no confusion of thought possible between the perfect forms of an eagle, a trout, and a war-horse, in their relations to the elements, and to man.

64. Now we have two orders of animals to take some note of in connection with Athena, and one vast order of plants, which will illustrate this matter very sufficiently for us.

The orders of animals are the serpent and the bird; the serpent, in which the breath or spirit is less than in any other
creature, and the earth-power greatest:—the bird, in which the breath or spirit is more full than in any other creature, and the earth power least.

65. We will take the bird first. It is little more than a drift of the air brought into form by plumes; the air is in all its quills, it breathes through its whole frame and flesh, and glows with air in its flying, like blown flame: it rests upon the air, subdues it, surpasses it, outraces it:—is the air, conscious of itself, conquering itself, ruling itself.

Also, into the throat of the bird is given the voice of the air. All that in the wind itself is weak, wild, useless in sweetness, is knit together in its song. As we may imagine the wild form of the cloud closed into the perfect form of the bird's wings, so the wild voice of the cloud into its ordered and commanded voice; unwearied, rippling through the clear heaven in its gladness, interpreting all intense passion through the soft spring nights, bursting into acclaim and rapture of choir at daybreak, or lisping and twittering among the boughs and hedges through heat of day, like little winds that only make the cowslip bells shake, and ruffle the petals of the wild rose.

66. Also, upon the plumes of the bird are put the colours of the air: on these the gold of the cloud, that cannot be gathered by any covetousness; the rubies of the clouds, that are not the price of Athena, but are Athena; the vermilion of the cloud-bar, and the flame of the cloud-crest, and the snow of the cloud, and its shadow, and the melted blue of the deep wells of the sky—all these, seized by the creating spirit, and woven by Athena herself into films and threads of plume; with wave on wave following and fading along breast, and throat, and opened wings, infinite as the dividing of the foam and the sifting of the sea-sand;—even the white down of the cloud seeming to flutter up between the stronger plumes, seen, but too soft for touch.

And so the Spirit of the Air is put into, and upon, this created form; and it becomes, through twenty centuries, the symbol of divine help, descending, as the Fire, to speak, but as the Dove, to bless.

67. Next, in the serpent, we approach the source of a group
of myths, world-wide, founded on great and common human instincts, respecting which I must note one or two points which bear intimately on all our subject. For it seems to me that the scholars who are at present occupied in interpretation of human myths have most of them forgotten that there are any such things as natural myths; and that the dark sayings of men may be both difficult to read, and not always worth reading; but the dark sayings of nature will probably become clearer for the looking into, and will very certainly be worth reading. And, indeed, all guidance to the right sense of the human and variable myths will probably depend on our first getting at the sense of the natural and invariable ones. The dead hieroglyph may have meant this or that—the living hieroglyph means always the same; but remember, it is just as much a hieroglyph as the other; nay, more,—a "sacred or reserved sculpture," a thing with an inner language. The serpent crest of the king’s crown, or of the god’s, on the pillars of Egypt, is a mystery; but the serpent itself, gliding past the pillar’s foot, is it less a mystery? Is there, indeed, no tongue, except the mute forked flash from its lips, in that running brook of horror on the ground?

68. Why that horror? We all feel it, yet how imaginative it is, how disproportioned to the real strength of the creature! There is more poison in an ill-kept drain,—in a pool of dish-washings at a cottage-door, than in the deadliest asp of Nile. Every back-yard which you look down into from the railway, as it carries you out by Vauxhall or Deptford, holds its coiled serpent: all the walls of those ghastly suburbs are enclosures of tank temples for serpent-worship; yet you feel no horror in looking down into them, as you would if you saw the livid scales, and lifted head. There is more venom, mortal, inevitable, in a single word, sometimes, or in the gliding entrance of a wordless thought, than ever "vanti Libia con sua rena." But that horror is of the myth, not of the creature. There are myriads lower than this, and more loathsome, in the scale of being; the links between dead matter and animation drift everywhere unseen. But it is the strength of the base element that is so dreadful in the ser-
pent; it is the very omnipotence of the earth. That rivulet of smooth silver—how does it flow, think you? It literally rows on the earth, with every scale for an oar; it bites the dust with the ridges of its body. Watch it, when it moves slowly:—A wave, but without wind! a current, but with no fall! all the body moving at the same instant, yet some of it to one side, some to another, or some forward, and the rest of the coil backwards; but all with the same calm will and equal way—no contraction, no extension; one soundless, causeless, march of sequent rings, and spectral procession of spotted dust, with dissolution in its fangs, dislocation in its coils. Startle it;—the winding stream will become a twisted arrow;—the wave of poisoned life will lash through the grass like a cast lance.* It scarcely breathes with its one lung (the other shrivelled and abortive); it is passive to the sun and shade, and is cold or hot like a stone; yet "it can outclimb the monkey, outswim the fish, outleap the zebra, outwrestle the athlete, and crush the tiger."† It is a divine hieroglyph of the demoniac power of the earth,—of the entire earthly nature. As the bird is the clothed power of the air, so this is the clothed power of the dust; as the bird the symbol of the spirit of life, so this of the grasp and sting of death.

69. Hence the continual change in the interpretation put upon it in various religions. As the worm of corruption, it is the mightiest of all adversaries of the gods—the special ad-

* I cannot understand this swift forward motion of serpents. The seizure of prey by the constrictor, though invisibly swift, is quite simple in mechanism; it is simply the return to its coil of an opened watch spring, and is just as instantaneous. But the steady and continuous motion, without a visible fulcrum (for the whole body moves at the same instant, and I have often seen even small snakes glide as fast as I could walk), seems to involve a vibration of the scales quite too rapid to be conceived. The motion of the crest and dorsal fin of the hippocampus, which is one of the intermediate types between serpent and fish, perhaps gives some resemblance of it, dimly visible, for the quivering turns the fin into a mere mist. The entrance of the two barbs of a bee's sting by alternate motion, "the teeth of one barb acting as a fulcrum for the other," must be something like the serpent motion on a small scale.

† Richard Owen.
versary of their light and creative power—Python against Apollo. As the power of the earth against the air, the giants are serpent-bodied in the Giganto-machia; but as the power of the earth upon the seed—consuming it into new life ("that which thou sowest is not quickened except it die")—serpents sustain the chariot of the spirit of agriculture.

70. Yet, on the other hand, there is a power in the earth to take away corruption, and to purify, (hence the very fact of burial, and many uses of earth, only lately known); and in this sense, the serpent is a healing spirit,—the representative of Æsculapius, and of Hygieia; and is a sacred earth-type in the temple of the Dew;—being there especially a symbol of the native earth of Athens; so that its departure from the temple was a sign to the Athenians that they were to leave their homes. And then, lastly, as there is a strength and healing in the earth, no less than the strength of air, so there is conceived to be a wisdom of earth no less than a wisdom of the spirit; and when its deadly power is killed, its guiding power becomes true; so that the Python serpent is killed at Delphi, where yet the oracle is from the breath of the earth.

71. You must remember, however, that in this, as in every other instance, I take the myth at its central time. This is only the meaning of the serpent to the Greek mind which could conceive an Athena. Its first meaning to the nascent eyes of men, and its continued influence over degraded races, are subjects of the most fearful mystery. Mr. Fergusson has just collected the principal evidence bearing on the matter in a work of very great value, and if you read his opening chapters, they will put you in possession of the circumstances needing chiefly to be considered. I cannot touch upon any of them here, except only to point out that, though the doctrine of the so-called "corruption of human nature," asserting that there is nothing but evil in humanity, is just as blasphemous and false as a doctrine of the corruption of physical nature would be, asserting there was nothing but evil in the earth,—there is yet the clearest evidence of a disease, plague, or continuous imperfection of development, hitherto allowed to prevail against the greater part of the races of men; and this in
monstrous ways, more full of mystery than the serpent-being itself. I have gathered for you to-night only instances of what is beautiful in Greek religion; but even in its best time there were deep corruptions in other phases of it, and degraded forms of many of its deities, all originating in a misunderstood worship of the principle of life; while in the religions of lower races, little else than these corrupted forms of devotion can be found;—all having a strange and dreadful consistency with each other, and infecting Christianity, even at its strongest periods, with fatal terror of doctrine, and ghastliness of symbolic conception, passing through fear into frenzied grotesque, and thence into sensuality.

In the Psalter of St. Louis itself, half of its letters are twisted snakes; there is scarcely a wreathed ornament, employed in Christian dress, or architecture, which cannot be traced back to the serpent's coil; and there is rarely a piece of monkish decorated writing in the world, that is not tainted with some ill-meant vileness of grotesque—nay, the very leaves of the twisted ivy-pattern of the fourteenth century can be followed back to wreaths for the foreheads of bacchanalian gods. And truly, it seems to me, as I gather in my mind the evidences of insane religion, degraded art, merciless war, sullen toil, detestable pleasure, and vain or vile hope, in which the nations of the world have lived since first they could bear record of themselves—it seems to me, I say, as if the race itself were still half-serpent, not extricated yet from its clay; a lacertine breed of bitterness—the glory of it emaciate with cruel hunger, and blotted with venomous stain: and the track of it, on the leaf a glittering slime, and in the sand a useless furrow.

There are no myths, therefore, by which the moral state and fineness of intelligence of different races can be so deeply tried, or measured, as by those of the serpent and the bird; both of them having an especial relation to the kind of remorse for sin, or grief in fate, of which the national minds that spoke by them had been capable. The serpent and vulture are alike emblems of immortality and purification among races which desired to be immortal and pure: and as they
recognize their own misery, the serpent becomes to them the scourge of the Furies, and the vulture finds its eternal prey in their breast. The bird long contests among the Egyptians with the still received serpent symbol of power. But the Draconian image of evil is established in the serpent Apap; while the bird’s wings, with the globe, become part of a better symbol of deity, and the entire form of the vulture, as an emblem of purification, is associated with the earliest conception of Athena. In the type of the dove with the olive branch, the conception of the spirit of Athena in renewed life prevailing over ruin, is embodied for the whole of futurity; while the Greeks, to whom, in a happier climate and higher life than that of Egypt, the vulture symbol of cleansing became unintelligible, took the eagle, instead, for their hieroglyph of supreme spiritual energy, and it thenceforward retains its hold on the human imagination, till it is established among Christian myths as the expression of the most exalted form of evangelistic teaching. The special relation of Athena to her favourite bird we will trace presently: the peacock of Hera, and dove of Aphrodite, are comparatively unimportant myths: but the bird power is soon made entirely human by the Greeks in their flying angel of victory (partially human, with modified meaning of evil, in the Harpy and Siren); and thenceforward it associates itself with the Hebrew cherubim, and has had the most singular influence on the Christian religion by giving its wings to render the conception of angels mysterious and untenable, and check rational endeavour to determine the nature of subordinate spiritual agency; while yet it has given to that agency a vague poetical influence of the highest value in its own imaginative way.

73. But with the early serpent worship there was associated another—that of the groves—of which you will also find the evidence exhaustively collected in Mr. Fergusson’s work. This tree-worship may have taken a dark form when associated with the Draconian one; or opposed, as in Judea, to a purer faith; but in itself, I believe, it was always healthy, and though it retains little definite hieroglyphic power in subsequent religion, it becomes, instead of symbolic, real; the
flowers and trees are themselves beheld and beloved with a half-worshipping delight, which is always noble and healthful.

And it is among the most notable indications of the volition of the animating power, that we find the ethical signs of good and evil set on these also, as well as upon animals; the venom of the serpent, and in some respects its image also, being associated even with the passionless growth of the leaf out of the ground; while the distinctions of species seem appointed with more definite ethical address to the intelligence of man as their material products become more useful to him.

74. I can easily show this, and, at the same time, make clear the relation to other plants of the flowers which especially belong to Athena, by examining the natural myths in the groups of the plants which would be used at any country dinner, over which Athena would, in her simplest household authority, cheerfully rule, here, in England. Suppose Horace's favourite dish of beans, with the bacon; potatoes; some savoury stuffing of onions and herbs with the meat; celery, and a radish or two, with the cheese; nuts and apples for dessert, and brown bread.

75. The beans are, from earliest time, the most important and interesting of the seeds of the great tribe of plants from which came the Latin and French name for all kitchen vegetables,—things that are gathered with the hand—potted seeds that cannot be reaped, or beaten, or shaken down, but must be gathered green. "Leguminous" plants, all of them having flowers like butterflies, seeds in (frequently pendent) pods,—"lactum siliqua quassante legumen"—smooth and tender leaves, divided into many minor ones; strange adjuncts of tendril, for climbing (and sometimes of thorn);—exquisitely sweet, yet pure, scents of blossom, and almost always harmless, if not serviceable, seeds. It is, of all tribes of plants, the most definite; its blossoms being entirely limited in their parts, and not passing into other forms. It is also the most usefully extended in range and scale; familiar in the height of the forest—acacia, laburnum, Judas-tree; familiar in the sown field—bean and vetch and pea; familiar in the pasture—in
every form of clustered clover and sweet trefoil tracery; the most entirely serviceable and human of all orders of plants.

76. Next, in the potato, we have the scarcely innocent underground stem of one of a tribe set aside for evil; having the deadly nightshade for its queen, and including the henbane, the witch’s mandrake, and the worst natural curse of modern civilization—tobacco.* And the strange thing about this tribe is, that though thus set aside for evil, they are not a group distinctly separate from those that are happier in function. There is nothing in other tribes of plants like the form of the bean blossom; but there is another family with forms and structure closely connected with this venomous one. Examine the purple and yellow bloom of the common hedge nightshade; you will find it constructed exactly like some of the forms of the cyclamen; and, getting this clue, you will find at last the whole poisonous and terrible group to be—sisters of the primulas!

The nightshades are, in fact, primroses with a curse upon them; and a sign set in their petals, by which the deadly and condemned flowers may always be known from the innocent ones,—that the stamens of the nightshades are between the lobes, and of the primulas, opposite the lobes, of the corolla.

77. Next, side by side, in the celery and radish, you have the two great groups of umbelled and cruciferous plants; alike in conditions of rank among herbs: both flowering in clusters; but the umbelled group, flat, the crucifers, in spires:—both of them mean and poor in the blossom, and losing what beauty they have by too close crowding:—both of them having the most curious influence on human character in the temperate zones of the earth, from the days of the parsley crown, and hemlock drink, and mocked Euripidean chervil, until now: but chiefly among the northern nations, being especially plants that are of some humble beauty, and (the crucifers) of endless use, when they are chosen and cultivated; but that run to wild waste, and are the signs of neglected

* It is not easy to estimate the demoralizing effect on the youth of Europe of the cigar, in enabling them to pass their time happily in idleness.
ground, in their rank or ragged leaves, and meagre stalks, and pursed or podded seed clusters. Capable, even under cultivation, of no perfect beauty, though reaching some subdued delightfulness in the lady's smock and the wallflower; for the most part, they have every floral quality meanly, and in vain,—they are white, without purity; golden, without preciousness; redundant, without richness; divided, without fineness; massive, without strength; and slender, without grace. Yet think over that useful vulgarity of theirs; and of the relations of German and English peasant character to its food of kraut and cabbage, (as of Arab character to its food of palm-fruit,) and you will begin to feel what purposes of the forming spirit are in these distinctions of species.

78. Next we take the nuts and apples,—the nuts representing one of the groups of catkined trees, whose blossoms are only tufts and dust; and the other, the rose tribe, in which fruit and flower alike have been the types, to the highest races of men, of all passionate temptation, or pure delight, from the coveting of Eve to the crowning of the Madonna, above the

"Rosa sempiterna,
Che si dilata, rigrada, e ridole
Odor di lode al Sol."

We have no time now for these, we must go on to the humblest group of all, yet the most wonderful, that of the grass, which has given us our bread; and from that we will go back to the herbs.

79. The vast family of plants which, under rain, make the earth green for man, and, under sunshine, give him bread, and, in their springing in the early year, mixed with their native flowers, have given us (far more than the new leaves of trees) the thought and word of "spring," divide themselves broadly into three great groups—the grasses, sedges, and rushes. The grasses are essentially a clothing for healthy and pure ground, watered by occasional rain, but in itself dry, and fit for all cultivated pasture and corn. They are distinctively plants with round and jointed stems, which have long green flexible leaves, and heads of seed, independently
emerging from them. The sedges are essentially the clothing of waste and more or less poor or uncultivable soils, coarse in their structure, frequently triangular in stem—hence called "acute" by Virgil—and with their heads of seed not extricated from their leaves. Now, in both the sedges and grasses, the blossom has a common structure, though undeveloped in the sedges, but composed always of groups of double husks, which have mostly a spinous process in the centre, sometimes projecting into a long awn or beard; this central process being characteristic also of the ordinary leaves of mosses, as if a moss were a kind of ear of corn made permanently green on the ground, and with a new and distinct fructification. But the rushes differ wholly from the sedge and grass in their blossom structure. It is not a dual cluster, but a twice three-fold one, so far separate from the grasses, and so closely connected with a higher order of plants, that I think you will find it convenient to group the rushes at once with that higher order, to which, if you will for the present let me give the general name of Drosidæ, or dew-plants, it will enable me to say what I have to say of them much more shortly and clearly.

80. These Drosidæ, then, are plants delighting in interrupted moisture—moisture which comes either partially or at certain seasons—into dry ground. They are not water-plants; but the signs of water resting among dry places. Many of the true water-plants have triple blossoms, with a small triple calyx holding them; in the Drosidæ, the floral spirit passes into the calyx also, and the entire flower becomes a six-rayed star, bursting out of the stem laterally, as if it were the first of flowers, and had made its way to the light by force through the unwilling green. They are often required to retain moisture or nourishment for the future blossom through long times of drought; and this they do in bulbs under ground, of which some become a rude and simple, but most wholesome, food for man.

81. So now, observe, you are to divide the whole family of the herbs of the field into three great groups—Drosidæ, Carices,*

*I think Carex will be found ultimately better that Cyperus for the generic name, being the Virgilian word, and representing a larger sub-species.
Gramineæ—dew-plants, sedges, and grasses. Then, the Drosidæ are divided into five great orders—lilies, asphodels, amaryllids, irids, and rushes. No tribes of flowers have had so great, so varied, or so healthy an influence on man as this great group of Drosidæ, depending, not so much on the whiteness of some of their blossoms, or the radiance of others, as on the strength and delicacy of the substance of their petals; enabling them to take forms of faultless elastic curvature, either in cups, as the crocus, or expanding bells, as the true lily, or heath-like bells, as the hyacinth, or bright and perfect stars, like the star of Bethlehem, or, when they are affected by the strange reflex of the serpent nature which forms the labiate group of all flowers, closing into forms of exquisitely fantastic symmetry in the gladiolus. Put by their side their Nereid sisters, the water-lilies, and you have in them the origin of the loveliest forms of ornamental design, and the most powerful floral myths yet recognized among human spirits, born by the streams of Ganges, Nile, Arno, and Avon.

82. For consider a little what each of those five tribes* has been to the spirit of man. First, in their nobleness: the Lilies gave the lily of the Annunciation; the Asphodels, the flower of the Elysian fields; the Irids, the fleur-de-lys of chivalry; and the Amaryllids, Christ's lily of the field: while the rush, trodden always under foot, became the emblem of humility. Then take each of the tribes, and consider the extent of their lower influence. Perdita's "The crown imperial, lilies of all kinds," are the first tribe; which, giving the type of perfect purity in the Madonna's lily, have, by their lovely form, influenced the entire decorative design of Italian sacred art; while ornament of war was continually enriched by the curves of the triple petals of the Florentine "giglio," and French fleur-de-lys; so that it is impossible to count their in-

* Take this rough distinction of the four tribes:—Lilies, superior ovary, white seeds; Asphodels, superior ovary, black seeds; Irids, inferior ovary, style (typically) rising into central crest; Amaryllids, inferior ovary, stamens (typically) joined in central cup. Then the rushes are a dark group, through which they stoop to the grasses.
fluence for good in the middle ages, partly as a symbol of womanly character, and partly of the utmost brightness and refinement of chivalry in the city which was the flower of cities.

Afterwards, the group of the turban-lilies, or tulips, did some mischief, (their splendid stains having made them the favourite caprice of florists;) but they may be pardoned all such guilt for the pleasure they have given in cottage gardens, and are yet to give, when lowly life may again be possible among us; and the crimson bars of the tulips in their trim beds, with their likeness in crimson bars of morning above them, and its dew glittering heavy, globed in their glossy cups, may be loved better than the gray nettles of the ash heap, under gray sky, unveined by vermillion or by gold.

83. The next great group, of the Asphodels, divides itself also into two principal families; one, in which the flowers are like stars, and clustered characteristically in balls, though opening sometimes into looser heads; and the other, in which the flowers are in long bells, opening suddenly at the lips, and clustered in spires on a long stem, or drooping from it, when bent by their weight.

The star-group, of the squills, garlicks, and onions, has always caused me great wonder. I cannot understand why its beauty, and serviceableness, should have been associated with the rank scent which has been really among the most powerful means of degrading peasant life, and separating it from that of the higher classes.

The belled group, of the hyacinth and convallaria, is as delicate as the other is coarse: the unspeakable azure light along the ground of the wood hyacinth in English spring; the grape hyacinth, which is in south France, as if a cluster of grapes and a hive of honey had been distilled and compressed together into one small boss of celled and beaded blue; the lilies of the valley everywhere, in each sweet and wild recess of rocky lands;—count the influences of these on childish and innocent life; then measure the mythic power of the hyacinth and asphodel as connected with Greek thoughts of immortality; finally take their useful and nour-
ishing power in ancient and modern peasant life, and it will be strange if you do not feel what fixed relation exists between the agency of the creating spirit in these, and in us who live by them.

84. It is impossible to bring into any tenable compass for our present purpose, even hints of the human influence of the two remaining orders of Amaryllids and Irids;—only note this generally, that while these in northern countries share with the Primulas the fields of spring, it seems that in Greece, the primulaceae are not an extended tribe, while the crocus, narcissus, and Amaryllis lutea, the “lily of the field” (I suspect also that the flower whose name we translate “violet” was in truth an Iris) represented to the Greek the first coming of the breath of life on the renewed herbage; and became in his thoughts the true embroidery of the saffron robe of Athena. Later in the year, the dianthus (which, though belonging to an entirely different race of plants, has yet a strange look of having been made out of the grasses by turning the sheath-membrane at the root of their leaves into a flower,) seems to scatter; in multitudinous families, its crimson stars far and wide. But the golden lily and crocus, together with the asphodel, retain always the old Greek’s fondest thoughts—they are only “golden” flowers that are to burn on the trees, and float on the streams of paradise.

85. I have but one tribe of plants more to note at our country feasts—the savoury herbs; but must go a little out of my way to come at them rightly. All flowers whose petals are fastened together, and most of those whose petals are loose, are best thought of first as a kind of cup or tube opening at the mouth. Sometimes the opening is gradual, as in the convolvulus or campanula; oftener there is a distinct change of direction between the tube and expanding lip, as in the primrose; or even a contraction under the lip, making the tube into a narrow-necked phial or vase, as in the heaths, but the general idea of a tube expanding into a quatrefoil, cinquefoil, or sixfoil, will embrace most of the forms.

86. Now it is easy to conceive that flowers of this kind, growing in close clusters, may, in process of time, have ex-
tended their outside petals rather than the interior ones (as the outer flowers of the clusters of many umbellifers actually do), and thus, elongated and variously distorted forms have established themselves; then if the stalk is attached to the side instead of the base of the tube, its base becomes a spur, and thus all the grotesque forms of the mints, violets, and larkspurs, gradually might be composed. But, however this may be, there is one great tribe of plants separate from the rest, and of which the influence seems shed upon the rest in different degrees: and these would give the impression, not so much of having been developed by change, as of being stamped with a character of their own, more or less serpentine or dragon-like. And I think you will find it convenient to call these generally, Draconidæ; disregarding their present ugly botanical name, which I do not care even to write once—you may take for their principal types the Foxglove, Snapdragon, and Calceolaria; and you will find they all agree in a tendency to decorate themselves by spots, and with bosses or swollen places in their leaves, as if they had been touched by poison. The spot of the Foxglove is especially strange, because it draws the colour out of the tissue all around it, as if it had been stung, and as if the central colour was really an inflamed spot, with paleness round. Then also they carry to its extreme the decoration by bulging or pouting the petal;—often beautifully used by other flowers in a minor degree, like the beating out of bosses in hollow silver, as in the kalmia, beaten out apparently in each petal by the stamens instead of a hammer; or the borage, pouting inwards; but the snapdragons and calceolarias carry it to its extreme.

87. Then the spirit of these Draconidæ seems to pass more or less into other flowers, whose forms are properly pure vases; but it affects some of them slightly,—others not at all. It never strongly affects the heaths; never once the roses; but it enters like an evil spirit into the buttercup, and turns it into a larkspur, with a black, spotted, grotesque centre, and a strange, broken blue, gorgeous and intense, yet impure, glittering on the surface as if it were strewn with broken glass, and stained or darkening irregularly into red. And
then at last the serpent charm changes the ranunculus into monkshood; and makes it poisonous. It enters into the forget-me-not, and the star of heavenly turquoise is corrupted into the viper's bugloss, darkened with the same strange red as the larkspur, and fretted into a fringe of thorn; it enters, together with a strange insect-spirit, into the asphodels, and (though with a greater interval between the groups,) they change into spotted orchideæ: it touches the poppy, it becomes a fumaria; the iris, and it pouts into a gladiolus; the lily, and it chequers itself into a snake's-head, and secretes in the deep of its bell, drops, not of venom indeed, but honey-dew, as if it were a healing serpent. For there is an Æsculapian as well as an evil serpentry among the Draconidæ, and the fairest of them, the "erba della Madonna" of Venice, (Linaria Cymbalaria,) descends from the ruins it delights in to the herbage at their feet, and touches it; and behold, instantly, a vast group of herbs for healing,—all draconid in form,—spotted, and crested, and from their lip-like corollas named "labiateæ;" full of various balm, and warm strength for healing, yet all of them without splendid honour or perfect beauty, "ground ivies," richest when crushed under the foot; the best sweetness and gentle brightness of the robes of the field,—thyme, and marjoram, and Euphrasy.

88. And observe, again and again, with respect to all these divisions and powers of plants; it does not matter in the least by what concurrences of circumstance or necessity they may gradually have been developed: the concurrence of circumstance is itself the supreme and inexplicable fact. We always come at last to a formative cause, which directs the circumstance, and mode of meeting it. If you ask an ordinary botanist the reason of the form of a leaf, he will tell you it is a "developed tubercle," and that its ultimate form "is owing to the directions of its vascular threads." But what directs its vascular threads? "They are seeking for something they want," he will probably answer. What made them want that? What made them seek for it thus? Seek for it, in five fibres or in three? Seek for it, in serration, or in sweeping curves? Seek for it, in servile tendrils, or impetuous spray?
it, in woollen wrinkles rough with stings, or in glossy surfaces, green with pure strength, and winterless delight?

89. There is no answer. But the sum of all is, that over the entire surface of the earth and its waters, as influenced by the power of the air under solar light, there is developed a series of changing forms, in clouds, plants, and animals, all of which have reference in their action, or nature, to the human intelligence that perceives them; and on which, in their aspects of horror and beauty, and their qualities of good and evil, there is engraved a series of myths, or words of the forming power, which, according to the true passion and energy of the human race, they have been enabled to read into religion. And this forming power has been by all nations partly confused with the breath or air through which it acts, and partly understood as a creative wisdom, proceeding from the Supreme Deity; but entering into and inspiring all intelligences that work in harmony with Him. And whatever intellectual results may be in modern days obtained by regarding this effluence only as a motion of vibration, every formative human art hitherto, and the best states of human happiness and order, have depended on the apprehension of its mystery (which is certain), and of its personality, which is probable.

90. Of its influence on the formative arts, I have a few words to say separately: my present business is only to interpret, as we are now sufficiently enabled to do, the external symbols of the myth under which it was represented by the Greeks as a goddess of counsel, taken first into the breast of their supreme Deity, then created out of his thoughts, and abiding closely beside him; always sharing and consummating his power.

91. And in doing this we have first to note the meaning of the principal epithet applied to Athena, "Glaukopis," "with eyes full of light," the first syllable being connected, by its root, with words signifying sight, not with words signifying colour. As far as I can trace the colour perception of the Greeks, I find it all founded primarily on the degree of connection between colour and light; the most important fact to them in the colour of red being its connection with fire and
sunshine; so that “purple” is, in its original sense, “fire-colour,” and the scarlet, or orange, of dawn, more than any other fire-colour. I was long puzzled by Homer’s calling the sea purple; and misled into thinking he meant the colour of cloud shadows on green sea; whereas he really means the gleaming blaze of the waves under wide light. Aristotle’s idea (partly true) is that light, subdued by blackness, becomes red; and blackness, heated or lighted, also becomes red. Thus, a colour may be called purple because it is light subdued (and so death is called “purple” or “shadowy” death); or else it may be called purple as being shade kindled with fire, and thus said of the lighted sea; or even of the sun itself, when it is thought of as a red luminary opposed to the whiteness of the moon: “purpureos inter soles, et candida lune sidera;” or of golden hair: “pro purpureo pœnam solvens scelerata capillo;” while both ideas are modified by the influence of an earlier form of the word, which has nothing to do with fire at all, but only with mixing or staining; and then, to make the whole group of thoughts inextricably complex, yet rich and subtle in proportion to their intricacy, the various rose and crimson colours of the murex-dye,—the crimson and purple of the poppy, and fruit of the palm,—and the association of all these with the hue of blood;—partly direct, partly through a confusion between the word signifying “slaughter” and “palm-fruit colour,” mingle themselves in, and renew the whole nature of the old word; so that, in later literature, it means a different colour, or emotion of colour, in almost every place where it occurs; and casts forever around the reflection of all that has been dipped in its dyes.

92. So that the word is really a liquid prism, and stream of opal. And then, last of all, to keep the whole history of it in the fantastic course of a dream, warped here and there into wild grotesque, we moderns, who have preferred to rule over coal-mines instead of the sea (and so have turned the everlasting lamp of Athena into a Davy’s safety-lamp in the hand of Britannia, and Athenian heavenly lightning into British subterranean “damp”), have actually got our purple out of coal instead of the sea! And thus, grotesquely, we have had en-
forced on us the doubt that held the old word between blackness and fire, and have completed the shadow, and the fear of it, by giving it a name from battle, "Magenta."

93. There is precisely a similar confusion between light and colour in the word used for the blue of the eyes of Athena—a noble confusion, however, brought about by the intensity of the Greek sense that the heaven is light, more than it is blue. I was not thinking of this when I wrote, in speaking of pictorial chiaroscuro, "The sky is not blue colour merely; it is blue fire, and cannot be painted" (Mod. P. iv. p. 36); but it was this that the Greeks chiefly felt of it, and so "Glaukopis" chiefly means gray-eyed: gray standing for a pale or luminous blue; but it only means "owl-eyed" in thought of the roundness and expansion, not from the colour; this breadth and brightness being, again, in their moral sense typical of the breadth, intensity, and singleness of the sight in prudence ("if thine eye be single, thy whole body shall be full of light"). Then the actual power of the bird to see in twilight enters into the type, and perhaps its general fineness of sense. "Before the human form was adopted, her (Athena's) proper symbol was the owl, a bird which seems to surpass all other creatures in acuteness of organic perception, its eye being calculated to observe objects which to all others are enveloped in darkness, its ear to hear sounds distinctly, and its nostrils to discriminate effluvia with such nicety that it has been deemed prophetic, from discovering the putridity of death even in the first stages of disease." *

I cannot find anywhere an account of the first known occurrence of the type; but, in the early ones on Attic coins, the wide round eyes are clearly the principal things to be made manifest.

94. There is yet, however, another colour of great importance in the conception of Athena—the dark blue of her ægis. Just as the blue or gray of her eyes was conceived as more light than colour, so her ægis was dark blue, because the

* Payne Knight in his "Inquiry into the Symbolical Language of Ancient Art," not trustworthy, being little more than a mass of conjectural memoranda, but the heap is suggestive, if well sifted.
Greeks thought of this tint more as shade than colour; and, while they used various materials in ornamentation, lapislazuli, carbonate of copper, or perhaps, smalt, with real enjoyment of the blue tint, it was yet in their minds as distinctly representative of darkness as scarlet was of light, and therefore, anything dark,* but especially the colour of heavy thunder-cloud, was described by the same term. The physical power

*In the breastplate and shield of Atrides the serpents and bosses are all of this dark colour, yet the serpents are said to be like rainbows; but through all this splendour and opposition of hue, I feel distinctly that the literal "splendour," with its relative shade, are prevalent in the conception; and that there is always a tendency to look through the hue to its cause. And in this feeling about colour the Greeks are separated from the eastern nations, and from the best designers of Christian times. I cannot find that they take pleasure in colour for its own sake; it may be in something more than colour, or better; but it is not in the hue itself. When Homer describes cloud breaking from a mountain summit, the crags became visible in light, not in colour; he feels only their flashing out in bright edges and trenchant shadows: above, the "infinite," "unspeakable" ether is torn open—but not the blue of it. He has scarcely any abstract pleasure in blue, or green, or gold; but only in their shade or flame.

I have yet to trace the causes of this (which will be a long task, belonging to art questions, not to mythological ones); but it is, I believe, much connected with the brooding of the shadow of death over the Greeks without any clear hope of immortality. The restriction of the colour on their vases to dim red (or yellow) with black and white, is greatly connected with their sepulchral use, and with all the melancholy of Greek tragic thought; and in this gloom the failure of colour-perception is partly noble, partly base: noble, in its earnestness, which raises the design of Greek vases as far above the designing of mere colourist nations like the Chinese, as men's thoughts are above children's; and yet it is partly base and earthly; and inherently defective in one human faculty: and I believe it was one cause of the perishing of their art so swiftly, for indeed there is no decline so sudden, or down to such utter loss and ludicrous depravity, as the fall of Greek design on its vases from the fifth to the third century, B.C. On the other hand, the pure coloured gift, when employed for pleasure only, degrades in another direction; so that among the Indians, Chinese, and Japanese, all intellectual progress in art has been for ages rendered impossible by the prevalence of that faculty: and yet it is, as I have said again and again, the spiritual power of art; and its true brightness is the essential characteristic of all healthy schools.
of this darkness of the ægis, fringed with lightning, is given quite simply when Jupiter himself uses it to overshadow Ida and the Plain of Troy, and withdraws it at the prayer of Ajax for light; and again when he grants it to be worn for a time by Apollo, who is hidden by its cloud when he strikes down Patroclus: but its spiritual power is chiefly expressed by a word signifying deeper shadow;—the gloom of Erebus, or of our evening, which, when spoken of the ægis, signifies, not merely the indignation of Athena, but the entire hiding or withdrawal of her help, and beyond even this, her deadliest of all hostility,—the darkness by which she herself deceives and beguiles to final ruin those to whom she is wholly adverse; this contradiction of her own glory being the uttermost judgment upon human falsehood. Thus it is she who provokes Pandarus to the treachery which purposed to fulfil the rape of Helen by the murder of her husband in time of truce; and then the Greek King, holding his wounded brother's hand, prophesies against Troy the darkness of the ægis which shall be over all, and for ever.*

95. This, then, finally, was the perfect colour-conception of Athena;—the flesh, snow-white, (the hands, feet, and face of marble, even when the statue was hewn roughly in wood); the eyes of keen pale blue, often in statues represented by jewels; the long robe to the feet, crocus coloured; and the ægis thrown over it of thunderous purple; the helmet golden, (Π. v. 744), and I suppose its crest also, as that of Achilles.

If you think carefully of the meaning and character which is now enough illustrated for you in each of these colours; and remember that the crocus-colour and the purple were both of them developments, in opposite directions, of the great central idea of fire-colour, or scarlet, you will see that this form of the creative spirit of the earth is conceived as robed in the blue, and purple, and scarlet, the white, and the gold, which have been recognized for the sacred chord of colours, from the day when the cloud descended on a Rock more mighty than Ida.

96. I have spoken throughout, hitherto, of the conception

* ἐρεμνὴν Αἰγίδα πᾶσι.—Π. iv. 166.
of Athena, as it is traceable in the Greek mind; not as it was rendered by Greek art. It is matter of extreme difficulty, requiring a sympathy at once affectionate and cautious, and a knowledge reaching the earliest springs of the religion of many lands, to discern through the imperfection, and, alas! more dimly yet, through the triumphs of formative art, what kind of thoughts they were that appointed for it the tasks of its childhood, and watched by the awakening of its strength.

The religious passion is nearly always vividest when the art is weakest; and the technical skill only reaches its deliberate splendour when the ecstasy which gave it birth has passed away for ever. It is as vain an attempt to reason out the visionary power or guiding influence of Athena in the Greek heart, from anything we now read, or possess, of the work of Phidias, as it would be for the disciples of some new religion to infer the spirit of Christianity from Titian's "Assumption." The effective vitality of the religious conception can be traced only through the efforts of trembling hands, and strange pleasures of untaught eyes; and the beauty of the dream can no more be found in the first symbols by which it is expressed, than a child's idea of fairyland can be gathered from its pencil scrawl, or a girl's love for her broken doll explained by the defaced features. On the other hand, the Athena of Phidias was, in very fact, not so much the deity, as the darling of the Athenian people. Her magnificence represented their pride and fondness, more than their piety; and the great artist, in lavishing upon her dignities which might be ended abruptly by the pillage they provoked, resigned, apparently without regret, the awe of her ancient memory; and (with only the careless remonstrance of a workman too strong to be proud) even the perfectness of his own art. Rejoicing in the protection of their goddess, and in their own hour of glory, the people of Athena robed her, at their will, with the preciousness of ivory and gems; forgot or denied the darkness of the breastplate of judgment, and vainly bade its unappeasable serpents relax their coils in gold.

97. It will take me many a day yet—if days, many or few,
ATHENA IN THE EARTH.

are given me—to disentangle in anywise the proud and prac-
tised disguises of religious creeds from the instinctive arts
which, grotesquely and indecorously, yet with sincerity, strove
to embody them, or to relate. But I think the reader, by
help even of the imperfect indications already given to him,
will be able to follow, with a continually increasing security,
the vestiges of the Myth of Athena; and to reanimate its al-
most evanescent shade, by connecting it with the now recog-
nized facts of existent nature, which it, more or less dimly, re-
dected and foretold. I gather these facts together in brief sum.

98. The deep of air that surrounds the earth enters into union
with the earth at its surface, and with its waters; so as to be
the apparent cause of their ascending into life. First, it warms
them, and shades, at once, staying the heat of the sun’s rays
in its own body, but warding their force with its clouds. It
warms and cools at once, with traffic of balm and frost; so
that the white wreaths are withdrawn from the field of the
Swiss peasant by the glow of Libyan rock. It gives its own
strength to the sea; forms and fills every cell of its foam;
sustains the precipices, and designs the valleys of its waves;
gives the gleam to their moving under the night, and the
white fire to their plains under sunrise; lifts their voices along
the rocks, bears above them the spray of birds, pencils through
them the dimpling of unfooted sands. It gathers out of them
a portion in the hollow of its hand: dyes, with that, the hills
into dark blue, and their glaciers with dying rose; inlays with
that, for sapphire, the dome in which it has to set the cloud;
shapes out of that the heavenly flocks: divides them, numbers,
cherishes, bears them on its bosom, calls them to their jour-
neys, waits by their rest; feeds from them the brooks
that cease not, and strews with them the dews that cease.
It spins and weaves their fleece into wild tapestry, rends it,
and renews; and flits and flames, and whispers, among the
golden threads, thrilling them with a plectrum of strange fire
that traverses them to and fro, and is enclosed in them like life.

It enters into the surface of the earth, subdues it, and falls
together with it into fruitful dust, from which can be moulded
flesh; itjoins itself, in dew, to the substance of adamant:
and becomes the green leaf out of the dry ground; it enters into the separated shapes of the earth it has tempered, commands the ebb and flow of the current of their life, fills their limbs with its own lightness, measures their existence by its indwelling pulse, moulds upon their lips the words by which one soul can be known to another; is to them the hearing of the ear, and the beating of the heart; and, passing away, leaves them to the peace that hears and moves no more.

99. This was the Athena of the greatest people of the days of old. And opposite to the temple of this Spirit of the breath, and life-blood, of man and of beast, stood, on the Mount of Justice, and near the chasm which was haunted by the goddess-Avengers, an altar to a God unknown;—proclaimed at last to them, as one who, indeed, gave to all men, life, and breath, and all things; and rain from heaven, filling their hearts with food and gladness;—a God who had made of one blood all nations of men who dwell on the face of all the earth, and had determined the times of their fate, and the bounds of their habitation.

100. We ourselves, fretted here in our narrow days, know less, perhaps, in very deed, than they, what manner of spirit we are of, or what manner of spirit we ignorantly worship. Have we, indeed, desired the Desire of all nations? and will the Master whom we meant to seek, and the Messenger in whom we thought we delighted, confirm, when He comes to His temple,—or not find in its midst,—the tables heavy with gold for bread, and the seats that are bought with the price of the dove? Or is our own land also to be left by its angered Spirit;—left among those, where sunshine vainly sweet, and passionate folly of storm, waste themselves in the silent places of knowledge that has passed away, and of tongues that have ceased?

This only we may discern assuredly: this, every true light of science, every mercifully-granted power, every wisely-restricted thought, teach us more clearly day by day, that in the heavens above, and the earth beneath, there is one continual and omnipotent presence of help, and of peace, for all men who know that they Live, and remember that they Die.
III.

ATHENA ERGANE.*

(Athena in the Heart.)

Various Notes relating to the Conception of Athena as the Directress of the Imagination and Will.

101. I have now only a few words to say, bearing on what seems to me present need, respecting the third function of Athena, conceived as the directress of human passion, resolution, and labour.

Few words, for I am not yet prepared to give accurate distinction between the intellectual rule of Athena and that of the Muses: but, broadly, the Muses, with their king, preside over meditative, historical, and poetic arts, whose end is the discovery of light or truth, and the creation of beauty: but Athena rules over moral passion, and practically useful art. She does not make men learned, but prudent and subtle: she does not teach them to make their work beautiful, but to make it right.

In different places of my writings, and through many years of endeavour to define the laws of art, I have insisted on this rightness in work, and on its connection with virtue of character, in so many partial ways, that the impression left on the reader's mind—if, indeed, it was ever impressed at all—has been confused and uncertain. In beginning the series of my corrected works, I wish this principle (in my own mind the foundation of every other) to be made plain, if nothing else is: and will try, therefore, to make it so, as far as, by any effort, I can put it into unmistakable words. And, first, here is a very simple statement of it, given lately in a lecture on the Architecture of the Valley of the Somme, which will be

* "Athena the worker, or having rule over work." The name was first given to her by the Athenians.
better read in this place than in its incidental connection with my account of the porches of Abbeville.

102. I had used, in a preceding part of the lecture, the expression, "by what faults" this Gothic architecture fell. We continually speak thus of works of art. We talk of their faults and merits, as of virtues and vices. What do we mean by talking of the faults of a picture, or the merits of a piece of stone?

The faults of a work of art are the faults of its workmen, and its virtues his virtues.

Great art is the expression of the mind of a great man, and mean art, that of the want of mind of a weak man. A foolish person builds foolishly, and a wise one, sensibly; a virtuous one, beautifully; and a vicious one, basely. If stone work is well put together, it means that a thoughtful man planned it, and a careful man cut it, and an honest man cemented it. If it has too much ornament, it means that its carver was too greedy of pleasure; if too little, that he was rude, or insensitive, or stupid, and the like. So that when once you have learned how to spell these most precious of all legends,—pictures and buildings,—you may read the characters of men, and of nations, in their art, as in a mirror;—nay, as in a microscope, and magnified a hundredfold; for the character becomes passionate in the art, and intensifies itself in all its noblest or meanest delights. Nay, not only as in a microscope, but as under a scalpel, and in dissection; for a man may hide himself from you, or misrepresent himself to you, every other way; but he cannot in his work: there, be sure, you have him to the inmost. All that he likes, all that he sees,—all that he can do,—his imagination, his affections, his perseverance, his impatience, his clumsiness, cleverness, everything is there. If the work is a cobweb, you know it was made by a spider; if a honeycomb, by a bee; a worm-cast is thrown up by a worm, and a nest wreathed by a bird; and a house built by a man, worthily, if he is worthy, and ignobly, if he is ignoble.

And always, from the least to the greatest, as the made thing is good or bad, so is the maker of it.
103. You all use this faculty of judgment more or less, whether you theoretically admit the principle or not. Take that floral gable;* you don't suppose the man who built Stonehenge could have built that, or that the man who built that, *would* have built Stonehenge? Do you think an old Roman would have liked such a piece of filigree work? or that Michael Angelo would have spent his time in twisting these stems of roses in and out? Or, of modern handicraftsmen, do you think a burglar, or a brute, or a pickpocket could have carved it? Could Bill Sykes have done it? or the Dodger, dexterous with finger and tool? You will find in the end, that *no man could have done it but exactly the man who did it*; and by looking close at it, you may, if you know your letters, read precisely the manner of man he was.

104. Now I must insist on this matter, for a grave reason. Of all facts concerning art, this is the one most necessary to be known, that, while manufacture is the work of hands only, art is the work of the whole spirit of man; and as that spirit is, so is the deed of it: and by whatever power of vice or virtue any art is produced, the same vice or virtue it reproduces and teaches. That which is born of evil begets evil; and that which is born of valour and honour, teaches valour and honour. All art is either infection or education. It *must* be one or other of these.

105. This, I repeat, of all truths respecting art, is the one of which understanding is the most precious, and denial the most deadly. And I assert it the more, because it has of late been repeatedly, expressly, and with contumely, denied; and that by high authority; and I hold it one of the most sorrowful facts, connected with the decline of the arts among us, that English gentlemen, of high standing as scholars and artists, should have been blinded into the acceptance, and betrayed into the assertion of a fallacy which only authority such as theirs could have rendered for an instant credible. For the contrary of it is written in the history of all great nations; it

* The elaborate pediment above the central porch at the west end of Rouen Cathedral, pierced into a transparent web of tracery, and enriched with a border of "twisted eglantine."
is the one sentence always inscribed on the steps of their thrones; the one concordant voice in which they speak to us out of their 'dust.

All such nations first manifest themselves as a pure and beautiful animal race, with intense energy and imagination. They live lives of hardship by choice, and by grand instinct of manly discipline: they become fierce and irresistible soldiers; the nation is always its own army, and their king, or chief head of government, is always their first soldier. Pharaoh, or David, or Leonidas, or Valerius, or Barbarossa, or Cœur de Lion, or St. Louis, or Dandolo, or Frederick the Great:—Egyptian, Jew, Greek, Roman, German, English, French, Venetian,—that is inviolable law for them all; their king must be their first soldier, or they cannot be in progressive power. Then, after their great military period, comes the domestic period; in which, without betraying the discipline of war, they add to their great soldiership the delights and possessions of a delicate and tender home-life: and then, for all nations, is the time of their perfect art, which is the fruit, the evidence, the reward of their national idea of character, developed by the finished care of the occupations of peace. That is the history of all true art that ever was, or can be: palpably the history of it,—unmistakably,—written on the forehead of it in letters of light,—in tongues of fire, by which the seal of virtue is branded as deep as ever iron burnt into a convict's flesh the seal of crime. But always, hitherto, after the great period, has followed the day of luxury, and pursuit of the arts for pleasure only. And all has so ended.

106. Thus far of Abbeville building. Now I have here asserted two things,—first, the foundation of art in moral character; next, the foundation of moral character in war. I must make both these assertions clearer, and prove them.

First, of the foundation of art in moral character. Of course art-gift and amiability of disposition are two different things; a good man is not necessarily a painter, nor does an eye for colour necessarily imply an honest mind. But great art implies the union of both powers: it is the expression, by an art-gift, of a pure soul. If the gift is not there, we can
have no art at all; and if the soul—and a right soul too—is not there, the art is bad, however dexterous.

107. But also, remember, that the art-gift itself is only the result of the moral character of generations. A bad woman may have a sweet voice; but that sweetness of voice comes of the past morality of her race. That she can sing with it at all, she owes to the determination of laws of music by the morality of the past. Every act, every impulse, of virtue and vice, affects in any creature, face, voice, nervous power, and vigour and harmony of invention, at once. Perseverance in rightness of human conduct, renders, after a certain number of generations, human art possible; every sin clouds it, be it ever so little a one; and persistent vicious living and following of pleasure render, after a certain number of generations, all art impossible. Men are deceived by the long-suffering of the laws of nature; and mistake, in a nation, the reward of the virtue of its sires for the issue of its own sins. The time of their visitation will come, and that inevitably; for, it is always true, that if the fathers have eaten sour grapes, the children's teeth are set on edge. And for the individual, as soon as you have learned to read, you may, as I said, know him to the heart's core, through his art. Let his art-gift be never so great, and cultivated to the height by the schools of a great race of men; and it is still but a tapestry thrown over his own being and inner soul; and the bearing of it will show, infallibly, whether it hangs on a man, or on a skeleton. If you are dim-eyed, you may not see the difference in the fall of the folds at first, but learn how to look, and the folds themselves will become transparent, and you shall see through them the death's shape, or the divine one, making the tissue above it as a cloud of light, or as a winding-sheet.

108. Then farther, observe, I have said (and you will find it true, and that to the uttermost) that, as all lovely art is rooted in virtue, so it bears fruit of virtue, and is didactic in its own nature. It is often didactic also in actually expressed thought, as Giotto's, Michael Angelo's, Dürer's, and hundreds more; but that is not its special function,—it is didactic chiefly by being beautiful; but beautiful with haunting
thought, no less than with form, and full of myths that can be read only with the heart.

For instance, at this moment there is open beside me as I write, a page of Persian manuscript, wrought with wreathed azure and gold, and soft green, and violet, and ruby and scarlet, into one field of pure resplendence. It is wrought to delight the eyes only; and does delight them; and the man who did it assuredly had eyes in his head; but not much more. It is not didactic art, but its author was happy: and it will do the good, and the harm, that mere pleasure can do. But, opposite me, is an early Turner drawing of the lake of Geneva, taken about two miles from Geneva, on the Lausanne road, with Mont Blanc in the distance. The old city is seen lying beyond the waveless waters, veiled with a sweet misty veil of Athena's weaving: a faint light of morning, peaceful exceedingly, and almost colourless, shed from behind the Voirons, increases into soft amber along the slope of the Saleve, and is just seen, and no more, on the fair warm fields of its summit, between the folds of a white cloud that rests upon the grass, but rises, high and tower-like, into the zenith of dawn above.

109. There is not as much colour in that low amber light upon the hill-side as there is in the palest dead leaf. The lake is not blue, but gray in mist, passing into deep shadow beneath the Voirons' pines; a few dark clusters of leaves, a single white flower—scarcely seen—are all the gladness given to the rocks of the shore. One of the ruby spots of the eastern manuscript would give colour enough for all the red that is in Turner's entire drawing. For the mere pleasure of the eye, there is not so much in all those lines of his, throughout the entire landscape, as in half an inch square of the Persian's page. What made him take pleasure in the low colour that is only like the brown of a dead leaf? in the cold gray of dawn—in the one white flower among the rocks—in these—and no more than these?

110. He took pleasure in them because he had been bred among English fields and hills; because the gentleness of a great race was in his heart, and its powers of thought in his
brain; because he knew the stories of the Alps, and of the
cities at their feet; because he had read the Homeric legends
of the clouds, and beheld the gods of dawn, and the givers of
dew to the fields; because he knew the faces of the crags, and
the imagery of the passionate mountains, as a man knows the
face of his friend; because he had in him the wonder and
sorrow concerning life and death, which are the inheritance
of the Gothic soul from the days of its first sea kings; and
also the compassion and the joy that are woven into the inner-
most fabric of every great imaginative spirit, born now in
countries that have lived by the Christian faith with any cour-
age or truth. And the picture contains also, for us, just this
which its maker had in him to give; and can convey it to us,
just so far as we are of the temper in which it must be re-
ceived. It is didactic if we are worthy to be taught, no other-
wise. The pure heart, it will make more pure; the thought-
ful, more thoughtful. It has in it no words for the reckless
or the base.

111. As I myself look at it, there is no fault nor folly of my
life,—and both have been many and great,—that does not rise
up against me, and take away my joy, and shorten my power
of possession, of sight, of understanding. And every past
effort of my life, every gleam of rightness or good in it, is
with me now, to help me in my grasp of this art, and its vis-
ion. So far as I can rejoice in, or interpret either, my power
is owing to what of right there is in me. I dare to say it,
that, because through all my life I have desired good, and not
evil; because I have been kind to many; have wished to be
kind to all; have wilfully injured none; and because I have
loved much, and not selfishly;—therefore, the morning light
is yet visible to me on those hills, and you, who read, may
trust my thought and word in such work as I have to do for
you; and you will be glad afterwards that you have trusted
them.

112. Yet remember,—I repeat it again and yet again,—that
I may for once, if possible, make this thing assuredly clear:—
the inherited art-gift must be there, as well as the life in some
poor measure, or rescued fragment, right. This art-gift of
mines could not have been won by any work or by any conduct: it belongs to me by birthright, and came by Athena's will, from the air of English country villages, and Scottish hills. I will risk whatever charge of folly may come on me, for printing one of my many childish rhymes, written on a frosty day in Glen Farg, just north of Loch Leven. It bears date 1st January, 1828. I was born on the 8th of February, 1819; and all that I ever could be, and all that I cannot be, the weak little rhyme already shows.

"Papa, how pretty those icicles are,
That are seen so near,—that are seen so far;
—Those dropping waters that come from the rocks
And many a hole, like the haunt of a fox.
That silvery stream that runs babbling along,
Making a murmuring, dancing song.
Those trees that stand waving upon the rock's side,
And men, that, like spectres, among them glide.
And waterfalls that are heard from far,
And come in sight when very near.
And the water-wheel that turns slowly round,
Grinding the corn that—requires to be ground,—

(Political Economy of the future!)

—And mountains at a distance seen,
And rivers winding through the plain.
And quarries with their craggy stones,
And the wind among them moans."

So foretelling Stones of Venice, and this essay on Athena.

Enough now concerning myself.

113. Of Turner's life, and of its good and evil, both great, but the good immeasurably the greater, his work is in all things a perfect and transparent evidence. His biography is simply,—"He did this, nor will ever another do its like again." Yet read what I have said of him, as compared with the great Italians, in the passages taken from the "Cestus of Aglaia," farther on, § 158, p. 119.

114. This then is the nature of the connection of morals with art. Now, secondly, I have asserted the foundation of
both these, at least, hitherto, in war. The reason of this too manifest fact is, that, until now, it has been impossible for any nation, except a warrior one, to fix its mind wholly on its men, instead of on their possessions. Every great soldier nation thinks, necessarily, first of multiplying its bodies and souls of men, in good temper and strict discipline. As long as this is its political aim, it does not matter what it temporarily suffers, or loses, either in numbers or in wealth; its morality and its arts, (if it have national art-gift,) advance together; but so soon as it ceases to be a warrior nation, it thinks of its possessions instead of its men; and then the moral and poetic powers vanish together.

115. It is thus, however, absolutely necessary to the virtue of war that it should be waged by personal strength, not by money or machinery. A nation that fights with a mercenary force, or with torpedoes instead of its own arms, is dying. Not but that there is more true courage in modern than even in ancient war; but this is, first, because all the remaining life of European nations is with a morbid intensity thrown into their soldiers; and, secondly, because their present heroism is the culmination of centuries of inbred and traditional valour, which Athena taught them by forcing them to govern the foam of the sea-wave and of the horse,—not the steam of kettles.

116. And farther, note this, which is vital to us in the present crisis: If war is to be made by money and machinery, the nation which is the largest and most covetous multitude will win. You may be as scientific as you choose; the mob that can pay more for sulphuric acid and gunpowder will at last poison its bullets, throw acid in your faces, and make an end of you,—of itself, also, in good time, but of you first. And to the English people the choice of its fate is very near now. It may spasmodically defend its property with iron walls a fathom thick, a few years longer—a very few. No walls will defend either it, or its havings, against the multitude that is breeding and spreading, faster than the clouds, over the habitable earth. We shall be allowed to live by small pedlar's business, and ironmongery—since we have chosen those for our line of life—as long as we are found useful black
servants to the Americans; and are content to dig coals and sit in the cinders; and have still coals to dig,—they once exhausted, or got cheaper elsewhere, we shall be abolished. But if we think more wisely, while there is yet time, and set our minds again on multiplying Englishmen, and not on cheapening English wares; if we resolve to submit to wholesome laws of labour and economy, and, setting our political squabbles aside, try how many strong creatures, friendly and faithful to each other, we can crowd into every spot of English dominion, neither poison nor iron will prevail against us; nor traffic—nor hatred: the noble nation will yet, by the grace of Heaven, rule over the ignoble, and force of heart hold its own against fire-balls.

117. But there is yet a farther reason for the dependence of the arts on war. The vice and injustice of the world are constantly springing anew, and are only to be subdued by battle; the keepers of order and law must always be soldiers. And now, going back to the myth of Athena, we see that though she is first a warrior maid, she detests war for its own sake; she arms Achilles and Ulysses in just quarrels, but she disarms Ares. She contends, herself, continually against disorder and convulsion, in the Earth giants; she stands by Hercules' side in victory over all monstrous evil: in justice only she judges and makes war. But in this war of hers she is wholly implacable. She has little notion of converting criminals. There is no faculty of mercy in her when she has been resisted. Her word is only, "I will mock you when your fear cometh." Note the words that follow: "when your fear cometh as desolation, and your destruction as a whirlwind;" for her wrath is of irresistible tempest: once roused, it is blind and deaf,—rabies—madness of anger—darkness of the Dies Irae.

And that is, indeed, the sorrowfullest fact we have to know about our own several lives. Wisdom never forgives. Whatever resistance we have offered to her law, she avenges for ever;—the lost hour can never be redeemed, and the accomplished wrong never atoned for. The best that can be done afterwards, but for that, had been better;—the falsest of all
the cries of peace, where there is no peace, is that of the pardon of sin, as the mob expect it. Wisdom can "put away" sin, but she cannot pardon it; and she is apt, in her haste, to put away the sinner as well, when the black ægis is on her breast.

118. And this is also a fact we have to know about our national life, that it is ended as soon as it has lost the power of noble Anger. When it paints over, and apologizes for its pitiful criminalities; and endures its false weights, and its adulterated food;—dares not to decide practically between good and evil, and can neither honour the one, nor smite the other, but sneers at the good, as if it were hidden evil, and consoles the evil with pious sympathy, and conserves it in the sugar of its leaden heart,—the end is come.

119. The first sign, then, of Athena's presence with any people, is that they become warriors, and that the chief thought of every man of them is to stand rightly in his rank, and not fail from his brother's side in battle. Wealth, and pleasure, and even love, are all, under Athena's orders, sacrificed to this duty of standing fast in the rank of war.

But farther: Athena presides over industry, as well as battle; typically, over women's industry; that brings comfort with pleasantness. Her word to us all is:—"Be well exercised, and rightly clothed. Clothed, and in your right minds; not insane and in rags, nor in soiled fine clothes clutched from each other's shoulders. Fight and weave. Then I myself will answer for the course of the lance, and the colours of the loom."

And now I will ask the reader to look with some care through these following passages respecting modern multitudes and their occupations, written long ago, but left in fragmentary form, in which they must now stay, and be of what use they can.

120. It is not political economy to put a number of strong men down on an acre of ground, with no lodging, and nothing to eat. Nor is it political economy to build a city on good ground, and fill it with store of corn and treasure, and put a score of lepers to live in it. Political economy creates together the means of life, and the living persons who are to
use them; and of both, the best and the most that it can, but imperatively the best, not the most. A few good and healthy men, rather than a multitude of diseased rogues; and a little real milk and wine rather than much chalk and petroleum; but the gist of the whole business is that the men and their property must both be produced together—not one to the loss of the other. Property must not be created in lands desolate by exile of their people, nor multiplied and depraved humanity, in lands barren of bread.

121. Nevertheless, though the men and their possessions are to be increased at the same time, the first object of thought is always to be the multiplication of a worthy people. The strength of the nation is in its multitude, not in its territory; but only in its sound multitude. It is one thing, both in a man and a nation, to gain flesh, and another to be swollen with putrid humours. Not that multitude ever ought to be inconsistent with virtue. Two men should be wiser than one, and two thousand than two; nor do I know another so gross fallacy in the records of human stupidity as that excuse for neglect of crime by greatness of cities. As if the first purpose of congregation were not to devise laws and repress crimes! as if bees and wasps could live honestly in flocks,—men, only in separate dens!—as if it was easy to help one another on the opposite sides of a mountain, and impossible on the opposite sides of a street! But when the men are true and good, and stand shoulder to shoulder, the strength of any nation is in its quantity of life, not in its land nor gold. The more good men a state has, in proportion to its territory, the stronger the state. And as it has been the madness of economists to seek for gold instead of life, so it has been the madness of kings to seek for land instead of life. They want the town on the other side of the river, and seek it at the spear point: it never enters their stupid heads that to double the honest souls in the town on this side of the river, would make them stronger kings; and that this doubling might be done by the ploughshare instead of the spear, and through happiness instead of misery.

Therefore, in brief, this is the object of all true policy and
true economy: "utmost multitude of good men on every given space of ground"—imperatively always, good, sound, honest men, not a mob of white-faced thieves. So that, on the one hand, all aristocracy is wrong which is inconsistent with numbers; and, on the other, all numbers are wrong which are inconsistent with breeding.

122. Then, touching the accumulation of wealth for the maintenance of such men, observe, that you must never use the terms "money" and "wealth" as synonymous. Wealth consists of the good, and therefore useful, things in the possession of the nation: money is only the written or coined sign of the relative quantities of wealth in each person's possession. All money is a divisible title-deed, of immense importance as an expression of right to property; but absolutely valueless, as property itself. Thus, supposing a nation isolated from all others, the money in its possession is, at its maximum value, worth all the property of the nation, and no more, because no more can be got for it. And the money of all nations is worth, at its maximum, the property of all nations, and no more, for no more can be got for it. Thus, every article of property produced increases, by its value, the value of all the money in the world, and every article of property destroyed, diminishes the value of all the money in the world. If ten men are cast away on a rock, with a thousand pounds in their pockets, and there is on the rock neither food nor shelter, their money is worth simply nothing; for nothing is to be had for it: if they build ten huts, and recover a cask of biscuit from the wreck, then their thousand pounds, at its maximum value, is worth ten huts and a cask of biscuit. If they make their thousand pounds into two thousand by writing new notes, their two thousand pounds are still only worth ten huts and a cask of biscuit. And the law of relative value is the same for all the world, and all the people in it, and all their property, as for ten men on a rock. Therefore, money is truly and finally lost in the degree in which its value is taken from it, (ceasing in that degree to be money at all); and it is truly gained in the degree in which value is added to it. Thus, suppose the money coined by the
nation to be a fixed sum, divided very minutely, (say into francs and cents), and neither to be added to, nor diminished. Then every grain of food and inch of lodging added to its possessions makes every cent in its pockets worth proportionally more, and every grain of food it consumes, and inch of roof it allows to fall to ruin, makes every cent in its pockets worth less; and this with mathematical precision. The immediate value of the money at particular times and places depends, indeed, on the humours of the possessors of property; but the nation is in the one case gradually getting richer; and will feel the pressure of poverty steadily everywhere relaxing, whatever the humours of individuals may be; and, in the other case, is gradually growing poorer, and the pressure of its poverty will every day tell more and more, in ways that it cannot explain, but will most bitterly feel.

123. The actual quantity of money which it coins, in relation to its real property, is therefore only of consequence for convenience of exchange; but the proportion in which this quantity of money is divided among individuals expresses their various rights to greater or less proportions of the national property, and must not, therefore, be tampered with. The Government may at any time, with perfect justice, double its issue of coinage, if it gives every man who had ten pounds in his pocket, another ten pounds, and every man who had ten pence, another ten pence; for it thus does not make any of them richer; it merely divides their counters for them into twice the number. But if it gives the newly-issued coins to other people, or keeps them itself, it simply robs the former holders to precisely that extent. This most important function of money, as a title-deed, on the non-violation of which all national soundness of commerce and peace of life depend, has been never rightly distinguished by economists from the quite unimportant function of money as a means of exchange. You can exchange goods,—at some inconvenience, indeed, but still you can contrive to do it,—without money at all; but you cannot maintain your claim to the savings of your past life without a document, declaring the amount of them, which the nation and its Government will respect.
124. And as economists have lost sight of this great function of money in relation to individual rights, so they have equally lost sight of its function as a representative of good things. That, for every good thing produced, so much money is put into everybody's pocket—is the one simple and primal truth for the public to know, and for economists to teach. How many of them have taught it? Some have; but only incidentally; and others will say it is a truism. If it be, do the public know it? Does your ordinary English householder know that every costly dinner he gives has destroyed for ever as much money as it is worth? Does every well-educated girl—do even the women in high political position—know that every fine dress they wear themselves, or cause to be worn, destroys precisely so much of the national money as the labour and material of it are worth? If this be a truism, it is one that needs proclaiming somewhat louder.

125. That, then, is the relation of money and goods. So much goods, so much money; so little goods, so little money. But, as there is this true relation between money and "goods," or good things, so there is a false relation between money and "bads," or bad things. Many bad things will fetch a price in exchange; but they do not increase the wealth of the country. Good wine is wealth—drugged wine is not; good meat is wealth—putrid meat is not; good pictures are wealth—bad pictures are not. A thing is worth precisely what it can do for you; not what you choose to pay for it. You may pay a thousand pounds for a cracked pipkin, if you please; but you do not by that transaction make the cracked pipkin worth one that will hold water, nor that, nor any pipkin whatsoever, worth more than it was before you paid such sum for it. You may, perhaps, induce many potters to manufacture fissured pots, and many amateurs of clay to buy them; but the nation is, through the whole business so encouraged, rich by the addition to its wealth of so many potsherds—and there an end. The thing is worth what it can do for you, not what you think it can; and most national luxuries, nowadays, are a form of potsherd, provided for the solace of a self-complacent Job, voluntary sedent on his ash-heap.
126. And, also, so far as good things already exist, and have become media of exchange, the variations in their prices are absolutely indifferent to the nation. Whether Mr. A. buys a Titian from Mr. B. for twenty, or for two thousand, pounds, matters not sixpence to the national revenue: that is to say, it matters in nowise to the revenue whether Mr. A. has the picture, and Mr. B. the money, or Mr. B. the picture, and Mr. A. the money. Which of them will spend the money most wisely, and which of them will keep the picture most carefully, is, indeed, a matter of some importance; but this cannot be known by the mere fact of exchange.

127. The wealth of a nation then, first, and its peace and well-being besides, depend on the number of persons it can employ in making good and useful things. I say its well-being also, for the character of men depends more on their occupations than on any teaching we can give them, or principles with which we can imbue them. The employment forms the habits of body and mind, and these are the constitution of the man;—the greater part of his moral or persistent nature, whatever effort, under special excitement, he may make to change, or overcome them. Employment is the half, and the primal half, of education—it is the warp of it; and the fineness or the endurance of all subsequently woven pattern depends wholly on its straightness and strength. And, whatever difficulty there may be in tracing through past history the remoter connections of event and cause, one chain of sequence is always clear: the formation, namely, of the character of nations by their employments, and the determination of their final fate by their character. The moment, and the first direction of decisive revolutions, often depend on accident; but their persistent course, and their consequences, depend wholly on the nature of the people. The passing of the Reform Bill by the late English Parliament may have been more or less accidental: the results of the measure now rest on the character of the English people, as it has been developed by their recent interests, occupations, and habits of life. Whether, as a body, they employ their new powers for good or evil, will depend, not on their facilities of knowledge, not
even on the general intelligence they may possess; but on the number of persons among them whom wholesome employ-
ments have rendered familiar with the duties, and modest in their estimate of the promises, of Life.

128. But especially in framing laws respecting the treatment or employment of improvident and more or less vicious persons, it is to be remembered that as men are not made heroes by the performance of an act of heroism, but must be brave before they can perform it, so they are not made villains by the commission of a crime, but were villains before they committed it; and that the right of public interference with their conduct begins when they begin to corrupt themselves;—not merely at the moment when they have proved themselves hopelessly corrupt.

All measures of reformation are effective in exact proportion to their timeliness: partial decay may be cut away and cleansed; incipient error corrected: but there is a point at which corruption can no more be stayed, nor wandering recalled. It has been the manner of modern philanthropy to remain passive until that precise period, and to leave the sick to perish, and the foolish to stray, while it spent itself in frantic exertions to raise the dead, and reform the dust.

The recent direction of a great weight of public opinion against capital punishment is, I trust, the sign of an awakening perception that punishment is the last and worst instrument in the hands of the legislator for the prevention of crime. The true instruments of reformation are employment and reward;—not punishment. Aid the willing, honour the virtuous, and compel the idle into occupation, and there will be no need for the compelling of any into the great and last indolence of death.

129. The beginning of all true reformation among the criminal classes depends on the establishment of institutions for their active employment, while their criminality is still unripe, and their feelings of self-respect, capacities of affection, and sense of justice, not altogether quenched. That those who are desirous of employment should always be able to find it, will hardly, at the present day, be disputed: but
that those who are undesirous of employment should of all persons be the most strictly compelled to it, the public are hardly yet convinced; and they must be convinced. If the danger of the principal thoroughfares in their capital city, and the multiplication of crimes more ghastly than ever yet disgraced a nominal civilization, are not enough, they will not have to wait long before they receive sterner lessons. For our neglect of the lower orders has reached a point at which it begins to bear its necessary fruit, and every day makes the fields, not whiter, but more sable, to harvest.

130. The general principles by which employment should be regulated may be briefly stated as follows:—

1. There being three great classes of mechanical powers at our disposal, namely, (a) vital or muscular power; (b) natural mechanical power of wind, water, and electricity; and (c) artificially produced mechanical power; it is the first principle of economy to use all available vital power first, then the inexpensive natural forces, and only at last to have recourse to artificial power. And this, because it is always better for a man to work with his own hands to feed and clothe himself, than to stand idle while a machine works for him; and if he cannot by all the labour healthily possible to him, feed and clothe himself, then it is better to use an inexpensive machine—as a windmill or watermill—than a costly one like a steam-engine, so long as we have natural force enough at our disposal. Whereas at present we continually hear economists regret that the water-power of the cascades or streams of a country should be lost, but hardly ever that the muscular power of its idle inhabitants should be lost; and, again, we see vast districts, as the south of Provence, where a strong wind * blows steadily all day long for six days out of seven throughout the year, without a windmill, while men are continually employed a hundred miles to the north, in digging fuel to obtain artificial power. But the principal point of all to be kept in view is, that in every idle arm and shoulder

* In order fully to utilize this natural power, we only require machinery to turn the variable into a constant velocity—no insurmountable difficulty.
throughout the country there is a certain quantity of force, equivalent to the force of so much fuel; and that it is mere insane waste to dig for coal for our force, while the vital force is unused; and not only unused, but, in being so, corrupting and polluting itself. We waste our coal, and spoil our humanity at one and the same instant. Therefore, wherever there is an idle arm, always save coal with it, and the stores of England will last all the longer. And precisely the same argument answers the common one about “taking employment out of the hands of the industrious labourer.” Why, what is “employment” but the putting out of vital force instead of mechanical force? We are continually in search of means of strength,—to pull, to hammer, to fetch, to carry; we waste our future resources to get this strength, while we leave all the living fuel to burn itself out in mere pestiferous breath, and production of its variously noisome forms of ashes! Clearly, if we want fire for force, we want men for force first. The industrious hands must already have so much to do that they can do no more, or else we need not use machines to help them. Then use the idle hands first. Instead of dragging petroleum with a steam-engine, put it on a canal, and drag it with human arms and shoulders. Petroleum cannot possibly be in a hurry to arrive anywhere. We can always order that, and many other things, time enough before we want it. So, the carriage of everything which does not spoil by keeping may most wholesomely and safely be done by water-traction and sailing vessels; and no healthier work can men be put to, nor better discipline, than such active porterage.

131. (2nd.) In employing all the muscular power at our disposal we are to make the employments we choose as educational as possible. For a wholesome human employment is the first and best method of education, mental as well as bodily. A man taught to plough, row, or steer well, and a woman taught to cook properly, and make a dress neatly, are already educated in many essential moral habits. Labour considered as a discipline has hitherto been thought of only for criminals; but the real and noblest function of labour is
to prevent crime, and not to be Reformatory, but Forma-
dory.

132. The third great principle of employment is, that when-
ever there is pressure of poverty to be met, all enforced occu-
pation should be directed to the production of useful articles
only, that is to say, of food, of simple clothing, of lodging, or
of the means of conveying, distributing, and preserving these.
It is yet little understood by economists, and not at all by the
public, that the employment of persons in a useless business
cannot relieve ultimate distress. The money given to employ
riband-makers at Coventry is merely so much money with-
drawn from what would have employed lace-makers at Honi-
ton: or makers of something else, as useless, elsewhere. We
must spend our money in some way, at some time, and it
cannot at any time be spent without employing somebody.
If we gamble it away, the person who wins it must spend it;
if we lose it in a railroad speculation, it has gone into some
one else's pockets, or merely gone to pay navvies for making
a useless embankment, instead of to pay riband or button
makers for making useless ribands or buttons; we cannot
lose it (unless by actually destroying it) without giving em-
ployment of some kind; and therefore, whatever quantity of
money exists, the relative quantity of employment must some
day come out of it; but the distress of the nation signifies
that the employments given have produced nothing that will
support its existence. Men cannot live on ribands, or buttons,
or velvet, or by going quickly from place to place; and every
coin spent in useless ornament, or useless motion, is so much
withdrawn from the national means of life. One of the most
beautiful uses of railroads is to enable A to travel from the
town of X to take away the business of B in the town of Y;
while, in the meantime, B travels from the town of Y to take
away A's business in the town of X. But the national wealth
is not increased by these operations. Whereas every coin
spent in cultivating ground, in repairing lodging, in making
necessary and good roads, in preventing danger by sea or
land, and in carriage of food or fuel where they are required,
is so much absolute and direct gain to the whole nation. To
cultivate land round Coventry makes living easier at Honiton, and every acre of sand gained from the sea in Lincolnshire, makes life easier all over England.

4th, and lastly. Since for every idle person, some one else must be working somewhere to provide him with clothes and food, and doing, therefore, double the quantity of work that would be enough for his own needs, it is only a matter of pure justice to compel the idle person to work for his maintenance himself. The conscription has been used in many countries, to take away labourers who supported their families, from their useful work, and maintain them for purposes chiefly of military display at the public expense. Since this has been long endured by the most civilized nations, let it not be thought that they would not much more gladly endure a conscription which should seize only the vicious and idle, already living by criminal procedures at the public expense; and which should discipline and educate them to labour which would not only maintain themselves, but be serviceable to the commonwealth. The question is simply this:—we must feed the drunkard, vagabond, and thief;—but shall we do so by letting them steal their food, and do no work for it? or shall we give them their food in appointed quantity, and enforce their doing work which shall be worth it? and which, in process of time, will redeem their own characters, and make them happy and serviceable members of society?

I find by me a violent little fragment of undelivered lecture, which puts this, perhaps, still more clearly. Your idle people, (it says,) as they are now, are not merely waste coal-beds. They are explosive coal-beds, which you pay a high annual rent for. You are keeping all these idle persons, remember, at far greater cost than if they were busy. Do you think a vicious person eats less than an honest one? or that it is cheaper to keep a bad man drunk, than a good man sober? There is, I suppose, a dim idea in the mind of the public, that they don't pay for the maintenance of people they don't employ. Those staggering rascals at the street corner, grouped around its splendid angle of public-house, we fancy they are no servants of ours? that we pay them no wages? that no cash out of our pockets is spent over that beer-stained counter!
Whose cash is it then they are spending? It is not got honestly by work. You know that much. Where do they get it from? Who has paid for their dinner and their pot? Those fellows can only live in one of two ways—by pillage or beggary. Their annual income by thieving comes out of the public pocket, you will admit. They are not cheaply fed, so far as they are fed by theft. But the rest of their living—all that they don't steal—they must beg. Not with success from you, you think. Wise as benevolent, you never gave a penny in "indiscriminate charity." Well, I congratulate you on the freedom of your conscience from that sin, mine being bitterly burdened with the memory of many a sixpence given to beggars of whom I knew nothing, but that they had pale faces and thin waists. But it is not that kind of street beggary that the vagabonds of our people chiefly practise. It is home beggary that is the worst beggars' trade. Home alms which it is their worst degradation to receive. Those scamps know well enough that you and your wisdom are worth nothing to them. They won't beg of you. They will beg of their sisters, and mothers, and wives, and children, and of any one else who is enough ashamed of being of the same blood with them to pay to keep them out of sight. Every one of those blackguards is the bane of a family. That is the deadly "indiscriminate charity"—the charity which each household pays to maintain its own private curse.

133. And you think that is no affair of yours? and that every family ought to watch over and subdue its own living plague? Put it to yourselves this way, then: suppose you knew every one of those families kept an idol in an inner room—a big-bellied bronze figure, to which daily sacrifice and oblation was made; at whose feet so much beer and brandy was poured out every morning on the ground: and before which, every night, good meat, enough for two men's keep, was set, and left, till it was putrid, and then carried out and thrown on the dunghill;—you would put an end to that form of idolatry with your best diligence, I suppose. You would understand then that the beer, and brandy, and meat, were wasted; and that the burden imposed by each household or
itself lay heavily through them on the whole community? But, suppose farther, that this idol were not of silent and quiet bronze only;—but an ingenious mechanism, wound up every morning, to run itself down in automatic blasphemies; that it struck and tore with its hands the people who set food before it; that it was anointed with poisonous unguents and infected the air for miles round. You would interfere with the idolatry then, straightway? Will you not interfere with it now, when the infection that the venomous idol spreads is not merely death—but sin?

134. So far the old lecture. Returning to cool English, the end of the matter is, that sooner or later, we shall have to register our people; and to know how they live; and to make sure, if they are capable of work, that right work is given them to do.

The different classes of work for which bodies of men could be consistently organized, might ultimately become numerous; these following divisions of occupation may at once be suggested:—

1. **Road-making.**—Good roads to be made, wherever needed, and kept in repair; and the annual loss on unfrequented roads, in spoiled horses, strained wheels, and time, done away with.

2. **Bringing in of waste land.**—All waste lands not necessary for public health, to be made accessible and gradually reclaimed; chiefly our wide and waste seashores. Not our mountains nor moorland. Our life depends on them more than on the best arable we have.

3. **Harbour-making.**—The deficiencies of safe or convenient harbourage in our smaller ports to be remedied; other harbours built at dangerous points of coast, and a disciplined body of men always kept in connection with the pilot and life-boat services. There is room for every order of intelligence in this work, and for a large body of superior officers.

4. **Porterage.**—All heavy goods, not requiring speed in transit, to be carried (under preventive duty on transit by railroad) by canal-boats, employing men for draught; and the merchant-shipping service extended by sea; so that no ships may be
wrecked for want of hands, while there are idle ones in mischief on shore.

5. *Repair of buildings.*—A body of men in various trades to be kept at the disposal of the authorities in every large town, for repair of buildings, especially the houses of the poorer orders, who, if no such provision were made, could not employ workmen on their own houses, but would simply live with rent walls and roofs.

6. *Dressmaking.*—Substantial dress, of standard material and kind, strong shoes, and stout bedding, to be manufactured for the poor, so as to render it unnecessary for them, unless by extremity of improvidence, to wear cast clothes, or be without sufficiency of clothing.

7. *Works of Art.*—Schools to be established on thoroughly sound principles of manufacture, and use of materials, and with sample and, for given periods, unalterable modes of work; first, in pottery, and embracing gradually metal work, sculpture, and decorative painting; the two points insisted upon, in distinction from ordinary commercial establishments, being perfectness of material to the utmost attainable degree; and the production of everything by hand-work, for the special purpose of developing personal power and skill in the workman.

The two last departments, and some subordinate branches of the others, would include the service of women and children.

I give now, for such farther illustration as they contain of the points I desire most to insist upon with respect both to education and employment, a portion of the series of notes published some time ago in the *Art Journal*, on the opposition of Modesty and Liberty, and the unescapable law of wise restraint. I am sorry that they are written obscurely;—and it may be thought affectedly:—but the fact is, I have always had three different ways of writing; one, with the single view of making myself understood, in which I necessarily omit a great deal of what comes into my head:—another, in which I say what I think ought to be said, in what I suppose to be the best words I can find for it; (which is in reality an affected style—be it good or bad;) and my third way of writing is to
say all that comes into my head for my own pleasure, in the first words that come, retouching them afterwards into (approximate) grammar. These notes for the Art Journal were so written; and I like them myself, of course; but ask the reader's pardon for their confusedness.

135. "Sir, it cannot be better done."

We will insist, with the reader's permission, on this comfortful saying of Albert Durer's, in order to find out, if we may, what Modesty is; which it will be well for painters, readers, and especially critics, to know, before going farther. What it is; or, rather, who she is; her fingers being among the deftest in laying the ground-threads of Aglaia's Cestus.

For this same opinion of Albert's is entertained by many other people respecting their own doings—a very prevalent opinion, indeed, I find it; and the answer itself, though rarely made with the Nuremberger's crushing decision, is nevertheless often enough intimated, with delicacy, by artists of all countries, in their various dialects. Neither can it always be held an entirely modest one, as it assuredly was in the man who would sometimes estimate a piece of his unconquerable work at only the worth of a plate of fruit, or a flask of wine—would have taken even one “fig for it,” kindly offered; or given it royally for nothing, to show his hand to a fellow-king of his own, or any other craft—as Gainsborough gave the "Boy at the Stile" for a solo on the violin. An entirely modest saying, I repeat, in him—not always in us. For Modesty is "the measuring virtue," the virtue of modes or limits. She is, indeed, said to be only the third or youngest of the children of the cardinal virtue, Temperance; and apt to be despised, being more given to arithmetic, and other vulgar studies (Cinderella-like) than her elder sisters: but she is useful in the household, and arrives at great results with her yard-measure and slate-pencil—a pretty little Marchande des Modes, cutting her dress always according to the silk (if this be the proper feminine reading of "coat according to the cloth"), so that, consulting with her carefully of a morning, men get to know not only their income, but their inbeing—to know themselves, that is, in a gauger's manner, round, and up
and down—surface and contents; what is in them, and what
may be got out of them; and, in fine, their entire canon of
weight and capacity. That yard-measure of Modesty’s lent to
those who will use it, is a curious musical reed, and will go
round and round waists that are slender enough, with latent
melody in every joint of it, the dark root only being soundless,
moist from the wave wherein

"Null' altra pianta che facesse fronda
O indurasse, puote aver vita." *

But when the little sister herself takes it in hand, to measure
things outside of us with, the joints shoot out in an amazing
manner: the four-square walls even of celestial cities being
measurable enough by that reed; and the way pointed to
them, though only to be followed, or even seen, in the dim
starlight shed down from worlds amidst which there is no
name of Measure any more, though the reality of it always.
For, indeed, to all true modesty the necessary business is
not inlook, but outlook, and especially uplook: it is only her
sister, Shamefacedness, who is known by the drooping lashes
—Modesty, quite otherwise, by her large eyes full of wonder;
for she never contemns herself, nor is ashamed of herself, but
forgets herself—at least until she has done something worth
memory. It is easy to peep and potter about one’s own defi-
ciences in a quiet inmodest discontent; but Modesty is so
pleased with other people’s doings, that she has no leisure to
lament her own: and thus, knowing the fresh feeling of con-
tentment, unstained with thought of self, she does not fear
being pleased, when there is cause, with her own rightness,
as with another’s, saying calmly, "Be it mine, or yours, or
whose else’s it may, it is no matter;—this also is well." But
the right to say such a thing depends on continual reverence,
and manifold sense of failure. If you have known yourself to
have failed, you may trust, when it comes, the strange con-
sciousness of success; if you have faithfully loved the noble
work of others, you need not fear to speak with respect of
things duly done, of your own.

* Purgatorio, i. 103.
136. But the principal good that comes of art's being followed in this reverent feeling, is vitally manifest in the associative conditions of it. Men who know their place, can take it and keep it, be it low or high, contentedly and firmly, neither yielding nor grasping; and the harmony of hand and thought follows, rendering all great deeds of art possible—deeds in which the souls of men meet like the jewels in the windows of Aladdin's palace, the little gems and the large all equally pure, needing no cement but the fitting of facets; while the associative work of immodest men is all jointless, and astir with wormy ambition; putridly dissolute, and for ever on the crawl: so that if it come together for a time, it can only be by metamorphosis through flash of volcanic fire out of the vale of Siddim, vitrifying the clay of it, and fastening the slime, only to end in wilder scattering; according to the fate of those oldest, mightiest, immodestest of builders, of whom it is told in scorn, "They had brick for stone, and slime had they for mortar."

137. The first function of Modesty, then, being this recognition of place, her second is the recognition of law, and delight in it, for the sake of law itself, whether her part be to assert it, or obey. For as it belongs to all immodesty to defy or deny law, and assert privilege and licence, according to its own pleasure (it being therefore rightly called "insolent," that is, "custom-breaking," violating some usual and appointed order to attain for itself greater forwardness or power), so it is the habit of all modesty to love the constancy and "solemnity," or, literally, "accustomedness," of law, seeking first what are the solemn, appointed, inviolable customs and general orders of nature, and of the Master of nature, touching the matter in hand; and striving to put itself, as habitually and inviolably, in compliance with them. Out of which habit, once established, arises what is rightly called "conscience," not "science" merely, but "with-science," a science "with us," such as only modest creatures can have—with or within them—and within all creation besides, every member of it, strong or weak, witnessing together, and joining in the happy consciousness that each one's work is good; the bee also being
profoundly of that opinion; and the lark; and the swallow, in that noisy, but modestly upside-down, Babel of hers, under the eaves, with its unvolcanic slime for mortar; and the two ants who are asking of each other at the turn of that little ant's-foot-worn path through the moss, "lor via e lor fortuna;" and the builders also, who built yonder pile of cloud-marble in the west, and the gilder who gilded it, and is gone down behind it.

138. But I think we shall better understand what we ought of the nature of Modesty, and of her opposite, by taking a simple instance of both, in the practice of that art of music which the wisest have agreed in thinking the first element of education; only I must ask the reader's patience with me through a parenthesis.

Among the foremost men whose power has had to assert itself, though with conquest, yet with countless loss, through peculiarly English disadvantages of circumstance, are assuredly to be ranked together, both for honour and for mourning, Thomas Bewick and George Cruikshank. There is, however, less cause for regret in the instance of Bewick. We may understand that it was well for us once to see what an entirely powerful painter's genius, and an entirely keen and true man's temper, could achieve, together, unhelped, but also unharmed, among the black banks and wolds of Tyne. But the genius of Cruikshank has been cast away in an utterly ghastly and lamentable manner: his superb line-work, worthy of any class of subject, and his powers of conception and composition, of which I cannot venture to estimate the range in their degraded application, having been condemned, by his fate, to be spent either in rude jesting, or in vain war with conditions of vice too low alike for record or rebuke, among the dregs of the British populace. Yet perhaps I am wrong in regretting even this: it may be an appointed lesson for futurity, that the art of the best English etcher in the nineteenth century, spent on illustrations of the lives of burglars and drunkards, should one day be seen in museums beneath Greek vases fretted with drawings of the wars of Troy, or side by side with Durer's "Knight and Death."
139. Be that as it may, I am at present glad to be able to refer to one of these perpetuations, by his strong hand, of such human character as our faultless British constitution occasionally produces, in out-of-the-way corners. It is among his illustrations of the Irish Rebellion, and represents the pillage and destruction of a gentleman's house by the mob. They have made a heap in the drawing-room of the furniture and books, to set first fire to; and are tearing up the floor for its more easily kindled planks: the less busily-disposed meanwhile hacking round in rage, with axes, and smashing what they can with butt-ends of guns. I do not care to follow with words the ghastly truth of the picture into its detail; but the most expressive incident of the whole, and the one immediately to my purpose, is this, that one fellow has sat himself at the piano, on which, hitting down fiercely with his clenched fists, he plays, grinning, such tune as may be so producible, to which melody two of his companions, flourishing knotted sticks, dance, after their manner, on the top of the instrument.

140. I think we have in this conception as perfect an instance as we require of the lowest supposable phase of immodest or licentious art in music; the "inner consciousness of good" being dim, even in the musician and his audience; and wholly unsympathized with, and unacknowledged, by the Delphian, Vestal, and all other prophetic and cosmic powers. This represented scene came into my mind suddenly, one evening, a few weeks ago, in contrast with another which I was watching in its reality; namely, a group of gentle schoolgirls, leaning over Mr. Charles Halle as he was playing a variation on "Home, sweet Home." They had sustained with unwonted courage the glance of subdued indignation with which, having just closed a rippling melody of Sebastian Bach's (much like what one might fancy the singing of nightingales would be if they fed on honey instead of flies), he turned to the slight, popular air. But they had their own associations with it, and besought for, and obtained it; and pressed close, at first, in vain, to see what no glance could follow, the traversing of the fingers. They soon thought no
more of seeing. The wet eyes, round-open, and the little scarlet upper lips, lifted, and drawn slightly together, in passionate glow of utter wonder, became picture-like,—porcelain-like,—in motionless joy, as the sweet multitude of low notes fell in their timely infinities, like summer rain. Only La Robbia himself (nor even he, unless with tenderer use of colour than is usual in his work) could have rendered some image of that listening.

141. But if the reader can give due vitality in his fancy to these two scenes, he will have in them representative types, clear enough for all future purpose, of the several agencies of debased and perfect art. And the interval may easily and continuously be filled by mediate gradations. Between the entirely immodest, unmeasured, and (in evil sense) unmannnered, execution with the fist; and the entirely modest, measured, and (in the noblest sense) mannered, or moral'd, execution with the finger; between the impatient and unpractised doing, containing in itself the witness of lasting impatience and idleness through all previous life, and the patient and practised doing, containing in itself the witness of self-restraint and unwearied toil through all previous life;—between the expressed subject and sentiment of home violation, and the expressed subject and sentiment of home love;—between the sympathy of audience, given in irreverent and contemptuous rage, joyless as the rabidity of a dog, and the sympathy of audience given in an almost appalled humility of intense, rapturous, and yet entirely reasoning and reasonable pleasure;—between these two limits of octave, the reader will find he can class, according to its modesty, usefulness, and grace, or becomingness all other musical art. For although purity of purpose and fineness of execution by no means go together, degree to degree, (since fine, and indeed all but the finest, work is often spent in the most wanton purpose—as in all our modern opera—and the rudest execution is again often joined with purest purpose, as in a mother's song to her child), still the entire accomplishment of music is only in the union of both. For the difference between that "all but" finest and "finest" is an infinite one; and besides this, how-
ever the power of the performer, once attained, may be afterwards misdirected, in slavery to popular passion or childishness, and spend itself, at its sweetest, in idle melodies, cold and ephemeral (like Michael Angelo's snow statue in the other art), or else in vicious difficulty and miserable noise—crackling of thorns under the pot of public sensuality—still, the attainment of this power, and the maintenance of it, involve always in the executant some virtue or courage of high kind; the understanding of which, and of the difference between the discipline which develops it and the disorderly efforts of the amateur, it will be one of our first businesses to estimate rightly. And though not indeed by degree to degree, yet in essential relation (as of winds to waves, the one being always the true cause of the other; though they are not necessarily of equal force at the same time), we shall find vice in its varieties, with art-failure,—and virtue in its varieties, with art-success,—fall and rise together: the peasant-girl's song at her spinning-wheel, the peasant-labourer's "to the oaks and rills,"—domestic music, feebly yet sensitively skilful,—music for the multitude, of beneficent, or of traitorous power,—dance-melodies, pure and orderly, or foul and frantic,—march-music, blatant in mere fever of animal pugnacity, or majestic with force of national duty and memory,—song-music, reckless, sensual, sickly, slovenly, forgetful even of the foolish words it effaces with foolish noise,—or thoughtful, sacred, healthful, artful, for ever sanctifying noble thought with separately distinguished loveliness of belonging sound,—all these families and gradations of good or evil, however mingled, follow, in so far as they are good, one constant law of virtue (or "life-strength," which is the literal meaning of the word, and its intended one, in wise men's mouths), and in so far as they are evil, are evil by outlawry and unvirtue, or death-weakness. Then, passing wholly beyond the domain of death, we may still imagine the ascendant nobleness of the art, through all the concordant life of incorrupt creatures, and a continually deeper harmony of "puissant words and murmurs made to bless," until we reach

"The undisturbed song of pure consent,
Aye sung before the sapphire-coloured throne."
142. And so far as the sister arts can be conceived to have place or office, their virtues are subject to a law absolutely the same as that of music, only extending its authority into more various conditions, owing to the introduction of a distinctly representative and historical power, which acts under logical as well as mathematical restrictions, and is capable of endlessly changeful fault, fallacy, and defeat, as well as of endlessly manifold victory.

143. Next to Modesty, and her delight in measures, let us reflect a little on the character of her adversary, the Goddess of Liberty, and her delight in absence of measures, or in false ones. It is true that there are liberties and liberties. Yonder torrent, crystal-clear, and arrow-swift, with its spray leaping into the air like white troops of fawns, is free enough. Lost, presently, amidst bankless, boundless marsh—soaking in slow shallowness, as it will, hither and thither, listless, among the poisonous reeds and unresting slime—it is free also. We may choose which liberty we like,—the restraint of voiceful rock, or the dumb and edgeless shore of darkened sand. Of that evil liberty, which men are now glorifying, and proclaiming as essence of gospel to all the earth, and will presently, I suppose, proclaim also to the stars, with invitation to them out of their courses,—and of its opposite continence, which is the clasp and χρυσέη περόνη of Aglaia's cestus, we must try to find out something true. For no quality of Art has been more powerful in its influence on public mind; none is more frequently the subject of popular praise, or the end of vulgar effort, than what we call "Freedom." It is necessary to determine the justice or injustice of this popular praise.

144. I said, a little while ago, that the practical teaching of the masters of Art was summed by the O of Giotto. "You may judge my masterhood of craft," Giotto tells us, "by seeing that I can draw a circle unerringly." And we may safely believe him, understanding him to mean, that—though more may be necessary to an artist than such a power—at least this power is necessary. The qualities of hand and eye needful to do this are the first conditions of artistic craft.
145. Try to draw a circle yourself with the "free" hand, and with a single line. You cannot do it if your hand trembles, nor if it hesitates, nor if it is unmanageable, nor if it is in the common sense of the word "free." So far from being free, it must be under a control as absolute and accurate as if it were fastened to an inflexible bar of steel. And yet it must move, under this necessary control, with perfect, untormented serenity of ease.

146. That is the condition of all good work whatsoever. All freedom is error. Every line you lay down is either right or wrong: it may be timidly and awkwardly wrong, or fearlessly and impudently wrong: the aspect of the impudent wrongness is pleasurable to vulgar persons; and is what they commonly call "free" execution: the timid, tottering, hesitating wrongness is rarely so attractive; yet sometimes, if accompanied with good qualities, and right aims in other directions, it becomes in a manner charming, like the inarticulateness of a child: but, whatever the charm or manner of the error, there is but one question ultimately to be asked respecting every line you draw, Is it right or wrong? If right, it most assuredly is not a "free" line, but an intensely continent, restrained, and considered line; and the action of the hand in laying it is just as decisive, and just as "free" as the hand of a first-rate surgeon in a critical incision.

A great operator told me that his hand could check itself within about the two-hundredth of an inch, in penetrating a membrane; and this, of course, without the help of sight, by sensation only. With help of sight, and in action on a substance which does not quiver nor yield, a fine artist's line is measurable in its proposed direction to considerably less than the thousandth of an inch.

A wide freedom, truly!

147. The conditions of popular art which most foster the common ideas about freedom, are merely results of irregularly energetic effort by men imperfectly educated; these conditions being variously mingled with cruder mannerisms resulting from timidity, or actual imperfection of body. Northern hands and eyes are, of course, never so subtle as
Southern; and in very cold countries, artistic execution is palsied. The effort to break through this timidity, or to refine the bluntness, may lead to a licentious impetuosity, or an ostentatious minuteness. Every man's manner has this kind of relation to some defect in his physical powers or modes of thought; so that in the greatest work there is no manner visible. It is at first uninteresting from its quietness; the majesty of restrained power only dawns gradually upon us, as we walk towards its horizon.

There is, indeed, often great delightfulfulness in the innocent manners of artists who have real power and honesty, and draw, in this way or that, as best they can, under such and such untoward circumstances of life. But the greater part of the looseness, flimsiness, or audacity of modern work is the expression of an inner spirit of licence in mind and heart, connected, as I said, with the peculiar folly of this age, its hope of, and trust in, "liberty." Of which we must reason a little in more general terms.

148. I believe we can nowhere find a better type of a perfectly free creature than in the common house fly. Nor free only, but brave; and irreverent to a degree which I think no human republican could by any philosophy exalt himself to. There is no courtesy in him; he does not care whether it is king or clown whom he teases; and in every step of his swift mechanical march, and in every pause of his resolute observation, there is one and the same expression of perfect egotism, perfect independence and self-confidence, and conviction of the world's having been made for flies. Strike at him with your hand; and to him, the mechanical fact and external aspect of the matter is, what to you it would be, if an acre of red clay, ten feet thick, tore itself up from the ground in one massive field, hovered over you in the air for a second, and came crashing down with an aim. That is the external aspect of it; the inner aspect, to his fly's mind, is of a quite natural and unimportant occurrence—one of the momentary conditions of his active life. He steps out of the way of your hand, and alights on the back of it. You cannot terrify him, nor govern him, nor persuade him, nor convince him. He
has his own positive opinion on all matters; not an unwise one, usually, for his own ends; and will ask no advice of yours. He has no work to do—no tyrannical instinct to obey. The earthworm has his digging; the bee her gathering and building; the spider her cunning net-work; the ant her treasury and accounts. All these are comparatively slaves, or people of vulgar business. But your fly, free in the air, free in the chamber—a black incarnation of caprice—wandering, investigating, flitting, flirting, feasting at his will, with rich variety of choice in feast, from the heaped sweets in the grocer's window to those of the butcher's back-yard, and from the galled place on your cab-horse's back, to the brown spot in the road, from which, as the hoof disturbs him, he rises with angry republican buzz—what freedom is like his?

149. For captivity, again, perhaps your poor watch-dog is as sorrowful a type as you will easily find. Mine certainly is. The day is lovely, but I must write this, and cannot go out with him. He is chained in the yard, because I do not like dogs in rooms, and the gardener does not like dogs in gardens. He has no books,—nothing but his own weary thoughts for company, and a group of those free flies, whom he snaps at, with sullen ill success. Such dim hope as he may have that I may yet take him out with me, will be, hour by hour, wearily disappointed; or, worse, darkened at once into a leaden despair by an authoritative "No"—too well understood. His fidelity only seals his fate; if he would not watch for me, he would be sent away, and go hunting with some happier master: but he watches, and is wise, and faithful, and miserable: and his high animal intellect only gives him the wistful powers of wonder, and sorrow, and desire, and affection, which embitter his captivity. Yet of the two, would we rather be watch-dog, or fly?

150. Indeed, the first point we have all to determine is not how free we are, but what kind of creatures we are. It is of small importance to any of us whether we get liberty; but of the greatest that we deserve it. Whether we can win it, fate must determine; but that we will be worthy of it, we may
ourselves determine; and the sorrowfullest fate, of all that we can suffer, is to have it, without deserving it.

151. I have hardly patience to hold my pen and go on writing, as I remember (I would that it were possible for a few consecutive instances to forget) the infinite follies of modern thought in this matter, centred in the notion that liberty is good for a man, irrespectively of the use he is likely to make of it. Folly unfathomable! unspeakable! unendurable to look in the full face of, as the laugh of a cretin. You will send your child, will you, into a room where the table is loaded with sweet wine and fruit—some poisoned, some not?—you will say to him, "Choose freely, my little child! It is so good for you to have freedom of choice: it forms your character—your individuality! If you take the wrong cup, or the wrong berry, you will die before the day is over, but you will have acquired the dignity of a Free child?"

152. You think that puts the case too sharply? I tell you, lover of liberty, there is no choice offered to you, but it is similarly between life and death. There is no act, nor option of act, possible, but the wrong deed or option has poison in it which will stay in your veins thereafter forever. Never more to all eternity can you be as you might have been, had you not done that—chosen that. You have "formed your character," forsooth! No; if you have chosen ill, you have De-formed it, and that forever! In some choices, it had been better for you that a red hot iron bar had struck you aside, scarred and helpless, than that you had so chosen. "You will know better next time!" No. Next time will never come. Next time the choice will be in quite another aspect—between quite different things,—you, weaker than you were by the evil into which you have fallen; it, more doubtful than it was, by the increased dimness of your sight. No one ever gets wiser by doing wrong, nor stronger. You will get wiser and stronger only by doing right, whether forced or not; the prime, the one need is to do that, under whatever compulsion, until you can do it without compulsion. And then you are a Man.

153. "What!" a wayward youth might perhaps answer, in
creduulously; "no one ever gets wiser by doing wrong? Shall I not know the world best by trying the wrong of it, and repenting? Have I not, even as it is, learned much by many of my errors?" Indeed, the effort by which partially you recovered yourself was precious; that part of your thought by which you discerned the error was precious. What wisdom and strength you kept, and rightly used, are rewarded; and in the pain and the repentance, and in the acquaintance with the aspects of folly and sin, you have learned something; how much less than you would have learned in right paths, can never be told, but that it is less is certain. Your liberty of choice has simply destroyed for you so much life and strength, never regainable. It is true you now know the habits of swine, and the taste of husks: do you think your father could not have taught you to know better habits and pleasanter tastes, if you had stayed in his house; and that the knowledge you have lost would not have been more, as well as sweeter, than that you have gained? But "it so forms my individuality to be free!" Your individuality was given you by God, and in your race; and if you have any to speak of, you will want no liberty. You will want a den to work in, and peace, and light—no more,—in absolute need; if more, in anywise, it will still not be liberty, but direction, instruction, reproof, and sympathy. But if you have no individuality, if there is no true character nor true desire in you, then you will indeed want to be free. You will begin early; and, as a boy, desire to be a man; and, as a man, think yourself as good as every other. You will choose freely to eat, freely to drink, freely to stagger and fall, freely, at last, to curse yourself and die. Death is the only real freedom possible to us: and that is consummate freedom,—permission for every particle in the rotting body to leave its neighbour particle, and shift for itself. You call it "corruption" in the flesh; but before it comes to that, all liberty is an equal corruption in mind. You ask for freedom of thought; but if you have not sufficient grounds for thought, you have no business to think; and if you have sufficient grounds, you have no business to think wrong. Only one thought is possible to you, if you are
wise—your liberty is geometrically proportionate to your folly.

154. "But all this glory and activity of our age; what are they owing to, but to our freedom of thought?" In a measure, they are owing—what good is in them—to the discovery of many lies, and the escape from the power of evil. Not to liberty, but to the deliverance from evil or cruel masters. Brave men have dared to examine lies which had long been taught, not because they were free-thinkers, but because they were such stern and close thinkers that the lie could no longer escape them. Of course the restriction of thought, or of its expression, by persecution, is merely a form of violence, justifiable or not, as other violence is, according to the character of the persons against whom it is exercised, and the divine and eternal laws which it vindicates or violates. We must not burn a man alive for saying that the Athanasian creed is ungrammatical, nor stop a bishop's salary because we are getting the worst of an argument with him; neither must we let drunken men howl in the public streets at night. There is much that is true in the part of Mr. Mill's essay on Liberty which treats of freedom of thought; some important truths are there beautifully expressed, but many, quite vital, are omitted; and the balance, therefore, is wrongly struck. The liberty of expression, with a great nation, would become like that in a well-educated company, in which there is indeed freedom of speech, but not of clamour; or like that in an orderly senate, in which men who deserve to be heard, are heard in due time, and under determined restrictions. The degree of liberty you can rightly grant to a number of men is in the inverse ratio of their desire for it; and a general hush, or call to order, would be often very desirable in this England of ours. For the rest, of any good or evil extant, it is impossible to say what measure is owing to restraint, and what to licence, where the right is balanced between them. I was not a little provoked one day, a summer or two since, in Scotland, because the Duke of Athol hindered me from examining the gneiss and slate junctions in Glen Tilt, at the hour convenient to me; but I saw them at last, and in quietness; and to the
very restriction that annoyed me, owed, probably, the fact of their being in existence, instead of being blasted away by a mob-company; while the "free" paths and inlets of Loch Katrine and the Lake of Geneva are for ever trampled down and destroyed, not by one duke, but by tens of thousands of ignorant tyrants.

155. So, a Dean and Chapter may, perhaps, unjustifiably charge me twopence for seeing a cathedral;—but your free mob pulls spire and all down about my ears, and I can see it no more for ever. And even if I cannot get up to the granite junctions in the glen, the stream comes down from them pure to the Garry; but in Beddington Park I am stopped by the newly erected fence of a building speculator; and the bright Wandel, divine of waters as Castaly, is filled by the free public with old shoes, obscene crockery, and ashes.

156. In fine, the arguments for liberty may in general be summed in a few very simple forms, as follows:—

Misguiding is mischievous: therefore guiding is.

If the blind lead the blind, both fall into the ditch: therefore, nobody should lead anybody.

Lambs and fawns should be left free in the fields; much more bears and wolves.

If a man's gun and shot are his own, he may fire in any direction he pleases.

A fence across a road is inconvenient; much more one at the side of it.

Babes should not be swaddled with their hands bound down to their sides: therefore they should be thrown out to roll in the kennels naked.

None of these arguments are good, and the practical issues of them are worse. For there are certain eternal laws for human conduct which are quite clearly discernible by human reason. So far as these are discovered and obeyed, by whatever machinery or authority the obedience is procured, there follow life and strength. So far as they are disobeyed, by whatever good intention the disobedience is brought about, there follow ruin and sorrow. And the first duty of every man in the world is to find his true master, and, for his own
good, submit to him; and to find his true inferior, and, for that inferior's good, conquer him. The punishment is sure, if we either refuse the reverence, or are too cowardly and indolent to enforce the compulsion. A base nation crucifies or poisons its wise men, and lets its fools rave and rot in its streets. A wise nation obeys the one, restrains the other, and cherishes all.

157. The best examples of the results of wise normal discipline in Art will be found in whatever evidence remains respecting the lives of great Italian painters, though, unhappily, in eras of progress, but just in proportion to the admirableness and efficiency of the life, will be usually the scantiness of its history. The individualities and liberties which are causes of destruction may be recorded; but the loyal conditions of daily breath are never told. Because Leonardo made models of machines, dug canals, built fortifications, and dissipated half his art-power in capricious ingenuities, we have many anecdotes of him;—but no picture of importance on canvas, and only a few withered stains of one upon a wall. But because his pupil, or reputed pupil, Luini, laboured in constant and successful simplicity, we have no anecdotes of him;—only hundreds of noble works. Luini is, perhaps, the best central type of the highly-trained Italian painter. He is the only man who entirely united the religious temper which was the spirit-life of art, with the physical power which was its bodily life. He joins the purity and passion of Angelico to the strength of Veronese: the two elements, poised in perfect balance, are so calmed and restrained, each by the other, that most of us lose the sense of both. The artist does not see the strength, by reason of the chastened spirit in which it is used; and the religious visionary does not recognize the passion, by reason of the frank human truth with which it is rendered. He is a man ten times greater than Leonardo;—a mighty colourist, while Leonardo was only a fine draughtsman in black, staining the chiaroscuro drawing, like a coloured print: he perceived and rendered the delicatest types of human beauty that have been painted since the days of the Greeks, while Leonardo deprived his finer instincts by caricature, and re-
mained to the end of his days the slave of an archaic smile: and he is a designer as frank, instinctive, and exhaustless as Tintoret, while Leonardo's design is only an agony of science, admired chiefly because it is painful, and capable of analysis in its best accomplishment. Luini has left nothing behind him that is not lovely; but of his life I believe hardly anything is known beyond remnants of tradition which murmur about Lugano and Saronno, and which remain uncleaned. This only is certain, that he was born in the loveliest district of North Italy, where hills, and streams, and air, meet in softest harmonies. Child of the Alps, and of their divinest lake, he is taught, without doubt or dismay, a lofty religious creed, and a sufficient law of life, and of its mechanical arts. Whether lessoned by Leonardo himself, or merely one of many, disciplined in the system of the Milanese school, he learns unerringly to draw, unerringly and enduringly to paint. His tasks are set him without question day by day, by men who are justly satisfied with his work, and who accept it without any harmful praise, or senseless blame. Place, scale, and subject are determined for him on the cloister wall or the church dome; as he is required, and for sufficient daily bread, and little more, he paints what he has been taught to design wisely, and has passion to realize gloriously: every touch he lays is eternal, every thought he conceives is beautiful and pure: his hand moves always in radiance of blessing; from day to day his life enlarges in power and peace; it passes away cloudlessly, the starry twilight remaining arched far against the night.

158. Oppose to such a life as this that of a great painter amidst the elements of modern English liberty. Take the life of Turner, in whom the artistic energy and inherent love of beauty were at least as strong as in Luini: but, amidst the disorder and ghastliness of the lower streets of London, his instincts in early infancy were warped into toleration of evil, or even into delight in it. He gathers what he can of instruction by questioning and prying among half-informed masters; spells out some knowledge of classical fable; educates himself, by an admirable force, to the production of wildly ma-
jestic or pathetically tender and pure pictures, by which he cannot live. There is no one to judge them, or to command him: only some of the English upper classes hire him to paint their houses and parks, and destroy the drawings afterwards by the most wanton neglect. Tired of labouring carefully, without either reward or praise, he dashes out into various experimental and popular works—makes himself the servant of the lower public, and is dragged hither and thither at their will; while yet, helpless and guideless, he indulges his idiosyncrasies till they change into insanities; the strength of his soul increasing its sufferings, and giving force to its errors; all the purpose of life degenerating into instinct; and the web of his work wrought, at last, of beauties too subtle to be understood, his liberty, with vices too singular to be forgiven—all useless, because magnificent idiosyncrasy had become solitude, or contention, in the midst of a reckless populace, instead of submitting itself in loyal harmony to the Art-laws of an understanding nation. And the life passed away in darkness; and its final work, in all the best beauty of it, has already perished, only enough remaining to teach us what we have lost.

159. These are the opposite effects of Law and of Liberty on men of the highest powers. In the case of inferiors the contrast is still more fatal: under strict law, they become the subordinate workers in great schools, healthily aiding, echoing, or supplying, with multitudinous force of hand, the mind of the leading masters: they are the nameless carvers of great architecture—stainers of glass—hammerers of iron—helpful scholars, whose work ranks round, if not with, their master's and never disgraces it. But the inferiors under a system of licence for the most part perish in miserable effort; * a few

* As I correct this sheet for press, my Pull Mill Gazette of last Saturday, April 17th, is lying on the table by me. I print a few lines out of it: —

``An Artist's Death.—A sad story was told at an inquest held in St. Pancras last night by Dr. Lankester on the body of * * *, aged fifty-nine, a French artist, who was found dead in his bed at his rooms in * * * Street. M. * * *, also an artist, said he had known the deceased for fifteen years. He once held a high position, and being aux-
struggle into pernicious eminence—harmful alike to themselves and to all who admire them; many die of starvation; many insane, either in weakness of insolent egotism, like Haydon, or in a conscientious agony of beautiful purpose and warped power, like Blake. There is no probability of the persistence of a licentious school in any good accidentally discovered by them; there is an approximate certainty of their gathering, with acclaim, round any shadow of evil, and following it to whatever quarter of destruction it may lead.

160. Thus far the notes on Freedom. Now, lastly, here is some talk which I tried at the time to make intelligible; and with which I close this volume, because it will serve sufficiently to express the practical relation in which I think the art and imagination of the Greeks stand to our own; and will show the reader that my view of that relation is unchanged, from the first day on which I began to write, until now.

ions to make a name in the world, he five years ago commenced a large picture, which he hoped, when completed, to have in the gallery at Versailles; and with that view he sent a photograph of it to the French Emperor. He also had an idea of sending it to the English Royal Academy. He labourd on this picture, neglecting other work which would have paid him well, and gradually sank lower and lower into poverty. His friends assisted him, but being absorbed in his great work, he did not heed their advice, and they left him. He was, however, assisted by the French Ambassador, and last Saturday he (the witness) saw deceased, who was much depressed in spirits, as he expected the brokers to be put in possession for rent. He said his troubles were so great that he feared his brain would give way. The witness gave him a shilling, for which he appeared very thankful. On Monday the witness called upon him, but received no answer to his knock. He went again on Tuesday, and entered the deceased's bedroom and found him dead. Dr. George Ross said that when called in to the deceased he had been dead at least two days. The room was in a filthy dirty condition, and the picture referred to—certainly a very fine one—was in that room. The post-mortem examination shewed that the cause of death was fatty degeneration of the heart, the latter probably having ceased its action through the mental excitement of the deceased."
THE HERCULES OF CAMARINA.

Address to the Students of the Art School of South Lambeth, March 15th. 1869.

161. Among the photographs of Greek coins which present so many admirable subjects for your study, I must speak for the present of one only: the Hercules of Camarina. You have, represented by a Greek workman, in that coin, the face of a man, and the skin of a lion's head. And the man's face is like a man's face, but the lion's skin is not like a lion's skin.

162. Now there are some people who will tell you that Greek art is fine, because it is true; and because it carves men's faces as like men's faces as it can.

And there are other people who will tell you that Greek art is fine because it is not true; and carves a lion's skin so as to look not at all like a lion's skin.

And you fancy that one or other of these sets of people must be wrong, and are perhaps much puzzled to find out which you should believe.

But neither of them are wrong, and you will have eventually to believe, or rather to understand and know, in reconciliation, the truths taught by each;—but for the present, the teachers of the first group are those you must follow.

It is they who tell you the deepest and usefulest truth, which involves all others in time. Greek art, and all other art, is fine when it makes a man's face as like a man's face as it can. Hold to that. All kinds of nonsense are talked to you, now-a-days, ingeniously and irrelevantly about art. Therefore, for the most part of the day, shut your ears, and keep your eyes open: and understand primarily, what you may, I fancy, understand easily, that the greatest masters of all greatest schools—Phidias, Donatello, Titian, Velasquez, or Sir Joshua Reynolds—all tried to make human creatures as like human creatures as they could; and that anything less like humanity than their work, is not so good as theirs.
Get that well driven into your heads; and don't let it out again, at your peril.

163. Having got it well in, you may then farther understand, safely, that there is a great deal of secondary work in pots, and pans, and floors, and carpets, and shawls, and architectural ornament, which ought, essentially, to be unlike reality, and to depend for its charm on quite other qualities than imitative ones. But all such art is inferior and secondary—much of it more or less instinctive and animal, and a civilized human creature can only learn its principles rightly, by knowing those of great civilized art first—which is always the representation, to the utmost of its power, of whatever it has got to show—made to look as like the thing as possible. Go into the National Gallery, and look at the foot of Correggio's Venus there. Correggio made it as like a foot as he could, and you won't easily find anything liker. Now, you will find on any Greek vase something meant for a foot, or a hand, which is not at all like one. The Greek vase is a good thing in its way, but Correggio's picture is the best work.

164. So, again, go into the Turner room of the National Gallery, and look at Turner's drawing of "Ivy Bridge." You will find the water in it is like real water, and the ducks in it are like real ducks. Then go into the British Museum, and look for an Egyptian landscape, and you will find the water in that constituted of blue zigzags, not at all like water; and ducks in the middle of it made of red lines, looking not in the least as if they could stand stuffing with sage and onions. They are very good in their way, but Turner's are better.

165. I will not pause to fence my general principle against what you perfectly well know of the due contradiction,—that a thing may be painted very like, yet painted ill. Rest content with knowing that it must be like, if it is painted well; and take this farther general law:—Imitation is like charity. When it is done for love it is lovely; when it is done for show, hateful.

166. Well, then, this Greek coin is fine, first, because the face is like a face. Perhaps you think there is something particularly handsome in the face, which you can't see in the
photograph, or can't at present appreciate. But there is nothing of the kind. It is a very regular, quiet, commonplace sort of face; and any average English gentleman's, of good descent, would be far handsomer.

167. Fix that in your heads also, therefore, that Greek faces are not particularly beautiful. Of the much nonsense against which you are to keep your ears shut, that which is talked to you of the Greek ideal of beauty, is among the abso-

lutest. There is not a single instance of a very beautiful head left by the highest school of Greek art. On coins, there is even no approximately beautiful one. The Juno of Argos is a virago; the Athena of Athens, grotesque; the Athena of Corinth is insipid; and of Thurium, sensual. The Siren Ligeia, and fountain of Arethusa, on the coins of Terina and Syracuse, are prettier, but totally without expression, and chiefly set off by their well-curled hair. You might have expected something subtle in Mercuries; but the Mercury of Ænus is a very stupid-looking fellow, in a cap like a bowl, with a knob on the top of it. The Bacchus of Thasos is a drayman with his hair pomatum'd. The Jupiter of Syracuse is, however, calm and refined; and the Apollo of Clazomenae would have been impressive, if he had not come down to us much flattened by friction. But on the whole, the merit of Greek coins does not primarily depend on beauty of features, nor even, in the period of highest art, that of the statues. You may take the Venus of Melos as a standard of beauty of the central Greek type. She has tranquil, regular, and lofty features; but could not hold her own for a moment against the beauty of a simple English girl, of pure race and kind heart.

168. And the reason that Greek art, on the whole, bores you, (and you know it does,) is that you are always forced to look in it for something that is not there; but which may be seen every day, in real life, all round you; and which you are naturally disposed to delight in, and ought to delight in. For the Greek race was not at all one of exalted beauty, but only of general and healthy completeness of form. They were only, and could be only, beautiful in body to the degree that
they were beautiful in soul (for you will find, when you read deeply into the matter, that the body is only the soul made visible). And the Greeks were indeed very good people, much better people than most of us think, or than many of us are; but there are better people alive now than the best of them, and lovelier people to be seen now than the loveliest of them.

169. Then, what are the merits of this Greek art, which make it so exemplary for you? Well, not that it is beautiful, but that it is Right.* All that it desires to do, it does, and all that it does, does well. You will find, as you advance in the knowledge of art, that its laws of self-restraint are very marvelous; that its peace of heart, and contentment in doing a simple thing, with only one or two qualities, restrictedly desired, and sufficiently attained, are a most wholesome element of education for you, as opposed to the wild writhing, and wrestling, and longing for the moon, and tilting at wind-mills, and agony of eyes, and torturing of fingers, and general spinning out of one's soul into fiddlestrings, which constitute the ideal life of a modern artist.

Also observe, there is entire masterhood of its business up to the required point. A Greek does not reach after other people's strength, nor out-reach his own. He never tries to paint before he can draw; he never tries to lay on flesh where there are no bones; and he never expects to find the bones of anything in his inner consciousness. Those are his first merits—sincere and innocent purpose, strong common sense and principle, and all the strength that comes of these, and all the grace that follows on that strength.

170. But, secondly, Greek art is always exemplary in disposition of masses, which is a thing that in modern days students rarely look for; artists not enough, and the public never. But, whatever else Greek work may fail of, you may be always sure its masses are well placed, and their placing has been the object of the most subtle care. Look, for instance, at the inscription in front of this Hercules of the name of the town—Camarina. You can't read it, even though you may know Greek, without some pains; for the sculptor knew would

* Compare above, § 101.
enough that it mattered very little whether you read it or not, for the Camarina Hercules could tell his own story; but what did above all things matter was, that no K or A or M should come in a wrong place with respect to the outline of the head, and divert the eye from it, or spoil any of its lines. So the whole inscription is thrown into a sweeping curve of gradually diminishing size, continuing from the lion’s paws, round the neck, up to the forehead, and answering a decorative purpose as completely as the curls of the mane opposite. Of these, again, you cannot change or displace one without mischief: they are almost as even in reticulation as a piece of basket-work; but each has a different form and a due relation to the rest, and if you set to work to draw that mane rightly, you will find that, whatever time you give to it, you can’t get the tresses quite into their places, and that every tress out of its place does an injury. If you want to test your powers of accurate drawing, you may make that lion’s mane your pons asinorum. I have never yet met with a student who didn’t make an ass in a lion’s skin of himself, when he tried it.

171. Granted, however, that these tresses may be finely placed, still they are not like a lion’s mane. So we come back to the question,—if the face is to be like a man’s face, why is not the lion’s mane to be like a lion’s mane? Well, because it can’t be like a lion’s mane without too much trouble;—and inconvenience after that, and poor success, after all. Too much trouble, in cutting the die into fine fringes and jags; inconvenience after that,—because fringes and jags would spoil the surface of a coin; poor success after all,—because, though you can easily stamp cheeks and foreheads smooth at a blow, you can’t stamp projecting tresses fine at a blow, whatever pains you take with your die.

So your Greek uses his common sense, wastes no time, loses no skill, and says to you, “Here are beautifully set tresses, which I have carefully designed and easily stamped. Enjoy them; and if you cannot understand that they mean lion’s mane, heaven mend your wits.”

172. See then, you have in this work, well-founded knowl-
edge, simple and right aims, thorough mastery of handicraft, splended invention in arrangement, unerring common sense in treatment,—merits, these, I think, exemplary enough to justify our tormenting you a little with Greek Art. But it has one merit more than these, the greatest of all. It always means something worth saying. Not merely worth saying for that time only, but for all time. What do you think this helmet of lion’s hide is always given to Hercules for? You can’t suppose it means only that he once killed a lion, and always carried the skin afterwards to show that he had, as Indian sportsmen send home stuffed rugs, with claws at the corners, and a lump in the middle which one tumbles over every time one stirs the fire. What was this Nemean Lion, whose spoils were evermore to cover Hercules from the cold? Not merely a large specimen of Felis Leo, ranging the fields of Nemea, be sure of that. This Nemean cub was one of a bad litter. Born of Typhon and Echidna,—of the whirlwind and the snake,—Cerberus his brother, the Hydra of Lerna his sister,—it must have been difficult to get his hide off him. He had to be found in darkness too, and dealt upon without weapons, by grip at the throat—arrows and club of no avail against him. What does all that mean?

173. It means that the Nemean Lion is the first great adversary of life, whatever that may be—to Hercules, or to any of us, then or now. The first monster we have to strangle, or be destroyed by, fighting in the dark, and with none to help us, only Athena standing by to encourage with her smile. Every man’s Nemean Lion lies in wait for him somewhere. The slothful man says, there is a lion in the path. He says well. The quiet unslothful man says the same, and knows it too. But they differ in their farther reading of the text. The slothful man says I shall be slain, and the unslothful, it shall be. It is the first ugly and strong enemy that rises against us, all future victory depending on victory over that. Kill it; and through all the rest of life, what was once dreadful is your armour and you are clothed with that conquest for every other, and helmed with its crest of fortitude for evermore.

Alas, we have most of us to walk bare-headed; but that is
the meaning of the story of Nemea,—worth laying to heart and thinking of, sometimes, when you see a dish garnished with parsley, which was the crown at the Nemean games.

174. How far, then, have we got, in our list of the merits of Greek art now?

Sound knowledge.
Simple aims.
Mastered craft.
Vivid invention.
Strong common sense.
And eternally true and wise meaning.
Are these not enough? Here is one more then, which will find favour, I should think, with the British Lion. Greek art is never frightened at anything, it is always cool.

175. It differs essentially from all other art, past or present, in this incapability of being frightened. Half the power and imagination of every other school depend on a certain feverish terror mingling with their sense of beauty;—the feeling that a child has in a dark room, or a sick person in seeing ugly dreams. But the Greeks never have ugly dreams. They cannot draw anything ugly when they try. Sometimes they put themselves to their wits'-end to draw an ugly thing,—the Medusa's head, for instance,—but they can't do it,—not they,—because nothing frightens them. They widen the mouth, and grind the teeth, and puff the cheeks, and set the eyes a-goggling; and the thing is only ridiculous after all, not the least dreadful, for there is no dread in their hearts. Pensiveness; amazement; often deepest grief and desolation. All these; but terror never. Everlasting calm in the presence of all fate; and joy such as they could win, not indeed in a perfect beauty, but beauty at perfect rest! A kind of art this, surely, to be looked at, and thought upon sometimes with profit, even in these latter days.

176. To be looked at sometimes. Not continually, and never as a model for imitation. For you are not Greeks; but, for better or worse, English creatures; and cannot do, even if it were a thousand times better worth doing, anything well, except what your English hearts shall prompt, and your Eng-
lish skies teach you. For all good art is the natural utterance of its own people in its own day.

But also, your own art is a better and brighter one than ever this Greek art was. Many motives, powers, and insights have been added to those elder ones. The very corruptions into which we have fallen are signs of a subtle life, higher than theirs was, and therefore more fearful in its faults and death. Christianity has neither superseded, nor, by itself, excelled heathenism; but it has added its own good, won also by many a Nemean contest in dark valleys, to all that was good and noble in heathenism: and our present thoughts and work, when they are right, are nobler than the heathen’s. And we are not reverent enough to them, because we possess too much of them. That sketch of four cherub heads from an English girl, by Sir Joshua Reynolds, at Kensington, is an incomparably finer thing than ever the Greeks did. Ineffably tender in the touch, yet Herculanean in power; innocent, yet exalted in feeling; pure in colour as a pearl; reserved and decisive in design, as this Lion crest,—if it alone existed of such,—if it were a picture by Zeuxis, the only one left in the world, and you built a shrine for it, and were allowed to see it only seven days in a year, it alone would teach you all of art that you ever needed to know. But you do not learn from this or any other such work, because you have not reverence enough for them, and are trying to learn from all at once, and from a hundred other masters besides.

177. Here, then, is the practical advice which I would venture to deduce from what I have tried to show you. Use Greek art as a first, not a final, teacher. Learn to draw carefully from Greek work; above all, to place forms correctly, and to use light and shade tenderly. Never allow yourselves black shadows. It is easy to make things look round and projecting; but the things to exercise yourselves in are the placing of the masses, and the modelling of the lights. It is an admirable exercise to take a pale wash of colour for all the shadows, never reinforcing it everywhere, but drawing the statue as if it were in far distance, making all the darks one flat pale tint. Then model from those into the lights, round-
ing as well as you can, on those subtle conditions. In your chalk drawings, separate the lights from the darks at once all over; then reinforce the darks slightly where absolutely necessary, and put your whole strength on the lights and their limits. Then, when you have learned to draw thoroughly, take one master for your painting, as you would have done necessarily in old times by being put into his school (were I to choose for you, it should be among six men only—Titian, Correggio, Paul Veronese, Velasquez, Reynolds, or Holbein). If you are a landscapist, Turner must be your only guide, (for no other great landscape painter has yet lived); and having chosen, do your best to understand your own chosen master, and obey him, and no one else, till you have strength to deal with the nature itself round you, and then, be your own master, and see with your own eyes. If you have got masterhood or sight in you, that is the way to make the most of them; and if you have neither, you will at least be sound in your work, prevented from immodest and useless effort, and protected from vulgar and fantastic error.

And so I wish you all, good speed, and the favour of Hercules and of the Muses; and to those who shall best deserve them, the crown of Parsley first and then of the Laurel.

THE END.
THE STORM CLOUD OF THE NINETEENTH CENTURY

Two Lectures

DELIVERED AT THE LONDON INSTITUTION,
FEBRUARY 4th AND 11th, 1884

BY

JOHN RUSKIN
HONORARY STUDENT OF CHRISTCHURCH, HONORARY FELLOW OF CORPUS-CHRISTI COLLEGE, AND SLADE PROFESSOR OF FINE ART, OXFORD

NEW YORK
JOHN W. LOVELL COMPANY
150 Worth Street, corner Mission Place
The following lectures, drawn up under the pressure of more imperative and quite otherwise directed work, contain many passages which stand in need of support, and some, I do not doubt, more or less of correction, which I always prefer to receive openly from the better knowledge of friends, after setting down my own impressions of the matter in clearness as far as they reach, than to guard myself against by submitting my manuscript, before publication, to annotators whose stricture or suggestion I might often feel pain in refusing, yet hesitation in admitting.

But though thus hastily, and to some extent incautiously, thrown into form, the statements in the text are founded on patient and, in all essential particulars, accurately recorded observations of the sky, during fifty years of a life of solitude and leisure; and in all they contain of what may seem to the reader questionable, or astonishing, are guardedly and absolutely true.

In many of the reports given by the daily press, my assertion of radical change, during recent years, in weather aspect was scouted as imaginary, or insane. I am indeed, every day of my yet spared life, more and more grateful that my mind is capable of imaginative vision, and liable to the noble dangers of delusion which separate the speculative intellect of humanity from the dreamless instinct of brutes: but I have been able, during all active work, to use or refuse my power of contemplative imagination, with as easy command of it as a physicist's of his telescope: the times of morbid are just as easily distinguished by me from those of healthy vision, as by men of ordinary faculty, dream from waking; nor is there a
single fact stated in the following pages which I have not verified with a chemist's analysis, and a geometer's precision.

The first lecture is printed, with only addition here and there of an elucidatory word or phrase, precisely as it was given on the 4th February. In repeating it on the 11th, I amplified several passages, and substituted for the concluding one, which had been printed with accuracy in most of the leading journals, some observations which I thought calculated to be of more general interest. To these, with the additions in the first text, I have now prefixed a few explanatory notes, to which numeral references are given in the pages they explain, and have arranged the fragments in connection clear enough to allow of their being read with ease as a second Lecture.

Herne Hill, 12th March, 1884.

THE STORM-CLOUD OF THE NINETEENTH CENTURY.

LECTURE I.

Let me first assure my audience that I have no arrière pensée in the title chosen for this lecture. I might, indeed, have meant, and it would have been only too like me to mean, any number of things by such a title;—but, to-night, I mean simply what I have said, and propose to bring to your notice a series of cloud phenomena, which, so far as I can weigh existing evidence, are peculiar to our own times; yet which have not hitherto received any special notice or description from meteorologists.

So far as the existing evidence, I say, of former literature can be interpreted, the storm-cloud—or more accurately plague-cloud, for it is not always stormy—which I am about to describe to you, never was seen but by now living, or lately living eyes. It is not yet twenty years that this—I may well call it, wonderful, cloud has been, in its essence, recognizable. There is no description of it, so far as I have read, by any ancient observer. Neither Homer nor Virgil, neither Aristophanes nor Horace, acknowledges any such clouds among those compelled by Jove. Chaucer has no word of them, nor Dante; Milton none, nor Thomson. In modern times, Scott, Wordsworth and Byron are alike unconscious of them; and the most observant and descriptive of scientific men, De Saussure, is utterly silent concerning them. Taking up the traditions of air from the year before Scott's death, I am able, by my own constant and close observation, to certify you that
in the forty following years (1831 to 1871 approximately—for the phenomena in question came on gradually)—no such clouds as these are, and are now often for months without intermission, were ever seen in the skies of England, France, or Italy.

In those old days, when weather was fine, it was luxuriously fine; when it was bad—it was often abominably bad, but it had its fit of temper and was done with it—it didn’t sulk for three months without letting you see the sun,—nor send you one cyclone inside out, every Saturday afternoon, and another outside in, every Monday morning.

In fine weather the sky was either blue or clear in its light; the clouds, either white or golden, adding to, not abating, the lustre of the sky. In wet weather, there were two different species of clouds,—those of beneficent rain, which for distinction’s sake I will call the non-electric rain-cloud, and those of storm, usually charged highly with electricity. The beneficent rain-cloud was indeed often extremely dull and grey for days together, but gracious nevertheless, felt to be doing good, and often to be delightful after drought; capable also of the most exquisite colouring, under certain conditions; and continually traversed in clearing by the rainbow:—and, secondly, the storm-cloud, always majestic, often dazzlingly beautiful, and felt also to be beneficent in its own way, affecting the mass of the air with vital agitation, and purging it from the impurity of all morbific elements.

In the entire system of the Firmament, thus seen and understood, there appeared to be, to all the thinkers of those ages, the incontrovertible and unmistakable evidence of a Divine Power in creation, which had fitted, as the air for human breath, so the clouds for human sight and nourishment;—the Father who was in heaven feeding day by day the souls of His children with marvels, and satisfying them with bread, and so filling their hearts with food and gladness.

Their hearts, you will observe, it is said, not merely their bellies,—or indeed not at all, in this sense, their bellies—but the heart itself, with its blood for this life, and its faith for the next. The opposition between this idea and the notions of
our own time may be more accurately expressed by modification of the Greek than of the English sentence. The old Greek is—

€μπιπλῶν τροφῆς καὶ έυφροσύνης
tās καρδίας ἡμῶν.

filling with meat, and cheerfulness, our hearts. The modern Greek should be—

€μπιπλῶν ἀνέμου καὶ ἀφροσύνης
tās γαστέρας ἡμῶν.

filling with wind, and foolishness, our stomachs.

You will not think I waste your time in giving you two cardinal examples of the sort of evidence which the higher forms of literature furnish respecting the cloud-phenomena of former times.

When, in the close of my lecture on landscape last year at Oxford, I spoke of stationary clouds as distinguished from passing ones, some blockheads wrote to the papers to say that clouds never were stationary. Those foolish letters were so far useful in causing a friend to write me the pretty one I am about to read to you, quoting a passage about clouds in Homer which I had myself never noticed, though perhaps the most beautiful of its kind in the Iliad. In the fifth book, after the truce is broken, and the aggressor Trojans are rushing to the onset in a tumult of clamour and charge, Homer says that the Greeks, abiding them, "stood like clouds." My correspondent, giving the passage, writes as follows:

"Sir,—Last winter when I was at Ajaccio, I was one day reading Homer by the open window, and came upon the lines—

'Αλλ' έμενον, νεφέλησιν έοικότες έσ τε Κρονίων
Νηφελήσις έστησεν ἐπί άκροπόλισιν ὄρεσιν,
'Ατρέμας, δορ' εὕδησε μένος Βαρέας καὶ άλλων
Ζαχρεῖών ἀνέμων, ὅτε νέφα σκίσετα
Πνεύμων λυγυρήσις διασκίδησαν ἄειντες
'Ως Δαυαοί Τρώας μένον ἐμπεδοῦ, οὐδ' έφέβουτο.

'But they stood, like the clouds which the Son of Kronos establishes in calm upon the mountains, motionless, when the
rage of the North and of all the fiery winds is asleep.' As I
finished these lines, I raised my eyes, and looking across the
gulf, saw a long line of clouds resting on the top of its hills.
The day was windless, and there they stayed, hour after hour,
without any stir or motion. I remember how I was delighted
at the time, and have often since that day thought on the
beauty and the truthfulness of Homer's simile.

"Perhaps this little fact may interest you, at a time when
you are attacked for your description of clouds.

"I am, sir, yours faithfully,

"G. B. HILL."

With this bit of noonday from Homer, I will read you a
sunset and a sunrise from Byron. That will enough express
to you the scope and sweep of all glorious literature, from the
orient of Greece herself to the death of the last Englishman
who loved her. I will read you from 'Sardanapalus' the ad-
dress of the Chaldean priest Beleses to the sunset, and of the
Greek slave, Myrrha, to the morning.

"The sun goes down: methinks he sets more slowly,
Taking his last look of Assyria's empire.
How red he glares amongst those deepening clouds, If not in vain,
Like the blood he predicts. If not in vain,
Thou sun that sinkest, and ye stars which rise,
I have outwatch'd ye, reading ray by ray
The edicts of your orbs, which make Time tremble
For what he brings the nations, 't is the furthest
Hour of Assyria's years. And yet how calm:
An earthquake should announce so great a fall—
A summer's sun discloses it. You disk
To the star-red Chaldean, bears upon
Its everlasting page the end of what
Seem'd everlasting; but oh! thou TRUE sun!
The burning oracle of all that live,
As fountain of all life, and symbol of
Him who bestows it, wherefore dost thou limit
Thy lore unto calamity? Why not
Unfold the rise of days more worthy thine
All-glorious burst from ocean? why not dart
A beam of hope athwart the future years,
As of wrath to its days? Hear me! oh, hear me!
I am thy worshipper, thy priest, thy servant—"
I have gazed on thee at thy rise and fall,
And bow'd my head beneath thy mid-day beams,
When my eye dared not meet thee. I have watch'd
For thee, and after thee, and pray'd to thee,
And sacrificed to thee, and read, and fear'd thee,
And ask'd of thee, and thou hast answer'd—but
Only to thus much. While I speak, he sinks—
Is gone—and leaves his beauty, not his knowledge,
To the delighted west, which revels in
Its hues of dying glory. Yet what is
Death, so it be but glorious? 'T is a sunset;
And mortals may be happy to resemble
The gods but in decay."

Thus the Chaldean priest, to the brightness of the setting
sun. Hear now the Greek girl, Myrrha, of his rising.

"The day at last has broken. What a night
Hath usher'd it! How beautiful in heaven!
Though varied with a transitory storm,
More beautiful in that variety:
How hideous upon earth! where peace, and hope,
And love, and revel, in an hour were trampled
By human passions to a human chaos,
Not yet resolved to separate elements:
'T is warring still! And can the sun so rise,
So bright, so rolling back the clouds into
Vapours more lovely than the unclouded sky,
With golden pinnacles, and snowy mountains,
And billows purpler than the ocean's, making
In heaven a glorious mockery of the earth,
So like,—we almost deem it permanent;
So fleeting,—we can scarcely call it aught
Beyond a vision, 't is so transiently
Scatter'd along the eternal vault: and yet
It dwells upon the soul, and soothes the soul,
And blends itself into the soul, until
Sunrise and sunset form the haunted epoch
Of sorrow and of love."

How often now—young maids of London,—do you make
sunrise the 'haunted epoch' of either?
Thus much, then, of the skies that used to be, and clouds
"more lovely than the unclouded sky," and of the temper of
their observers. I pass to the account of clouds that are, and—I say it with sorrow—of the distemper of their observers.

But the general division which I have instituted between bad-weather and fair-weather clouds must be more carefully carried out in the sub-species, before we can reason of it farther: and before we begin talk either of the sub-genera and sub-species, or super-genera and super-species of cloud, perhaps we had better define what every cloud is, and must be, to begin with.

Every cloud that can be, is thus primarily definable: "Visible vapour of water floating at a certain height in the air." The second clause of this definition, you see, at once implies that there is such a thing as visible vapour of water which does not float at a certain height in the air. You are all familiar with one extremely cognizable variety of that sort of vapour—London Particular; but that especial blessing of metropolitan society is only a strongly-developed and highly-seasoned condition of a form of watery vapour which exists just as generally and widely at the bottom of the air, as the clouds do—on what, for convenience' sake, we may call the top of it;—only as yet, thanks to the sagacity of scientific men, we have got no general name for the bottom cloud, though the whole question of cloud nature begins in this broad fact, that you have one kind of vapour that lies to a certain depth on the ground, and another that floats at a certain height in the sky. Perfectly definite, in both cases, the surface level of the earthly vapour, and the roof level of the heavenly vapour, are each of them drawn within the depth of a fathom. Under their line, drawn for the day and for the hour, the clouds will not stoop, and above theirs, the mists will not rise. Each in their own region, high or deep, may expatiate at their pleasure; within that, they climb, or decline,—within that they congeal or melt away; but below their assigned horizon the surges of the cloud sea may not sink, and the floods of the mist lagoon may not be swollen.

That is the first idea you have to get well into your minds concerning the abodes of this visible vapour; next, you have
to consider the manner of its visibility. Is it, you have to ask, with cloud vapour, as with most other things, that they are seen when they are there, and not seen when they are not there? or has cloud vapour so much of the ghost in it, that it can be visible or invisible as it likes, and may perhaps be all unpleasantly and malignantly there, just as much when we don’t see it, as when we do? To which I answer, comfortably and generally, that, on the whole, a cloud is where you see it, and isn’t where you don’t; that, when there’s an evident and honest thunder-cloud in the north-east, you needn’t suppose there’s a surreptitious and slinking one in the north-west;—when there’s a visible fog at Bermondsey, it doesn’t follow there’s a spiritual one, more than usual, at the West End: and when you get up to the clouds, and can walk into them or out of them, as you like, you find when you’re in them they wet your whiskers, or take out your curls, and when you’re out of them, they don’t; and therefore you may with probability assume—not with certainty, observe, but with probability—that there’s more water in the air where it damps your curls than where it doesn’t. If it gets much denser than that, it will begin to rain; and then you may assert, certainly with safety, that there is a shower in one place, and not in another; and not allow the scientific people to tell you that the rain is everywhere, but palpable in Tooley Street, and im-palpable in Grosvenor Square.

That, I say, is broadly and comfortably so on the whole,—and yet with this kind of qualification and farther condition in the matter. If you watch the steam coming strongly out of an engine-funnel,—at the top of the funnel it is transparent,—you can’t see it, though it is more densely and intensely there than anywhere else. Six inches out of the funnel it becomes snow-white,—you see it, and you see it, observe, exactly where it is,—it is then a real and proper cloud. Twenty yards off the funnel it scatters and melts away; a little of it sprinkles you with rain if you are underneath it, but the rest disappears; yet it is still there;—the surrounding air does not absorb it all into space in a moment; there is a gradually diffusing current of invisible moisture at the end of the visible stream—an in-
visible, yet quite substantial, vapour; but not, according to our definition, a cloud, for a cloud is vapour visible.

Then the next bit of the question, of course, is, What makes the vapour visible, when it is so? Why is the compressed steam transparent, the loose steam white, the dissolved steam transparent again?

The scientific people tell you that the vapour becomes visible, and chilled, as it expands. Many thanks to them; but can they show us any reason why particles of water should be more opaque when they are separated than when they are close together, or give us any idea of the difference of the state of a particle of water, which won't sink in the air, from that of one that won't rise in it?"

And here I must parenthetically give you a little word of, I will venture to say, extremely useful, advice about scientific people in general. Their first business is, of course, to tell you things that are so, and do happen,—as that, if you warm water, it will boil; if you cool it, it will freeze; and if you put a candle to a cask of gunpowder, it will blow you up. Their second, and far more important business, is to tell you what you had best do under the circumstances,—put the kettle on in time for tea; powder your ice and salt, if you have a mind for ices; and obviate the chance of explosion by not making the gunpowder. But if, beyond this safe and beneficial business, they ever try to explain anything to you, you may be confident of one of two things,—either that they know nothing (to speak of) about it, or that they have only seen one side of it—and not only haven't seen, but usually have no mind to see, the other. When, for instance, Professor Tyndall explains the twisted beds of the Jungfrau to you by intimating that the Matterhorn is growing flat;¹⁰ or the clouds on the lee side of the Matterhorn by the wind's rubbing against the windward side of it,¹¹—you may be pretty sure the scientific people don't know much (to speak of) yet, either about rock-beds, or cloud-beds. And even if the explanation, so to call it, be sound on one side, windward or lee, you may, as I said, be nearly certain it won't do on the other. Take the very top and centre of scientific interpretation by the greatest
of its masters: Newton explained to you—or at least was once supposed to have explained—why an apple fell; but he never thought of explaining the exactly correlative, but infinitely more difficult question, how the apple got up there!

You will not, therefore, so please you, expect me to explain anything to you,—I have come solely and simply to put before you a few facts, which you can't see by candlelight, or in railroad tunnels, but which are making themselves now so very distinctly felt as well as seen, that you may perhaps have to roof, if not wall, half London afresh before we are many years older.

I go back to my point—the way in which clouds, as a matter of fact, become visible. I have defined the floating or sky cloud, and defined the falling, or earth cloud. But there's a sort of thing between the two, which needs a third definition: namely, Mist. In the 22nd page of his 'Glaciers of the Alps,' Professor Tyndall says that "the marvellous blueness of the sky in the earlier part of the day indicated that the air was charged, almost to saturation, with transparent aqueous vapour." Well, in certain weather that is true. You all know the peculiar clearness which precedes rain,—when the distant hills are looking nigh. I take it on trust from the scientific people that there is then a quantity—almost to saturation—of aqueous vapour in the air, but it is aqueous vapour in a state which makes the air more transparent than it would be without it. What state of aqueous molecule is that, absolutely unreflective of light—perfectly transmissive of light, and showing at once the colour of blue water and blue air on the distant hills?

I put the question—and pass round to the other side. Such a clearness, though a certain forerunner of rain, is not always its forerunner. Far the contrary. Thick air is a much more frequent forerunner of rain than clear air. In cool weather, you will often get the transparent prophecy: but in hot weather, or in certain not hitherto defined states of atmosphere, the forerunner of rain is mist. In a general way, after you have had two or three days of rain, the air and sky are healthily clear, and the sun bright. If it is hot also, the
next day is a little mistier—the next misty and sultry,—and
the next and the next, getting thicker and thicker,—end in
another storm, or period of rain.

I suppose the thick air, as well as the transparent, is in both
cases saturated with aqueous vapour;—but also in both, ob-
serve, vapour that floats everywhere, as if you mixed mud with
the sea; and it takes no shape anywhere: you may have it with
calm, or with wind, it makes no difference to it. You have a
nasty haze with a bitter east wind, or a nasty haze with not a
leaf stirring, and you may have the clear blue vapour with a
fresh rainy breeze, or the clear vapour as still as the sky
above. What difference is there between these aqueous mole-
cules that are clear, and those that are muddy, these that must
sink or rise, and those that must stay where they are, these
that have form and stature, that are bellied like whales and
backed like weasels, and those that have neither backs nor
fronts, nor feet nor faces, but are a mist—and no more—over
two or three thousand square miles?

I again leave the questions with you, and pass on.

Hitherto I have spoken of all aqueous vapour as if it were
either transparent or white—visible by becoming opaque like
snow, but not by any accession of colour. But even those of
us who are least observant of skies, know that, irrespective of
all supervening colours from the sun, there are white clouds,
brown clouds, grey clouds, and black clouds. Are these in-
deed—what they appear to be—entirely distinct monastic
disciplines of cloud; Black Friars, and White Friars, and
Friars of Orders Grey? Or is it only their various near-
ness to us, their denseness, and the failing of the light
upon them, that makes some clouds look black and others
snowy?

I can only give you qualified and cautious answer. There
are, by differences in their own character, Dominican clouds,
and there are Franciscan;—there are the Black Hussars of
the Bandiera della Morte, and there are the Scots Greys
whose horses can run upon the rock. But if you ask me, as I
would have you ask me, why argent and why sable, how bap-
tized in white like a bride or a novice, and how hooded with
blackness like a Judge of the Vehmgericht Tribunal,—I leave these questions with you, and pass on.

Admitting degrees of darkness, we have next to ask what colour from sunshine can the white cloud receive, and what the black?

You won't expect me to tell you all that, or even the little that is accurately known about that, in a quarter of an hour; yet note these main facts on the matter.

On any pure white, and practically opaque, cloud, or thing like a cloud, as an Alp, or Milan Cathedral, you can have cast by rising or setting sunlight, any tints of amber, orange, or moderately deep rose—you can't have lemon yellows, or any kind of green except in negative hue by opposition; and though by storm-light you may sometimes get the reds cast very deep, beyond a certain limit you cannot go,—the Alps are never vermilion colour, nor flamingo colour, nor canary colour; nor did you ever see a full scarlet cumulus of thunder-cloud.

On opaque white vapour, then, remember, you can get a glow or a blush of colour, never a flame of it.

But when the cloud is transparent as well as pure, and can be filled with light through all the body of it, you then can have by the light reflected from its atoms any force conceivable by human mind of the entire group of the golden and ruby colours, from intensely burnished gold colour, through a scarlet for whose brightness there are no words, into any depth and any hue of Tyrian crimson and Byzantine purple. These with full blue breathed between them at the zenith, and green blue nearer the horizon, form the scales and chords of colour possible to the morning and evening sky in pure and fine weather; the keynote of the opposition being vermilion against green blue, both of equal tone, and at such a height and acme of brilliancy that you cannot see the line where their edges pass into each other.

No colours that can be fixed in earth can ever represent to you the lustre of these cloudy ones. But the actual tints may be shown you in a lower key, and to a certain extent their power and relation to each other.
I have painted the diagram here shown you with colours prepared for me lately by Messrs. Newman, which I find brilliant to the height that pigments can be; and the ready kindness of Mr. Wilson Barrett enables me to show you their effect by a white light as pure as that of the day. The diagram is enlarged from my careful sketch of the sunset of 1st October, 1868, at Abbeville, which was a beautiful example of what, in fine weather about to pass into storm, a sunset could then be, in the districts of Kent and Picardy unaffected by smoke. In reality, the ruby and vermilion clouds were, by myriads, more numerous than I have had time to paint: but the general character of their grouping is well enough expressed. All the illumined clouds are high in the air, and nearly motionless; beneath them, electric storm-cloud rises in a threatening cumulus on the right, and drifts in dark flakes across the horizon, casting from its broken masses radiating shadows on the upper clouds. These shadows are traced, in the first place by making the misty blue of the open sky more transparent, and therefore darker; and secondly, by entirely intercepting the sunbeams on the bars of cloud, which, within the shadowed spaces, show dark on the blue instead of light.

But, mind, all that is done by reflected light—and in that light you never get a green ray from the reflecting cloud; there is no such thing in nature as a green lighted cloud relieved from a red sky,—the cloud is always red, and the sky green, and green, observe, by transmitted, not reflected light.

But now note, there is another kind of cloud, pure white, and exquisitely delicate; which acts not by reflecting, nor by refracting, but, as it is now called, diffraacting, the sun's rays. The particles of this cloud are said—with what truth I know not—to send the sunbeams round them instead of through them; somehow or other, at any rate, they resolve them into their prismatic elements; and then you have literally a kaleidoscope in the sky, with every colour of the prism in absolute purity; but above all in force, now, the ruby red and the green,—with purple, and violet-blue, in a virtual equality, more definite than that of the rainbow. The red in the rain-
bow is mostly brick red, the violet, though beautiful, often lost at the edge; but in the prismatic cloud the violet, the green, and the ruby are all more lovely than in any precious stones, and they are varied as in a bird’s breast, changing their places, depths, and extent at every instant.

The main cause of this change being, that the prismatic cloud itself is always in rapid, and generally in fluctuating motion. “A light veil of clouds had drawn itself,” says Professor Tyndall, in describing his solitary ascent of Monte Rosa, “between me and the sun, and this was flooded with the most brilliant dyes. Orange, red, green, blue—all the hues produced by diffraction—were exhibited in the utmost splendour.

“Three times during my ascent (the short ascent of the last peak) similar veils drew themselves across the sun, and at each passage the splendid phenomena were renewed. There seemed a tendency to form circular zones of colour round the sun; but the clouds were not sufficiently uniform to permit of this, and they were consequently broken into spaces, each steeped with the colour due to the condition of the cloud at the place.”

Three times, you observe, the veil passed, and three times another came, or the first faded and another formed; and so it is always, as far as I have registered prismatic cloud: and the most beautiful colours I ever saw were on those that flew fastest.

This second diagram is enlarged admirably by Mr. Arthur Severn from my sketch of the sky in the afternoon of the 6th of August, 1880, at Brantwood, two hours before sunset. You are looking west by north, straight towards the sun, and nearly straight towards the wind. From the west the wind blows fiercely towards you out of the blue sky. Under the blue space is a flattened dome of earth-cloud clinging to, and altogether masquing the form of, the mountain, known as the Old Man of Coniston.

The top of that dome of cloud is two thousand eight hundred feet above the sea, the mountain two thousand six hundred, the cloud lying two hundred feet deep on it. Behind it, westward and seaward, all’s clear; but when the
wind out of that blue clearness comes over the ridge of the earth-cloud, at that moment and that line, its own moisture congeals into these white—I believe, ice-clouds; threads, and meshes, and tresses, and tapestries, flying, failing, melting, reappearing; spinning and unspinning themselves, coiling and uncoiling, winding and unwinding, faster than eye or thought can follow: and through all their dazzling maze of frosty filaments shines a painted window in palpitation; its pulses of colour interwoven in motion, intermittent in fire,—emerald and ruby and pale purple and violet melting into a blue that is not of the sky, but of the sunbeam;—purer than the crystal, softer than the rainbow, and brighter than the snow.

But you must please here observe that while my first diagram did with some adequateness represent to you the colour facts there spoken of, the present diagram can only explain, not reproduce them. The bright reflected colours of clouds can be represented in painting, because they are relieved against darker colours, or, in many cases, are dark colours, the vermilion and ruby clouds being often much darker than the green or blue sky beyond them. But in the case of the phenomena now under your attention, the colours are all brighter than pure white,—the entire body of the cloud in which they show themselves being white by transmitted light, so that I can only show you what the colours are, and where they are,—but leaving them dark on the white ground. Only artificial, and very high illumination would give the real effect of them,—painting cannot.

Enough, however, is here done to fix in your minds the distinction between those two species of cloud,—one, either stationary, or slow in motion, reflecting unresolved light; the other, fast-flying, and transmitting resolved light. What difference is there in the nature of the atoms, between those two kinds of clouds? I leave the question with you for to-day, merely hinting to you my suspicion that the prismatic cloud is of finely-comminuted water, or ice, instead of aqueous vapour; but the only clue I have to this idea is in the purity of the rainbow formed in frost mist, lying close to water surfaces.
Such mist, however, only becomes prismatic as common rain does, when the sun is behind the spectator, while prismatic clouds are, on the contrary, always between the spectator and the sun.

The main reason, however, why I can tell you nothing yet about these colours of diffraction or interference, is that, whenever I try to find anything firm for you to depend on, I am stopped by the quite frightful inaccuracy of the scientific people's terms, which is the consequence of their always trying to write mixed Latin and English, so losing the grace of the one and the sense of the other. And, in this point of the diffraction of light I am stopped dead by their confusion of idea also, in using the words undulation and vibration as synonyms. "When," says Professor Tyndall, "you are told that the atoms of the sun vibrate at different rates, and produce waves of different sizes,—your experience of water-waves will enable you to form a tolerably clear notion of what is meant."

'Tolerably clear'!—your toleration must be considerable, then. Do you suppose a water-wave is like a harp-string? Vibration is the movement of a body in a state of tension,—undulation, that of a body absolutely lax. In vibration, not an atom of the body changes its place in relation to another,—in undulation, not an atom of the body remains in the same place with regard to another. In vibration, every particle of the body ignores gravitation, or defies it,—in undulation, every particle of the body is slavishly submitted to it. In undulation, not one wave is like another; in vibration, every pulse is alike. And of undulation itself, there are all manner of visible conditions, which are not true conditions. A flag ripples in the wind, but it does not undulate as the sea does,—for in the sea, the water is taken from the trough to put on to the ridge, but in the flag, though the motion is progressive, the bits of bunting keep their place. You see a field of corn undulating as if it was water,—it is different from the flag, for the ears of corn bow out of their places and return to them,—and yet, it is no more like the undulation of the sea, than the shaking of an aspen leaf in a storm, or the lowering of the lances in a battle.
And the best of the jest is, that after mixing up these two notions in their heads inextricably, the scientific people apply both when neither will fit; and when all undulation known to us presumes weight, and all vibration, impact,—the undulating theory of light is proposed to you concerning a medium which you can neither weigh nor touch!

All *communicable* vibration—of course I mean—and in dead matter: *You* may fall a shivering on your own account, if you like, but *you* can't get a billiard-ball to fall a shivering on *its* own account.

Yet observe that in thus signalizing the inaccuracy of the terms in which they are taught, I neither accept, nor assail, the conclusions respecting the oscillatory states of light, heat, and sound, which have resulted from the postulate of an elastic, though impalpable and imponderable ether, possessing the elasticity of air. This only I desire you to mark with attention,—that both light and sound are *sensations* of the animal frame, which remain, and must remain, wholly inexplicable, whatever manner of force, pulse, or palpitation may be instrumental in producing them: nor does any such force *become* light or sound, except in its rencontre with an animal. The leaf hears no murmur in the wind to which it wavers on the branches, nor can the clay discern the vibration by which it is thrilled into a ruby. The Eye and the Ear are the creators alike of the ray and the tone; and the conclusion follows logically from the right conception of their living power,—"He that planted the Ear, shall He not hear? He that formed the Eye, shall not He see?"

For security, therefore, and simplicity of definition of light, you will find no possibility of advancing beyond Plato's "the power that through the eye manifests colour," but on that definition, you will find, alike by Plato and all great subsequent thinkers, a moral Science of Light founded, far and away more important to you than all the physical laws ever learned by vitreous revelation. Concerning which I will refer you to the sixth lecture which I gave at Oxford in 1872, on the relation of Art to the Science of Light ('Eagle's Nest,' p. 75), reading now only the sentence introducing its subject:
—"The 'Fiat lux' of creation is therefore, in the deep sense, 'fiat anima,' and is as much, when you understand it, the ordering of Intelligence as the ordering of Vision. It is the appointment of change of what had been else only a mechanical effluence from things unseen to things unseeing,—from Stars, that did not shine, to Earth, that did not perceive,—the change, I say, of that blind vibration into the glory of the Sun and Moon for human eyes: so making possible the communication out of the unfathomable truth of that portion of truth which is good for us, and animating to us, and is set to rule over the day and over the night of our joy and our sorrow."

Returning now to our subject at the point from which I permitted myself, I trust not without your pardon, to diverge; you may incidentally, but carefully, observe, that the effect of such a sky as that represented in the second diagram, so far as it can be abstracted or conveyed by painting at all, implies the total absence of any pervading warmth of tint, such as artists usually call 'tone.' Every tint must be the purest possible, and above all the white. Partly, lest you should think, from my treatment of these two phases of effect, that I am insensible to the quality of tone,—and partly to complete the representation of states of weather undefiled by plague-cloud, yet capable of the most solemn dignity in saddening colour, I show you, Diagram 3, the record of an autumn twilight of the year 1845,—sketched while I was changing horses between Verona and Brescia. The distant sky in this drawing is in the glowing calm which is always taken by the great Italian painters for the background of their sacred pictures; a broad field of cloud is advancing upon it overhead, and meeting others enlarging in the distance; these are rain-clouds, which will certainly close over the clear sky, and bring on rain before midnight: but there is no power in them to pollute the sky beyond and above them: they do not darken the air, nor defile it, nor in any way mingle with it; their edges are burnished by the sun like the edges of golden shields, and their advancing march is as deliberate and majestic as the fading of the twilight itself into a darkness full of stars.

These three instances are all I have time to give of the
former conditions of serene weather, and of non-electric rain-cloud. But I must yet, to complete the sequence of my subject, show you one example of a good, old-fashioned, healthy, and mighty, storm.

In Diagram 4, Mr. Severn has beautifully enlarged my sketch of a July thunder-cloud of the year 1858, on the Alps of the Val d’Aosta, seen from Turin, that is to say, some twenty-five or thirty miles distant. You see that no mistake is possible here about what is good weather and what bad, or which is cloud and which is sky; but I show you this sketch especially to give you the scale of heights for such clouds in the atmosphere. These thunder cumuli entirely hide the higher Alps. It does not, however, follow that they have buried them, for most of their own aspect of height is owing to the approach of their nearer masses; but at all events, you have cumulus there rising from its base, at about three thousand feet above the plain, to a good ten thousand in the air.

White cirri, in reality parallel, but by perspective radiating, catch the sunshine above, at a height of from fifteen to twenty thousand feet; but the storm on the mountains gathers itself into a full mile’s depth of massy cloud,—every fold of it involved with thunder, but every form of it, every action, every colour, magnificent:—doing its mighty work in its own hour and its own dominion, nor snatching from you for an instant, nor defiling with a stain, the abiding blue of the transcendent sky, or the fretted silver of its passionless clouds.

We so rarely now see cumulus cloud of this grand kind, that I will yet delay you by reading the description of its nearer aspect, in the 113th page of ‘Eagle’s Nest.’

“The rain which flooded our fields the Sunday before last, was followed, as you will remember, by bright days, of which Tuesday the 20th (February, 1872) was, in London, notable for the splendour, towards the afternoon, of its white cumulus clouds. There has been so much black east wind lately, and so much fog and artificial gloom, besides, that I find it is actually some two years since I last saw a noble cumulus cloud under full light. I chanced to be standing under the Victoria Tower at Westminster, when the largest mass of
them floated past, that day, from the north-west; and I was more impressed then ever yet by the awfulness of the cloud-form, and its unaccountableness, in the present state of our knowledge. The Victoria Tower, seen against it, had no magnitude: it was like looking at Mont Blanc over a lamp-post. The domes of cloud-snow were heaped as definitely: their broken flanks were as grey and firm as rocks, and the whole mountain, of a compass and height in heaven which only became more and more inconceivable as the eye strove to ascend it, was passing behind the tower with a steady march, whose swiftness must in reality have been that of a tempest: yet, along all the ravines of vapour, precipice kept pace with precipice, and not one thrust another.

“What is it that hews them out? Why is the blue sky pure there,—the cloud solid here; and edged like marble: and why does the state of the blue sky pass into the state of cloud, in that calm advance?

“It is true that you can more or less imitate the forms of cloud with explosive vapour or steam; but the steam melts instantly, and the explosive vapour dissipates itself. The cloud, of perfect form, proceeds unchanged. It is not an explosion, but an enduring and advancing presence. The more you think of it, the less explicable it will become to you.”

Thus far then of clouds that were once familiar; now at last, entering on my immediate subject, I shall best introduce it to you by reading an entry in my diary which gives progressive description of the most gentle aspect of the modern plague-cloud.

“Bolton Abbey, 4th July, 1875.

“Half-past eight, morning; the first bright morning for the last fortnight.

“At half-past five it was entirely clear, and entirely calm; the moorlands glowing, and the Wharfe glittering in sacred light, and even the thin-stemmed field-flowers quiet as stars, in the peace in which—

‘All trees and simples, great and small,
That balmy leaf do bear,
Than they were painted on a wall,
No more do move, nor steir.’
But, an hour ago, the leaves at my window first shook slightly. They are now trembling *continuously*, as those of all the trees, under a gradually rising wind, of which the tremulous action scarcely permits the direction to be defined,—but which falls and returns in fits of varying force, like those which precede a thunderstorm,—never wholly ceasing; the direction of its upper current is shown by a few ragged white clouds, moving fast from the north, which rose, at the time of the first leaf-shaking, behind the edge of the moors in the east.

"This wind is the plague-wind of the eighth decade of years in the nineteenth century; a period which will assuredly be recognised in future meteorological history as one of phenomena hitherto unrecorded in the courses of nature, and characterized pre-eminently by the almost ceaseless action of this calamitous wind. While I have been writing these sentences, the white clouds above specified have increased to twice the size they had when I began to write; and in about two hours from this time—say by eleven o'clock, if the wind continue,—the whole sky will be dark with them, as it was yesterday, and has been through prolonged periods during the last five years. I first noticed the definite character of this wind, and of the clouds it brings with it, in the year 1871, describing it then in the July number of 'Fors Clavigera;' but little, at that time, apprehending either its universality, or any probability of its annual continuance. I am able now to state positively that its range of power extends from the North of England to Sicily; and that it blows more or less during the whole of the year, except the early autumn. This autumnal abdication is, I hope, beginning: it blew but feebly yesterday, though without intermission, from the north, making every shady place cold, while the sun was burning; its effect on the sky being only to dim the blue of it between masses of ragged cumulus. To-day it has entirely fallen; and there seems hope of bright weather, the first for me since the end of May, when I had two fine days at Aylesbury; the third, May 28th, being black again from morning to evening. There seems to be some reference to the blackness caused by the prevalence of this wind in the old French name of Bise, 'grey wind'; and, indeed, one of the darkest and bitterest days of it I ever saw was at Vevay in 1872."

The first time I recognised the clouds brought by the plague-wind as distinct in character was in walking back from
Oxford, after a hard day's work, to Abingdon, in the early spring of 1871: it would take too long to give you any account this evening of the particulars which drew my attention to them; but during the following months I had too frequent opportunities of verifying my first thoughts of them, and on the first of July in that year wrote the description of them which begins the 'Fors Clavigera' of August, thus:

"It is the first of July, and I sit down to write by the dismallest light that ever yet I wrote by; namely, the light of this mid-summer morning, in mid-England (Matlock, Derbyshire), in the year 1871.

"For the sky is covered with grey clouds;—not rain-cloud, but a dry black veil, which no ray of sunshine can pierce; partly diffused in mist, feeble mist, enough to make distant objects unintelligible, yet without any substance, or wreathing, or colour of its own. And everywhere the leaves of the trees are shaking fitfully, as they do before a thunderstorm; only not violently, but enough to show the passing to and fro of a strange, bitter, blighting wind. Dismal enough, had it been the first morning of its kind that summer had sent. But during all this spring, in London, and at Oxford, through meagre March, through changelessly sullen April, through despondent May, and darkened June, morning after morning has come grey-shrouded thus.

"And it is a new thing to me, and a very dreadful one. I am fifty years old, and more; and since I was five, have gleaned the best hours of my life in the sun of spring and summer mornings; and I never saw such as these, till now.

"And the scientific men are busy as ants, examining the sun, and the moon, and the seven stars, and can tell me all about them, I believe, by this time; and how they move, and what they are made of.

"And I do not care, for my part, two copper spangles how they move, nor what they are made of. I can't move them any other way than they go, nor make them of anything else, better than they are made. But I would care much and give
much, if I could be told where this bitter wind comes from, and what it is made of.

"For, perhaps, with forethought, and fine laboratory science, one might make it of something else.

"It looks partly as if it were made of poisonous smoke; very possibly it may be: there are at least two hundred furnace chimneys in a square of two miles on every side of me. But mere smoke would not blow to and fro in that wild way. It looks more to me as if it were made of dead men's souls—such of them as are not gone yet where they have to go, and may be flitting hither and thither, doubting, themselves, of the fittest place for them.

"You know, if there are such things as souls, and if ever any of them haunt places where they have been hurt, there must be many about us, just now, displeased enough!"

The last sentence refers of course to the battles of the Franco-German campaign, which was especially horrible to me, in its digging, as the Germans should have known, a moat flooded with waters of death between the two nations for a century to come.

Since that Midsummer day, my attention, however otherwise occupied, has never relaxed in its record of the phenomena characteristic of the plague-wind; and I now define for you, as briefly as possible, the essential signs of it.

1. It is a wind of darkness,—all the former conditions of tormenting winds, whether from the north or east, were more or less capable of co-existing with sunlight, and often with steady and bright sunlight; but whenever, and wherever the plague-wind blows, be it but for ten minutes, the sky is darkened instantly.

2. It is a malignant quality of wind, unconnected with any one quarter of the compass; it blows indifferently from all, attaching its own bitterness and malice to the worst characters of the proper winds of each quarter. It will blow either with drenching rain, or dry rage, from the south,—with ruinous blasts from the west,—with bitterest chills from the north,—and with venomous blight from the east.

Its own favourite quarter, however, is the south-west, so
that it is distinguished in its malignity equally from the Bise of Provence, which is a north wind always, and from our own old friend, the east.

3. It always blows tremulously, making the leaves of the trees shudder as if they were all aspens, but with a peculiar fitfulness which gives them—and I watch them this moment as I write—an expression of anger as well as of fear and distress. You may see the kind of quivering, and hear the ominous whimpering, in the gusts that precede a great thunder-storm; but plague-wind is more panic-struck, and feverish; and its sound is a hiss instead of a wail.

When I was last at Avallon, in South France, I went to see 'Faust' played at the little country theatre: it was done with scarcely any means of pictorial effect, except a few old curtains, and a blue light or two. But the night on the Brocken was nevertheless extremely appalling to me,—a strange ghastliness being obtained in some of the witch scenes merely by fine management of gesture and drapery; and in the phantom scenes, by the half-palsied, half-furious, faltering or fluttering past of phantoms stumbling as into graves; as if of not only soulless, but senseless, Dead, moving with the very action, the rage, the decrepitude, and the trembling of the plague-wind.

4. Not only tremulous at every moment, it is also intermittent with a rapidity quite unexampled in former weather. There are, indeed, days—and weeks, on which it blows without cessation, and is as inevitable as the Gulf Stream; but also there are days when it is contending with healthy weather, and on such days it will remit for half an hour, and the sun will begin to show itself, and then the wind will come back and cover the whole sky with clouds in ten minutes; and so on, every half-hour, through the whole day; so that it is often impossible to go on with any kind of drawing in colour, the light being never for two seconds the same from morning till evening.

5. It degrades, while it intensifies, ordinary storm; but before I read you any description of its efforts in this kind, I must correct an impression which has got abroad through the papers, that I speak as if the plague-wind blew now always,
and there were no more any natural weather. On the contrary, the winter of 1878–9 was one of the most healthy and lovely I ever saw ice in;—Coniston lake shone under the calm clear frost in one marble field, as strong as the floor of Milan Cathedral, half a mile across and four miles down; and the first entries in my diary which I read you shall be from the 22d to 26th June, 1876, of perfectly lovely and natural weather.

"Sunday, 25th June, 1876.

"Yesterday, an entirely glorious sunset, unmatched in beauty since that at Abbeville,—deep scarlet, and purest rose, on purple grey, in bars; and stationary, plumpy, sweeping filaments above in upper sky, like 'using up the brush,' said Joanie; remaining in glory, every moment best, changing from one good into another, (but only in colour or light—form steady,) for half an hour full, and the clouds afterwards fading into the grey against amber twilight, stationary in the same form for about two hours, at least. The darkening rose tint remained till half-past ten, the grand time being at nine.

"The day had been fine,—exquisite green light on afternoon hills.

"Monday, 26th June, 1876.

"Yesterday an entirely perfect summer light on the Old Man; Lancaster Bay all clear; Ingleborough and the great Pennine fault as on a map. Divine beauty of western colour on thyme and rose,—then twilight of clearest warm amber far into night, of pale amber all night long; hills dark-clear against it.

"And so it continued, only growing more intense in blue and sunlight, all day. After breakfast, I came in from the well under strawberry bed, to say I had never seen anything like it, so pure or intense, in Italy; and so it went glowing on, cloudless, with soft north wind, all day.

"16th July.

"The sunset almost too bright through the blinds for me to read Humboldt at tea by,—finally, new moon like a lime-light, reflected on breeze-struck water; traces, across dark calm, of reflected hills."

These extracts are, I hope, enough to guard you against the absurdity of supposing that it all only means that I am myself soured, or doting, in my old age, and always in an ill humour.
Depend upon it, when old men are worth anything, they are better humoured than young ones: and have learned to see what good there is, and pleasantness, in the world they are likely so soon to have orders to quit.

Now then—take the following sequences of accurate description of thunderstorm, with plague-wind.

"22nd June, 1876.

"Thunderstorm; pitch dark, with no blackness,—but deep, high, filthiness of lurid, yet not sublimely lurid, smoke-cloud; dense manufacturing mist; fearful squalls of shivery wind, making Mr. Severn's sail quiver like a man in a fever fit—all about four, afternoon—but only two or three claps of thunder, and feeble, though near, flashes. I never saw such a dirty, weak, foul storm. It cleared suddenly, after raining all afternoon, at half-past eight to nine, into pure, natural weather,—low rain-clouds on quite clear, green, wet hills.

"Brantwood, 13th August, 1879.

"The most terrific and horrible thunderstorm, this morning, I ever remember. It waked me at six, or a little before—then rolling incessantly, like railway luggage trains, quite ghastly in its mockery of them—the air one loathsome mass of sultry and foul fog, like smoke; scarcely raining at all, but increasing to heavier rollings, with flashes quivering vaguely through all the air, and at last terrific double streams of reddish-violet fire, not forked or zigzag, but rippled rivulets—two at the same instant some twenty to thirty degrees apart, and lasting on the eye at least half a second, with grand artillery-peals following; not rattling crashes, or irregular cracklings, but delivered volleys. It lasted an hour, then passed off, clearing a little, without rain to speak of,—not a glimpse of blue,—and now, half-past seven, seems settling down again into Manchester devil's darkness.

"Quarter to eight, morning.—Thunder returned, all the air collapsed into one black fog, the hills invisible, and scarcely visible the opposite shore; heavy rain in short fits, and frequent, though less formidable, flashes, and shorter thunder. While I have written this sentence the cloud has again dissolved itself, like a nasty solution in a bottle, with miraculous and unnatural rapidity, and the hills are in sight again; a double-forked flash—rippled, I mean, like the others—starts into its frightful ladder of light between me and Wetherlam,
as I raise my eyes. All black above, a rugged spray cloud on the Eaglet. (The 'Eaglet' is my own name for the bold and elevated crag to the west of the little lake above Coniston mines. It had no name among the country people, and is one of the most conspicuous features of the mountain chain, as seen from Brantwood.)

“Half-past eight.—Three times light and three times dark since last I wrote, and the darkness seeming each time as it settles more loathsome, at last stopping my reading in mere blindness. One lurid gleam of white cumulus in upper lead-blue sky, seen for half a minute through the sulphurous chimney-pot vomit of blackguardly cloud beneath, where its rags were thinnest.

“THURSDAY, 22nd Feb., 1883.

“Yesterday a fearfully dark mist all afternoon, with steady, south plague-wind of the bitterest, nastiest, poisonous blight, and fretful flutter. I could scarcely stay in the wood for the horror of it. To-day, really rather bright blue, and bright semi-cumuli, with the frantic Old Man blowing sheaves of lancets and chisels across the lake—not in strength enough, or whirl enough, to raise it in spray, but tracing every squall’s outline in black on the silver grey waves, and whistling meanly, and as if on a flute made of a file.

“SUNDAY, 17th August, 1879.

“Raining in foul drizzle, slow and steady; sky pitch-dark, and I just get a little light by sitting in the bow-window; diabolic clouds over everything: and looking over my kitchen garden yesterday, I found it one miserable mass of weeds gone to seed, the roses in the higher garden putrefied into brown sponges, feeling like dead snails; and the half-ripe strawberries all rotten at the stalks.”

6. And now I come to the most important sign of the plague-wind and the plague-cloud: that in bringing on their peculiar darkness, they blanch the sun instead of reddening it. And here I must note briefly to you the uselessness of observation by instruments, or machines, instead of eyes. In the first year when I had begun to notice the specialty of the plague-wind, I went of course to the Oxford observatory to consult its registrars. They have their anemometer always on the twirl, and can tell you the force, or at least the pace, of a
gale," by day or night. But the anemometer can only record for you how often it has been driven round, not at all whether it went round steadily, or went round trembling. And on that point depends the entire question whether it is a plague breeze or a healthy one: and what's the use of telling you whether the wind's strong or not, when it can't tell you whether it's a strong medicine, or a strong poison?

But again—you have your sun-measure, and can tell exactly at any moment how strong, or how weak, or how wanting, the sun is. But the sun-measurer can't tell you whether the rays are stopped by a dense shallow cloud, or a thin deep one. In healthy weather, the sun is hidden behind a cloud, as it is behind a tree; and, when the cloud is past, it comes out again, as bright as before. But in plague-wind, the sun is choked out of the whole heaven, all day long, by a cloud which may be a thousand miles square and five miles deep.

And yet observe: that thin, scraggy, filthy, mangy, miserable cloud, for all the depth of it, can't turn the sun red, as a good, business-like fog does with a hundred feet or so of itself. By the plague-wind every breath of air you draw is polluted, half round the world; in a London fog the air itself is pure, though you choose to mix up dirt with it, and choke yourself with your own nastiness.

Now I'm going to show you a diagram of a sunset in entirely pure weather, above London smoke. I saw it and sketched it from my old post of observation—the top garret of my father's house at Herne Hill. There, when the wind is south, we are outside of the smoke and above it; and this diagram, admirably enlarged from my own drawing by my, now in all things best aide-de-camp, Mr. Collingwood, shows you an old-fashioned sunset—the sort of thing Turner and I used to have to look at,—(nobody else ever would) constantly. Every sunset and every dawn, in fine weather, had something of the sort to show us. This is one of the last pure sunsets I ever saw, about the year 1876,—and the point I want you to note in it is, that the air being pure, the smoke on the horizon, though at last it hides the sun, yet hides it through gold and vermilion. Now, don't go away fancying there's any exagger-
ation in that study. The *prismatic* colours, I told you, were simply impossible to paint; these, which are transmitted colours, can indeed be suggested, but no more. The brightest pigment we have would look dim beside the truth.

I should have liked to have blotted down for you a bit of plague-cloud to put beside this; but *Heaven* knows, you can see enough of it nowadays without any trouble of mine; and if you want, in a hurry, to see what the sun looks like through it, you've only to throw a bad half-crown into a basin of soap and water.

Blanched Sun,—blighted grass,—blinded man.—If, in conclusion, you ask me for any conceivable cause or meaning of these things—I can tell you none, according to your modern beliefs; but I can tell you what meaning it would have borne to the men of old time. Remember, for the last twenty years, England, and all foreign nations, either tempting her, or following her, have blasphemed the name of God deliberately and openly; and have done iniquity by proclamation, every man doing as much injustice to his brother as it is in his power to do. Of states in such moral gloom every seer of old predicted the physical gloom, saying, "The light shall be darkened in the heavens thereof, and the stars shall withdraw their shining." All Greek, all Christian, all Jewish prophecy insists on the same truth through a thousand myths; but of all the chief, to former thought, was the fable of the Jewish warrior and prophet, for whom the sun hasted not to go down, with which I leave you to compare at leisure the physical result of your own wars and prophecies, as declared by your own elect journal not fourteen days ago,—that the Empire of England, on which formerly the sun never set, has become one on which he never rises.

What is best to be done, do you ask me? The answer is plain. Whether you can affect the signs of the sky or not, you *can* the signs of the times. Whether you can bring the *sun* back or not, you can assuredly bring back your own cheerfulness, and your own honesty. You may not be able to say to the winds, "Peace; be still," but you can cease from the insolence of your own lips, and the troubling of your own
passions. And all that it would be extremely well to do, even though the day were coming when the sun should be as darkness, and the moon as blood. But, the paths of rectitude and piety once regained, who shall say that the promise of old time would not be found to hold for us also?—"Bring ye all the tithes into my storehouse, and prove me now herewith, saith the Lord God, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

LECTURE II.

MARCH 11TH, 1884.

It was impossible for me, this spring, to prepare, as I wished to have done, two lectures for the London Institution: but finding its members more interested in the subject chosen than I had anticipated, I enlarged my lecture at its second reading by some explanations and parentheses, partly represented, and partly farther developed, in the following notes; which led me on, however, as I arranged them, into branches of the subject untouched in the former lecture, and it seems to me of no inferior interest.

1. The vapour over the pool of Anger in the 'Inferno,' the clogging stench which rises from Caina, and the fog of the circle of Anger in the 'Purgatorio' resemble, indeed, the cloud of the Plague-wind very closely,—but are conceived only as supernatural. The reader will no doubt observe, throughout the following lecture, my own habit of speaking of beautiful things as 'natural,' and of ugly ones as 'unnatural.' In the conception of recent philosophy, the world is one Kosmos in which diphtheria is held to be as natural as song, and cholera as digestion. To my own mind, and the more distinctly the more I see, know, and feel, the Earth, as prepared for the abode of man, appears distinctly ruled by agencies of health and disease, of which the first may be aided by his industry, prudence, and piety; while the destroying laws are allowed to
prevail against him, in the degree in which he allows himself in idleness, folly, and vice. Had the point been distinctly indicated where the degrees of adversity necessary for his discipline pass into those intended for his punishment, the world would have been put under a manifest theocracy; but the declaration of the principle is at least distinct enough to have convinced all sensitive and earnest persons, from the beginning of speculation in the eyes and mind of Man: and it has been put in my power by one of the singular chances which have always helped me in my work when it was in the right direction, to present to the University of Oxford the most distinct expression of this first principle of mediæval Theology which, so far as I know, exists in fifteenth-century art. It is one of the drawings of the Florentine book which I bought for a thousand pounds, against the British Museum, some ten or twelve years since; being a compendium of classic and mediæval religious symbolism. In the two pages of it, forming one picture, given to Oxford, the delivery of the Law on Sinai is represented on the left hand, (contrary to the Scriptural narrative, but in deeper expression of the benediction of the Sacred Law to all nations,) as in the midst of bright and calm light, the figure of the Deity being supported by luminous and level clouds, and attended by happy angels: while opposite, on the right hand, the worship of the Golden Calf is symbolized by a single decorated pillar, with the calf on its summit, surrounded by the clouds and darkness of a furious storm, issuing from the mouths of fiends;—uprooting the trees, and throwing down the rocks, above the broken tables of the Law, of which the fragments lie in the foreground.

2. These conditions are mainly in the arrangement of the lower rain-clouds in flakes thin and detached enough to be illuminated by early or late sunbeams: their textures are then more softly blended than those of the upper cirri, and have the qualities of painted, instead of burnished or inflamed, colour.

They were thus described in the 4th chapter of the 7th part of 'Modern Painters':—

"Often in our English mornings, the rain-clouds in the
dawn form soft level fields, which melt imperceptibly into the blue; or when of less extent, gather into apparent bars, crossing the sheets of broader cloud above; and all these bathed throughout in an unspeakable light of pure rose-colour, and purple, and amber, and blue, not shining, but misty-soft, the barred masses, when seen nearer, found to be woven in tresses of cloud, like floss silk, looking as if each knot were a little swathe or sheaf of lighted rain.

No clouds form such skies, none are so tender, various, imitable; Turner himself never caught them. Correggio, putting out his whole strength, could have painted them,—no other man."

3. I did not, in writing this sentence, forget Mr. Gladstone's finely scholastic enthusiasm for Homer; nor Mr. Newton's for Athenian—(I wish it had not been also for Halicarnassian) sculpture. But Byron loved Greece herself—through her death—and to his own; while the subsequent refusal of England to give Greece one of our own princes for a king, has always been held by me the most ignoble, cowardly, and lamentable, of all our base commercial impulses.

4. 'Deepening' clouds.—Byron never uses an epithet vainly,—he is the most accurate, and therefore the most powerful, of all modern describers. The deepening of the cloud is essentially necessary to the redness of the orb. Ordinary observers are continually unaware of this fact, and imagine that a red sun can be darker than the sky round it! Thus Mr. Gould, though a professed naturalist, and passing most of his life in the open air, over and over again, in his 'British Birds,' draws the setting sun dark on the sky!

5. 'Like the blood he predicts.'—The astrological power of the planet Mars was of course ascribed to it in the same connection with its red colour. The reader may be interested to see the notice, in 'Modern Painters,' of Turner's constant use of the same symbol; partly an expression of his own personal feeling, partly the employment of a symbolic language known to all careful readers of solar and stellar tradition.

"He was very definitely in the habit of indicating the association of any subject with circumstances of death, especially
the death of multitudes, by placing it under one of his most deeply crimsoned sunset skies.

The colour of blood is thus plainly taken for the leading tone in the storm-clouds above the 'Slave-ship.' It occurs with similar distinctness in the much earlier picture of 'Ulysses and Polyphemus,' in that of 'Napoleon at St. Helena,' and, subdued by softer hues, in the 'Old Temeraire.'

The sky of this Goldau is, in its scarlet and crimson, the deepest in tone of all that I know in Turner's drawings.

Another feeling, traceable in several of his former works, is an acute sense of the contrast between the careless interests and idle pleasures of daily life, and the state of those whose time for labour, or knowledge, or delight, is passed for ever. There is evidence of this feeling in the introduction of the boys at play in the churchyard of Kirkby Lonsdale, and the boy climbing for his kite among the thickets above the little mountain churchyard of Brignall-banks; it is in the same tone of thought that he has placed here the two figures fishing, leaning against these shattered flanks of rock,—the sepulchral stones of the great mountain Field of Death."

6. 'Thy lore unto calamity.'—It is, I believe, recognised by all who have in any degree become interested in the traditions of Chaldean astrology, that its warnings were distinct,—its promises deceitful. Horace thus warns Leuconoe against reading the Babylonian numbers to learn the time of her death,—he does not imply their promise of previous happiness; and the continually deceptive character of the Delphic oracle itself, tempted always rather to fatal than to fortunate conduct, unless the inquirer were more than wise in his reading. Byron gathers into the bitter question all the sorrow of former superstition, while in the lines italicized, just above, he sums in the briefest and plainest English, all that we yet know, or may wisely think, about the Sun. It is the 'Burn-ing oracle.' (other oracles there are by sound, or feeling, but this by fire) of all that live; the only means of our accurate knowledge of the things round us, and that affect our lives: it is the fountain of all life,—Byron does not say the origin;—the origin of life would be the origin of the sun itself; but it is
the visible source of vital energy, as the spring is of a stream, though the origin is the sea. "And symbol of Him who bestows it."—This the sun has always been, to every one who believes there is a bestower; and a symbol so perfect and beautiful that it may also be thought of as partly an apocalypse.

7. 'More beautiful in that variety.'—This line, with the one italicized beneath, expresses in Myrrha's mind, the feeling which I said, in the outset, every thoughtful watcher of heaven necessarily had in those old days; whereas now, the variety is for the most part, only in modes of disagreeableness; and the vapour, instead of adding light to the unclouded sky, takes away the aspect and destroys the functions of sky altogether.

8. 'Steam out of an engine funnel.'—Compare the sixth paragraph of Professor Tyndall's 'Forms of Water,' and the following seventh one, in which the phenomenon of transparent steam becoming opaque is thus explained. "Every bit of steam shrinks, when chilled, to a much more minute particle of water. The liquid particles thus produced form a kind of water dust of exceeding fineness, which floats in the air, and is called a cloud."

But the author does not tell us, in the first place, what is the shape or nature of a 'bit of steam,' nor, in the second place, how the contraction of the individual bits of steam is effected without any diminution of the whole mass of them, but on the contrary, during its steady expansion; in the third place he assumes that the particles of water dust are solid, not vesicular, which is not yet ascertained; in the fourth place, he does not tell us how their number and size are related to the quantity of invisible moisture in the air; in the fifth place, he does not tell us how cool invisible moisture differs from hot invisible moisture; and in the sixth, he does not tell us why the cool visible moisture stays while the hot visible moisture melts away. So much for the present state of 'scientific' information, or at least communicativeness, on the first and simplest conditions of the problem before us!

In its wider range that problem embraces the total mystery
of volatile power in substance; and of the visible states consequent on sudden—and presumably, therefore, imperfect—vaporization; as the smoke of frankincense, or the sacred fume of modern devotion which now fills the inhabited world, as that of the rose and violet its deserts. What,—it would be useful to know, is the actual bulk of an atom of orange perfume?—what of one of vaporized tobacco, or gunpowder?—and where do these artificial vapours fall back in beneficent rain? or through what areas of atmosphere exist, as invisible, though perhaps not innocuous, cloud?

All these questions were put, closely and precisely, four-and-twenty years ago, in the 1st chapter of the 7th part of 'Modern Painters,' paragraphs 4 to 9, of which I can here allow space only for the last, which expresses the final difficulties of the matter better than anything said in this lecture:—

"But farther: these questions of volatility, and visibility, and hue, are all complicated with those of shape. How is a cloud outlined? Granted whatever you choose to ask, concerning its material, or its aspect, its loftiness and luminousness,—how of its limitation? What hews it into a heap, or spins it into a web? Cold is usually shapeless, I suppose, extending over large spaces equally, or with gradual diminution. You cannot have in the open air, angles, and wedges, and coils, and cliffs, of cold. Yet the vapour stops suddenly, sharp and steep as a rock, or thrusts itself across the gates of heaven in likeness of a brazen bar; or braids itself in and out, and across and across, like a tissue of tapestry; or falls into ripples, like sand; or into waving shreds and tongues, as fire. On what anvils and wheels is the vapour pointed, twisted, hammered, whirled, as the potter's clay? By what hands is the incense of the sea built up into domes of marble?"

9. The opposed conditions of the higher and lower orders of cloud, with the balanced intermediate one, are beautifully seen on mountain summits of rock or earth. On snowy ones they are far more complex: but on rock summits there are three distinct forms of attached cloud in serene weather; the first that of cloud veil laid over them, and falling in folds
through their ravines, (the obliquely descending clouds of the entering chorus in Aristophanes); secondly, the ascending cloud, which develops itself loosely and independently as it rises, and does not attach itself to the hillside, while the falling veil cloud clings to it close all the way down;—and lastly the throned cloud, which rests indeed on the mountain summit, with its base, but rises high above into the sky, continually changing its outlines, but holding its seat perhaps all day long.

These three forms of cloud belong exclusively to calm weather; attached drift cloud, (see Note 11) can only be formed in the wind.

10. 'Glaciers of the Alps,' page 10.—“Let a pound weight be placed upon a cube of granite” (size of supposed cube not mentioned), “the cube is flattened, though in an infinitesimal degree. Let the weight be removed, the cube remains a little flattened. Let us call the cube thus flattened No. 1. Starting with No. 1 as a new mass, let the pound weight be laid upon it. We have a more flattened mass, No. 2. . . . Apply this to squeezed rocks, to those, for example, which form the base of an obelisk like the Matterhorn,—the conclusion seems inevitable that the mountain is sinking by its own weight, etc., etc. Similarly the Nelson statue must be gradually flattening the Nelson column,—and in time Cleopatra's needle will be as flat as her pincushion.

11. 'Glaciers of the Alps,' page 146.—“The sun was near the western horizon, and I remained alone upon the Grat to see his last beams illuminate the mountains, which, with one exception, were without a trace of cloud.

This exception was the Matterhorn, the appearance of which was extremely instructive. The obelisk appeared to be divided in two halves by a vertical line, drawn from its summit half-way down, to the windward of which we had the bare cliffs of the mountain; and to the left of it a cloud which appeared to cling tenaciously to the rocks.

In reality, however, there was no clinging; the condensed vapour incessantly got away, but it was ever renewed, and thus a river of cloud had been sent from the mountain over
the valley of Aosta. The wind, in fact, blew lightly up the valley of St. Nicholas, charged with moisture, and when the air that held it rubbed against the cold cone of the Matterhorn, the vapour was chilled and precipitated in his lee.”

It is not explained, why the wind was not chilled by rubbing against any of the neighbouring mountains, nor why the cone of the Matterhorn, mostly of rock, should be colder than cones of snow. The phenomenon was first described by De Saussure, who gives the same explanation as Tyndall; and from whom, in the first volume of ‘Modern Painters,’ I adopted it without sufficient examination. Afterwards I re-examined it, and showed its fallacy, with respect to the cap or helmet cloud, in the fifth volume of ‘Modern Painters,’ page 142, in the terms given in the subjoined note,* but I still retained the explanation of Saussure for the lee-side cloud, engraving in plate 69 the modes of its occurrence on the Aiguille Dru, of which the most ordinary one saw afterwards represented by Tyndall in his ‘Glaciers of the Alps,’ under the title of ‘Banner-cloud.’ Its less imaginative title, in ‘Modern Painters,’ of

*“But both Saussure and I ought to have known,—we did know, but did not think of it,—that the covering or cap-cloud forms on hot summits as well as cold ones;—that the red and bare rocks of Mont Pilate, hotter, certainly, after a day’s sunshine than the cold storm-wind which sweeps to them from the Alps, nevertheless have been renowned for their helmet of cloud, ever since the Romans watched the cloven summit, grey against the south, from the ramparts of Vindonissa, giving it the name from which the good Catholics of Lucerne have warped out their favourite piece of terrific sacred biography. And both my master and I should also have reflected that if our theory about its formation had been generally true, the helmet cloud ought to form on every cold summit, at the approach of rain, in approximating proportions to the bulk of the glaciers; which is so far from being the case that not only (A) the cap-cloud may often be seen on lower summits of grass or rock, while the higher ones are splendidly clear (which may be accounted for by supposing the wind containing the moisture not to have risen so high); but (B) the cap-cloud always shows a preference for hills of a conical form, such as the Mole or Niesen, which can have very little power in chilling the air, even supposing they were cold themselves; while it will entirely refuse to form huge masses of mountain, which, supposing them of chilly temperament, must have discomforted the atmosphere in their neighbourhood for leagues.
'Lee-side cloud,' is more comprehensive, for this cloud forms often under the brows of far-terraced precipices, where it has no resemblance to a banner. No true explanation of it has ever yet been given; for the first condition of the problem has hitherto been unobserved,—namely, that such cloud is constant in certain states of weather, under precipitous rocks;—but never developed with distinctness by domes of snow.

But my former expansion of Saussure's theory is at least closer to the facts than Professor Tyndall's "rubbing against the rocks," and I therefore allow room for it here, with its illustrative woodcut.

"When a moist wind blows in clear weather over a cold summit, it has not time to get chilled as it approaches the rock, and therefore the air remains clear, and the sky bright on the windward side; but under the lee of the peak, there is partly a back eddy, and partly still air; and in that lull and eddy the wind gets time to be chilled by the rock, and the cloud appears, as a boiling mass of white vapour, rising continually with the return current to the upper edge of the mountain, where it is caught by the straight wind and partly torn, partly melted away in broken fragments.

"In the accompanying figure, the dark mass represents the mountain peak, the arrow the main direction of the wind, the curved lines show the directions of such current and its concentration, and the dotted line encloses the space in which cloud forms densely, floating away beyond and above in irregular tongues and flakes."

12. See below, on the different uses of the word 'reflection,' note 14, and note that throughout this lecture I use the words 'aqueous molecules,' alike of water liquid or vaporized, not
knowing under what conditions or at what temperatures water-dust becomes water-gas; and still less, supposing pure water-gas blue, and pure air blue, what are the changes in either which make them what sailors call "dirty;" but it is one of the worst omissions of the previous lecture, that I have not stated among the characters of the plague-cloud that it is always dirty,* and never blue under any conditions, neither when deep in the distance, nor when in the electric states which produce sulphurous blues in natural cloud. But see the next note.

13. Black clouds.—For the sudden and extreme local blackness of thundercloud, see Turner’s drawing of Winchelsea, (England series), and compare Homer, of the Ajaces, in the 4th book of the Iliad,—(I came on the passage in verifying Mr. Hill’s quotation from the 5th.)

"authenticate νέφος εἶποτο πεζών.
'Ως δ' ὁτ' ἀνδ ἀκοπίης εἶδεν νέφος ἀπόλος ἀνήρ
Ερχόμενον κατὰ πόντον ὑπὸ Ζεφύρου ἰωὴς,
Τῇ δὲ γ', ἀνεύθεν ἐοντι, μελάντερον, ἡπὶ πισσα
Φαίνετ', ἵδων κατὰ πόντον, ἄγει δὲ τε λαίλατα πολλήν·
Ῥηγησέν τε ἰδών, ὑπὸ τε σπέος ἤλατο μῆλα·
Τοῖς ἄμ Αἰαντεσιν ἀρηθίδων αἰχήνων
Αἰγὸν ἐς πόλεμον πυκνὰ κίννυστο φάλαγγες
Κυάνεαι,"

I give Chapman’s version—noting only that his breath of Zephyrus, ought to have been ‘cry’ or ‘roar’ of Zephyrus, the blackness of the cloud being as much connected with the wildness of the wind as, in the formerly quoted passage, its brightness with calm of air.

"Behind them hid the ground
A cloud of foot, that seemed to smoke. And as a Goatherd spies
On some hill top, out of the sea a rainy vapour rise,
Driven by the breath of Zephyrus, which though far off he rest,
Comes on as black as pitch, and brings a tempest in his breast
Whereat he, frightened, drives his herds apace into a den;
So, darkening earth, with swords and shields, showed these with all their men."

* In my final collation of the lectures given at Oxford last year on the Art of England, I shall have occasion to take notice of the effects of this character of plague-cloud on our younger painters, who have perhaps never in their lives seen a clean sky!
I add here Chapman's version of the other passage, which is extremely beautiful and close to the text, while Pope's is hopelessly erroneous.

"Their ground they still made good,
And in their silence and set powers, like fair still clouds they stood,
With which Jove crowns the tops of hills in any quiet day
When Boreas, and the ruder winds that use to drive away
Air's dusky vapours, being loose, in many a whistling gale,
Are pleasingly bound up and calm, and not a breath exhale."

14. 'Reflected.'—The reader must be warned in this place of the difference implied by my use of the word 'cast' in page 17, and 'reflected' here: that is to say, between light or colour which an object possesses, whatever the angle it is seen at, and the light which it reverberates at one angle only. The Alps, under the rose* of sunset, are exactly of the same colour whether you see them from Berne or Schaffhausen. But the gilding to our eyes of a burnished cloud depends, I believe, at least for a measure of its lustre, upon the angle at which the rays incident upon it are reflected to the eye, just as much as the glittering of the sea beneath it—or the sparkling of the windows of the houses on the shore.

Previously, at page 15, in calling the molecules of trans-

* In speaking, at p. 17 of the first lecture, of the limits of depth in the rose-colour cast on snow, I ought to have noted the greater strength of the tint possible under the light of the tropics. The following passage, in Mr. Cunningham's 'Natural History of the Strait of Magellan,' is to me of the greatest interest, because of the beautiful effect described as seen on the occasion of his visit to 'the small town of Santa Rosa,' (near Valparaiso.) "The day, though clear, had not been sunny, so that, although the snowy heights of the Andes had been distinctly visible throughout the greater part of our journey, they had not been illuminated by the rays of the sun. But now, as we turned the corner of a street, the chain of the Cordillera suddenly burst on our gaze in such a blaze of splendour that it almost seemed as if the windows of heaven had been opened for a moment, permitting a flood of crimson light to stream forth upon the snow. The sight was so unexpected, and so transcendently magnificent, that a breathless silence fell upon us for a few moments, while even the driver stopped his horses. This deep red glow lasted for three or four minutes, and then rapidly faded into that lovely rosy hue so characteristic of snow at sunset among the Alps."
parent atmospheric 'absolutely' unreflective of light, I mean, in like manner, unreflective from their surfaces. Their blue
colour seen against a dark ground is indeed a kind of reflc-
tion, but one of which I do not understand the nature. It is
seen most simply in wood smoke, blue against trees, brown
against clear light; but in both cases the colour is communi-
cated to (or left in) the transmitted rays.

So also the green of the sky (p. 18) is said to be given by
transmitted light, yellow rays passing through blue air: much
yet remains to be known respecting translucent colours of this
kind; only let them always be clearly distinguished in our
minds from the firmly possessed colour of opaque substances,
like grass or malachite.

15. Diffraction.—Since these passages were written, I have
been led, in conversation with a scientific friend, to doubt my
statement that the coloured portions of the lighted clouds
were brighter than the white ones. He was convinced that
the resolution of the rays would diminish their power, and in
thinking over the matter, I am disposed to agree with him,
although my impression at the time has been always that the
diffacted colours rose out of the white, as a rainbow does
out of the grey. But whatever the facts may be, in this re-
spect the statement in the text of the impossibility of repre-
senting diffracted colour in painting is equally true. It may
be that the resolved hues are darker than the white, as
coloured panes in a window are darker than the colourless
glass, but all are alike in a key which no artifice of painting
can approach.

For the rest, the phenomena of diffraction are not yet ar-
ranged systematically enough to be usefully discussed: some
of them involving the resolution of the light, and others merely
its intensification. My attention was first drawn to them
near St. Laurent, on the Jura mountains, by the vivid reflec-
tion, (so it seemed), of the image of the sun from a particular
point of a cloud in the west, after the sun itself was beneath
the horizon: but in this image there were no prismatic col-
ours, neither is the constantly seen metamorphosis of pine
forests into silver filigree on ridges behind which the sun is
rising or setting, accompanied with any prismatic hue; the trees become luminous, but not iridescent: on the other hand, in his great account of his ascent of Mont Blanc with Mr. Huxley, Professor Tyndall thus describes the sun’s remarkable behaviour on that occasion:—“As we attained the brow which forms the entrance to the Grand Plateau, he hung his disk upon a spike of rock to our left, and, surrounded by a glory of interference spectra of the most gorgeous colours, blazed down upon us.” (‘Glaciers of the Alps,’ p. 76.)

Nothing irritates me more, myself, than having the colour of my own descriptions of phenomena in anywise attributed by the reader to accidental states either of my mind or body; —but I cannot, for once, forbear at least the innocent question to Professor Tyndall, whether the extreme beauty of these ‘interference spectra’ may not have been partly owing to the extreme sobriety of the observer? no refreshment, it appears, having been attainable the night before at the Grands Mulets, except the beverage diluted with dirty snow, of which I have elsewhere quoted the Professor’s pensive report,—“my memory of that tea is not pleasant.”

16. ‘Either stationary or slow in motion, reflecting unresolved light.’

The rate of motion is of course not essentially connected with the method of illumination; their connection, in this instance, needs explanation of some points which could not be dealt with in the time of a single lecture.

It is before said, with reserve only, that “a cloud is where it is seen, and is not where it is not seen.” But thirty years ago, in ‘Modern Painters,’ I pointed out (see the paragraph quoted in note 8th), the extreme difficulty of arriving at the cause of cloud outline, or explaining how, if we admitted at any given moment the atmospheric moisture to be generally diffused, it could be chilled by formal chills into formal clouds. How, for instance, in the upper cirri, a thousand little chills, alternating with a thousand little warmths, could stand still as a thousand little feathers.

But the first step to any elucidation of the matter is in the firmly fixing in our minds the difference between windless
clouds, unaffected by any conceivable local accident, and windy clouds, affected by some change in their circumstances as they move.

In the sunset at Abbeville, represented in my first diagram, the air is absolutely calm at the ground surface, and the motion of its upper currents extremely slow. There is no local reason assignable for the presence of the cirri above, or of the thundercloud below. There is no conceivable cause either in the geology, or the moral character, of the two sides of the town of Abbeville, to explain why there should be decorative fresco on the sky over the southern suburb, and a muttering heap of gloom and danger over the northern. The electric cloud is as calm in motion as the harmless one: it changes its form, indeed; but imperceptibly; and, so far as can be discerned, only at its own will is exalted, and with its own consent abased.

But in my second diagram are shown forms of vapour sustaining at every instant all kinds of varying local influences; beneath, fastened down by mountain attraction, above, flung afar by distracting winds; here, spread abroad into blanched sheets beneath the sunshine, and presently gathered into strands of coiled cordage in the shade. Their total existence is in metamorphosis, and their every aspect a surprise, or a deceit.

17. 'Finely comminuted water or ice.'

My impression that these clouds were glacial was at once confirmed by a member of my audience, Dr. John Rae, in conversation after the lecture, in which he communicated to me the perfectly definite observations which he has had the kindness to set down with their dates for me, in the following letter:

"4, Addison Gardens, Kensington, 4th Feb., 1884.

Dear Sir,—I have looked up my old journal of thirty years ago, written in pencil because it was impossible to keep ink unfrozen in the snow-hut in which I passed the winter of 1853-4, at Repulse Bay, on the Arctic Circle.*

* I trust that Dr. Rae will forgive my making the reader better aware of the real value of this communication by allowing him to see also the
On the 1st of February, 1854, I find the following:

'A beautiful appearance of some cirrus clouds near the sun, the central part of the cloud being of a fine pink or red, then green, and pink fringe. This continued for about a quarter of an hour. The same was observed on the 27th of the month, but not so bright. Distance of clouds from sun, from 3° to 6°.'

On the 1st February the temperature was 38° below zero, and on the 27th February 26° below.

'On the 23rd and 30th (of March) the same splendid appearance of clouds as mentioned in last month's journal was observed. On the first of these days, about 10.30 a.m., it was extremely beautiful. The clouds were about 8° or 10° from the sun, below him and slightly to the eastward,—having a green fringe all round, then pink; the centre part at first green, and then pink or red.'

The temperature was 21° below zero, Fahrenheit.

There may have been other colours—blue, perhaps—but I merely noted the most prominent; and what I call green may have been bluish, although I do not mention this last colour in my notes.

From the lowness of the temperature at the time, the clouds must have been frozen moisture.

The phenomenon is by no means common, even in the Arctic zone.

The second beautiful cloud-picture shown this afternoon brought so visibly to my memory the appearance seen by me as above described, that I could not avoid remarking upon it.

Believe me, very truly yours,

JOHN RAE, (M.D., F.R.S.)

following passage from the kind private letter by which it was supplemented:

"Many years in the Hudson's Bay Company's service, I and my men became educated for Arctic work, in which I was five different times employed, in two of which expeditions we lived wholly by our own hunting and fishing for twelve months, once in a stone house (very disagreeable), and another winter in a snow hut (better), without fire of any kind to warm us. On the first of these expeditions, 1846-7, my little party, there being no officer but myself, surveyed seven hundred miles of coast of Arctic America by a sledge journey, which Parry, Ross, Bach, and Lyon had failed to accomplish, costing the country about £70,000 or £80,000 at the lowest computation. The total expense of my little party, including my own pay, was under fourteen hundred pounds sterling.

"My Arctic work has been recognised by the award of the founder's gold medal of the Royal Geographical Society (before the completion of the whole of it)."
Now this letter enables me to leave the elements of your problem for you in very clear terms.

Your sky—altogether—may be composed of one or more of four things:

Molecules of water in warm weather.
Molecules of ice in cold weather.
Molecules of water-vapour in warm weather.
Molecules of ice-vapour, in cold weather.

But of the size, distances, or modes of attraction between these different kinds of particles, I find no definite information anywhere, except the somewhat vague statement by Sir William Thomson, that "if a drop of water could be magnified so as to be as large as the earth, and have a diameter of eight thousand miles, then a molecule of this water in it would appear somewhat larger than a shot" (What kind of shot?) "and somewhat smaller than a cricket-ball"!

And as I finally review the common accounts given of cloud formation, I find it quite hopeless for the general reader to deal with the quantity of points which have to be kept in mind and severally valued, before he can account for any given phenomena. I have myself, in many of the passages of 'Modern Painters' before referred to, conceived of cloud too narrowly as always produced by cold, whereas the temperature of a cloud must continually, like that of our visible breath in frosty weather, or of the visible current of steam, or the smoking of a warm lake surface under sudden frost, be above that of the surrounding atmosphere; and yet I never remember entering a cloud without being chilled by it, and the darkness of the plague-wind, unless in electric states of the air, is always accompanied by deadly chill.

Nor, so far as I can read, has any proper account yet been given of the balance, in serene air, of the warm air under the cold, in which the warm air is at once compressed by weight, and expanded by heat, and the cold air is thinned by its elevation, yet contracted by its cold. There is indeed no possibility of embracing the conditions in a single sentence, any more than in a single thought. But the practical balance is effected in calm air, so that its lower strata have no tendency
to rise, like the air in a fire balloon, nor its higher strata to fall, unless they congeal into rain or snow.

I believe it will be an extreme benefit to my younger readers if I write for them a little 'Grammar of Ice and Air,' collecting the known facts on all these matters, and I am much minded to put by my ecclesiastical history for a while, in order to relate what is legible of the history of the visible Heaven.

18. 'You can't get a billiard ball to fall a shivering on its own account.'—I am under correction in this statement by the Lucasian professor of Cambridge, with respect to the molecules of bodies capable of 'epipolizing' light. "Nothing seems more natural than to suppose that the incident vibrations of the luminiferous ether produce vibratory movements among the ultimate molecules of sensitive substances, and that the molecules in return, swinging on their own account, produce vibrations in the luminous ether, and thus cause the sensation of light. The periodic times of these vibrations depend upon the periods in which the molecules are disposed to swing." ('On the Changes of Refrangibility of Light,' p. 549.)

It seems to me a pleasant conclusion, this, of recent science, and suggestive of a perfectly regenerate theology. The 'Let there be light' of the former Creation is first expanded into 'Let there be a disposition of the molecules to swing,' and the destinies of mankind, no less than the vitality of the universe, depend thereafter upon this amiable, but perhaps capricious, and at all events not easily influenced or anticipated, disposition!

Is it not also strange that in a treatise entering into so high mathematical analysis as that from which I quote, the false word 'swing,' expressing the action of a body liable to continuous arrest by gravitation, should be employed to signify the oscillation, wholly unaffected by gravity, of substance in which the motion once originated, may cease only with the essence of the body?

It is true that in men of high scientific calibre, such as the writer in this instance, carelessness in expression does not af-
fect the security of their conclusions. But in men of lower rank, mental defects in language indicate fatal flaws in thought. And although the constant habit to which I owe my (often foolishly praised) "command of language"—of never allowing a sentence to pass proof in which I have not considered whether, for the vital word in it, a better could be found in the dictionary, makes me somewhat morbidly intolerant of careless diction, it may be taken for an extremely useful and practical rule, that if a man can think clearly he will write well, and that no good science was ever written in bad English. So that, before you consider whether a scientific author says a true or a false thing, you had better first look if he is able properly to say anything,—and secondly, whether his conceit permits him to say anything properly.

Thus, when Professor Tyndall, endeavouring to write poetically of the sun, tells you that "The Lilies of the field are his workmanship," you may observe, first, that since the sun is not a man, nothing that he does is workmanship; while even the figurative statement that he rejoices as a strong man to run his course, is one which Professor Tyndall has no intention whatever of admitting. And you may then observe, in the second place, that, if even in that figurative sense, the lilies of the field are the sun's workmanship, in the same sense the lilies of the hothouse are the stove's workmanship,—and in perfectly logical parallel, you, who are alive here to listen to me, because you have been warmed and fed through the winter, are the workmanship of your own coalscuttles.

Again, when Mr. Balfour Stewart begins a treatise on the 'Conservation of Energy,' which is to conclude, as we shall see presently, with the prophecy of its total extinction as far as the present world is concerned,—by clothing in a "properly scientific garb," our innocent impression that there is some difference between the blow of a rifle stock and a rifle ball; he prepares for the scientific toilette by telling us in italics that "the something which the rifle ball possesses in contrastinction to the rifle stock is clearly the power of overcoming resistance," since "it can penetrate through oak-wood or
through water—or (alas! that it should be so often tried) through the human body; and this power of penetration" (italics now mine) "is the distinguishing characteristic of a substance moving with very great velocity. Let us, define by the term 'Energy,' this power which the rifle ball possesses of overcoming obstacles, or of doing work."

Now, had Mr. Stewart been a better scholar, he would have felt, even if he had not known, that the Greek word 'energy' could only be applied to the living—and of living, with perfect propriety only to the mental, action of animals, and that it could no more be applied as a 'scientific garb,' to the flight of a rifle ball, than to the fall of a dead body. And, if he had attained thus much, even of the science of language, it is just possible that the small forte and faculty of thought he himself possesses might have been energized so far as to perceive that the force of all inertly moving bodies, whether rifle stock, rifle ball, or rolling world, is under precisely one and the same relation to their weights and velocities; that the effect of their impact depends—not merely on their pace, but their constitution; and on the relative forms and stability of the substances they encounter, and that there is no more quality of Energy, though much less quality of Art, in the swiftly penetrating shot, or crushing ball, than in the deliberately contemplative and administrative puncture by a gnat's proboscis, or a sempstress' needle.

Mistakes of this kind, beginning with affectations of diction, do not always invalidate general statements or conclusions,—for a bad writer often equivocates out of a blunder as he equivocates into one,—but I have been strict in pointing out the confusions of idea admitted in scientific books between the movement of a swing, that of a sounding violin chord, and that of an agitated liquid, because these confusions have actually enabled Professor Tyndall to keep the scientific world in darkness as to the real nature of glacier motion for the last twenty years; and to induce a resultant quantity of aberration in the scientific mind concerning glacial erosion, of which another twenty years will scarcely undo the damage.
19. 'Force and pace.'—Among the nearer questions which the careless terminology on which I have dwelt in the above note has left unsettled, I believe the reader will be surprised, as much as I am, myself, to find that of the mode of impulse in a common gust of wind! Whence is its strength communicated to it, and how gathered in it? and what is the difference of manner in the impulse between compressible gas and incompressible fluid? For instance: The water at the head of a weir is passing every instant from slower into quicker motion; but (until broken in the air) the fast flowing water is just as dense as the slowly flowing water. But a fan alternately compresses and rarefies the air between it and the cheek, and the violence of a destructive gust in a gale of wind means a momentary increase in velocity and density of which I cannot myself in the least explain,—and find in no book on dynamics explained,—the mechanical causation.

The following letter, from a friend whose observations on natural history for the last seven or eight years have been consistently valuable and instructive to me, will be found, with that subjoined in the note, in various ways interesting; but especially in its notice of the inefficiency of ordinary instrumental registry in such matters:

"6, Moira Place, Southampton, Feb. 8th, 1884.

"Dear Mr. Ruskin,—Some time since I troubled you with a note or two about sea-birds, etc. . . . but perhaps I should never have ventured to trouble you again, had not your lecture on the 'Storm Clouds' touched a subject which has deeply interested me for years past. I had, of course, no idea that you had noticed this thing, though I might have known that, living the life you do, you must have done so. As for me, it has been a source of perplexity for years: so much so, that I began to wonder at times whether I was not under some mental delusion about it, until the strange theatrical displays of the last few months, for which I was more or less prepared, led so many to use their eyes, unmuzzled by brass or glass, for a time. I know you do not bother, or care much to read newspapers, but I have taken the liberty of cutting out and sending a letter of mine, sent on the 1st January to an evening
paper,* upon this subject, thinking you might like to know that one person, at any rate, has seen that strange, bleared look about the sun, shining so seldom except through a ghastly glare of pale, persistent haze. May it be that the singular colouring of the sunsets marks an end of this long period of plague-cloud, and that in them we have promise of steadier weather? (No: those sunsets were entirely distinct phenomena, and promised, if anything, only evil.—R.)

"I was glad to see that in your lecture you gave the dependants upon the instrument-makers a warning. On the 26th I had a heavy sailing-boat lifted and blown, from where she lay hauled up, a distance of four feet, which, as the boat has four hundred-weight of iron upon her keel, gives a wind-gust, or force, not easily measured by instruments.

"Believe me, dear Mr. Ruskin,
"Yours sincerely,
"ROBT. C. LESLIE."

—THE LOOK OF THE SKY.

'To the Editor of the St. James's Gazette.

'SIR,—I have been a very constant though not a scientific observer of the sky for a period of forty years; and I confess to a certain feeling of astonishment at the way in which the "recent celestial phenomena" seem to have taken the whole body of scientific observers by surprise. It would even appear that something like these extraordinary sunsets was necessary to call the attention of such observers to what has long been a source of perplexity to a variety of common folk, like sailors, farmers, and fishermen. But to such people the look of the weather, and what comes of that look, is of far more consequence than the exact amount of ozone or the depth or width of a band of the spectrum.

'Now, to all such observers, including myself, it has been plain that of late neither the look of the sky nor the character of the weather has been, as we should say, what it used to be; and those whose eyes were strong enough to look now and then toward the sun have noticed a very marked increase of what some would call a watery look about him, which might perhaps be better expressed as a white sheen or glare, at times developing into solar halo or mock suns, as noted in your paper of the 2nd of October last year. A fisherman would describe it as "white and davery-like." So far as my observation goes, this appearance was only absent here for a limited period during the present summer, when we had a week or two of nearly normal weather; the summer before it was seldom absent.

'Again, those whose business or pleasure has depended on the use of wind-power have all remarked the strange persistence of hard westerly and easterly winds, the westerly ones at times partaking of an almost trade-wind-like force and character. The summer of 1882 was especially remarkable for these winds, while each stormy November has been followed by a period about mid-winter of mild calm weather with dense
I am especially delighted, in this letter, by my friend's vigorously accurate expression, eyes "unmuzzled by brass or glass." I have had occasion continually, in my art-lectures, to dwell on the great law of human perception and power, that the beauty which is good for us is prepared for the natural focus of the sight, and the sounds which are delightful to us for the natural power of the nerves of the ear; and the art which is admirable in us, is the exercise of our own bodily powers, and not carving by sand-blast, nor oratorizing through fog. During these strong winds in summer and early autumn the weather would remain bright and sunny, and to a landsman would be not remarkable in any way, while the barometer has been little affected by them; but it has been often observed by those employed on the water that when it ceased blowing half a gale the sky at once became overcast, with damp weather or rain. This may all seem common enough to most people; but to those accustomed to gauge the wind by the number of reefs wanted in a mainsail or foresail it was not so; and the number of consecutive days when two or more reefs have been kept tied down during the last few summers has been remarkable—alternating at times with equally persistent spells of calm and fog such as we are now passing through. Again, we have had an unusually early appearance of ice in the Atlantic, and most abnormal weather over Central Europe; while in a letter I have just received from an old hand on board a large Australian clipper, he speaks of heavy gales and big seas off that coast in almost the height of their summer.

Now, upon all this, in our season of long twilights, we have bursting upon us some clear weather; with a display of cloud-forms or vapour at such an elevation that, looking at them one day through an opening in the nearer clouds, they seemed so distant as to resemble nothing but the delicate grain of ivory upon a billiard-ball. And yet with the fact that two-thirds of this earth is covered with water, and bearing in mind the effect which a very small increase of sun-power would have in producing cloud and lifting it above its normal level for a time, we are asked to believe that this sheen is all dust of some kind or other, in order to explain what are now known as the "recent sunsets": though I venture to think that we shall see more of them yet when the sun comes our way again.

At first sight, increased sun-power would seem to mean more sunshine; but a little reflection would show us that this would not be for long, while any considerable addition to the sun's power would be followed by such a vast increase of vapour that we should only see him, in our latitudes, at very short intervals. I am aware that all this is most unscientific; but I have read column after column of explanation written by those who are supposed to know all about such things, and find myself not a jot the wiser for it. Do you know anybody who is?—I am, Sir, your obedient servant,

'AN UNSCIENTIFIC OBSERVER. (R. LESLIE.)

'January 1.'
a speaking trumpet, nor dancing with spring heels. But more recently, I have become convinced that even in matters of science, although every added mechanical power has its proper use and sphere, yet the things which are vital to our happiness and prosperity can only be known by the rational use and subtle skill of our natural powers. We may trust the instrument with the prophecy of storm, or registry of rainfall; but the conditions of atmospheric change, on which depend the health of animals and fruitfulness of seeds, can only be discerned by the eye and the bodily sense.

Take, for simplest and nearest example, this question of the stress of wind. It is not the actual power that is immeasurable, if only it would stand to be measured! Instruments could easily now be invented which would register not only a blast that could lift a sailing boat, but one that would sink a ship of the line. But, lucklessly—the blast won't pose to the instrument! nor can the instrument be adjusted to the blast. In the gale of which my friend speaks in his next letter, 26th January, a gust came down the hill above Coniston village upon two old oaks, which were well rooted in the slate rock, and some fifty or sixty feet high—the one, some twenty yards below the other. The blast tore the highest out of the ground, peeling its roots from the rock as one peels an orange—swept the head of the lower tree away with it in one ruin, and snapped the two leader branches of the upper one over the other's stump, as one would break one's cane over some people's heads, if one got the chance. In wind action of this kind the amount of actual force used is the least part of the business;—it is the suddenness of its concentration, and the lifting and twisting strength, as of a wrestler, which makes the blast fatal; none of which elements of storm-power can be recognised by mechanical tests. In my friend's next letter, however, he gives us some evidence of the consistent strength of this same gale, and of the electric conditions which attended it:—the prefatory notice of his pet bird I had meant for 'Love's Meinie,' but it will help us through the grimness of our studies here.
"March 3rd, 1884.

"My small blackheaded gull Jack is still flourishing, and the time is coming when I look for that singularly sudden change in the plumage of his head which took place last March. I have asked all my ocean-going friends to note whether these little birds are not the gulls par excellence of the sea; and so far all I have heard from them confirms this. It seems almost incredible; but my son, a sailor, who met that hurricane of the 26th of January, writes to me to say that out in the Bay of Biscay on the morning after the gale, 'though it was blowing like blazes, I observed some little gulls of Jacky's species, and they followed us half way across the Bay, seeming to find shelter under the lee of our ship. Some alighted now and then, and rested upon the water as if tired.' When one considers that these birds must have been at sea all that night somewhere, it gives one a great idea of their strength and endurance. My son's ship, though a powerful ocean steamer, was for two whole hours battling head to sea off the Eddystone that night, and for that time the lead gave no increase of soundings, so that she could have made no headway during those two hours; while all the time her yards had the St. Elmo's fire at their ends, looking as though a blue light was burning at each yard-arm, and this was about all they could see.

"Yours sincerely,
"Robt. C. Leslie."

The next letter, from a correspondent with whom I have the most complete sympathy in some expressions of his postscript which are yet, I consider, more for my own private ear than for the public eye, describes one of the more malignant phases of the plague-wind, which I forgot to notice in my lecture.

"Burnham, Somerset, February 7, 1884.

"Dear Sir,—I read with great interest your first lecture at Oxford on cloud and wind (very indifferently reported in 'The Times'). You have given a name to a wind I've known for years. You call it the plague—I call it the devil-wind: e.g., on April 29th, 1882, morning warmer, then rain storms from east; afternoon, rain squalls; wind, west by south, rough; barometer falling awfully; 4.30 P.M., tremendous wind.—April 30th, all the leaves of the trees, all plants black
and dead, as if a fiery blast had swept over them. All the hedges on windward side black as black tea.

"Another devil-wind came towards the end of last summer. The next day, all the leaves were falling sere and yellow, as if it were late autumn.

"I am, dear sir,
"Yours faithfully,
"A. H. Birkett."

I remember both these blights well; they were entirely terrific; but only sudden maxima of the constant morbific power of this wind,—which, if Mr. Birkett saw my personal notices of, intercalated among the scientific ones, he would find alluded to in terms quite as vigorously damning as he could desire: and the actual effect of it upon my thoughts and work has been precisely that which would have resulted from the visible phantom of an evil spirit, the absolute opponent of the Queen of the Air,—Typhon against Athena,—in a sense of which I had neither the experience nor the conception when I wrote the illustrations of the myth of Perseus in 'Modern Painters.' Not a word of all those explanations of Homer and Pindar could have been written in weather like that of the last twelve years; and I am most thankful to have got them written before the shadow came, and I could still see what Homer and Pindar saw. I quote one passage only—Vol. v., p. 160—for the sake of a similitude which reminds me of one more thing I have to say here—and a bit of its note—which I think is a precious little piece, not of word-painting, but of simply told feeling—(that, if people knew it, is my real power).

"On the Yorkshire and Derbyshire hills, when the rain-cloud is low and much broken, and the steady west wind fills all space with its strength,* the sun-gleams fly like golden vultures; they are flashes rather than shinings; the dark spaces and the dazzling race and skim along the acclivities, and dart and dip from crag to dell, swallow-like."

"I have been often at great heights on the Alps in rough weather, and have seen strong gusts of storm in the plains of the south. But, to get full expression of the very heart and meaning of wind, there is no place
The dipping of the shadows here described of course is caused only by that of the dingles they cross; but I have not in any of my books yet dwelt enough on the difference of character between the dipping and the mounting winds. Our wildest phase of the west wind here at Coniston is 'swallow-like' with a vengeance, coming down on the lake in swirls which spurn the spray under them as a fiery horse does the dust. On the other hand, the softly ascending winds express themselves in the grace of their cloud motion, as if set to the continuous music of a distant song.*

The reader will please note also that whenever, either in 'Modern Painters' or elsewhere, I speak of rate of flight in clouds, I am thinking of it as measured by the horizontal distance overpast in given time, and not as apparent only, owing to the nearness of the spectator. All low clouds appear to move faster than high ones, the pace being supposed equal in both: but when I speak of quick or slow cloud, it is always with respect to a given altitude. In a fine summer morning, a cloud will wait for you among the pines, folded to and fro like a Yorkshire moor. I think Scottish breezes are thinner, very bleak and piercing, but not substantial. If you lean on them they will let you fall, but one may rest against a Yorkshire breeze as one would on a quickset hedge. I shall not soon forget,—having had the good fortune to meet a vigorous one on an April morning, between Hawes and Settle, just on the flat under Wharnside,—the vague sense of wonder with which I watched Ingleborough stand without rocking."

*Compare Wordsworth's

"Oh beauteous birds, methinks ye measure
Your movements to some heavenly tune."

And again—

"While the mists,
Flying and rainy vapours, call out shapes,
And phantoms from the crags and solid earth,
As fast as a musician scatters sounds
Out of an instrument."

And again—

"The Knight had ridden down from Wensley moor,
With the slow motion of a summer cloud."
among their stems, with a branch or two coming out here, and a spire or two there: you walk through it, and look back to it. At another time on the same spot, the fury of cloud-flood drifts past you like the Rhine at Schaffhausen.

The space even of the double lecture does not admit of my entering into any general statement of the action of the plague-cloud in Switzerland and Italy; but I must not omit the following notes of its aspect in the high Alps.

“Sallenches, 11th September, 1882.

“This morning, at half-past five, the Mont Blanc summit was clear, and the greater part of the Aiguilles du Plan and Midi clear dark—all, against pure cirri, lighted beneath by sunrise; the sun of course not visible yet from the valley.

“By seven o’clock, the plague-clouds had formed in brown flakes, down to the base of the Aiguille de Bionassay; entirely covering the snowy ranges; the sun, as it rose to us here, shone only for about ten minutes—gilding in its old glory the range of the Dorons,—before one had time to look from peak to peak of it, the plague-cloud formed from the west, hid Mont Joli, and steadily choked the valley with advancing streaks of dun-coloured mist. Now—twenty minutes to nine—there is not one ray of sunshine on the whole valley, or on its mountains, from the Forclaz down to Cluse.

“These phenomena are only the sequel of a series of still more strange and sad conditions of the air, which have continued among the Savoy Alps for the last eight days, (themselves the sequel of others yet more general, prolonged, and harmful). But the weather was perfectly fine at Dijon, and I doubt not at Chamouni, on the 1st of this month. On the 2nd, in the evening, I saw, from the Jura, heavy thunderclouds in the west; on the 3rd, the weather broke at Morez, in hot thunder-showers, with intervals of scorching sun; on the 4th, 5th, and 6th there was nearly continuous rain at St. Cergues, the Alps being totally invisible all the time. The sky cleared on the night of the 6th, and on the 7th I saw from the top of the Dole all the western plateaux of Jura quite clearly; but the entire range of the Alps, from the Moleson to the Salève, and all beyond,—snow, crag, and hill-side,—were wrapped and buried in one unbroken grey-brown winding-sheet, of such cloud as I had never seen till that day touch an Alpine summit.
“The wind, from the east, (so that it blew up over the edge of the Dole cliff, and admitted of perfect shelter on the slope to the west,) was bitter cold, and extremely violent: the sun overhead, bright enough, and remained so during the afternoon; the plague-cloud reaching from the Alps only about as far as the southern shore of the lake of Geneva; but we could not see the Salève; nor even the north shore, farther than to Morges! I reached the Col de la Faucille at sunset, when, for a few minutes, the Mont Blanc and Aiguille Verte showed themselves in dull red light, but were buried again, before the sun was quite down, in the rising deluge of cloud-poison. I saw no farther than the Voirons and Brezon—and scarcely those, during the electric heat of the 9th at Geneva; and last Saturday and Sunday have been mere whirls and drifts of indecisive, but always sullen, storm. This morning I saw the snows clear for the first time, having been, during the whole past week, on steady watch for them.

“I have written that the clouds of the 7th were such as I never before saw on the Alps. Often, during the past ten years, I have seen them on my own hills, and in Italy in 1874; but it has always chanced to be fine weather, or common rain and cold, when I have been among the snowy chains; and now from the Dole for the first time I saw the plague-cloud on them.”

20. 'Blasphemy.'—If the reader can refer to my papers on Fiction in the ‘Nineteenth Century,’ he will find this word carefully defined in its Scriptural, and evermore necessary, meaning,—'Harmful speaking'—not against God only, but against man, and against all the good works and purposes of Nature. The word is accurately opposed to 'Euphemy,' the right or well-speaking of God and His world; and the two modes of speech are those which going out of the mouth sanctify or defile the man.

Going out of the mouth, that is to say, deliberately and of purpose. A French postilion's 'Sacr-r-ré'—loud, with the low 'Nom de Dieu' following between his teeth, is not blasphemy, unless against his horse;—but Mr. Thackeray's close of his Waterloo chapter in 'Vanity Fair,' "And all the night long Amelia was praying for George, who was lying on his face dead with a bullet through his heart," is blasphemy of the most fatal and subtle kind.
And the universal instinct of blasphemy in the modern vulgar scientific mind is above all manifested in its love of what is ugly, and natural enthralment by the abominable;—so that it is ten to one if, in the description of a new bird, you learn much more of it than the enumerated species of vermin that stick to its feathers; and in the natural history museum of Oxford, humanity has been hitherto taught, not by portraits of great men, but by the skulls of cretins.

But the deliberate blasphemy of science, the assertion of its own virtue and dignity against the always implied, and often asserted, vileness of all men and—Gods,—heretofore, is the most wonderful phenomenon, so far as I can read or perceive, that hitherto has arisen in the always marvellous course of the world's mental history.

Take, for brief general type, the following 92nd paragraph of the 'Forms of Water':—

"But while we thus acknowledge our limits, there is also reason for wonder at the extent to which Science has mastered the system of nature. From age to age and from generation to generation, fact has been added to fact and law to law, the true method and order of the Universe being thereby more and more revealed. In doing this, Science has encountered and overthrown various forms of superstition and deceit, of credulity and imposture. But the world continually produces weak persons and wicked persons, and as long as they continue to exist side by side, as they do in this our day, very debasing beliefs will also continue to infest the world."

The debasing beliefs meant being simply those of Homer, David, and St. John*—as against a modern French gamin's. And what the results of the intended education of English gamins of every degree in that new higher theology will be, England is I suppose by this time beginning to discern.

In the last 'Fors †' which I have written, on education of a

* With all who died in Faith, not having received the Promises, nor—according to your modern teachers—ever to receive.

† Hence to the end the text is that read in termination of the lecture on its second delivery, only with an added word or two of comment on Proverbs xvii.
safer kind, still possible, one practical point is insisted on chiefly,—that learning by heart, and repetition with perfect accent and cultivated voice, should be made quite principal branches of school discipline up to the time of going to the university.

And of writings to be learned by heart, among other passages of disputable philosophy and perfect poetry, I include certain chapters of the—now for the most part forgotten—wisdom of Solomon; and of these, there is one selected portion which I should recommend not only schoolboys and girls, but persons of every age, if they don't know it, to learn forthwith, as the shortest summary of Solomon's wisdom;—namely, the seventeenth chapter of Proverbs, which being only twenty-eight verses long, may be fastened in the dullest memory at the rate of a verse a day in the shortest month of the year. Out of the twenty-eight verses, I will read you seven, for example of their tenor,—the last of the seven I will with your good leave dwell somewhat upon. You have heard the verses often before, but probably without remembering that they are all in this concentrated chapter.

1. Verse 1.—Better is a dry morsel, and quietness therewith, than a house full of good eating, with strife.
   (Remember, in reading this verse, that though England has chosen the strife, and set every man's hand against his neighbour, her house is not yet so full of good eating as she expected, even though she gets half of her victuals from America.)

2. Verse 3.—The fining pot is for silver, the furnace for gold, but the Lord tries the heart.
   (Notice the increasing strength of trial for the more precious thing: only the melting-pot for the silver—the fierce furnace for the gold—but the Fire of the Lord for the heart.)

3. Verse 4.—A wicked doer giveth heed to false lips.
   (That means, for you, that, intending to live by usury and swindling, you read Mr. Adam Smith and Mr. Stuart Mill, and other such political economists).
4. Verse 5.—Whoso mocketh the poor, reproacheth his Maker.

(Mocketh,—by saying that his poverty is his fault, no less than his misfortune,—England’s favourite theory now-a-days.)

5. Verse 12.—Let a bear robbed of her whelps meet a man, rather than a fool in his folly.

( Carlyle is often now accused of false scorn in his calling the passengers over London Bridge, “mostly fools,”—on the ground that men are only to be justly held foolish if their intellect is under, as only wise when it is above, the average. But the reader will please observe that the essential function of modern education is to develope what capacity of mistake a man has. Leave him at his forge and plough,—and those tutors teach him his true value, indulge him in no error, and provoke him to no vice. But take him up to London,—give him her papers to read, and her talk to hear,—and it is fifty to one you send him presently on a fool’s errand over London Bridge.)

6. Now listen, for this verse is the question you have mainly to ask yourselves about your beautiful all-over-England system of competitive examination:—

Verse 16. Wherefore is there a price in the hand of a fool to get wisdom, seeing he hath no heart to it?

(You know perfectly well it isn’t the wisdom you want, but the “station in life,”—and the money !)

7. Lastly, Verse 24.—Wisdom is before him that hath understanding, but the eyes of a fool are in the ends of the earth.

“And in the beginnings of it”! Solomon would have written, had he lived in our day; but we will be content with the ends at present. No scientific people, as I told you at first, have taken any notice of the more or less temporary phenomena of which I have tonight given you register. But, from the constant arrangements of the universe, the same respecting which the thinkers of former time came to the conclusion that
they were essentially good, and to end in good, the modern speculator arrives at the quite opposite and extremely uncomfortable conclusion that they are essentially evil, and to end—in nothing.

And I have here a volume,* before quoted, by a very foolish and very lugubrious author, who in his concluding chapter gives us,—founded, you will observe, on a series of 'ifs,'—the latest scientific views concerning the order of creation. "We have spoken already about a medium pervading space"—this is the Scientific God, you observe, differing from the unscientific one, in that the purest in heart cannot see—nor the softest in heart feel—this spacious Deity—a Medium pervading space—"the office of which" (italics all mine) "appears to be to degrade and ultimately extinguish, all differential motion. It has been well pointed out by Thomson, that, looked at in this light, the universe is a system that had a beginning and must have an end, for a process of degradation cannot be eternal. If we could view the Universe as a candle not lit, then it is perhaps conceivable to regard it as having been always in existence; but if we regard it rather as a candle that has been lit, we become absolutely certain that it cannot have been burning from eternity, and that a time will come when it will cease to burn. We are led to look to a beginning in which the particles of matter were in a diffuse chaotic state, but endowed with the power of gravitation; and we are led to look to an end in which the whole Universe will be one equally heated inert mass, and from which everything like life, or motion, or beauty, will have utterly gone away."

Do you wish me to congratulate you on this extremely cheerful result of telescopic and microscopic observation, and so at once close my lecture? or may I venture yet to trespass on your time by stating to you any of the more comfortable views held by persons who did not regard the universe in what my author humorously calls "this light"?

In the peculiarly characteristic notice with which the 'Daily News' honoured my last week's lecture, that courte-

ous journal charged me, in the metaphorical term now classical on Exchange, with "hedging," to conceal my own opinions. The charge was not prudently chosen, since, of all men now obtaining any portion of popular regard, I am pretty well known to be precisely the one who cares least either for hedge or ditch, when he chooses to go across country. It is certainly true that I have not the least mind to pin my heart on my sleeve, for the daily daw, or nightly owl, to peck at; but the essential reason for my not telling you my own opinions on this matter is—that I do not consider them of material consequence to you.

It might possibly be of some advantage for you to know what—were he now living, Orpheus would have thought, or Æschylus, or a Daniel come to judgment, or John the Baptist, or John the Son of Thunder; but what either you, or I, or any other Jack or Tom of us all, think,—even if we knew what to think,—is of extremely small moment either to the Gods, the clouds, or ourselves.

Of myself, however, if you care to hear it, I will tell you thus much: that had the weather when I was young been such as it is now, no book such as 'Modern Painters' ever would or could have been written; for every argument, and every sentiment in that book, was founded on the personal experience of the beauty and blessing of nature, all spring and summer long; and on the then demonstrable fact that over a great portion of the world's surface the air and the earth were fitted to the education of the spirit of man as closely as a schoolboy's primer is to his labour, and as gloriously as a lover's mistress is to his eyes.

That harmony is now broken, and broken the world round: fragments, indeed, of what existed still exist, and hours of what is past still return; but month by month the darkness gains upon the day, and the ashes of the Antipodes glare through the night.*

* Written under the impression that the lurid and prolonged sunsets of last autumn has been proved to be connected with the flight of volcanic ashes. This has been since, I hear, disproved again. Whatever their cause, those sunsets were, in the sense in which I myself use the
What consolation, or what courage, through plague, danger or darkness, you can find in the conviction that you are nothing more than brute beasts driven by brute forces, your other tutors can tell you—not I: but this I can tell you—and with the authority of all the masters of thought since time was time,—that, while by no manner of vivisection you can learn what a Beast is, by only looking into your own hearts you may know what a Man is,—and know that his only true happiness is to live in Hope of something to be won by him, word, altogether 'unnatural' and terrific: but they have no connection with the far more fearful, because protracted and increasing, power of the Plague-wind. The letter from White's 'History of Selborne,' quoted by the Rev. W. R. Andrews in his letter to the 'Times,' (dated January 8th) seems to describe aspects of the sky like these of 1883, just a hundred years before, in 1783: and also some of the circumstances noted, especially the variation of the wind to all quarters without alteration in the air, correspond with the character of the plague-wind; but the fog of 1783 made the sun dark, with iron-coloured rays—not pale, with blanching rays. I subjoin Mr. Andrews' letter, extremely valuable in its collation of the records of simultaneous volcanic phenomena; praying the reader also to observe the instantaneous acknowledgment, by the true 'Naturalist,' of horror in the violation of beneficent natural law.

"THE RECENT SUNSETS AND VOLCANIC Eruptions."

"Sir,—It may, perhaps, be interesting at the present time, when so much attention has been given to the late brilliant sunsets and sunrises, to be reminded that almost identically the same appearances were observed just a hundred years ago.

"Gilbert White writes in the year 1783, in his 109th letter, published in his 'Natural History of Selborne':—

"'The summer of the year 1783 was an amazing and portentous one, and full of horrible phenomena; for besides the alarming meteors and tremendous thunderstorms that affrighted and distressed the different counties of this kingdom, the peculiar haze or smoky fog that prevailed for many weeks in this island and in every part of Europe, and even beyond its limits, was a most extraordinary appearance, unlike anything known within the memory of man. By my journal I find that I had noticed this strange occurrence from June 23rd to July 20th inclusive, during which period the wind varied to every quarter without making any alteration in the air. The sun at noon looked as black as a clouded
in Reverence of something to be worshipped by him, and in Love of something to be cherished by him, and cherished—for ever.

Having these instincts, his only rational conclusion is that the objects which can fulfil them may be by his effort gained, and by his faith discerned; and his only earthly wisdom is to accept the united testimony of the men who have sought these things in the way they were commanded. Of whom no single one has ever said that his obedience or his faith had been

moon, and shed a ferruginous light on the ground and floors of rooms, but was particularly lurid and blood-coloured at rising and setting. The country people began to look with a superstitious awe at the red lowering aspect of the sun; and, indeed, there was reason for the most enlightened person to be apprehensive, for all the while Calabria and part of the Isle of Sicily were torn and convulsed with earthquakes, and about that juncture a volcano sprang out of the sea on the coast of Norway.'

'Other writers also mention volcanic disturbances in this same year, 1783. We are told by Lyell and Geikie, that there were great volcanic eruptions in and near Iceland. A submarine volcano burst forth in the sea, thirty miles south-west of Iceland, which ejected so much pumice that the ocean was covered with this substance, to the distance of 150 miles, and ships were considerably impeded in their course; and a new island was formed, from which fire and smoke and pumice were emitted.

'Besides this submarine eruption, the volcano Skaptar-Jokull, on the mainland, on June 11th, 1783, threw out a torrent of lava, so immense as to surpass in magnitude the bulk of Mont Blanc, and ejected so vast an amount of fine dust, that the atmosphere over Iceland continued loaded with it for months afterwards. It fell in such quantities over parts of Caithness—a distance of 600 miles—as to destroy the crops, and that year is still spoken of by the inhabitants as the year of 'the ashie.'

'These particulars are gathered from the text-books of Lyell and Geikie.

'I am not aware whether the coincidence in time of the Icelandic eruptions, and of the peculiar appearance of the sun, described by Gilbert White, has yet been noticed: but this coincidence may very well be taken as some little evidence towards explaining the connexion between the recent beautiful sunsets and the tremendous volcanic explosion of the Isle of Krakatoa in August last.

"W. R. Andrews, F.G.S.

"Teffont Ewyas Rectory, Salisbury, January 8th."
vain, or found himself cast out from the choir of the living souls, whether here, or departed, for whom the song was written: —

God be merciful unto us, and bless us, and cause His face to shine upon us;
That Thy way may be known upon earth, Thy saving health among all nations.
Oh let the nations rejoice and sing for joy, for Thou shalt judge the people righteously and govern the nations upon earth.
Then shall the earth yield her increase, and God, even our own God, shall bless us.
God shall bless us, and all the ends of the earth shall fear Him.

PREFACE.

Twenty years ago, there was no lovelier piece of lowland scenery in South England, nor any more pathetic in the world, by its expression of sweet human character and life, than that immediately bordering on the sources of the Wandle, and including the lower moors of Addington, and the villages of Beddington and Carshalton, with all their pools and streams. No clearer or diviner waters ever sang with constant lips of the hand which 'giveth rain from heaven;' no pastures ever lightened in spring time with more passionate blossoming; no sweeter homes ever hallowed the heart of the passer-by with their pride of peaceful gladness—fain-hidden—yet full-confessed. The place remains, or, until a few months ago, remained, nearly unchanged in its larger features; but, with deliberate mind I say, that I have never seen anything so ghastly in its inner tragic meaning,—not in Pisan Maremma—not by Campagna tomb,—not by the sand-isles of the Torcellan shore,—as the slow stealing of aspects of reckless, indolent, animal neglect, over the delicate sweetness of that English scene: nor is any blasphemy or impiety—any frantic saying or godless thought—more appalling to me, using the best power of judgment I have to discern its sense and scope, than the insolent defilings of those springs by the human herds that drink of them. Just where the welling of stainless water, trembling and pure, like a body of light, enters the pool of Carshalton, cutting itself a radiant channel down to the gravel, through warp of feathery weeds, all waving, which it traverses with its deep threads of clearness, like the chalcedony in moss-agate, starred here and there with white grenouillette; just in the very rush and murmur of the first spreading currents, the human
wretches of the place cast their street and house foulness; heaps of dust and slime, and broken shreds of old metal, and rags of putrid clothes; they having neither energy to cart it away, nor decency enough to dig it into the ground, thus shed into the stream, to diffuse what venom of it will float and melt, far away, in all places where God meant those waters to bring joy and health. And, in a little pool, behind some houses farther in the village, where another spring rises, the shattered stones of the well, and of the little fretted channel which was long ago built and traced for it by gentler hands, lie scattered, each from each, under a ragged bank of mortar, and scoria; and bricklayers' refuse, on one side, which the clean water nevertheless chastises to purity; but it cannot conquer the dead earth beyond; and there, circled and coiled under festering scum, the stagnant edge of the pool effaces itself into a slope of black slime, the accumulation of indolent years. Half-a-dozen men, with one day's work, could cleanse those pools, and trim the flowers about their banks, and make every breath of summer air above them rich with cool balm; and every glittering wave medicinal, as if it ran, troubled of angels, from the porch of Bethesda. But that day's work is never given, nor will be; nor will any joy be possible to heart of man, for evermore, about those wells of English waters.

When I last left them, I walked up slowly through the back streets of Croydon, from the old church to the hospital; and, just on the left, before coming up to the crossing of the High Street, there was a new public-house built. And the front of it was built in so wise manner, that a recess of two feet was left below its front windows, between them and the street-pavement—a recess too narrow for any possible use (for even if it had been occupied by a seat, as in old time it might have been, everybody walking along the street would have fallen over the legs of the reposing wayfarers). But, by way of making this two feet depth of freehold land more expressive of the dignity of an establishment for the sale of spirituous liquors, it was fenced from the pavement by an imposing iron railing, having four or five spearheads to the yard of it, and six feet high; containing as much iron and iron-work, indeed,
as could well be put into the space; and by this stately arrangement, the little piece of dead ground within, between wall and street, became a protective receptacle of refuse; cigar ends, and oyster shells, and the like, such as an open-handed English street-populace habitually scatters from its presence, and was thus left, unsweepable by any ordinary methods. Now the iron bars which, uselessly (or in great degree worse than uselessly), enclosed this bit of ground, and made it pestilent, represented a quantity of work which would have cleansed the Carshalton pools three times over:—of work, partly cramped and deadly, in the mine; partly fierce* and exhaustive, at the furnace; partly foolish and sedentary, of ill-taught students making bad designs: work from the beginning to the last fruits of it, and in all the branches of it, venomous, deathful, and miserable. Now, how did it come to pass that this work was done instead of the other; that the strength and life of the English operative were spent in defiling ground, instead of redeeming it; and in producing an entirely (in that place) valueless piece of metal, which can neither be eaten nor breathed, instead of medicinal fresh air, and pure water?

There is but one reason for it, and at present a conclusive one,—that the capitalist can charge per-centage on the work

* 'A fearful occurrence took place a few days since, near Wolverhampton. Thomas Snape, aged nineteen, was on duty as the 'keeper' of a blast furnace at Deepfield, assisted by John Gardner, aged eighteen, and Joseph Swift, aged thirty-seven. The furnace contained four tons of molten iron, and an equal amount of cinders, and ought to have been run out at 7.30 p.m. But Snape and his mates, engaged in talking and drinking, neglected their duty, and, in the meantime, the iron rose in the furnace until it reached a pipe wherein water was contained. Just as the men had stripped, and were proceeding to tap the furnace, the water in the pipe, converted into steam, burst down its front and let loose on them the molten metal, which instantaneously consumed Gardner; Snape, terribly burnt, and mad with pain, leaped into the canal and then ran home and fell dead on the threshold, Swift survived to reach the hospital, where he died too.

In further illustration of this matter, I beg the reader to look at the article on the 'Decay of the English Race,' in the 'Pull-Mill Gazette' of April 17, of this year; and at the articles on the 'Report of the Thames Commission,' in any journals of the same date.
in the one case, and cannot in the other. If, having certain funds for supporting labour at my disposal, I pay men merely to keep my ground in order, my money is, in that function, spent once for all; but if I pay them to dig iron out of my ground, and work it, and sell it, I can charge rent for the ground, and per-centage both on the manufacture and the sale, and make my capital profitable in these three bye-ways. The greater part of the profitable investment of capital, in the present day, is in operations of this kind, in which the public is persuaded to buy something of no use to it, on production, or sale, of which, the capitalist may charge per-centage; the said public remaining all the while under the persuasion that the per-centages thus obtained are real national gains, whereas, they are merely filchings out of partially light pockets, to swell heavy ones.

Thus, the Croydon publican buys the iron railing, to make himself more conspicuous to drunkards. The public-house-keeper on the other side of the way presently buys another railing, to out-rail him with. Both are, as to their relative attractiveness to customers of taste, just where they were before; but they have lost the price of the railings; which they must either themselves finally lose, or make their aforesaid customers of taste pay, by raising the price of their beer, or adulterating it. Either the publicans, or their customers, are thus poorer by precisely what the capitalist has gained; and the value of the work itself, meantime, has been lost to the nation; the iron bars in that form and place being wholly useless. It is this mode of taxation of the poor by the rich which is referred to in the text (page 31), in comparing the modern acquisitive power of capital with that of the lance and sword; the only difference being that the levy of black mail in old times was by force, and is now by cozening. The old rider and reiver frankly quartered himself on the publican for the night; the modern one merely makes his lance into an iron spike, and persuades his host to buy it. One comes as an open robber, the other as a cheating pedlar; but the result, to the injured person's pocket, is absolutely the same. Of course many useful industries mingle with, and disguise the useless ones; and
in the habits of energy aroused by the struggle, there is a
certain direct good. It is far better to spend four thousand
pounds in making a good gun, and then to blow it to pieces,
than to pass life in idleness. Only do not let it be called
‘political economy.’ There is also a confused notion in the
minds of many persons, that the gathering of the property of
the poor into the hands of the rich does no ultimate harm;
since, in whossoever hands it may be, it must be spent at last,
and thus, they think, return to the poor again. This fallacy
has been again and again exposed; but grant the plea true,
and the same apology may, of course, be made for black mail,
or any other form of robbery. It might be (though practically
it never is) as advantageous for the nation that the robber
should have the spending of the money he extorts, as that the
person robbed should have spent it. But this is no excuse
for the theft. If I were to put a turnpike on the road where
it passes my own gate, and endeavour to exact a shilling from
every passenger, the public would soon do away with my gate,
without listening to any plea on my part that ‘it was as ad-
vantageous to them, in the end, that I should spend their
shillings, as that they themselves should.’ But if, instead of
out-facing them with a turnpike, I can only persuade them to
come in and buy stones, or old iron, or any other useless
thing, out of my ground, I may rob them to the same extent,
and be, moreover, thanked as a public benefactor, and pro-
moter of commercial prosperity. And this main question for
the poor of England—for the poor of all countries—is wholly
omitted in every common treatise on the subject of wealth.
Even by the labourers themselves, the operation of capital is
regarded only in its effect on their immediate interests; never
in the far more terrific power of its appointment of the kind
and the object of labour. It matters little, ultimately, how
much a labourer is paid for making anything; but it matters
fearfully what the thing is, which he is compelled to make. If
his labour is so ordered as to produce food, and fresh air, and
fresh water, no matter that his wages are low;—the food and
fresh air and water will be at last there; and he will at last
get them. But if he is paid to destroy food and fresh air, or
to produce iron bars instead of them,—the food and air will finally not be there, and he will not get them, to his great and final inconvenience. So that, conclusively, in political as in household economy, the great question is, not so much what money you have in your pocket, as what you will buy with it, and do with it.

I have been long accustomed, as all men engaged in work of investigation must be, to hear my statements laughed at for years, before they are examined or believed; and I am generally content to wait the public's time. But it has not been without displeased surprise that I have found myself totally unable, as yet, by any repetition, or illustration, to force this plain thought into my readers' heads,—that the wealth of nations, as of men, consists in substance, not in ciphers; and that the real good of all work, and of all commerce, depends on the final worth of the thing you make, or get by it. This is a practical enough statement, one would think: but the English public has been so possessed by its modern school of economists with the notion that Business is always good, whether it be busy in mischief or in benefit; and that buying and selling are always salutary, whatever the intrinsic worth of what you buy or sell,—that it seems impossible to gain so much as a patient hearing for any inquiry respecting the substantial result of our eager modern labours. I have never felt more checked by the sense of this impossibility than in arranging the heads of the following three lectures, which, though delivered at considerable intervals of time, and in different places, were not prepared without reference to each other. Their connection would, however, have been made far more distinct, if I had not been prevented, by what I feel to be another great difficulty in addressing English audiences, from enforcing, with any decision, the common, and to me the most important, part of their subjects. I chiefly desired (as I have just said) to question my hearers—operatives, merchants, and soldiers, as to the ultimate meaning of the business they had in hand; and to know from them what they expected or intended their manufacture to come to, their selling to come to, and their
killing to come to. That appeared the first point needing determination before I could speak to them with any real utility or effect. 'You craftsmen—salesmen—swordsmen,—do but tell me clearly what you want, then, if I can say anything to help you, I will; and if not, I will account to you as I best may for my inability.' But in order to put this question into any terms, one had first of all to face the difficulty just spoken of—to me for the present insuperable,—the difficulty of knowing whether to address one's audience as believing, or not believing, in any other world than this. For if you address any average modern English company as believing in an Eternal life, and endeavour to draw any conclusions, from this assumed belief, as to their present business, they will forthwith tell you that what you say is very beautiful, but it is not practical. If, on the contrary, you frankly address them as unbelievers in Eternal life, and try to draw any consequences from that unbelief,—they immediately hold you for an accursed person, and shake off the dust from their feet at you. And the more I thought over what I had got to say, the less I found I could say it, without some reference to this intangible or intractable part of the subject. It made all the difference, in asserting any principle of war, whether one assumed that a discharge of artillery would merely knead down a certain quantity of red clay into a level line, as in a brick field; or whether, out of every separately Christian-named portion of the ruinous heap, there went out, into the smoke and dead-fallen air of battle, some astonished condition of soul, unwillingly released. It made all the difference, in speaking of the possible range of commerce, whether one assumed that all bargains related only to visible property—or whether property, for the present invisible, but nevertheless real, was elsewhere purchasable on other terms. It made all the difference, in addressing a body of men subject to considerable hardship, and having to find some way out of it—whether one could confidentially say to them, 'My friends,—you have only to die, and all will be right;' or whether one had any secret misgiving that such advice was more blessed to him that gave, than to him that took it. And therefore
the deliberate reader will find, throughout these lectures, a hesitation in driving points home, and a pausing short of conclusions which he will feel I would fain have come to; hesitation which arises wholly from this uncertainty of my hearers' temper. For I do not now speak, nor have I ever spoken, since the time of my first forward youth, in any proselyting temper, as desiring to persuade any one of what, in such matters, I thought myself; but, whomsoever I venture to address, I take for the time his creed as I find it; and endeavour to push it into such vital fruit as it seems capable of. Thus, it is a creed with a great part of the existing English people, that they are in possession of a book which tells them, straight from the lips of God all they ought to do, and need to know. I have read that book, with as much care as most of them, for some forty years; and am thankful that, on those who trust it, I can press its pleadings. My eudeavour has been uniformly to make them trust it more deeply than they do; trust it, not in their own favourite verses only, but in the sum of all; trust it not as a fetish or talisman, which they are to be saved by daily repetitions of; but as a Captain's order, to be heard and obeyed at their peril. I was always encouraged by supposing my hearers to hold such belief. To these, if to any, I once had hope of addressing, with acceptance, words which insisted on the guilt of pride, and the futility of avarice; from these, if from any, I once expected ratification of a political economy, which asserted that the life was more than the meat, and the body than raiment; and these, it once seemed to me, I might ask without accusation or fanaticism, not merely in doctrine of the lips, but in the bestowal of their heart's treasure, to separate themselves from the crowd of whom it is written, 'After all these things do the Gentiles seek.'

It cannot, however, be assumed, with any semblance of reason, that a general audience is now wholly, or even in majority, composed of these religious persons. A large portion must always consist of men who admit no such creed; or who, at least, are inaccessible to appeals founded on it. And as, with the so-called Christian, I desired to plead for honest
declaration and fulfilment of his belief in life,—with the so-called Infidel, I desired to plead for an honest declaration and fulfilment of his belief in death. The dilemma is inevitable. Men must either hereafter live, or hereafter die; fate may be bravely met, and conduct wisely ordered, on either expectation; but never in hesitation between ungrasped hope, and unconfronted fear. We usually believe in immortality, so far as to avoid preparation for death; and in mortality, so far as to avoid preparation for anything after death. Whereas, a wise man will at least hold himself prepared for one or other of two events, of which one or other is inevitable; and will have all things in order, for his sleep, or in readiness, for his awakening.

Nor have we any right to call it an ignoble judgment, if he determine to put them in order, as for sleep. A brave belief in life is indeed an enviable state of mind, but, as far as I can discern, an unusual one. I know few Christians so convinced of the splendour of the rooms in their Father's house, as to be happier when their friends are called to those mansions, than they would have been if the Queen had sent for them to live at Court: nor has the Church's most ardent 'desire to depart, and be with Christ,' ever cured it of the singular habit of putting on mourning for every person summoned to such departure. On the contrary, a brave belief in death has been assuredly held by many not ignoble persons, and it is a sign of the last depravity in the Church itself, when it assumes that such a belief is inconsistent with either purity of character, or energy of hand. The shortness of life is not, to any rational person, a conclusive reason for wasting the space of it which may be granted him; nor does the anticipation of death to-morrow suggest, to any one but a drunkard, the expediency of drunkenness to-day. To teach that there is no device in the grave, may indeed make the deviceless person more contented in his dulness; but it will make the devisor only more earnest in devising, nor is human conduct likely, in every case, to be purer under the conviction that all its evil may in a moment be pardoned, and all its wrong-doing in a moment redeemed; and that the sigh of repentance, which
purges the guilt of the past, will waft the soul into a felicity which forgets its pain,—than it may be under the sterner, and to many not unwise minds, more probable, apprehension, that 'what a man soweth that shall he also reap'—or others reap,—when he, the living seed of pestilence, walketh no more in darkness, but lies down therein.

But to men whose feebleness of sight,—or bitterness of soul, or the offence given by the conduct of those who claim higher hope, may have rendered this painful creed the only possible one, there is an appeal to be made, more secure in its ground than any which can be addressed to happier persons. I would fain, if I might offencelessly, have spoken to them as if none others heard; and have said thus: Hear me, you dying men, who will soon be deaf for ever. For these others, at your right hand and your left, who look forward to a state of infinite existence, in which all their errors will be overruled, and all their faults forgiven; for these, who, stained and blackened in the battle smoke of mortality, have but to dip themselves for an instant in the font of death, and to rise renewed of plumage, as a dove that is covered with silver, and her feathers like gold; for these, indeed, it may be permissible to waste their numbered moments, through faith in a future of innumerable hours; to these, in their weakness, it may be conceded that they should tamper with sin which can only bring forth fruit of righteousness, and profit by the iniquity which, one day, will be remembered no more. In them, it may be no sign of hardness of heart to neglect the poor, over whom they know their Master is watching; and to leave those to perish temporarily, who cannot perish eternally. But, for you, there is no such hope, and therefore no such excuse. This fate, which you ordain for the wretched, you believe to be all their inheritance; you may crush them, before the moth, and they will never rise to rebuke you,—their breath, which fails for lack of food, once expiring, will never be recalled to whisper against you a word of accusing;—they and you, as you think, shall lie down together in the dust, and the worms cover you;—and for them there shall be no consolation, and on you it is certain,—only the question
murmured above your grave: 'Who shall repay him what he hath done?' Is it therefore easier for you in your heart to inflict the sorrow for which there is no remedy? Will you take, wantonly, this little all of his life from your poor brother, and make his brief hours long to him with pain? Will you be readier to the injustice which can never be redressed; and niggardly of mercy which you can bestow but once, and which, refusing, you refuse for ever? I think better of you, even of the most selfish, than that you would do this, well understood. And for yourselves, it seems to me, the question becomes not less grave, in these curt limits. If your life were but a fever fit,—the madness of a night, whose follies were all to be forgotten in the dawn, it might matter little how you fretted away the sickly hours,—what toys you snatched at, or let fall,—what visions you followed wistfully with the deceived eyes of sleepless phrenzy. Is the earth only an hospital? Play, if you care to play, on the floor of the hospital dens. Knit its straw into what crowns please you; gather the dust of it for treasure, and die rich in that, clutching at the black motes in the air with your dying hands;—and yet, it may be well with you. But if this life be no dream, and the world no hospital; if all the peace and power and joy you can ever win, must be won now; and all fruit of victory gathered here, or never;—will you still, throughout the puny totality of your life, weary yourselves in the fire for vanity? If there is no rest which remaineth for you, is there none you might presently take? was this grass of the earth made green for your shroud only, not for your bed? and can you never lie down upon it, but only under it? The heathen, to whose creed you have returned, thought not so. They knew that life brought its contest, but they expected from it also the crown of all contest: No proud one! no jewelled circlet flaming through Heaven above the height of the unmerited throne; only some few leaves of wild olive, cool to the tired brow, through a few years of peace. It should have been of gold, they thought; but Jupiter was poor; this was the best the god could give them. Seeking a greater than this, they had known it a mockery. Not in war, not in wealth, not in tyr-
anny, was there any happiness to be found for them—only in kindly peace, fruitful and free. The wreath was to be of wild olive, mark you:—the tree that grows carelessly, tufting the rocks with no vivid bloom, no verdure of branch; only with soft snow of blossom, and scarcely fulfilled fruit, mixed with grey leaf and thornset stem; no fastening of diadem for you but with such sharp embroidery! But this, such as it is, you may win while yet you live; type of grey honour and sweet rest.* Free-heartedness, and graciousness, and undisturbed trust, and requited love, and the sight of the peace of others, and the ministry to their pain;—these, and the blue sky above you, and the sweet waters and flowers of the earth beneath; and mysteries and presences, innumerable, of living things,—these may yet be here your riches; untormenting and divine: serviceable for the life that now is; nor, it may be, without promise of that which is to come.

* μελιτόσσαι, ἄεθλων γ' ἐνεκευ.
THE CROWN OF WILD OLIVE.

LECTURE I.

WORK.

(Delivered before the Working Men’s Institute, at Camberwell.)

My Friends,—I have not come among you to-night to endeavour to give you an entertaining lecture; but to tell you a few plain facts, and ask you some plain, but necessary questions. I have seen and known too much of the struggle for life among our labouring population, to feel at ease, even under any circumstances, in inviting them to dwell on the trivialities of my own studies; but, much more, as I meet to-night, for the first time, the members of a working Institute established in the district in which I have passed the greater part of my life, I am desirous that we should at once understand each other, on graver matters. I would fain tell you, with what feelings, and with what hope, I regard this Institution, as one of many such, now happily established throughout England, as well as in other countries;—Institutions which are preparing the way for a great change in all the circumstances of industrial life; but of which the success must wholly depend upon our clearly understanding the circumstances and necessary limits of this change. No teacher can truly promote the cause of education, until he knows the conditions of the life for which that education is to prepare his pupil. And the fact that he is called upon to address you nominally, as a ‘Working Class,’ must compel him, if he is in any wise earnest or thoughtful, to inquire in the outset,
on what you yourselves suppose this class distinction has been founded in the past, and must be founded in the future. The manner of the amusement, and the matter of the teaching, which any of us can offer you, must depend wholly on our first understanding from you, whether you think the distinction heretofore drawn between working men and others, is truly or falsely founded. Do you accept it as it stands? do you wish it to be modified? or do you think the object of education is to efface it, and make us forget it for ever?

Let me make myself more distinctly understood. We call this—you and I—a 'Working Men's' Institute, and our college in London, a 'Working Men's' College. Now, how do you consider that these several institutes differ, or ought to differ, from 'idle men's' institutes and 'idle men's' colleges? Or by what other word than 'idle' shall I distinguish those whom the happiest and wisest of working men do not object to call the 'Upper Classes'? Are there really upper classes,—are there lower? How much should they always be elevated, how much always depressed? And, gentlemen and ladies—I pray those of you who are here to forgive me the offence there may be in what I am going to say. It is not I who wish to say it. Bitter voices say it; voices of battle and of famine through all the world, which must be heard some day, whoever keeps silence. Neither is it to you specially that I say it. I am sure that most now present know their duties of kindness, and fulfil them, better perhaps than I do mine. But I speak to you as representing your whole class, which errs, I know, chiefly by thoughtlessness, but not therefore the less terribly. Wilful error is limited by the will, but what limit is there to that of which we are unconscious?

Bear with me, therefore, while I turn to these workmen, and ask them, also as representing a great multitude, what they think the 'upper classes' are, and ought to be, in relation to them. Answer, you workmen who are here, as you would among yourselves, frankly; and tell me how you would have me call those classes. Am I to call them—would you think me right in calling them—the idle classes? I think you would feel somewhat uneasy, and as if I were not treating
work.

my subject honestly, or speaking from my heart, if I went on under the supposition that all rich people were idle. You would be both unjust and unwise if you allowed me to say that;—not less unjust than the rich people who say that all the poor are idle, and will never work if they can help it, or more than they can help.

For indeed the fact is, that there are idle poor and idle rich; and there are busy poor and busy rich. Many a beggar is as lazy as if he had ten thousand a year; and many a man of large fortune is busier than his errand-boy, and never would think of stopping in the street to play marbles. So that, in a large view, the distinction between workers and idlers, as between knaves and honest men, runs through the very heart and innermost economies of men of all ranks and in all positions. There is a working class—strong and happy—among both rich and poor; there is an idle class—weak, wicked, and miserable—among both rich and poor. And the worst of the misunderstandings arising between the two orders come of the unlucky fact that the wise of one class habitually contemplate the foolish of the other. If the busy rich people watched and rebuked the idle rich people, all would be right; and if the busy poor people watched and rebuked the idle poor people, all would be right. But each class has a tendency to look for the faults of the other. A hard-working man of property is particularly offended by an idle beggar; and an orderly, but poor, workman is naturally intolerant of the licentious luxury of the rich. And what is severe judgment in the minds of the just men of either class, becomes fierce enmity in the unjust—but among the unjust only. None but the dissolute among the poor look upon the rich as their natural enemies, or desire to pillage their houses and divide their property. None but the dissolute among the rich speak in opprobrious terms of the vices and follies of the poor.

There is, then, no class distinction between idle and industrious people; and I am going to-night to speak only of the industrious. The idle people we will put out of our thoughts at once—they are mere nuisances—what ought to be done with them, we'll talk of at another time. But there are class dis-
tinctions, among the industrious themselves; tremendous distinctions, which rise and fall to every degree in the infinite thermometer of human pain and of human power—distinctions of high and low, of lost and won, to the whole reach of man’s soul and body.

These separations we will study, and the laws of them, among energetic men only, who, whether they work or whether they play, put their strength into the work, and their strength into the game; being in the full sense of the word ‘industrious,’ one way or another—with a purpose, or without. And these distinctions are mainly four:

I. Between those who work, and those who play.

II. Between those who produce the means of life, and those who consume them.

III. Between those who work with the head, and those who work with the hand.

IV. Between those who work wisely, and who work foolishly.

For easier memory, let us say we are going to oppose, in our examination—

I. Work to play;

II. Production to consumption;

III. Head to Hand; and,

IV. Sense to nonsense.

I. First, then, of the distinction between the classes who work and the classes who play. Of course we must agree upon a definition of these terms,—work and play,—before going farther. Now, roughly, not with vain subtlety of definition, but for plain use of the words, ‘play’ is an exertion of body or mind, made to please ourselves, and with no determined end; and work is a thing done because it ought to be done, and with a determined end. You play, as you call it, at cricket, for instance. That is as hard work as anything else; but it amuses you, and it has no result but the amusement. If it were done as an ordered form of exercise, for health’s sake, it would become work directly. So, in like manner, whatever we do to please ourselves, and only for the sake of the pleasure, not for an ultimate object, is ‘play,’ the
pleasing thing,' not the useful thing. Play may be useful in
a secondary sense (nothing is indeed more useful or necessary);
but the use of it depends on its being spontaneous.

Let us, then, enquire together what sort of games the play-
ing class in England spend their lives in playing at.

The first of all English games is making money. That is
an all-absorbing game; and we knock each other down often-
er in playing at that than at foot-ball, or any other roughest
sport; and it is absolutely without purpose; no one who en-
gages heartily in that game ever knows why. Ask a great
money-maker what he wants to do with his money—he never
knows. He doesn't make it to do anything with it. He gets
it only that he may get it. 'What will you make of what you
have got?' you ask. 'Well, I'll get more,' he says. Just as,
at cricket, you get more runs. There's no use in the runs, but
to get more of them than other people is the game. And
there's no use in the money, but to have more of it than other
people is the game. So all that great foul city of London
there,—rattling, growling, smoking, stinking,—a ghastly heap
of fermenting brickwork, pouring out poison at every pore,—
you fancy it is a city of work? Not a street of it! It is a
great city of play; very nasty play, and very hard play, but
still play. It is only Lord's cricket ground without the turf,—
a huge billiard table without the cloth, and with pockets as deep
as the bottomless pit; but mainly a billiard table, after all.

Well, the first great English game is this playing at coun-
ters. It differs from the rest in that it appears always to be
producing money, while every other game is expensive. But
it does not always produce money. There's a great difference
between 'winning' money and 'making' it; a great difference
between getting it out of another man's pocket into ours, or
filling both. Collecting money is by no means the same thing
as making it; the tax-gatherer's house is not the Mint; and
much of the apparent gain (so called), in commerce, is only a
form of taxation on carriage or exchange.

Our next great English game, however, hunting and shoot-
ing, is costly altogether; and how much we are fined for it
annually in land, horses, gamekeepers, and game laws, and all
else that accompanies that beautiful and special English game, I will not endeavour to count now: but note only that, except for exercise, this is not merely a useless game, but a deadly one, to all connected with it. For through horse-racing, you get every form of what the higher classes everywhere call 'Play,' in distinction from all other plays; that is—gambling; by no means a beneficial or recreative game: and, through game-preserving, you get also some curious laying out of ground; that beautiful arrangement of dwelling-house for man and beast, by which we have grouse and black-cock—so many brace to the acre, and men and women—so many brace to the garret. I often wonder what the angelic builders and surveyors—the angelic builders who build the 'many mansions' up above there; and the angelic surveyors, who measured that four-square city with their measuring reeds—I wonder what they think, or are supposed to think, of the laying out of ground by this nation, which has set itself, as it seems, literally to accomplish, word for word, or rather fact for word, in the persons of those poor whom its Master left to represent him, what that Master said of himself—that foxes and birds had homes, but He none.

Then, next to the gentlemen's game of hunting, we must put the ladies' game of dressing. It is not the cheapest of games. I saw a brooch at a jeweller's in Bond Street a fortnight ago, not an inch wide, and without any singular jewel in it, yet worth 3,000l. And I wish I could tell you what this 'play' costs, altogether, in England, France, and Russia annually. But it is a pretty game, and on certain terms, I like it; nay, I don't see it played quite as much as I would fain have it. You ladies like to lead the fashion:—by all means lead it—lead it thoroughly, lead it far enough. Dress yourselves nicely, and dress everybody else nicely. Lead the fashions for the poor first; make them look well, and you yourselves will look, in ways of which you have now no conception, all the better. The fashions you have set for some time among your peasantry are not pretty ones; their doublets are too irregularly slashed, and the wind blows too frankly through them.
Then there are other games, wild enough, as I could show you if I had time.

There's playing at literature, and playing at art—very different, both, from working at literature, or working at art, but I've no time to speak of these. I pass to the greatest of all—the play of plays, the great gentlemen's game, which ladies like them best to play at,—the game of War. It is entrancingly pleasant to the imagination; the facts of it, not always so pleasant. We dress for it, however, more finely than for any other sport; and go out to it, not merely in scarlet, as to hunt, but in scarlet and gold, and all manner of fine colours: of course we could fight better in grey, and without feathers; but all nations have agreed that it is good to be well dressed at this play. Then the bats and balls are very costly; our English and French bats, with the balls and wickets, even those which we don't make any use of, costing, I suppose, now about fifteen millions of money annually to each nation; all of which, you know is paid for by hard labourer's work in the furrow and furnace. A costly game!—not to speak of its consequences; I will say at present nothing of these. The mere immediate cost of all these plays is what I want you to consider; they all cost deadly work somewhere, as many of us know too well. The jewel-cutter, whose sight fails over the diamonds; the weaver, whose arm fails over the web; the iron-forger, whose breath fails before the furnace—they know what work is—they, who have all the work, and none of the play, except a kind they have named for themselves down in the black north country, where 'play' means being laid up by sickness. It is a pretty example for philologists, of varying dialect, this change in the sense of the word 'play,' as used in the black country of Birmingham, and the red and black country of Baden Baden. Yes, gentlemen, and gentlewomen, of England, who think 'one moment unamused a misery, not made for feeble man,' this is what you have brought the word 'play' to mean, in the heart of merry England! You may have your fluting and piping; but there are sad children sitting in the market-place, who indeed cannot say to you, 'We have piped unto you, and ye
have not danced:’ but eternally shall say to you, ‘We have mourned unto you, and ye have not lamented.’

This, then, is the first distinction between the ‘upper and lower’ classes. And this is one which is by no means necessary; which indeed must, in process of good time, be by all honest men’s consent abolished. Men will be taught that an existence of play, sustained by the blood of other creatures, is a good existence for gnats and sucking fish; but not for men: that neither days, nor lives, can be made holy by doing nothing in them: that the best prayer at the beginning of a day is that we may not lose its moments; and the best grace before meat, the consciousness that we have justly earned our dinner. And when we have this much of plain Christianity preached to us again, and enough respect for what we regard as inspiration, as not to think that ‘Son, go work to-day in my vineyard,’ means ‘Fool, go play to-day in my vineyard,’ we shall all be workers, in one way or another; and this much at least of the distinction between ‘upper’ and ‘lower’ forgotten.

II. I pass then to our second distinction; between the rich and poor, between Dives and Lazarus,—distinction which exists more sternly, I suppose, in this day, than ever in the world, Pagan or Christian, till now. I will put it sharply before you, to begin with, merely by reading two paragraphs which I cut from two papers that lay on my breakfast table on the same morning, the 25th of November, 1864. The piece about the rich Russian at Paris is commonplace enough, and stupid besides (for fifteen francs,—12s. 6d.,—is nothing for a rich man to give for a couple of peaches, out of season). Still, the two paragraphs printed on the same day are worth putting side by side.

‘Such a man is now here. He is a Russian, and, with your permission, we will call him Count Teufelskine. In dress he is sublime; art is considered in that toilet, the harmony of colour respected, the chiar’ oscuro evident in well-selected contrast. In manners he is dignified—nay, perhaps apathetic; nothing disturbs the placid serenity of that calm exterior. One day our friend breakfasted chez Bignon. When the bill came he read, ‘Two peaches, 15f.’ He paid,
"Peaches scarce, I presume?" was his sole remark. "No, sir," replied the waiter, "but Teufelskines are."' *Telegraph*, November 25, 1864.

'Yesterday morning, at eight o'clock, a woman, passing a dung heap in the stone yard near the recently-erected almshouses in Shadwell Gap, High Street, Shadwell, called the attention of a Thames police-constable to a man in a sitting position on the dung heap, and said she was afraid he was dead. Her fears proved to be true. The wretched creature appeared to have been dead several hours. He had perished of cold and wet, and the rain had been beating down on him all night. The deceased was a bone-picker. He was in the lowest stage of poverty, poorly clad, and half-starved. The police had frequently driven him away from the stone yard, between sunset and sunrise, and told him to go home. He selected a most desolate spot for his wretched death. A penny and some bones were found in his pockets. The deceased was between fifty and sixty years of age. Inspector Roberts, of the K division, has given directions for inquiries to be made at the lodging-houses respecting the deceased, to ascertain his identity if possible.'—*Morning Post*, November 25, 1864.

You have the separation thus in brief compass; and I want you to take notice of the 'a penny and some bones were found in his pockets,' and to compare it with this third statement, from the *Telegraph* of January 16th of this year:

'Again, the dietary scale for adult and juvenile paupers was drawn up by the most conspicuous political economists in England. It is low in quantity, but it is sufficient to support nature; yet within ten years of the passing of the Poor Law Act, we heard of the paupers in the Andover Union gnawing the scraps of putrid flesh and sucking the marrow from the bones of horses which they were employed to crush.'

You see my reason for thinking that our Lazarus of Christianity has some advantage over the Jewish one. Jewish Lazarus expected, or at least prayed, to be fed with crumbs from the rich man's table; but our Lazarus is fed with crumbs from the dog's table.
Now this distinction between rich and poor rests on two bases. Within its proper limits, on a basis which is lawful and everlastingly necessary; beyond them, on a basis unlawful, and everlastingly corrupting the frame-work of society. The lawful basis of wealth is, that a man who works should be paid the fair value of his work; and that if he does not choose to spend it to-day, he should have free leave to keep it, and spend it to-morrow. Thus, an industrious man working daily, and laying by daily, attains at last the possession of an accumulated sum of wealth, to which he has absolute right. The idle person who will not work, and the wasteful person who lays nothing by, at the end of the same time will be doubly poor—poor in possession, and dissolute in moral habit; and he will then naturally covet the money which the other has saved. And if he is then allowed to attack the other, and rob him of his well-earned wealth, there is no more any motive for saving, or any reward for good conduct; and all society is thereupon dissolved, or exists only in systems of rapine. Therefore the first necessity of social life is the clearness of national conscience in enforcing the law—that he should keep who has justly earned.

That law, I say, is the proper basis of distinction between rich and poor. But there is also a false basis of distinction; namely, the power held over those who earn wealth by those who levy or exact it. There will be always a number of men who would fain set themselves to the accumulation of wealth as the sole object of their lives. Necessarily, that class of men is an uneducated class, inferior in intellect, and more or less cowardly. It is physically impossible for a well-educated, intellectual, or brave man to make money the chief object of his thoughts; as physically impossible as it is for him to make his dinner the principal object of them. All healthy people like their dinners, but their dinner is not the main object of their lives. So all healthily minded people like making money—ought to like it, and to enjoy the sensation of winning it; but the main object of their life is not money; it is something better than money. A good soldier, for instance, mainly wishes to do his fighting well. He is glad of his pay—very
properly so, and justly grumbles when you keep him ten years without it—still, his main notion of life is to win battles, not to be paid for winning them. So of clergymen. They like pew-rents, and baptismal fees, of course; but yet, if they are brave and well educated, the pew-rent is not the sole object of their lives, and the baptismal fee is not the sole purpose of the baptism; the clergyman’s object is essentially to baptize and preach, not to be paid for preaching. So of doctors. They like fees no doubt,—ought to like them; yet if they are brave and well educated, the entire object of their lives is not fees. They, on the whole, desire to cure the sick; and,—if they are good doctors, and the choice were fairly put to them,—would rather cure their patient, and lose their fee, than kill him, and get it. And so with all other brave and rightly trained men; their work is first, their fee second—very important always, but still second. But in every nation, as I said, there are a vast class who are ill-educated, cowardly, and more or less stupid. And with these people, just as certainly the fee is first, and the work second, as with brave people the work is first and the fee second. And this is no small distinction. It is the whole distinction in a man; distinction between life and death in him, between heaven and hell for him. You cannot serve two masters;—you must serve one or other. If your work is first with you, and your fee second, work is your master, and the lord of work, who is God. But if your fee is first with you, and your work second, fee is your master, and the lord of fee, who is the Devil; and not only the Devil, but the lowest of devils—the ‘least erected fiend that fell.’ So there you have it in brief terms; Work first—you are God’s servants; Fee first—you are the Fiend’s. And it makes a difference, now and ever, believe me, whether you serve Him who has on His vesture and thigh written, ‘King of Kings,’ and whose service is perfect freedom; or him on whose vesture and thigh the name is written, ‘Slave of Slaves,’ and whose service is perfect slavery.

However, in every nation there are, and must always be, a certain number of these Fiend’s servants, who have it principally for the object of their lives to make money. They are
always, as I said, more or less stupid, and cannot conceive of anything else so nice as money. Stupidity is always the basis of the Judas bargain. We do great injustice to Iscariot, in thinking him wicked above all common wickedness. He was only a common money-lover, and, like all money-lovers, didn't understand Christ;—couldn't make out the worth of Him, or meaning of Him. He didn't want Him to be killed. He was horror-struck when he found that Christ would be killed; threw his money away instantly, and hanged himself. How many of our present money-seekers, think you, would have the grace to hang themselves, whoever was killed? But Judas was a common, selfish, muddle-headed, pilfering fellow; his hand always in the bag of the poor, not caring for them. He didn't understand Christ;—yet believed in Him, much more than most of us do; had seen Him do miracles, thought He was quite strong enough to shift for Himself, and he, Judas, might as well make his own little bye-perquisites out of the affair. Christ would come out of it well enough, and he have his thirty pieces. Now, that is the money-seeker's idea, all over the world. He doesn't hate Christ, but can't understand Him—doesn't care for him—sees no good in that benevolent business; makes his own little job out of it at all events, come what will. And thus, out of every mass of men, you have a certain number of bag-men—your 'fee-first' men, whose main object is to make money. And they do make it—make it in all sorts of unfair ways, chiefly by the weight and force of money itself, or what is called the power of capital; that is to say, the power which money, once obtained, has over the labour of the poor, so that the capitalist can take all its produce to himself, except the labourer's food. That is the modern Judas's way of 'carrying the bag,' and 'bearing what is put therein.'

Nay, but (it is asked) how is that an unfair advantage? Has not the man who has worked for the money a right to use it as he best can? No; in this respect, money is now exactly what mountain promontories over public roads were in old times. The barons fought for them fairly:—the strongest and cunningest got them; then fortified them, and made
everyone who passed below pay toll. Well, capital now is exactly what crags were then. Men fight fairly (we will, at least, grant so much, though it is more than we ought) for their money; but, once having got it, the fortified millionaire can make everybody who passes below pay toll to his million, and build another tower of his money castle. And I can tell you, the poor vagrants by the roadside suffer now quite as much from the bag-baron, as ever they did from the crag-baron. Bags and crags have just the same result on rags. I have not time, however, to-night to show you in how many ways the power of capital is unjust; but this one great principle I have to assert—you will find it quite indisputably true—that whenever money is the principal object of life with either man or nation, it is both got ill, and spent ill; and does harm both in the getting and spending; but when it is not the principal object, it and all other things will be well got, and well spent. And here is the test, with every man, of whether money is the principal object with him, or not. If in mid-life he could pause and say, "Now I have enough to live upon, I'll live upon it; and having well earned it, I will also well spend it, and go out of the world poor, as I came into it," then money is not principal with him; but if, having enough to live upon in the manner befitting his character and rank, he still wants to make more, and to die rich, then money is the principal object with him, and it becomes a curse to himself, and generally to those who spend it after him. For you know it must be spent some day; the only question is whether the man who makes it shall spend it, or some one else. And generally it is better for the maker to spend it, for he will know best its value and use. This is the true law of life. And if a man does not choose thus to spend his money, he must either hoard it or lend it, and the worst thing he can generally do is to lend it; for borrowers are nearly always ill-spenders, and it is with lent money that all evil is mainly done, and all unjust war protracted.

For observe what the real fact is, respecting loans to foreign military governments, and how strange it is. If your little boy came to you to ask for money to spend in squibs
and crackers, you would think twice before you gave it him; and you would have some idea that it was wasted, when you saw it fly off in fireworks, even though he did no mischief with it. But the Russian children, and Austrian children, come to you, borrowing money, not to spend in innocent squibs, but in cartridges and bayonets to attack you in India with, and to keep down all noble life in Italy with, and to murder Polish women and children with; and that you will give at once, because they pay you interest for it. Now, in order to pay you that interest, they must tax every working peasant in their dominions; and on that work you live. You therefore at once rob the Austrian peasant, assassinate or banish the Polish peasant, and you live on the produce of the theft, and the bribe for the assassination! That is the broad fact—that is the practical meaning of your foreign loans, and of most large interest of money; and then you quarrel with Bishop Colenso, forsooth, as if he denied the Bible, and you believed it! though, wretches as you are, every deliberate act of your lives is a new defiance of its primary orders; and as if, for most of the rich men of England at this moment, it were not indeed to be desired, as the best thing at least for them, that the Bible should not be true, since against them these words are written in it: 'The rust of your gold and silver shall be a witness against you, and shall eat your flesh, as it were fire.'

III. I pass now to our third condition of separation, between the men who work with the hand, and those who work with the head.

And here we have at last an inevitable distinction. There must be work done by the arms, or none of us could live. There must be work done by the brains, or the life we get would not be worth having. And the same men cannot do both. There is rough work to be done, and rough men must do it; there is gentle work to be done, and gentlemen must do it; and it is physically impossible that one class should do, or divide, the work of the other. And it is of no use to try to conceal this sorrowful fact by fine words, and to talk to the workman about the honourableness of manual labour,
and the dignity of humanity. That is a grand old proverb of Sancho Panza's, 'Fine words butter no parsnips;' and I can tell you that, all over England just now, you workmen are buying a great deal too much butter at that dairy. Rough work, honourable or not, takes the life out of us; and the man who has been heaving clay out of a ditch all day, or driving an express train against the north wind all night, or holding a collier's helm in a gale on a lee-shore, or whirling white hot iron at a furnace mouth, that man is not the same at the end of his day, or night, as one who has been sitting in a quiet room, with everything comfortable about him, reading books, or classing butterflies, or painting pictures. If it is any comfort to you to be told that the rough work is the more honourable of the two, I should be sorry to take that much of consolation from you; and in some sense I need not. The rough work is at all events real, honest, and, generally, though not always, useful; while the fine work is, a great deal of it, foolish and false as well as fine, and therefore dishonourable; but when both kinds are equally well and worthily done, the head's is the noble work, and the hand's the ignoble; and of all hand work whatsoever, necessary for the maintenance of life, those old words, 'In the sweat of thy face thou shalt eat bread,' indicate that the inherent nature of it is one of calamity; and that the ground, cursed for our sake, casts also some shadow of degradation into our contest with its thorn and its thistle; so that all nations have held their days honourable, or 'holy,' and constituted them 'holydays' or 'holidays,' by making them days of rest; and the promise, which, among all our distant hopes, seems to cast the chief brightness over death, is that blessing of the dead who die in the Lord, that 'they rest from their labours, and their works do follow them.'

And thus the perpetual question and contest must arise, who is to do this rough work? and how is the worker of it to be comforted, redeemed, and rewarded? and what kind of play should he have, and what rest, in this world, sometimes, as well as in the next? Well, my good working friends, these questions will take a little time to answer yet. They
must be answered: all good men are occupied with them, and all honest thinkers. There's grand head work doing about them; but much must be discovered, and much attempted in vain, before anything decisive can be told you. Only note these few particulars, which are already sure.

As to the distribution of the hard work. None of us, or very few of us, do either hard or soft work because we think we ought; but because we have chanced to fall into the way of it, and cannot help ourselves. Now, nobody does anything well that they cannot help doing: work is only done well when it is done with a will; and no man has a thoroughly sound will unless he knows he is doing what he should, and is in his place. And, depend upon it, all work must be done at last, not in a disorderly, scrambling, doggish way, but in an ordered, soldierly, human way—a lawful way. Men are enlisted for the labour that kills—the labour of war: they are counted, trained, fed, dressed, and praised for that. Let them be enlisted also for the labour that feeds: let them be counted, trained, fed, dressed, praised for that. Teach the plough exercise as carefully as you do the sword exercise, and let the officers of troops of life be held as much gentlemen as the officers of troops of death; and all is done: but neither this, nor any other right thing, can be accomplished—you can't even see your way to it—unless, first of all, both servant and master are resolved that, come what will of it, they will do each other justice. People are perpetually squabbling about what will be best to do, or easiest to do, or adviseablest to do, or profitablest to do; but they never, so far as I hear them talk, ever ask what it is just to do. And it is the law of heaven that you shall not be able to judge what is wise or easy, unless you are first resolved to judge what is just, and to do it. That is the one thing constantly reiterated by our Master—the order of all others that is given oftenest—'Do justice and judgment.' That's your Bible order; that's the 'Service of God,' not praying nor psalm-singing. You are told, indeed, to sing psalms when you are merry, and to pray when you need anything; and, by the perversion of the Evil Spirit, we get to think that praying and psalm-singing are
‘service.’ If a child finds itself in want of anything, it runs in and asks its father for it—does it call that, doing its father a service? If it begs for a toy or a piece of cake—does it call that serving its father? That, with God, is prayer, and He likes to hear it: He likes you to ask Him for cake when you want it; but He doesn’t call that ‘serving Him.’ Begging is not serving: God likes mere beggars as little as you do—He likes honest servants, not beggars. So when a child loves its father very much, and is very happy, it may sing little songs about him; but it doesn’t call that serving its father; neither is singing songs about God, serving God. It is enjoying ourselves, if it’s anything; most probably it is nothing; but if it’s anything, it is serving ourselves, not God. And yet we are impudent enough to call our beggings and chauntlings ‘Divine Service:’ we say ‘Divine service will be “performed”’ (that’s our word—the form of it gone through) ‘at eleven o’clock.’ Alas!—unless we perform Divine service in every willing act of our life, we, never perform it at all. The one Divine work—the one ordered sacrifice—is to do justice; and it is the last we are ever inclined to do. Anything rather than that! As much charity as you choose, but no justice. ‘Nay,’ you will say, ‘charity is greater than justice.’ Yes, it is greater; it is the summit of justice—it is the temple of which justice is the foundation. But you can’t have the top without the bottom; you cannot build upon charity. You must build upon justice, for this main reason, that you have not, at first, charity to build with. It is the last reward of good work. Do justice to your brother (you can do that, whether you love him or not), and you will come to love him. But do injustice to him, because you don’t love him; and you will come to hate him. It is all very fine to think you can build upon charity to begin with; but you will find all you have got to begin with, begins at home, and is essentially love of yourself. You well-to-do people, for instance, who are here to-night, will go to ‘Divine service’ next Sunday, all nice and tidy, and your little children will have their tight little Sunday boots on, and lovely little Sunday feathers in their hats; and you’ll think, complacently and piously, how
lovely they look! So they do: and you love them heartily, and you like sticking feathers in their hats. That's all right: that is charity; but it is charity beginning at home. Then you will come to the poor little crossing-sweeper, got up also,—it, in its Sunday dress,—the dirtiest rags it has,—that it may beg the better: we shall give it a penny, and think how good we are. That's charity going abroad. But what does Justice say, walking and watching near us? Christian Justice has been strangely mute, and seemingly blind; and, if not blind, decrepit, this many a day: she keeps her accounts still, however—quite steadily—doing them at nights, carefully, with her bandage off, and through acutest spectacles (the only modern scientific invention she cares about). You must put your ear down ever so close to her lips to hear her speak; and then you will start at what she first whispers, for it will certainly be, 'Why shouldn't that little crossing-sweeper have a feather on its head, as well as your own child?' Then you may ask Justice, in an amazed manner, 'How she can possibly be so foolish as to think children could sweep crossings with feathers on their heads?' Then you stoop again, and Justice says—still in her dull, stupid way—'Then, why don't you, every other Sunday, leave your child to sweep the crossing, and take the little sweeper to church in a hat and feather?' Mercy on us (you think), what will she say next? And you answer, of course, that 'you don't, because everybody ought to remain content in the position in which Providence has placed them.' Ah, my friends, that's the gist of the whole question. Did Providence put them in that position, or did you? You knock a man into a ditch, and then you tell him to remain content in the 'position in which Providence has placed him.' That's modern Christianity. You say—'We did not knock him into the ditch.' How do you know what you have done, or are doing? That's just what we have all got to know, and what we shall never know, until the question with us every morning, is, not how to do the gainful thing, but how to do the just thing; nor until we are at least so far on the way to being Christian, as to have understood that maxim of the poor half-way Mahometan,
'One hour in the execution of justice is worth seventy years of prayer.'

Supposing, then, we have it determined with appropriate justice, who is to do the hand work, the next questions must be how the hand-workers are to be paid, and how they are to be refreshed, and what play they are to have. Now, the possible quantity of play depends on the possible quantity of pay; and the quantity of pay is not a matter for consideration to hand-workers only, but to all workers. Generally, good, useful work, whether of the hand or head, is either ill-paid, or not paid at all. I don't say it should be so, but it always is so. People, as a rule, only pay for being amused or being cheated, not for being served. Five thousand a year to your talker, and a shilling a day to your fighter, digger, and thinker, is the rule. None of the best head work in art, literature, or science, is ever paid for. How much do you think Homer got for his Iliad? or Dante for his Paradise? only bitter bread and salt, and going up and down other people's stairs. In science, the man who discovered the telescope, and first saw heaven, was paid with a dungeon; the man who invented the microscope, and first saw earth, died of starvation, driven from his home: it is indeed very clear that God means all thoroughly good work and talk to be done for nothing. Baruch, the scribe, did not get a penny a line for writing Jeremiah's second roll for him; I fancy; and St. Stephen did not get bishop's pay for that long sermon of his to the Pharisees; nothing but stones. For indeed that is the world-father's proper payment. So surely as any of the world's children work for the world's good, honestly, with head and heart; and come to it, saying, 'Give us a little bread, just to keep the life in us,' the world-father answers them, 'No, my children, not bread; a stone, if you like, or as many as you need, to keep you quiet.' But the hand-workers are not so ill off as all this comes to. The worst that can happen to you is to break stones; not be broken by them. And for you there will come a time for better payment; some day, assuredly, more pence will be paid to Peter the Fisherman, and fewer to Peter the Pope; we shall pay people not quite
so much for talking in Parliament and doing nothing, as for holding their tongues out of it and doing something; we shall pay our ploughman a little more and our lawyer a little less, and so on: but, at least, we may even now take care that whatever work is done shall be fully paid for; and the man who does it paid for it, not somebody else; and that it shall be done in an orderly, soldierly, well-guided, wholesome way, under good captains and lieutenants of labour; and that it shall have its appointed times of rest, and enough of them; and that in those times the play shall be wholesome play, not in theatrical gardens, with tin flowers and gas sunshine, and girls dancing because of their misery; but in true gardens, with real flowers, and real sunshine, and children dancing because of their gladness; so that truly the streets shall be full (the 'streets,' mind you, not the gutters) of children, playing in the midst thereof. We may take care that working-men shall have at least as good books to read as anybody else, when they've time to read them; and as comfortable firesides to sit at as anybody else, when they've time to sit at them. This, I think, can be managed for you, my working friends, in the good time.

IV. I must go on, however, to our last head, concerning ourselves all, as workers. What is wise work; and what is foolish work? What the difference between sense and nonsense, in daily occupation?

Well, wise work is, briefly, work with God. Foolish work is work against God. And work done with God, which He will help, may be briefly described as 'Putting in Order'—that is, enforcing God's law of order, spiritual and material, over men and things. The first thing you have to do, essentially; the real 'good work' is, with respect to men, to enforce justice, and with respect to things, to enforce tidiness, and fruitfulness. And against these two great human deeds, justice and order, there are perpetually two great demons contending,—the devil of iniquity, or inequity, and the devil of disorder, or of death; for death is only consummation of disorder. You have to fight these two fiends daily. So far as you don't fight against the fiend of iniquity, you work for
him. You 'work iniquity,' and the judgment upon you, for all your 'Lord, Lord's,' will be 'Depart from me, ye that work iniquity.' And so far as you do not resist the fiend of disorder, you work disorder, and you yourself do the work of Death, which is sin, and has for its wages, Death himself.

Observe then, all wise work is mainly threefold in character. It is honest, useful, and cheerful.

I. It is honest. I hardly know anything more strange than that you recognise honesty in play, and you do not in work. In your lightest games, you have always some one to see what you call 'fair-play.' In boxing, you must hit fair; in racing, start fair. Your English watchword is fair-play, your English hatred, foul-play. Did it ever strike you that you wanted another watchword also, fair-work, and another hatred also, foul-work? Your prize-fighter has some honour in him yet; and so have the men in the ring round him: they will judge him to lose the match, by foul hitting. But your prize-merchant gains his match by foul selling, and no one cries out against that. You drive a gambler out of the gambling-room who loads dice, but you leave a tradesman in flourishing business, who loads scales! For observe, all dishonest dealing is loading scales. What does it matter whether I get short weight, adulterate substance, or dishonest fabric? The fault in the fabric is incomparably the worst of the two. Give me short measure of food, and I only lose by you; but give me adulterate food, and I die by you. Here, then, is your chief duty, you workmen and tradesmen—to be true to yourselves, and to us who would help you. We can do nothing for you, nor you for yourselves, without honesty. Get that, you get all; without that, your suffrages, your reforms, your free-trade measures, your institutions of science, are all in vain. It is useless to put your heads together, if you can't put your hearts together. Shoulder to shoulder, right hand to right hand, among yourselves, and no wrong hand to anybody else, and you'll win the world yet.

II. Then, secondly, wise work is useful. No man minds, or ought to mind, its being hard, if only it comes to something; but when it is hard, and comes to nothing; when all
our bees' business turns to spiders'; and for honey-comb we have only resultant cobweb, blown away by the next breeze—that is the cruel thing for the worker. Yet do we ever ask ourselves, personally, or even nationally, whether our work is coming to anything or not? We don't care to keep what has been nobly done; still less do we care to do nobly what others would keep; and, least of all, to make the work itself useful instead of deadly to the doer, so as to use his life indeed, but not to waste it. Of all wastes, the greatest waste that you can commit is the waste of labour. If you went down in the morning into your dairy, and you found that your youngest child had got down before you; and that he and the cat were at play together, and that he had poured out all the cream on the floor for the cat to lap up, you would scold the child, and be sorry the milk was wasted. But if, instead of wooden bowls with milk in them, there are golden bowls with human life in them, and instead of the cat to play with—the devil to play with; and you yourself the player; and instead of leaving that golden bowl to be broken by God at the fountain, you break it in the dust yourself, and pour the human blood out on the ground for the fiend tolick up—that is no waste! What! you perhaps think, 'to waste the labour of men is not to kill them.' Is it not? I should like to know how you could kill them more utterly—kill them with second deaths, seventh deaths, hundredfold deaths? It is the slightest way of killing to stop a man's breath. Nay, the hunger, and the cold, and the little whistling bullets—our love-messengers between nation and nation—have brought pleasant messages from us to many a man before now; orders of sweet release, and leave at last to go where he will be most welcome and most happy. At the worst you do but shorten his life, you do not corrupt his life. But if you put him to base labour, if you bind his thoughts, if you blind his eyes, if you blunt his hopes, if you steal his joys, if you stunt his body, and blast his soul, and at last leave him not so much as to reap the poor fruit of his degradation, but gather that for yourself, and dismiss him to the grave, when you have done with him, having, so far as in you lay, made the walls of that
grave everlasting (though, indeed, I fancy the goodly bricks of some of our family vaults will hold closer in the resurrection day than the sod over the labourer's head), this you think is no waste, and no sin!

III. Then, lastly, wise work is cheerful, as a child's work is. And now I want you to take one thought home with you, and let it stay with you.

Everybody in this room has been taught to pray daily, 'Thy kingdom come.' Now, if we hear a man swear in the streets, we think it very wrong, and say he 'takes God's name in vain.' But there's a twenty times worse way of taking His name in vain, than that. It is to ask God for what we don't want. He doesn't like that sort of prayer. If you don't want a thing, don't ask for it: such asking is the worst mockery of your King you can mock Him with; the soldiers striking Him on the head with the reed was nothing to that.' If you do not wish for His kingdom, don't pray for it. But if you do, you must do more than pray for it; you must work for it. And, to work for it, you must know what it is: we have all prayed for it many a day without thinking. Observe, it is a kingdom that is to come to us; we are not to go to it. Also, it is not to be a kingdom of the dead, but of the living. Also, it is not to come all at once, but quietly; nobody knows how. 'The kingdom of God cometh not with observation.' Also, it is not to come outside of us, but in the hearts of us: 'the kingdom of God is within you.' And, being within us, it is not a thing to be seen, but to be felt; and though it brings all substance of good with it, it does not consist in that: 'the kingdom of God is not meat and drink, but righteousness, peace, and joy in the Holy Ghost:' joy, that is to say, in the holy, healthful, and helpful Spirit. Now, if we want to work for this kingdom, and to bring it, and enter into it, there's just one condition to be first accepted. You must enter it as children, or not at all; 'Whosoever will not receive it as a little child shall not enter therein.' And again, 'Suffer little children to come unto me, and forbid them not, for of such is the kingdom of heaven.'

Of such, observe. Not of children themselves, but of such
as children. I believe most mothers who read that text think that all heaven is to be full of babies. But that's not so. There will be children there, but the hoary head is the crown. 'Length of days, and long life and peace,' that is the blessing, not to die in babyhood. Children die but for their parents' sins; God means them to live, but He can't let them always; then they have their earlier place in heaven: and the little child of David, vainly prayed for;—the little child of Jero-boam, killed by its mother's step on its own threshold,—they will be there. But weary old David, and weary old Barzillai, having learned children's lessons at last, will be there too: and the one question for us all, young or old, is, have we learned our child's lesson? it is the character of children we want, and must gain at our peril; let us see, briefly, in what it consists.

The first character of right childhood is that it is Modest. A well-bred child does not think it can teach its parents, or that it knows everything. It may think its father and mother know everything,—perhaps that all grown-up people know everything; very certainly it is sure that it does not. And it is always asking questions, and wanting to know more. Well, that is the first character of a good and wise man at his work. To know that he knows very little;—to perceive that there are many above him wiser than he; and to be always asking questions, wanting to learn, not to teach. No one ever teaches well who wants to teach, or governs well who wants to govern; it is an old saying (Plato's, but I know not if his, first), and as wise as old.

Then, the second character of right childhood is to be Faithful. Perceiving that its father knows best what is good for it, and having found always, when it has tried its own way against his, that he was right and it was wrong, a noble child trusts him at last wholly, gives him its hand, and will walk blindfold with him, if he bids it. And that is the true character of all good men also, as obedient workers, or soldiers under captains. They must trust their captains;—they are bound for their lives to choose none but those whom they can trust. Then, they are not always to be thinking that what seems
strange to them, or wrong in what they are desired to do, is strange or wrong. They know their captain: where he leads they must follow, what he bids, they must do; and without this trust and faith, without this captainship and soldiership, no great deed, no great salvation, is possible to man. Among all the nations it is only when this faith is attained by them that they become great: the Jew, the Greek, and the Mahometan, agree at least in testifying to this. It was a deed of this absolute trust which made Abraham the father of the faithful; it was the declaration of the power of God as captain over all men, and the acceptance of a leader appointed by Him as commander of the faithful, which laid the foundation of whatever national power yet exists in the East; and the deed of the Greeks, which has become the type of unselfish and noble soldiership to all lands, and to all times, was commemorated, on the tomb of those who gave their lives to do it, in the most pathetic, so far as I know, or can feel, of all human utterances: 'Oh, stranger, go and tell our people that we are lying here, having obeyed their words.'

Then the third character of right childhood is to be Loving and Generous. Give a little love to a child, and you get a great deal back. It loves everything near it, when it is a right kind of child—would hurt nothing, would give the best it has away, always, if you need it—does not lay plans for getting everything in the house for itself, and delights in helping people; you cannot please it so much as by giving it a chance of being useful, in ever so little a way.

And because of all these characters, lastly, it is Cheerful. Putting its trust in its father, it is careful for nothing—being full of love to every creature, it is happy always, whether in its play or in its duty. Well, that's the great worker's character also. Taking no thought for the morrow; taking thought only for the duty of the day; trusting somebody else to take care of to-morrow; knowing indeed what labour is, but not what sorrow is; and always ready for play—beautiful play,—for lovely human play is like the play of the Sun. There's a worker for you. He, steady to his time, is set as a strong man to run his course, but also, he rejoiceth as a
strong man to run his course. See how he plays in the morning, with the mists below, and the clouds above, with a ray here and a flash there, and a shower of jewels everywhere; that's the Sun's play; and great human play is like his—all various—all full of light and life, and tender, as the dew of the morning.

So then, you have the child's character in these four things—Humility, Faith, Charity, and Cheerfulness. That's what you have got to be converted to. 'Except ye be converted and become as little children'—You hear much of conversion now-a-days; but people always seem to think they have got to be made wretched by conversion,—to be converted to long faces. No, friends, you have got to be converted to short ones; you have to repent into childhood, to repent into delight, and delightsomeness. You can't go into a conventicle but you'll hear plenty of talk of backsliding. Backsliding, indeed! I can tell you, on the ways most of us go, the faster we slide back the better. Slide back into the cradle, if going on is into the grave—back, I tell you; back—out of your long faces, and into your long clothes. It is among children only, and as children only, that you will find medicine for your healing and true wisdom for your teaching. There is poison in the counsels of the men of this world; the words they speak are all bitterness, 'the poison of asps is under their lips,' but, 'the sucking child shall play by the hole of the asp.' There is death in the looks of men. 'Their eyes are privily set against the poor;' they are as the uncharmable serpent, the cockatrice, which slew by seeing. But 'the weaned child shall lay his hand on the cockatrice den.' There is death in the steps of men: 'their feet are swift to shed blood; they have compassed us in our steps like the lion that is greedy of his prey, and the young lion lurking in secret places,' but, in that kingdom, the wolf shall lie down with the lamb, and the fatling with the lion, and 'a little child shall lead them.' There is death in the thoughts of men: the world is one wide riddle to them, darker and darker as it draws to a close; but the secret of it is known to the child, and the Lord of heaven and earth is most to be thanked in
that ‘He has hidden these things from the wise and prudent, and has revealed them unto babes.’ Yes, and there is death—infinitude of death in the principalities and powers of men. As far as the east is from the west, so far our sins are—*not* set from us, but multiplied around us: the Sun himself, think you he *now* ‘rejoices’ to run his course, when he plunges westward to the horizon, so widely red, not with clouds, but blood? And it will be red more widely yet. Whatever drought of the early and latter rain may be, there will be none of that red rain. You fortify yourselves, you arm yourselves against it in vain; the enemy and avenger will be upon you also, unless you learn that it is not out of the mouths of the knitted gun, or the smoothed rifle, but ‘out of the mouths of babes and sucklings’ that the strength is ordained, which shall ‘still the enemy and avenger.’
LECTURE II.

TRAFFIC.

(Delivered in the Town Hall, Bradford.)

My good Yorkshire friends, you asked me down here among your hills that I might talk to you about this Exchange you are going to build; but earnestly and seriously asking you to pardon me, I am going to do nothing of the kind. I cannot talk, or at least can say very little, about this same Exchange. I must talk of quite other things, though not willingly;—I could not deserve your pardon, if when you invited me to speak on one subject, I wilfully spoke on another. But I cannot speak, to purpose, of anything about which I do not care; and most simply and sorrowfully I have to tell you, in the outset, that I do not care about this Exchange of yours.

If, however, when you sent me your invitation, I had answered, 'I won't come, I don't care about the Exchange of Bradford,' you would have been justly offended with me, not knowing the reasons of so blunt a carelessness. So I have come down, hoping that you will patiently let me tell you why, on this, and many other such occasions, I now remain silent, when formerly I should have caught at the opportunity of speaking to a gracious audience.

In a word, then, I do not care about this Exchange,—because you don't; and because you know perfectly well I cannot make you. Look at the essential circumstances of the case, which you, as business men, know perfectly well, though perhaps you think I forget them. You are going to spend 30,000l., which to you, collectively, is nothing; the buying a new coat is, as to the cost of it, a much more important matter of consideration to me than building a new Exchange.
is to you. But you think you may as well have the right thing for your money. You know there are a great many odd styles of architecture about; you don't want to do anything ridiculous; you hear of me, among others, as a respectable architectural man-milliner: and you send for me, that I may tell you the leading fashion; and what is, in our shops, for the moment, the newest and sweetest thing in pinnacles.

Now, pardon me for telling you frankly, you cannot have good architecture merely by asking people's advice on occasion. All good architecture is the expression of national life and character; and it is produced by a prevalent and eager national taste, or desire for beauty. And I want you to think a little of the deep significance of this word 'taste;' for no statement of mine has been more earnestly or oftener contorted than that good taste is essentially a moral quality. 'No,' say many of my antagonists, 'taste is one thing, morality is another. Tell us what is pretty; we shall be glad to know that; but preach no sermons to us.'

Permit me, therefore, to fortify this old dogma of mine somewhat. Taste is not only a part and an index of morality—it is the only morality. The first, and last, and closest trial question to any living creature is, 'What do you like?' Tell me what you like, and I'll tell you what you are. Go out into the street, and ask the first man or woman you meet, what their 'taste' is, and if they answer candidly, you know them, body and soul. 'You, my friend in the rags, with the unsteady gait, what do you like?' 'A pipe and a quartern of gin.' I know you. 'You, good woman, with the quick step and tidy bonnet, what do you like?' 'A swept hearth and a clean tea-table, and my husband opposite me, and a baby at my breast.' Good, I know you also. 'You, little girl with the golden hair and the soft eyes, what do you like?' 'My canary, and a run among the wood hyacinths.' 'You, little boy with the dirty hands and the low forehead, what do you like?' 'A shy at the sparrows, and a game at pitch-farthing.' Good; we know them all now. What more need we ask?

'Nay,' perhaps you answer: 'we need rather to ask what these people and children do, than what they like. If they do
right, it is no matter that they like what is wrong; and if they do wrong, it is no matter that they like what is right. Doing is the great thing; and it does not matter that the man likes drinking, so that he does not drink; nor that the little girl likes to be kind to her canary, if she will not learn her lessons; nor that the little boy likes throwing stones at the sparrows, if he goes to the Sunday school.' Indeed, for a short time, and in a provisional sense, this is true. For if, resolutely, people do what is right, in time they come to like doing it. But they only are in a right moral state when they have come to like doing it; and as long as they don't like it, they are still in a vicious state. The man is not in health of body who is always thirsting for the bottle in the cupboard, though he bravely bears his thirst; but the man who heartily enjoys water in the morning and wine in the evening, each in its proper quantity and time. And the entire object of true education is to make people not merely do the right things, but enjoy the right things—not merely industrious, but to love industry—not merely learned, but to love knowledge—not merely pure, but to love purity—not merely just, but to hunger and thirst after justice.

But you may answer or think, 'Is the liking for outside ornaments,—for pictures, or statues, or furniture, or architecture,—a moral quality?' Yes, most surely, if a rightly set liking. Taste for any pictures or statues is not a moral quality, but taste for good ones is. Only here again we have to define the word 'good.' I don't mean by 'good,' clever—or learned—or difficult in the doing. Take a picture by Teniers, of sots quarrelling over their dice: it is an entirely clever picture; so clever that nothing in its kind has ever been done equal to it; but it is also an entirely base and evil picture. It is an expression of delight in the prolonged contemplation of a vile thing, and delight in that is an 'unmannered,' or 'immoral' quality. It is 'bad taste' in the profoundest sense—it is the taste of the devils. On the other hand, a picture of Titian's, or a Greek statue, or a Greek coin, or a Turner landscape, expresses delight in the perpetual contemplation of a good and perfect thing. That is
TRAFFIC. 47

an entirely moral quality—it is the taste of the angels. And all delight in art, and all love of it, resolve themselves into simple love of that which deserves love. That deserving is the quality which we call 'loveliness'—(we ought to have an opposite word, hateliness, to be said of the things which deserve to be hated); and it is not an indifferent nor optional thing whether we love this or that; but it is just the vital function of all our being. What we like determines what we are, and is the sign of what we are; and to teach taste is inevitably to form character. As I was thinking over this, in walking up Fleet Street the other day, my eye caught the title of a book standing open in a bookseller's window. It was—'On the necessity of the diffusion of taste among all classes.'

'Ah,' I thought to myself, 'my classifying friend, when you have diffused your taste, where will your classes be? The man who likes what you like, belongs to the same class with you, I think. Inevitably so. You may put him to other work if you choose; but, by the condition you have brought him into, he will dislike the other work as much as you would yourself. You get hold of a scavenger, or a costermonger, who enjoyed the Newgate Calendar for literature, and "Pop goes the Weasel" for music. You think you can make him like Dante and Beethoven? I wish you joy of your lessons; but if you do, you have made a gentleman of him:—he won't like to go back to his costermongering.'

And so completely and unexceptionally is this so, that, if I had time to-night, I could show you that a nation cannot be affected by any vice, or weakness, without expressing it, legibly, and for ever, either in bad art, or by want of art; and that there is no national virtue, small or great, which is not manifestly expressed in all the art which circumstances enable the people possessing that virtue to produce. Take, for instance, your great English virtue of enduring and patient courage. You have at present in England only one art of any consequence—that is, iron-working. You know thoroughly well how to cast and hammer iron. Now, do you think in those masses of lava which you build volcanic cones to melt, and which you forge at the mouths of the Infernos
you have created; do you think, on those iron plates, your courage and endurance are not written for ever—not merely with an iron pen, but on iron parchment? And take also your great English vice—European vice—vice of all the world—vice of all other worlds that roll or shine in heaven, bearing with them yet the atmosphere of hell—the vice of jealousy, which brings competition into your commerce, treachery into your councils, and dishonour into your wars—that vice which has rendered for you, and for your next neighbouring nation, the daily occupations of existence no longer possible, but with the mail upon your breasts and the sword loose in its sheath; so that, at last, you have realised for all the multitudes of the two great peoples who lead the so-called civilisation of the earth—you have realised for them all, I say, in person and in policy, what was once true only of the rough Border riders of your Cheviot hills—

'They carved at the meal
With gloves of steel,
And they drank the red wine through the helmet barr'd;—

do you think that this national shame and dastardliness of heart are not written as legibly on every rivet of your iron armour as the strength of the right hands that forged it? Friends, I know not whether this thing be the more ludicrous or the more melancholy. It is quite unspeakably both. Suppose, instead of being now sent for by you, I had been sent for by some private gentleman, living in a suburban house, with his garden separated only by a fruit-wall from his next door neighbour's; and he had called me to consult with him on the furnishing of his drawing room. I begin looking about me, and find the walls rather bare; I think such and such a paper might be desirable—perhaps a little fresco here and there on the ceiling—a damask curtain or so at the windows. 'Ah,' says my employer, 'damask curtains, indeed! That's all very fine, but you know I can't afford that kind of thing just now!' 'Yet the world credits you with a splendid income!' 'Ah, yes,' says my friend, 'but do you know, at
present, I am obliged to spend it nearly all in steel-traps?'

'Steel-traps! for whom?' 'Why, for that fellow on the other side the wall, you know: we're very good friends, capital friends; but we are obliged to keep our traps set on both sides of the wall; we could not possibly keep on friendly terms without them, and our spring guns. The worst of it is, we are both clever fellows enough; and there's never a day passes that we don't find out a new trap, or a new gun-barrel, or something; we spend about fifteen millions a year each in our traps, take it all together; and I don't see how we're to do with less.' A highly comic state of life for two private gentlemen! but for two nations, it seems to me, not wholly comic? Bedlam would be comic, perhaps, if there were only one madman in it; and your Christmas pantomime is comic, when there is only one clown in it; but when the whole world turns clown, and paints itself red with its own heart's blood instead of vermilion, it is something else than comic, I think.

Mind, I know a great deal of this is play, and willingly allow for that. You don't know what to do with yourselves for a sensation: fox-hunting and cricketing will not carry you through the whole of this unendurably long mortal life: you liked pop-guns when you were schoolboys, and rifles and Armstrongs are only the same things better made: but then the worst of it is, that what was play to you when boys, was not play to the sparrows; and what is play to you now, is not play to the small birds of State neither; and for the black eagles, you are somewhat shy of taking shots at them, if I mistake not.

I must get back to the matter in hand, however. Believe me, without farther instance, I could show you, in all time, that every nation's vice, or virtue, was written in its art: the soldiership of early Greece; the sensuality of late Italy; the visionary religion of Tuscany; the splendid human energy and beauty of Venice. I have no time to do this to-night (I have done it elsewhere before now); but I proceed to apply the principle to ourselves in a more searching manner.

I notice that among all the new buildings that cover your
once wild hills, churches and schools are mixed in due, that is to say, in large proportion, with your mills and mansions; and I notice also that the churches and schools are almost always Gothic, and the mansions and mills are never Gothic. Will you allow me to ask precisely the meaning of this? For, remember, it is peculiarly a modern phenomenon. When Gothic was invented, houses were Gothic as well as churches; and when the Italian style superseded the Gothic, churches were Italian as well as houses. If there is a Gothic spire to the cathedral of Antwerp, there is a Gothic belfry to the Hôtel de Ville at Brussels; if Inigo Jones builds an Italian Whitehall, Sir Christopher Wren builds an Italian St. Paul's. But now you live under one school of architecture, and worship under another. What do you mean by doing this? Am I to understand that you are thinking of changing your architecture back to Gothic; and that you treat your churches experimentally, because it does not matter what mistakes you make in a church? Or am I to understand that you consider Gothic a pre-eminently sacred and beautiful mode of building, which you think, like the fine frankincense, should be mixed for the tabernacle only, and reserved for your religious services? For if this be the feeling, though it may seem at first as if it were graceful and reverent, you will find that, at the root of the matter, it signifies neither more nor less than that you have separated your religion from your life.

For consider what a wide significance this fact has; and remember that it is not you only, but all the people of England, who are behaving thus just now.

You have all got into the habit of calling the church 'the house of God.' I have seen, over the doors of many churches, the legend actually carved, 'This is the house of God, and this is the gate of heaven.' Now, note where that legend comes from, and of what place it was first spoken. A boy leaves his father's house to go on a long journey on foot, to visit his uncle; he has to cross a wild hill-desert; just as if one of your own boys had to cross the wolds of Westmoreland, to visit an uncle at Carlisle. The second or third day
your boy finds himself somewhere between Hawes and Brough, in the midst of the moors, at sunset. It is stony ground, and boggy; he cannot go one foot farther that night. Down he lies, to sleep, on Wharnside, where best he may, gathering a few of the stones together to put under his head;—so wild the place is, he cannot get anything but stones. And there, lying under the broad night, he has a dream; and he sees a ladder set up on the earth, and the top of it reaches to heaven, and the angels of God are ascending and descending upon it. And when he wakes out of his sleep, he says, 'How dreadful is this place; surely, this is none other than the house of God, and this is the gate of heaven.' This place, observe; not this church; not this city; not this stone, even, which he puts up for a memorial—the piece of flint on which his head has lain. But this place; this windy slope of Wharnside; this moorland hollow, torrent-bitten, snow-blighted; this any place where God lets down the ladder. And how are you to know where that will be? or how are you to determine where it may be, but by being ready for it always? Do you know where the lightning is to fall next? You do know that, partly; you can guide the lightning; but you cannot guide the going forth of the Spirit, which is that lightning when it shines from the east to the west.

But the perpetual and insolent warping of that strong verse to serve a merely ecclesiastical purpose, is only one of the thousand instances in which we sink back into gross Judaism. We call our churches 'temples.' Now, you know, or ought to know, they are not temples. They have never had, never can have, anything whatever to do with temples. They are 'synagogues'—'gathering places'—where you gather yourselves together as an assembly; and by not calling them so, you again miss the force of another mighty text—'Thou, when thou prayest, shalt not be as the hypocrites are; for they love to pray standing in the churches' [we should translate it], 'that they may be seen of men. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father;'—which is, not in chancel nor in aisle, but 'in secret.'
Now, you feel, as I say this to you—I know you feel—as if I were trying to take away the honour of your churches. Not so; I am trying to prove to you the honour of your houses and your hills; I am trying to show you—not that the Church is not sacred—but that the whole Earth is. I would have you feel, what careless, what constant, what infectious sin there is in all modes of thought, whereby, in calling your churches only 'holy,' you call your hearths and homes profane; and have separated yourselves from the heathen by casting all your household gods to the ground, instead of recognising, in the place of their many and feeble Lares, the presence of your One and Mighty Lord and Lar.

'But what has all this to do with our Exchange?' you ask me, impatiently. My dear friends, it has just everything to do with it; on these inner and great questions depend all the outer and little ones; and if you have asked me down here to speak to you, because you had before been interested in anything I have written, you must know that all I have yet said about architecture was to show this. The book I called 'The Seven Lamps' was to show that certain right states of temper and moral feeling were the magic powers by which all good architecture, without exception, had been produced. 'The Stones of Venice,' had, from beginning to end, no other aim than to show that the Gothic architecture of Venice had arisen out of, and indicated in all its features, a state of pure national faith, and of domestic virtue; and that its Renaissance architecture had arisen out of, and in all its features indicated, a state of concealed national infidelity, and of domestic corruption. And now, you ask me what style is best to build in; and how can I answer, knowing the meaning of the two styles, but by another question—do you mean to build as Christians or as Infidels? And still more—do you mean to build as honest Christians or as honest Infidels? as thoroughly and confessedly either one or the other? You don't like to be asked such rude questions. I cannot help it; they are of much more importance than this Exchange business; and if they can be at once answered, the Exchange business settles itself in a moment. But, before I press them farther,
I must ask leave to explain one point clearly. In all my past work, my endeavour has been to show that good architecture is essentially religious—the production of a faithful and virtuous, not of an infidel and corrupted people. But in the course of doing this, I have had also to show that good architecture is not ecclesiastical. People are so apt to look upon religion as the business of the clergy, not their own, that the moment they hear of anything depending on 'religion,' they think it must also have depended on the priesthood; and I have had to take what place was to be occupied between these two errors, and fight both, often with seeming contradiction. Good architecture is the work of good and believing men; therefore, you say, at least some people say, 'Good architecture must essentially have been the work of the clergy, not of the laity.' No—a thousand times no; good architecture has always been the work of the commonalty, not of the clergy. What, you say, those glorious cathedrals—the pride of Europe—did their builders not form Gothic architecture? No; they corrupted Gothic architecture. Gothic was formed in the baron's castle, and the burgher's street. It was formed by the thoughts, and hands, and powers of free citizens and soldier kings. By the monk it was used as an instrument for the aid of his superstition; when that superstition became a beautiful madness, and the best hearts of Europe vainly dreamed and pined in the cloister, and vainly raged and perished in the crusade—through that fury of perverted faith and wasted war, the Gothic rose also to its loveliest, most fantastic, and, finally, most foolish dreams; and, in those dreams, was lost.

I hope, now, that there is no risk of your misunderstanding me when I come to the gist of what I want to say to-night—when I repeat, that every great national architecture has been the result and exponent of a great national religion. You can't have bits of it here, bits there—you must have it everywhere, or nowhere. It is not the monopoly of a clerical company—it is not the exponent of a theological dogma—it is not the hieroglyphic writing of an initiated priesthood; it is the manly language of a people inspired by resolute and common
purpose, and rendering resolute and common fidelity to the
legible laws of an undoubted God.

Now, there have as yet been three distinct schools of Eu-
ropean architecture. I say, European, because Asiatic and
African architectures belong so entirely to other races and
climates, that there is no question of them here; only, in pass-
ing, I will simply assure you that whatever is good or great
in Egypt, and Syria, and India, is just good or great for the
same reasons as the buildings on our side of the Bosphorus.
We Europeans, then, have had three great religions: the
Greek, which was the worship of the God of Wisdom and
Power; the Mediaeval, which was the Worship of the God
of Judgment and Consolation; the Renaissance, which was
the worship of the God of Pride and Beauty; these three we
have had—they are past,—and now, at last, we English have
got a fourth religion, and a God of our own, about which I
want to ask you. But I must explain these three old ones
first.

I repeat, first, the Greeks essentially worshipped the God
of Wisdom; so that whatever contended against their reli-
gion,—to the Jews a stumbling block,—was, to the Greeks—
Foolishness.

The first Greek idea of Deity was that expressed in the
word, of which we keep the remnant in our words 'Di-urnal'
and 'Di-vine'—the god of Day, Jupiter the revealer. Athena
is his daughter, but especially daughter of the Intellect,
springing armed from the head. We are only with the help
of recent investigation beginning to penetrate the depth of
meaning couched under the Athenaic symbols: but I may
note rapidly, that her aegis, the mantle with the serpent
fringes, in which she often, in the best statues, is represented
as folding up her left hand for better guard, and the Gorgon
on her shield, are both representative mainly of the chilling
horror and sadness (turning men to stone, as it were,) of the
outmost and superficial spheres of knowledge—that knowl-
edge which separates, in bitterness, hardness, and sorrow,
the heart of the full-grown man from the heart of the child.
For out of imperfect knowledge spring terror, dissension,
danger, and disdain; but from perfect knowledge, given by
the full-revealed Athena, strength and peace, in sign of which
she is crowned with the olive spray, and bears the resistless
spear.

This, then, was the Greek conception of purest Deity, and
every habit of life, and every form of his art developed them-
selves from the seeking this bright, serene, resistless wisdom;
and setting himself, as a man, to do things evermore rightly
and strongly;* not with any ardent affection or ultimate
hope; but with a resolute and continent energy of will, as
knowing that for failure there was no consolation, and for sin
there was no remission. And the Greek architecture rose
unerring, bright, clearly defined, and self-contained.

Next followed in Europe the great Christian faith, which
was essentially the religion of Comfort. Its great doctrine
is the remission of sins; for which cause it happens, too
often, in certain phases of Christianity, that sin and sickness
themselves are partly glorified, as if, the more you had to be
healed of, the more divine was the healing. The practical
result of this doctrine, in art, is a continual contemplation
of sin and disease, and of imaginary states of purification
from them; thus we have an architecture conceived in a
mingled sentiment of melancholy and aspiration, partly
severe, partly luxuriant, which will bend itself to every one
of our needs, and every one of our fancies, and be strong or
weak with us, as we are strong or weak ourselves. It is, of
all architecture, the basest, when base people build it—of all,
the noblest, when built by the noble.

And now note that both these religions—Greek and Medi-

* It is an error to suppose that the Greek worship, or seeking, was
chiefly of Beauty. It was essentially of Rightness and Strength, founded
on Forethought: the principal character of Greek art is not Beauty, but
Design: and the Dorian Apollo-worship and Athenian Virgin-worship
are both expressions of adoration of divine Wisdom and Purity. Next
to these great deities rank, in power over the national mind, Dionysus
and Ceres, the givers of human strength and life: then, for heroic ex-
ample, Hercules. There is no Venus-worship among the Greek in the
great times: and the Muses are essentially teachers of Truth, and of its
harmonies.
æval—perished by falsehood in their own main purpose. TheGreek religion of Wisdom perished in a false philosophy—'Oppositions of science, falsely so called.' The Mediaæval religion of Consolation perished in false comfort; in remission of sins given lyingly. It was the selling of absolution that ended the Mediaæval faith; and I can tell you more, it is the selling of absolution which, to the end of time, will mark false Christianity. Pure Christianity gives her remission of sins only by ending them; but false Christianity gets her remission of sins by compounding for them. And there are many ways of compounding for them. We English have beautiful little quiet ways of buying absolution, whether in low Church or high, far more cunning than any of Tetzel's trading.

Then, thirdly, there followed the religion of Pleasure, in which all Europe gave itself to luxury, ending in death. First, bals masqués in every saloon, and then guillotines in every square. And all these three worships issue in vast temple building. Your Greek worshipped Wisdom, and built you the Parthenon—the Virgin's temple. The Mediaæval worshipped Consolation, and built you Virgin temples also—but to our Lady of Salvation. Then the Revivalist worshipped beauty, of a sort, and built you Versailles, and the Vatican. Now, lastly, will you tell me what we worship, and what we build?

You know we are speaking always of the real, active, continual, national worship; that by which men act while they live; not that which they talk of when they die. Now, we have, indeed, a nominal religion, to which we pay tithes of property, and sevenths of time; but we have also a practical and earnest religion, to which we devote nine-tenths of our property and six-sevenths of our time. And we dispute a great deal about the nominal religion; but we are all unanimous about this practical one, of which I think you will admit that the ruling goddess may be best generally described as the 'Goddess of Getting-on,' or 'Britannia of the Market.' The Athenians had an 'Athena Agoraia,' or Minerva of the Market; but she was a subordinate type of their goddess,
while our Britannia Agoraia is the principal type of ours. And all your great architectural works, are, of course, built to her. It is long since you built a great cathedral; and how you would laugh at me, if I proposed building a cathedral on the top of one of these hills of yours, taking it for an Acropolis! But your railroad mounds, prolonged masses of Acropolis; your railroad stations, vaster than the Parthenon, and innumerable; your chimneys, how much more mighty and costly than cathedral spires! your harbour-piers; your warehouses; your exchanges!—all these are built to your great Goddess of 'Getting-on;' and she has formed, and will continue to form, your architecture, as long as you worship her; and it is quite vain to ask me to tell you how to build to her; you know far better than I.

There might indeed, on some theories, be a conceivably good architecture for Exchanges—that is to say if there were any heroism in the fact or deed of exchange, which might be typically carved on the outside of your building. For, you know, all beautiful architecture must be adorned with sculpture or painting; and for sculpture or painting, you must have a subject. And hitherto it has been a received opinion among the nations of the world that the only right subjects for either, were heroisms of some sort. Even on his pots and his flagons, the Greek put a Hercules slaying lions, or an Apollo slaying serpents, or Bacchus slaying melancholy giants, and earth-born despondencies. On his temples, the Greek put contests of great warriors in founding states, or of gods with evil spirits. On his houses and temples alike, the Christian put carvings of angels conquering devils; or of hero-martyrs exchanging this world for another; subject inappropriate, I think, to our manner of exchange here. And the Master of Christians not only left his followers without any orders as to the sculpture of affairs of exchange on the outside of buildings, but gave some strong evidence of his dislike of affairs of exchange within them. And yet there might surely be a heroism in such affairs; and all commerce become a kind of selling of doves, not impious. The wonder has always been great to me, that heroism has never been
supposed to be in anywise consistent with the practice of supplying people with food, or clothes; but rather with that of quartering oneself upon them for food, and stripping them of their clothes. Spoiling of armour is an heroic deed in all ages; but the selling of clothes, old, or new, has never taken any colour of magnanimity. Yet one does not see why feeding the hungry and clothing the naked should ever become base businesses, even when engaged in on a large scale. If one could contrive to attach the notion of conquest to them anyhow? so that, supposing there were anywhere an obstinate race, who refused to be comforted, one might take some pride in giving them compulsory comfort; and as it were, ‘occupying a country’ with one’s gifts, instead of one’s armies? If one could only consider it as much a victory to get a barren field sown, as to get an eared field stripped; and contend who should build villages, instead of who should ‘carry’ them. Are not all forms of heroism, conceivable in doing these serviceable deeds? You doubt who is strongest? It might be ascertained by push of spade, as well as push of sword. Who is wisest? There are witty things to be thought of in planning other business than campaigns. Who is bravest? There are always the elements to fight with, stronger than men; and nearly as merciless. The only absolutely and unapproachably heroic element in the soldier’s work seems to be—that he is paid little for it—and regularly: while you traffickers, and exchangers, and others occupied in presumably benevolent business, like to be paid much for it—and by chance. I never can make out how it is that a knight-errant does not expect to be paid for his trouble, but a pedlar-errant always does;—that people are willing to take hard knocks for nothing, but never to sell ribands cheap;—that they are ready to go on fervent crusades to recover the tomb of a buried God, never on any travels to fulfil the orders of a living God;—that they will go anywhere barefoot to preach their faith, but must be well bribed to practise it, and are perfectly ready to give the Gospel gratis, but never the loaves and fishes. If you chose to take the matter up on any such soldierly principle, to do your commerce, and your
feeding of nations, for fixed salaries; and to be as particular about giving people the best food, and the best cloth, as soldiers are about giving them the best gunpowder, I could carve something for you on your exchange worth looking at. But I can only at present suggest decorating its frieze with pendant purses; and making its pillars broad at the base for the sticking of bills. And in the innermost chambers of it there might be a statue of Britannia of the Market, who may have, perhaps advisedly, a partridge for her crest, typical at once of her courage in fighting for noble ideas; and of her interest in game; and round its neck the inscription in golden letters, ‘Perdix fovit quae non peperit.’* Then, for her spear, she might have a weaver’s beam; and on her shield, instead of her Cross, the Milanese boar, semi-fleeced, with the town of Gennesaret proper, in the field and the legend ‘In the best market,’ and her corslet, of leather, folded over her heart in the shape of a purse, with thirty slits in it for a piece of money to go in at, on each day of the month. And I doubt not but that people would come to see your exchange, and its goddess, with applause.

Nevertheless, I want to point out to you certain strange characters in this goddess of yours. She differs from the great Greek and Mediæval deities essentially in two things—first, as to the continuance of her presumed power; secondly, as to the extent of it.

1st, as to the Continuance.

The Greek Goddess of Wisdom gave continual increase of wisdom, as the Christian Spirit of Comfort (or Comforter) continual increase of comfort. There was no question, with these, of any limit or cessation of function. But with your Agora Goddess, that is just the most important question. Getting on—but where to? Gathering together—but how much? Do you mean to gather always—never to spend? If so, I wish you joy of your goddess, for I am just as well

* Jerem. xvii. 11 (best in Septuagint and Vulgate). ‘As the partridge, fostering what she brought not forth, so he that getteth riches, not by right shall leave them in the midst of his days, and at his end shall be a fool.’
off as you, without the trouble of worshipping her at all. But if you do not spend, somebody else will—somebody else must. And it is because of this (among many other such errors) that I have fearlessly declared your so-called science of Political Economy to be no science; because, namely, it has omitted the study of exactly the most important branch of the business—the study of spending. For spend you must, and as much as you make, ultimately. You gather corn:—will you bury England under a heap of grain; or will you, when you have gathered, finally eat? You gather gold:—will you make your house-roofs of it, or pave your streets with it? That is still one way of spending it. But if you keep it, that you may get more, I'll give you more; I'll give you all the gold you want—all you can imagine—if you can tell me what you'll do with it. You shall have thousands of gold pieces;—thousands of thousands—millions—mountains, of gold: where will you keep them? Will you put an Olympus of silver upon a golden Pelion—make Ossa like a wart? Do you think the rain and dew would then come down to you, in the streams from such mountains, more blessedly than they will down the mountains which God has made for you, of moss and whinstone? But it is not gold that you want to gather! What is it? greenbacks? No; not those neither. What is it then—is it ciphers after a capital I? Cannot you practise writing ciphers, and write as many as you want? Write ciphers for an hour every morning, in a big book, and say every evening, I am worth all those noughts more than I was yesterday. Won't that do? Well, what in the name of Plutus is it you want? Not gold, not greenbacks, not ciphers after a capital I? You will have to answer, after all, 'No; we want, somehow or other, money's worth.' Well, what is that? Let your Goddess of Getting-on discover it, and let her learn to stay therein.

II. But there is yet another question to be asked respecting this Goddess of Getting-on. The first was of the continuance of her power; the second is of its extent.

Pallas and the Madonna were supposed to be all the world's Pallas, and all the world's Madonna. They could teach all
men, and they could comfort all men. But, look strictly into
the nature of the power of your Goddess of Getting-on; and
you will find she is the Goddess—not of everybody’s getting
on—but only of somebody’s getting on. This is a vital, or
rather deathful, distinction. Examine it in your own ideal of
the state of national life which this Goddess is to evoke and
maintain. I asked you what it was, when I was last here;*—
you have never told me. Now, shall I try to tell you?
Your ideal of human life then is, I think, that it should be
passed in a pleasant undulating world, with iron and coal
everywhere underneath it. On each pleasant bank of this
world is to be a beautiful mansion, with two wings; and
stables, and coach-houses; a moderately sized park; a large
garden and hot houses; and pleasant carriage drives through
the shrubberies. In this mansion are to live the favoured
votaries of the Goddess; the English gentleman, with his
gracious wife, and his beautiful family; always able to have
the boudoir and the jewels for the wife, and the beautiful
ball dresses for the daughters, and hunters for the sons, and
a shooting in the Highlands for himself. At the bottom of
the bank, is to be the mill; not less than a quarter of a mile
long, with a steam engine at each end, and two in the middle,
and a chimney three hundred feet high. In this mill are to
be in constant employment from eight hundred to a thousand
workers, who never drink, never strike, always go to church
on Sunday, and always express themselves in respectful lan-
guage.

Is not that, broadly, and in the main features, the kind of
thing you propose to yourselves? It is very pretty indeed
seen from above; not at all so pretty, seen from below. For,
observe, while to one family this deity is indeed the Goddess
of Getting on, to a thousand families she is the Goddess of
not Getting on. ‘Nay,’ you say, ‘they have all their chance.’
Yes, so has every one in a lottery, but there must always be
the same number of blanks. ‘Ah! but in a lottery it is not
skill and intelligence which take the lead, but blind chance.’
What then! do you think the old practice, that ‘they should

* Two Paths, p. 98.
take who have the power, and they should keep who can,' is less iniquitous, when the power has become power of brains instead of fist? and that, though we may not take advantage of a child's or a woman's weakness, we may of a man's foolishness? ‘Nay, but finally, work must be done, and some one must be at the top, some one at the bottom.' Granted, my friends. Work must always be, and captains of work must always be; and if you in the least remember the tone of any of my writings, you must know that they are thought unfit for this age, because they are always insisting on need of government, and speaking with scorn of liberty. But I beg you to observe that there is a wide difference between being captains or governors of work, and taking the profits of it. It does not follow, because you are general of an army, that you are to take all the treasure, or land, it wins (if it fight for treasure or land); neither, because you are king of a nation, that you are to consume all the profits of the nation's work. Real kings, on the contrary, are known invariably by their doing quite the reverse of this,—by their taking the least possible quantity of the nation's work for themselves. There is no test of real kinghood so infallible as that. Does the crowned creature live simply, bravely, unostentatiously? probably he is a King. Does he cover his body with jewels, and his table with delicates? in all probability he is not a King. It is possible he may be, as Solomon was; but that is when the nation shares his splendour with him. Solomon made gold, not only to be in his own palace as stones, but to be in Jerusalem as stones. But even so, for the most part, these splendid kinghoods expire in ruin, and only the true kinghoods live, which are of royal labourers governing loyal labourers; who, both leading rough lives, establish the true dynasties. Conclusively you will find that because you are king of a nation, it does not follow that you are to gather for yourself all the wealth of that nation; neither, because you are king of a small part of the nation, and lord over the means of its maintenance—over field, or mill, or mine, are you to take all the produce of that piece of the foundation of national existence for yourself.
You will tell me I need not preach against these things, for I cannot mend them. No, good friends, I cannot; but you can, and you will; or something else can and will. Do you think these phenomena are to stay always in their present power or aspect? All history shows, on the contrary, that to be the exact thing they never can do. Change must come; but it is ours to determine whether change of growth, or change of death. Shall the Parthenon be in ruins on its rock, and Bolton priory in its meadow, but these mills of yours be the consummation of the buildings of the earth, and their wheels be as the wheels of eternity? Think you that 'men may come, and men may go,' but—mills—go on forever? Not so; out of these, better or worse shall come; and it is for you to choose which.

I know that none of this wrong is done with deliberate purpose. I know, on the contrary, that you wish your workmen well; that you do much for them, and that you desire to do more for them, if you saw your way to it safely. I know that many of you have done, and are every day doing, whatever you feel to be in your power; and that even all this wrong and misery are brought about by a warped sense of duty, each of you striving to do his best, without noticing that this best is essentially and centrally the best for himself, not for others. And all this has come of the spreading of that thrice accursed, thrice impious doctrine of the modern economist, that 'To do the best for yourself, is finally to do the best for others.' Friends, our great Master said not so; and most absolutely we shall find this world is not made so. Indeed, to do the best for others, is finally to do the best for ourselves; but it will not do to have our eyes fixed on that issue. The Pagans had got beyond that. Hear what a Pagan says of this matter; hear what were, perhaps, the last written words of Plato,—if not the last actually written (for this we cannot know), yet assuredly in fact and power his parting words—in which, endeavouring to give full crowning and harmonious close to all his thoughts, and to speak the sum of them by the imagined sentence of the Great Spirit, his strength and his heart fail him, and the words cease, broken off for ever. It is the close
of the dialogue called 'Critias,' in which he describes, partly from real tradition, partly in ideal dream, the early state of Athens; and the genesis, and order, and religion, of the fabled isle of Atlantis; in which genesis he conceives the same first perfection and final degeneracy of man, which in our own Scriptural tradition is expressed by saying that the Sons of God intermarried with the daughters of men, for he supposes the earliest race to have been indeed the children of God; and to have corrupted themselves, until 'their spot was not the spot of his children.' And this, he says, was the end; that indeed 'through many generations, so long as the God’s nature in them yet was full, they were submissive to the sacred laws, and carried themselves lovingly to all that had kindred with them in divineness; for their uttermost spirit was faithful and true, and in every wise great; so that, in all meekness of wisdom, they dealt with each other, and took all the chances of life; and despising all things except virtue, they cared little what happened day by day, and bore lightly the burden of gold and of possessions; for they saw that, if only their common love and virtue increased, all these things would be increased together with them; but to set their esteem and ardent pursuit upon material possession would be to lose that first, and their virtue and affection together with it. And by such reasoning, and what of the divine nature remained in them, they gained all this greatness of which we have already told; but when the God’s part of them faded and became extinct, being mixed again and again, and effaced by the prevalent mortality; and the human nature at last exceeded, they then became unable to endure the courses of fortune; and fell into shapelessness of life, and baseness in the sight of him who could see, having lost everything that was fairest of their honour; while to the blind hearts which could not discern the true life, tending to happiness, it seemed that they were then chiefly noble and happy, being filled with all iniquity of inordinate possession and power. Whereupon, the God of God’s, whose Kinghood is in laws, beholding a once just nation thus cast into misery, and desiring to lay such punishment upon them as might make them repent into restraining, gathered
together all the gods into his dwelling-place, which from heaven's centre overlooks whatever has part in creation; and having assembled them, he said'——

The rest is silence. So ended are the last words of the chief wisdom of the heathen, spoken of this idol of riches; this idol of yours; this golden image high by measureless cubits, set up where your green fields of England are furnace-burnt into the likeness of the plain of Dura: this idol, forbidden to us, first of all idols, by our own Master and faith; forbidden to us also by every human lip that has ever, in any age or people, been accounted of as able to speak according to the purposes of God. Continue to make that forbidden deity your principal one, and soon no more art, no more science, no more pleasure will be possible. Catastrophe will come; or worse than catastrophe, slow mouldering and withering into Hades. But if you can fix some conception of a true human state of life to be striven for—life for all men as for yourselves—if you can determine some honest and simple order of existence; following those trodden ways of wisdom, which are pleasantness, and seeking her quiet and withdrawn paths, which are peace;—then, and so sanctifying wealth into 'commonwealth,' all your art, your literature, your daily labours, your domestic affection, and citizen's duty, will join and increase into one magnificent harmony. You will know then how to build, well enough; you will build with stone well, but with flesh better; temples not made with hands, but riveted of hearts; and that kind of marble, crimson-veined, is indeed eternal.
LECTURE III.

WAR.

(Delivered at the Royal Military Academy, Woolwich.)

Young soldiers, I do not doubt but that many of you came unwillingly to-night, and many in merely contemptuous curiosity, to hear what a writer on painting could possibly say, or would venture to say, respecting your great art of war. You may well think within yourselves, that a painter might, perhaps without immodesty, lecture younger painters upon painting, but not young lawyers upon law, nor young physicians upon medicine—least of all, it may seem to you, young warriors upon war. And, indeed, when I was asked to address you, I declined at first, and declined long; for I felt that you would not be interested in my special business, and would certainly think there was small need for me to come to teach you yours. Nay, I knew that there ought to be no such need, for the great veteran soldiers of England are now men every way so thoughtful, so noble, and so good, that no other teaching than their knightly example, and their few words of grave and tried counsel should be either necessary for you, or even, without assurance of due modesty in the offerer, endured by you.

But being asked, not once nor twice, I have not ventured persistently to refuse; and I will try, in very few words, to lay before you some reason why you should accept my excuse, and hear me patiently. You may imagine that your work is wholly foreign to, and separate from mine. So far from that, all the pure and noble arts of peace are founded on war; no great art ever yet rose on earth, but among a nation of soldiers. There is no art among a shepherd people, if it remains
There is no art among an agricultural people, if it remains at peace. Commerce is barely consistent with fine art; but cannot produce it. Manufacture not only is unable to produce it, but invariably destroys whatever seeds of it exist. There is no great art possible to a nation but that which is based on battle.

Now, though I hope you love fighting for its own sake, you must, I imagine, be surprised at my assertion that there is any such good fruit of fighting. You supposed, probably, that your office was to defend the works of peace, but certainly not to found them: nay, the common course of war, you may have thought, was only to destroy them. And truly, I who tell you this of the use of war, should have been the last of men to tell you so, had I trusted my own experience only. Hear why: I have given a considerable part of my life to the investigation of Venetian painting and the result of that enquiry was my fixing upon one man as the greatest of all Venetians, and therefore, as I believed, of all painters whatsoever. I formed this faith, (whether right or wrong matters at present nothing,) in the supremacy of the painter Tintoret, under a roof covered with his pictures; and of those pictures, three of the noblest were then in the form of shreds of ragged canvas, mixed up with the laths of the roof, rent through by three Austrian shells. Now it is not every lecturer who could tell you that he had seen three of his favourite pictures torn to rags by bombshells. And after such a sight, it is not every lecturer who would tell you that, nevertheless, war was the foundation of all great art.

Yet the conclusion is inevitable, from any careful comparison of the states of great historic races at different periods. Merely to show you what I mean, I will sketch for you, very briefly, the broad steps of the advance of the best art of the world. The first dawn of it is in Egypt; and the power of it is founded on the perpetual contemplation of death, and of future judgment, by the mind of a nation of which the ruling caste were priests, and the second, soldiers. The greatest works produced by them are sculptures of their kings going out to battle, or receiving the homage of conquered armies.
And you must remember also, as one of the great keys to the splendour of the Egyptian nation, that the priests were not occupied in theology only. Their theology was the basis of practical government and law, so that they were not so much priests as religious judges, the office of Samuel, among the Jews, being as nearly as possible correspondent to theirs.

All the rudiments of art then, and much more than the rudiments of all science, are laid first by this great warrior-nation, which held in contempt all mechanical trades, and in absolute hatred the peaceful life of shepherds. From Egypt art passes directly into Greece, where all poetry, and all painting, are nothing else than the description, praise, or dramatic representation of war, or of the exercises which prepare for it, in their connection with offices of religion. All Greek institutions had first respect to war; and their conception of it, as one necessary office of all human and divine life, is expressed simply by the images of their guiding gods. Apollo is the god of all wisdom of the intellect; he bears the arrow and the bow, before he bears the lyre. Again, Athena is the goddess of all wisdom in conduct. It is by the helmet and the shield, oftener than by the shuttle, that she is distinguished from other deities.

There were, however, two great differences in principle between the Greek and the Egyptian theories of policy. In Greece there was no soldier caste; every citizen was necessarily a soldier. And, again, while the Greeks rightly despised mechanical arts as much as the Egyptians, they did not make the fatal mistake of despising agricultural and pastoral life; but perfectly honoured both. These two conditions of truer thought raise them quite into the highest rank of wise manhood that has yet been reached; for all our great arts, and nearly all our great thoughts, have been borrowed or derived from them. Take away from us what they have given; and I hardly can imagine how low the modern European would stand.

Now, you are to remember, in passing to the next phase of history, that though you must have war to produce art—you must also have much more than war; namely an art-instinct
or genius in the people; and that, though all the talent for painting in the world won't make painters of you, unless you have a gift for fighting as well, you may have the gift for fighting; and none for painting. Now, in the next great dynasty of soldiers, the art-instinct is wholly wanting. I have not yet investigated the Roman character enough to tell you the causes of this; but I believe, paradoxical as it may seem to you, that, however truly the Roman might say of himself that he was born of Mars, and suckled by the wolf, he was nevertheless, at heart, more of a farmer than a soldier. The exercises of war were with him practical, not poetical; his poetry was in domestic life only, and the object of battle, 'pacis imponere morem.' And the arts are extinguished in his hands, and do not rise again, until, with Gothic chivalry, there comes back into the mind of Europe a passionate delight in war itself, for the sake of war. And then, with the romantic knighthood which can imagine no other noble employment,—under the fighting kings of France, England, and Spain; and under the fighting dukeships and citizenships of Italy, art is born again, and rises to her height in the great valleys of Lombardy and Tuscany, through which there flows not a single stream, from all their Alps or Apennines, that did not once run dark red from battle; and it reaches its culminating glory in the city which gave to history the most intense type of soldiership yet seen among men;—the city whose armies were led in their assault by their king, led through it to victory by their king, and so led, though that king of theirs was blind, and in the extremity of his age.

And from this time forward, as peace is established or extended in Europe, the arts decline. They reach an unparalleled pitch of costliness, but lose their life, enlist themselves at last on the side of luxury and various corruption, and, among wholly tranquil nations, wither utterly away; remaining only in partial practice among races who, like the French and us, have still the minds, though we cannot all live the lives, of soldiers.

'It may be so,' I can suppose that a philanthropist might exclaim. 'Perish then the arts, if they can flourish only at
such a cost. What worth is there in toys of canvas and stone, if compared to the joy and peace of artless domestic life? And the answer is—truly, in themselves, none. But as expressions of the highest state of the human spirit, their worth is infinite. As results they may be worthless, but, as signs, they are above price. For it is an assured truth that, whenever the faculties of men are at their fulness, they *must* express themselves by art; and to say that a state is without such expression, is to say that it is sunk from its proper level of manly nature. So that, when I tell you that war is the foundation of all the arts, I mean also that it is the foundation of all the high virtues and faculties of men.

It was very strange to me to discover this; and very dreadful—but I saw it to be quite an undeniable fact. The common notion that peace and the virtues of civil life flourished together, I found, to be wholly untenable. Peace and the *vices* of civil life only flourish together. We talk of peace and learning, and of peace and plenty, and of peace and civilisation; but I found that those were not the words which the Muse of History coupled together: that on her lips, the words were—peace and sensuality, peace and selfishness, peace and corruption, peace and death. I found, in brief, that all great nations learned their truth of word, and strength of thought, in war; that they were nourished in war, and wasted by peace; taught by war, and deceived by peace; trained by war, and betrayed by peace;—in a word, that they were born in war, and expired in peace.

Yet now note carefully, in the second place, it is not *all* war of which this can be said—nor all dragon's teeth, which, sown, will start up into men. It is not the ravage of a barbarian wolf-flock, as under Genseric or Suwarrow; nor the habitual restlessness and rapine of mountaineers, as on the old borders of Scotland; nor the occasional struggle of a strong peaceful nation for its life, as in the wars of the Swiss with Austria; nor the contest of merely ambitious nations for extent of power, as in the wars of France under Napoleon, or the just terminated war in America. None of these forms of war build anything but tombs. But the creative or found-
dational war is that in which the natural restlessness and love of contest among men are disciplined, by consent, into modes of beautiful—though it may be fatal—play: in which the natural ambition and love of power of men are disciplined into the aggressive conquest of surrounding evil: and in which the natural instincts of self-defence are sanctified by the nobleness of the institutions, and purity of the households, which they are appointed to defend. To such war as this all men are born; in such war as this any man may happily die; and from such war as this have arisen throughout the extent of past ages, all the highest sanctities and virtues of humanity.

I shall therefore divide the war of which I would speak to you into three heads. War for exercise or play; war for dominion; and, war for defence.

I. And first, of war for exercise or play. I speak of it primarily in this light, because, through all past history, manly war has been more an exercise than anything else, among the classes who cause, and proclaim it. It is not a game to the conscript, or the pressed sailor; but neither of these are the causers of it. To the governor who determines that war shall be, and to the youths who voluntarily adopt it as their profession, it has always been a grand pastime; and chiefly pursued because they had nothing else to do. And this is true without any exception. No king whose mind was fully occupied with the development of the inner resources of his kingdom, or with any other sufficing subject of thought, ever entered into war but on compulsion. No youth who was earnestly busy with any peaceful subject of study, or set on any serviceable course of action, ever voluntarily became a soldier. Occupy him early, and wisely, in agriculture or business, in science or in literature, and he will never think of war otherwise than as a calamity. But leave him idle; and, the more brave and active and capable he is by nature, the more he will thirst for some appointed field for action; and find, in the passion and peril of battle, the only satisfying fulfilment of his unoccupied being. And from the earliest incipient civilisation until now, the population of the earth divides itself, when you look at it widely, into two races; one
of workers, and the other of players—one tilling the ground, manufacturing, building, and otherwise providing for the necessities of life;—the other part proudly idle, and continually therefore needing recreation, in which they use the productive and laborious orders partly as their cattle, and partly as their puppets or pieces in the game of death.

Now, remember, whatever virtue or goodliness there may be in this game of war, rightly played, there is none when you thus play it with a multitude of small human pawns.

If you, the gentlemen of this or any other kingdom, choose to make your pastime of contest, do so, and welcome; but set not up these unhappy peasant-pieces upon the green fielded board. If the wager is to be of death, lay it on your own heads, not theirs. A goodly struggle in the Olympic dust, though it be the dust of the grave, the gods will look upon, and be with you in; but they will not be with you, if you sit on the sides of the amphitheatre, whose steps are the mountains of earth, whose arena its valleys, to urge your peasant millions into gladiatorial war. You also, you tender and delicate women, for whom, and by whose command, all true battle has been, and must ever be; you would perhaps shrink now, though you need not, from the thought of sitting as queens above set lists where the jousting game might be mortal. How much more, then, ought you to shrink from the thought of sitting above a theatre pit in which even a few condemned slaves were slaying each other only for your delight! And do you not shrink from the fact of sitting above a theatre pit, where,—not condemned slaves,—but the best and bravest of the poor sons of your people, slay each other,—not man to man,—as the coupled gladiators; but race to race, in duel of generations? You would tell me, perhaps, that you do not sit to see this; and it is indeed true, that the women of Europe—those who have no heart-interests of their own at peril in the contest—draw the curtains of their boxes, and muffle the openings; so that from the pit of the circus of slaughter there may reach them only at intervals a half-heard cry and a murmur as of the wind's sighing, when myriads of souls expire. They shut out the
death-cries; and are happy, and talk wittily among themselves. That is the utter literal fact of what our ladies do in their pleasant lives.

Nay, you might answer, speaking for them—'We do not let these wars come to pass for our play, nor by our carelessness; we cannot help them. How can any final quarrel of nations be settled otherwise than by war?' I cannot now delay, to tell you how political quarrels might be otherwise settled. But grant that they cannot. Grant that no law of reason can be understood by nations; no law of justice submitted to by them: and that, while questions of a few acres, and of petty cash, can be determined by truth and equity, the questions which are to issue in the perishing or saving of kingdoms can be determined only by the truth of the sword, and the equity of the rifle. Grant this, and even then, judge if it will always be necessary for you to put your quarrel into the hearts of your poor, and sign your treaties with peasants' blood. You would be ashamed to do this in your own private position and power. Why should you not be ashamed also to do it in public place and power? If you quarrel with your neighbour, and the quarrel be indeterminable by law, and mortal, you and he do not send your footmen to Battersea fields to fight it out; nor do you set fire to his tenants' cottages, nor spoil their goods. You fight out your quarrel yourselves, and at your own danger, if at all. And you do not think it materially affects the arbitrement that one of you has a larger household than the other; so that, if the servants or tenants were brought into the field with their masters, the issue of the contest could not be doubtful? You either refuse the private duel, or you practise it under laws of honour, not of physical force; that so it may be, in a manner, justly concluded. Now the just or unjust conclusion of the private feud is of little moment, while the just or unjust conclusion of the public feud is of eternal moment: and yet, in this public quarrel, you take your servants' sons from their arms to fight for it, and your servants' food from their lips to support it; and the black seals on the parchment of your treaties of peace are the deserted hearth and the fruitless field.
There is a ghastly ludicrousness in this, as there is mostly in these wide and universal crimes. Hear the statement of the very fact of it in the most literal words of the greatest of our English thinkers:—

'What, speaking in quite unofficial language, is the net-purport and upshot of war? To my own knowledge, for example, there dwell and toil, in the British village of Dumdrudge, usually some five hundred souls. From these, by certain "natural enemies" of the French, there are successively selected, during the French war, say thirty able-bodied men. Dumdrudge, at her own expense, has suckled and nursed them; she has, not without difficulty and sorrow, fed them up to manhood, and even trained them to crafts, so that one can weave, another build, another hammer, and the weakest can stand under thirty stone avoir-dupois. Nevertheless, amid much weeping and swearing, they are selected; all dressed in red; and shipped away, at the public charges, some two thousand miles, or say only to the south of Spain; and fed there till wanted.

'And now to that same spot in the south of Spain are thirty similar French artisans, from a French Dumdrudge, in like manner wending; till at length, after infinite effort, the two parties come into actual juxtaposition; and Thirty stands fronting Thirty, each with a gun in his hand.

'Straightway the word "Fire!" is given, and they blow the souls out of one another, and in place of sixty brisk useful craftsmen, the world has sixty dead carcases, which it must bury, and anon shed tears for. Had these men any quarrel? Busy as the devil is, not the smallest! They lived far enough apart; were the entierest strangers; nay, in so wide a universe, there was even, unconsciously, by commerce, some mutual helpfulness between them. How then? Simpleton! their governors had fallen out; and instead of shooting one another, had the cunning to make these poor blockheads shoot.' (Sartor Resartus.)

Positively, then, gentlemen, the game of battle must not, and shall not, ultimately be played this way. But should it be played any way? Should it, if not by your servants, be practised by yourselves? I think, yes. Both history and human instinct seem alike to say, yes. All healthy men like fighting, and like the sense of danger; all brave women like to hear of their fighting, and of their facing danger. This is a fixed instinct in the fine race of them; and I cannot help
fancying that fair fight is the best play for them; and that a tournament was a better game than a steeple-chase. The time may perhaps come in France as well as here, for universal hurdle-races and cricketing: but I do not think universal 'crickets' will bring out the best qualities of the nobles of either country. I use, in such question, the test which I have adopted, of the connection of war with other arts; and I reflect how, as a sculptor, I should feel, if I were asked to design a monument for a dead knight, in Westminster abbey, with a carving of a bat at one end, and a ball at the other. It may be the remains in me only of savage Gothic prejudice; but I had rather carve it with a shield at one end, and a sword at the other. And this, observe, with no reference whatever to any story of duty done, or cause defended. Assume the knight merely to have ridden out occasionally to fight his neighbour for exercise; assume him even a soldier of fortune, and to have gained his bread, and filled his purse, at the sword's point. Still, I feel as if it were, somehow, grander and worthier in him to have made his bread by sword play than any other play; I had rather he had made it by thrusting than by batting;—much more, than by betting. Much rather that he should ride war horses, than back race horses; and—I say it sternly and deliberately—much rather would I have him slay his neighbour, than cheat him.

But remember, so far as this may be true, the game of war is only that in which the full personal power of the human creature is brought out in management of its weapons. And this for three reasons:—

First, the great justification of this game is that it truly, when well played, determines who is the best man;—who is the highest bred, the most self-denying, the most fearless, the coolest of nerve, the swiftest of eye and hand. You cannot test these qualities wholly, unless there is a clear possibility of the struggle's ending in death. It is only in the fronting of that condition that the full trial of the man, soul and body, comes out. You may go to your game of wickets, or of hurdles, or of cards, and any knavery that is in you may stay unchallenged all the while. But if the play may be
ended at any moment by a lance-thrust, a man will probably make up his accounts a little before he enters it. Whatever is rotten and evil in him will weaken his hand more in holding a sword hilt, than in balancing a billiard cue; and on the whole, the habit of living lightly hearted, in daily presence of death, always has had, and must have, a tendency both to the making and testing of honest men. But for the final testing, observe, you must make the issue of battle strictly dependent on fineness of frame, and firmness of hand. You must not make it the question, which of the combatants has the longest gun, or which has got behind the biggest tree, or which has the wind in his face, or which has gunpowder made by the best chemist, or iron smelted with the best coal, or the angriest mob at his back. Decide your battle, whether of nations, or individuals, on those terms;—and you have only multiplied confusion, and added slaughter to iniquity. But decide your battle by pure trial, which has the strongest arm, and steadiest heart,—and you have gone far to decide a great many matters besides, and to decide them rightly.

And the other reasons for this mode of decision of cause, are the diminution both of the material destructiveness, or cost, and of the physical distress of war. For you must not think that in speaking to you in this (as you may imagine), fantastic praise of battle, I have overlooked the conditions weighing against me. I pray all of you, who have not read, to read with the most earnest attention, Mr. Helps's two essays on War and Government, in the first volume of the last series of 'Friends in Council.' Everything that can be urged against war is there simply, exhaustively, and most graphically stated. And all, there urged, is true. But the two great counts of evil alleged against war by that most thoughtful writer, hold only against modern war. If you have to take away masses of men from all industrial employment,—to feed them by the labour of others,—to move them and provide them with destructive machines, varied daily in national rivalship of inventive cost; if you have to ravage the country which you attack,—to destroy for a score of future years, its roads, its woods, its cities, and its harbours;—and if, finally, having brought masses
of men, counted by hundreds of thousands, face to face, you tear those masses to pieces with jagged shot, and leave the fragments of living creatures countless beyond all help of surgery, to starve and parch, through days of torture, down into clots of clay—what book of accounts shall record the cost of your work;—What book of judgment sentence the guilt of it?

That, I say, is modern war,—scientific war,—chemical and mechanic war, worse even than the savage's poisoned arrow. And yet you will tell me, perhaps, that any other war than this is impossible now. It may be so; the progress of science cannot, perhaps, be otherwise registered than by new facilities of destruction; and the brotherly love of our enlarging Christianity be only proved by multiplication of murder. Yet hear, for a moment, what war was, in Pagan and ignorant days;—what war might yet be, if we could extinguish our science in darkness, and join the heathen's practice to the Christian's theory. I read you this from a book which probably most of you know well, and all ought to know—Müller's 'Dorians;—but I have put the points I wish you to remember in closer connection than in his text.

'The chief characteristic of the warriors of Sparta was great composure and subdued strength; the violence (λύσσα) of Aristodemus and Isadas being considered as deserving rather of blame than praise; and these qualities in general distinguished the Greeks from the northern Barbarians, whose boldness always consisted in noise and tumult. For the same reason the Spartans sacrificed to the Muses before an action; these goddesses being expected to produce regularity and order in battle; as they sacrificed on the same occasion in Crete to the god of love, as the confirmer of mutual esteem and shame. Every man put on a crown, when the band of flute-players gave the signal for attack; all the shields of the line glittered with their high polish, and mingled their splendour with the dark red of the purple mantles, which were meant both to adorn the combatant, and to conceal the blood of the wounded; to fall well and decorously being an incentive the more to the most heroic valour. The conduct of the Spartans in battle denotes a high and noble disposition, which rejected all the
extremes of brutal rage. The pursuit of the enemy ceased when the victory was completed; and after the signal for retreat had been given, all hostilities ceased. The spoiling of arms, at least during the battle, was also interdicted; and the consecration of the spoils of slain enemies to the gods, as, in general, all rejoicings for victory, were considered as ill-omened.'

Such was, the war of the greatest soldiers who prayed to heathen gods. What Christian war is, preached by Christian ministers, let any one tell you, who saw the sacred crowning, and heard the sacred flute-playing, and was inspired and sanctified by the divinely-measured and musical language, of any North American regiment preparing for its charge. And what is the relative cost of life in pagan and Christian wars, let this one fact tell you:—the Spartans won the decisive battle of Corinth with the loss of eight men; the victors at indecisive Gettysburg confess to the loss of 30,000.

II. I pass now to our second order of war, the commonest among men, that undertaken in desire of dominion. And let me ask you to think for a few moments what the real meaning of this desire of dominion is—first in the minds of kings—then in that of nations.

Now, mind you this first,—that I speak either about kings, or masses of men, with a fixed conviction that human nature is a noble and beautiful thing; not a foul nor a base thing. All the sin of men I esteem as their disease, not their nature; as a folly which may be prevented, not a necessity which must be accepted. And my wonder, even when things are at their worst, is always at the height which this human nature can attain. Thinking it high, I find it always a higher thing than I thought it; while those who think it low, find it, and will find it, always lower than they thought it: the fact being, that it is infinite, and capable of infinite height and infinite fall; but the nature of it—and here is the faith which I would have you hold with me—the nature of it is in the nobleness, not in the catastrophe.

Take the faith in its utmost terms. When the captain of the 'London' shook hands with his mate, saying 'God speed you! I will go down with my passengers,' that I believe to be
human nature.' He does not do it from any religious motive—from any hope of reward, or any fear of punishment; he does it because he is a man. But when a mother, living among the fair fields of merry England, gives her two-year-old child to be suffocated under a mattress in her inner room, while the said mother waits and talks outside; that I believe to be not human nature. You have the two extremes there, shortly. And you, men, and mothers, who are here face to face with me to-night, I call upon you to say which of these is human, and which inhuman—which 'natural' and which 'unnatural?' Choose your creed at once, I beseech you:—choose it with unshaken choice—choose it forever. Will you take, for foundation of act and hope, the faith that this man was such as God made him, or that this woman was such as God made her? Which of them has failed from their nature—from their present, possible, actual nature;—not their nature of long ago, but their nature of now? Which has betrayed it—falsified it? Did the guardian who died in his trust, die inhumanly, and as a fool; and did the murderess of her child fulfil the law of her being? Choose, I say; infinitude of choices hang upon this. You have had false prophets among you—for centuries you have had them—solemnly warned against them though you were; false prophets, who have told you that all men are nothing but fiends or wolves, half beast, half devil. Believe that and indeed you may sink to that. But refuse that, and have faith that God 'made you upright,' though you have sought out many inventions; so, you will strive daily to become more what your Maker meant and means you to be, and daily gives you also the power to be—and you will cling more and more to the nobleness and virtue that is in you, saying, 'My righteousness I hold fast, and will not let it go.'

I have put this to you as a choice, as if you might hold either of these creeds you liked best. But there is in reality no choice for you; the facts being quite easily ascertainable. You have no business to think about this matter, or to choose in it. The broad fact is, that a human creature of the highest race, and most perfect as a human thing, is invariably both
kind and true; and that 'as you lower the race, you get cruelty
and falseness, as you get deformity: and this so steadily and
assuredly, that the two great words which, in their first use,
meant only perfection of race, have come, by consequence of
the invariable connection of virtue with the fine human nature,
both to signify benevolence of disposition. The word gener-
ous, and the word gentle, both, in their origin, meant only
'of pure race,' but because charity and tenderness are insep-
arable from this purity of blood, the words which once stood
only for pride, now stand as synonyms for virtue.

Now, this being the true power of our inherent humanity,
and seeing that all the aim of education should be to develop
this;—and seeing also what magnificent self sacrifice the
higher classes of men are capable of, for any cause that they
understand or feel,—it is wholly inconceivable to me how well-
educated princes, who ought to be of all gentlemen the gen-
tlest, and of all nobles the most generous, and whose title of
royalty means only their function of doing every man 'right'
—how these, I say, throughout history, should so rarely pro-
nounce themselves on the side of the poor and of justice, but
continually maintain themselves and their own interests by
oppression of the poor, and by wrestling of justice; and how
this should be accepted as so natural, that the word loyalty,
which means faithfulness to law, is used as if it were only the
duty of a people to be loyal to their king, and not the duty of
a king to be infinitely more loyal to his people. How comes
it to pass that a captain will die with his passengers, and lean
over the gunwale to give the parting boat its course; but that
a king will not usually die with, much less for, his passengers,
—thinks it rather incumbent on his passengers, in any num-
ber, to die for him? Think, I beseech you, of the wonder of
this. The sea captain, not captain by divine right, but only
by company's appointment;—not a man of royal descent, but
only a plebeian who can steer;—not with the eyes of the world
upon him, but with feeble chance, depending on one poor
boat, of his name being ever heard above the wash of the fatal
waves;—not with the cause of a nation resting on his act, but
helpless to save so much as a child from among the lost crowd
with whom he resolves to be lost,—yet goes down quietly to
his grave, rather than break his faith to these few emigrants.
But your captain by divine right,—your captain with the hues
of a hundred shields of kings upon his breast,—your captain
whose every deed, brave or base, will be illuminated or
branded for ever before unescapable eyes of men,—your cap-
tain whose every thought and act are beneficent, or fatal, from
sunrising to setting, blessing as the sunshine, or shadowing
as the night,—this captain, as you find him in history, for the
most part thinks only how he may tax his passengers, and
sit at most ease in his state cabin!

For observe, if there had been indeed in the hearts of the
rulers of great multitudes of men any such conception of
work for the good of those under their command, as there is
in the good and thoughtful masters of any small company of
men, not only wars for the sake of mere increase of power
could never take place, but our idea of power itself would be
entirely altered. Do you suppose that to think and act even
for a million of men, to hear their complaints, watch their
weaknesses, restrain their vices, make laws for them, lead
them, day by day, to purer life, is not enough for one man's
work? If any of us were absolute lord only of a district of
a hundred miles square, and were resolved on doing our ut-
most for it; making it feed as large a number of people as
possible; making every clod productive, and every rock de-
fensive, and every human being happy; should we not have
enough on our hands think you? But if the ruler has any
other aim than this; if, careless of the result of his interfer-
ence, he desire only the authority to interfere; and, regard-
less of what is ill-done or well-done, cares only that it shall
be done at his bidding,—if he would rather do two hundred
miles' space of mischief, than one hundred miles' space of
good, of course he will try to add to his territory; and to add
illimitably. But does he add to his power? Do you call it
power in a child, if he is allowed to play with the wheels and
bands of some vast engine, pleased with their murmur and
whirl, till his unwise touch, wandering where it ought not,
satters beam and wheel into ruin? Yet what machine is so
vast, so incognisable, as the working of the mind of a nation; what child's touch so wanton, as the word of a selfish king? And yet, how long have we allowed the historian to speak of the extent of the calamity a man causes, as a just ground for his pride; and to extol him as the greatest prince, who is only the centre of the widest error. Follow out this thought by yourselves; and you will find that all power, properly so called, is wise and benevolent. There may be capacity in a drifting fire-ship to destroy a fleet; there may be venom enough in a dead body to infect a nation:—but which of you, the most ambitious, would desire a drifting kinghood, robed in consuming fire, or a poison-dipped sceptre whose touch was mortal? There is no true potency, remember, but that of help; nor true ambition, but ambition to save.

And then, observe farther, this true power, the power of saving, depends neither on multitude of men, nor on extent of territory. We are continually assuming that nations become strong according to their numbers. They indeed become so, if those numbers can be made of one mind; but how are you sure you can stay them in one mind, and keep them from having north and south minds? Grant them unanimous, how know you they will be unanimous in right? If they are unanimous in wrong, the more they are, essentially the weaker they are. Or, suppose that they can neither be of one mind, nor of two minds, but can only be of no mind? Suppose they are a mere helpless mob; tottering into precipitant catastrophe, like a waggon load of stones when the wheel comes off. Dangerous enough for their neighbours, certainly, but not 'powerful.'

Neither does strength depend on extent of territory, any more than upon number of population. Take up your maps when you go home this evening,—put the cluster of British Isles beside the mass of South America; and then consider whether any race of men need care how much ground they stand upon. The strength is in the men, and in their unity and virtue, not in their standing room: a little group of wise hearts is better than a wilderness full of fools; and only that nation gains true territory, which gains itself.
And now for the brief practical outcome of all this. Remember, no government is ultimately strong, but in proportion to its kindness and justice; and that a nation does not strengthen, by merely multiplying and diffusing itself. We have not strengthened as yet, by multiplying into America. Nay, even when it has not to encounter the separating conditions of emigration, a nation need not boast itself of multiplying on its own ground, if it multiplies only as flies or locusts do, with the god of flies for its god. It multiplies its strength only by increasing as one great family, in perfect fellowship and brotherhood. And lastly, it does not strengthen itself by seizing dominion over races whom it cannot benefit. Austria is not strengthened, but weakened, by her grasp of Lombardy; and whatever apparent increase of majesty and of wealth may have accrued to us from the possession of India, whether these prove to us ultimately power or weakness, depends wholly on the degree in which our influence on the native race shall be benevolent and exalting. But, as it is at their own peril that any race extends their dominion in mere desire of power, so it is at their own still greater peril that they refuse to undertake aggressive war, according to their force, whenever they are assured that their authority would be helpful and protective. Nor need you listen to any sophistical objection of the impossibility of knowing when a people’s help is needed, or when not. Make your national conscience clean, and your national eyes will soon be clear. No man who is truly ready to take part in a noble quarrel will ever stand long in doubt by whom, or in what cause, his aid is needed. I hold it my duty to make no political statement of any special bearing in this presence; but I tell you broadly and boldly, that, within these last ten years, we English have, as a knightly nation, lost our spurs: we have fought where we should not have fought, for gain; and we have been passive where we should not have been passive, for fear. I tell you that the principle of non-intervention, as now preached among us, is as selfish and cruel as the worst frenzy of conquest, and differs from it only by being not only malignant, but dastardly.
I know, however, that my opinions on this subject differ too widely from those ordinarily held, to be any farther intruded upon you; and therefore I pass lastly to examine the conditions of the third kind of noble war;—war waged simply for defence of the country in which we were born, and for the maintenance and execution of her laws, by whomsoever threatened or defied. It is to this duty that I suppose most men entering the army consider themselves in reality to be bound, and I want you now to reflect what the laws of mere defence are; and what the soldier's duty, as now understood, or supposed to be understood. You have solemnly devoted yourselves to be English soldiers, for the guardianship of England. I want you to feel what this vow of yours indeed means, or is gradually coming to mean. You take it upon you, first, while you are sentimental schoolboys; you go into your military convent, or barracks, just as a girl goes into her convent while she is a sentimental schoolgirl; neither of you then know what you are about, though both the good soldiers and good nuns make the best of it afterwards. You don't understand perhaps why I call you 'sentimental' schoolboys, when you go into the army? Because, on the whole, it is love of adventure, of excitement, of fine dress and of the pride of fame, all which are sentimental motives, which chiefly make a boy like going into the Guards better than into a counting-house. You fancy, perhaps, that there is a severe sense of duty mixed with these peacocky motives? And in the best of you, there is; but do not think that it is principal. If you cared to do your duty to your country in a prosaic and unsentimental way, depend upon it, there is now truer duty to be done in raising harvests than in burning them; more in building houses, than in shelling them—more in winning money by your own work, wherewith to help men, than in taxing other people's work, for money wherewith to slay men; more duty finally, in honest and unselfish living than in honest and unselfish dying, though that seems to your boys' eyes the bravest. So far then, as for your own honour, and the honour of your families, you choose brave death in a red coat before brave life in a black one, you are sentimental; and now see
what this passionate vow of yours comes to. For a little while you ride, and you hunt tigers or savages, you shoot, and are shot; you are happy, and proud, always, and honoured and wept if you die; and you are satisfied with your life, and with the end of it; believing, on the whole, that good rather than harm of it comes to others, and much pleasure to you. But as the sense of duty enters into your forming minds, the vow takes another aspect. You find that you have put yourselves into the hand of your country as a weapon. You have vowed to strike, when she bids you, and to stay scabbarded when she bids you; all that you need answer for is, that you fail not in her grasp. And there is goodness in this, and greatness, if you can trust the hand and heart of the Britomart who has braced you to her side, and are assured that when she leaves you sheathed in darkness, there is no need for your flash to the sun. But remember, good and noble as this state may be, it is a state of slavery. There are different kinds of slaves and different masters. Some slaves are scourged to their work by whips, others are scourged to it by restlessness or ambition. It does not matter what the whip is; it is none the less a whip, because you have cut thongs for it out of your own souls: the fact, so far, of slavery, is in being driven to your work without thought, at another’s bidding. Again, some slaves are bought with money, and others with praise. It matters not what the purchase-money is. The distinguishing sign of slavery is to have a price, and be bought for it. Again, it matters not what kind of work you are set on; some slaves are set to forced diggings, others to forced marches; some dig furrows, others field-works, and others graves. Some press the juice of reeds, and some the juice of vines, and some the blood of men. The fact of the captivity is the same whatever work we are set upon, though the fruits of the toil may be different. But, remember, in thus vowing ourselves to be the slaves of any master, it ought to be some subject of forethought with us, what work he is likely to put us upon. You may think that the whole duty of a soldier is to be passive, that it is the country you have left behind who is to command, and you have only to obey. But
are you sure that you have left all your country behind, or that the part of it you have so left is indeed the best part of it? Suppose—and, remember, it is quite conceivable—that you yourselves are indeed the best part of England; that you, who have become the slaves, ought to have been the masters; and that those who are the masters, ought to have been the slaves! If it is a noble and whole-hearted England, whose bidding you are bound to do, it is well; but if you are yourselves the best of her heart, and the England you have left be but a half-hearted England, how say you of your obedience? You were too proud to become shopkeepers: are you satisfied then to become the servants of shopkeepers? You were too proud to become merchants or farmers yourselves: will you have merchants or farmers then for your field marshals? You had no gifts of special grace for Exeter Hall: will you have some gifted person thereat for your commander-in-chief, to judge of your work, and reward it? You imagine yourselves to be the army of England: how if you should find yourselves, at last, only the police of her manufacturing towns, and the beadle of her little Bethels?

It is not so yet, nor will be so, I trust, for ever; but what I want you to see, and to be assured of, is, that the ideal of soldiership is not mere passive obedience and bravery; that, so far from this, no country is in a healthy state which has separated, even in a small degree, her civil from her military power. All states of the world, however great, fall at once when they use mercenary armies; and although it is a less instant form of error (because involving no national taint of cowardice), it is yet an error no less ultimately fatal—it is the error especially of modern times, of which we cannot yet know all the calamitous consequences—to take away the best blood and strength of the nation, all the soul-substance of it that is brave, and careless of reward, and scornful of pain, and faithful in trust; and to cast that into steel, and make a mere sword of it; taking away its voice and will; but to keep the worst part of the nation—whatever is cowardly, avaricious, sensual, and faithless—and to give to this the voice, to this the authority, to this the chief privilege, where there is least
capacity, of thought. The fulfilment of your vow for the defence of England will by no means consist in carrying out such a system. You are not true soldiers, if you only mean to stand at a shop door, to protect shop-boys who are cheating inside. A soldier's vow to his country is that he will die for the guardianship of her domestic virtue, of her righteous laws, and of her anyway challenged or endangered honour. A state without virtue, without laws, and without honour, he is bound not to defend; nay, bound to redress by his own right hand that which he sees to be base in her. So sternly is this the law of Nature and life, that a nation once utterly corrupt can only be redeemed by a military despotism—never by talking, nor by its free effort. And the health of any state consists simply in this: that in it, those who are wisest shall also be strongest; its rulers should be also its soldiers; or, rather, by force of intellect more than of sword, its soldiers its rulers. Whatever the hold which the aristocracy of England has on the heart of England, in that they are still always in front of her battles, this hold will not be enough, unless they are also in front of her thoughts. And truly her thoughts need good captain's leading now, if ever! Do you know what, by this beautiful division of labour (her brave men fighting, and her cowards thinking), she has come at last to think? Here is a bit of paper in my hand,* a good one too, and an honest one; quite representative of the best common public thought of England at this moment; and it is holding forth

* I do not care to refer to the journal quoted, because the article was unworthy of its general tone, though in order to enable the audience to verify the quoted sentence, I left the number containing it on the table, when I delivered this lecture. But a saying of Baron Liebig's, quoted at the head of a leader on the same subject in the 'Daily Telegraph' of January 11, 1866, summarily digests and presents the maximum folly of modern thought in this respect. 'Civilization,' says the Baron, 'is the economy of power, and English power is coal.' Not altogether so, my chemical friend. Civilization is the making of civil persons, which is a kind of distillation of which alembics are incapable, and does not at all imply the turning of a small company of gentlemen into a large company of ironmongers. And English power (what little of it may be left), is by no means coal, but, indeed, of that which, 'when the whole world turns to coal, then chiefly lives.'
in one of its leaders upon our 'social welfare,'—upon our 'vivid life'—upon the 'political supremacy of Great Britain.' And what do you think all these are owing to? To what our English sires have done for us, and taught us, age after age? No : not to that. To our honesty of heart, or coolness of head, or steadiness of will? No: not to these. To our thinkers, or our statesmen, or our poets, or our captains, or our martyrs, or the patient labour of our poor? No: not to these; or at least not to these in any chief measure. Nay, says the journal, 'more than any agency, it is the cheapness and abundance of our coal which have made us what we are.' If it be so, then 'ashes to ashes' be our epitaph! and the sooner the better. I tell you, gentlemen of England, if ever you would have your country breathe the pure breath of heaven again, and receive again a soul into her body, instead of rotting into a carcase, blown up in the belly with carbonic acid (and great that way), you must think, and feel, for your England, as well as fight for her: you must teach her that all the true greatness she ever had, or ever can have, she won while her fields were green and her faces ruddy;—that greatness is still possible for Englishmen, even though the ground be not hollow under their feet, nor the sky black over their heads;—and that, when the day comes for their country to lay her honours in the dust, her crest will not rise from it more loftily because it is dust of coal. Gentlemen, I tell you, solemnly, that the day is coming when the soldiers of England must be her tutors and the captains of her army, captains also of her mind.

And now, remember, you soldier youths, who are thus in all ways the hope of your country; or must be, if she have any hope: remember that your fitness for all future trust depends upon what you are now. No good soldier in his old age was ever careless or indolent in his youth. Many a giddy and thoughtless boy has become a good bishop, or a good lawyer, or a good merchant; but no such an' one ever became a good general. I challenge you, in all history, to find a record of a good soldier who was not grave and earnest in his youth. And, in general, I have no patience with people who talk about 'the thoughtlessness of youth' indulgently.
I had infinitely rather hear of thoughtless old age, and the indulgence due to that. When a man has done his work, and nothing can any way be materially altered in his fate, let him forget his toil, and jest with his fate, if he will; but what excuse can you find for wilfulness of thought, at the very time when every crisis of future fortune hangs on your decisions? A youth thoughtless! when all the happiness of his home for ever depends on the chances, or the passions, of an hour! A youth thoughtless! when the career of all his days depends on the opportunity of a moment! A youth thoughtless! when his every act is a foundation-stone of future conduct, and every imagination a fountain of life or death! Be thoughtless in any after years, rather than now—though, indeed, there is only one place where a man may be nobly thoughtless,—his deathbed. No thinking should ever be left to be done there.

Having, then, resolved that you will not waste recklessly, but earnestly use, these early days of yours, remember that all the duties of her children to England may be summed in two words—industry, and honour. I say first, industry, for it is in this that soldier youth are especially tempted to fail. Yet surely, there is no reason because your life may possibly or probably be shorter than other men's, that you should therefore waste more recklessly the portion of it that is granted you; neither do the duties of your profession, which require you to keep your bodies strong, in any wise involve the keeping of your minds weak. So far from that, the experience, the hardship, and the activity of a soldier's life render his powers of thought more accurate than those of other men; and while, for others, all knowledge is often little more than a means of amusement, there is no form of science which a soldier may not at some time or other find bearing on business of life and death. A young mathematician may be excused for langour in studying curves to be described only with a pencil; but not in tracing those which are to be described with a rocket. Your knowledge of a wholesome herb may involve the feeding of an army; and acquaintance with an obscure point of geography, the success of a cam-
campaign. Never waste an instant's time, therefore; the sin of idleness is a thousand-fold greater in you than in other youths; for the fates of those who will one day be under your command hang upon your knowledge; lost moments now will be lost lives then, and every instant which you carelessly take for play, you buy with blood. But there is one way of wasting time, of all the vilest, because it wastes, not time only, but the interest and energy of your minds. Of all the ungentlemanly habits into which you can fall, the vilest is betting, or interesting yourselves in the issues of betting. It unites nearly every condition of folly and vice; you concentrate your interest upon a matter of chance, instead of upon a subject of true knowledge; and you back opinions which you have no grounds for forming, merely because they are your own. All the insolence of egotism is in this; and so far as the love of excitement is complicated with the hope of winning money, you turn yourselves into the basest sort of tradesmen—those who live by speculation. Were there no other ground for industry, this would be a sufficient one; that it protected you from the temptation to so scandalous a vice. Work faithfully, and you will put yourselves in possession of a glorious and enlarging happiness: not such as can be won by the speed of a horse, or marred by the obliquity of a ball.

First, then, by industry you must fulfil your vow to your country; but all industry and earnestness will be useless unless they are consecrated by your resolution to be in all things men of honour; not honour in the common sense only, but in the highest. Rest on the force of the two main words in the great verse, integer vitae, scelerisque purus. You have vowed your life to England; give it her wholly—a bright, stainless, perfect life—a knightly life. Because you have to fight with machines instead of lances, there may be a necessity for more ghastly danger, but there is none for less worthiness of character, than in olden time. You may be true knights yet, though perhaps not equites; you may have to call yourselves 'cannonry' instead of 'chivalry,' but that is no reason why you should not call yourselves true men. So the first thing you have to see to in becoming soldiers is that you make your-
elves wholly true. Courage is a mere matter of course among any ordinarily well-born youths; but neither truth nor gentleness is matter of course. You must bind them like shields about your necks; you must write them on the tables of your hearts. Though it be not exacted of you, yet exact it of yourselves, this vow of stainless truth. Your hearts are, if you leave them unstirred, as tombs in which a god lies buried. Vow yourselves crusaders to redeem that sacred sepulchre. And remember, before all things—for no other memory will be so protective, of you—that the highest law of this knightly truth is that under which it is vowed to women. Whosoever else you deceive, whosoever you injure, whosoever you leave unaided, you must not deceive, nor injure, nor leave unaided according to your power, any woman of whatever rank. Believe me, every virtue of the higher phases of manly character begins in this;—in truth and modesty before the face of all maidens; in truth and pity, or truth and reverence, to all womanhood.

And now let me turn for a moment to you,—wives and maidens, who are the souls of soldiers; to you,—mothers, who have devoted your children to the great hierarchy of war. Let me ask you to consider what part you have to take for the aid of those who love you; for if you fail in your part they cannot fulfil theirs; such absolute helpmates you are that no man can stand without that help, nor labour in his own strength.

I know your hearts, and that the truth of them never fails when an hour of trial comes which you recognise for such. But you know not when the hour of trial first finds you, nor when it verily finds you. You imagine that you are only called upon to wait and to suffer; to surrender and to mourn. You know that you must not weaken the hearts of your husbands and lovers, even by the one fear of which those hearts are capable,—the fear of parting from you, or of causing you grief. Through weary years of separation, through fearful expectancies of unknown fate; through the tenfold bitterness of the sorrow which might so easily have been joy, and the tenfold yearning for glorious life struck down in its prime—
through all these agonies you fail not, and never will fail. But your trial is not in these. To be heroic in danger is little; —you are Englishwomen. To be heroic in change and sway of fortune is little;—for do you not love? To be patient through the great chasm and pause of loss is little;—for do you not still love in heaven? But to be heroic in happiness; to bear yourselves gravely and righteously in the dazzling of the sunshine of morning; not to forget the God in whom you trust, when He gives you most; not to fail those who trust you, when they seem to need you least; this is the difficult fortitude. It is not in the pining of absence, not in the peril of battle, not in the wasting of sickness, that your prayer should be most passionate, or your guardianship most tender. Pray, mothers and maidens, for your young soldiers in the bloom of their pride; pray for them, while the only dangers round them are in their own wayward wills; watch you, and pray, when they have to face, not death, but temptation. But it is this fortitude also for which there is the crowning reward. Believe me, the whole course and character of your lovers' lives is in your hands; what you would have them be, they shall be, if you not only desire to have them so, but deserve to have them so; for they are but mirrors in which you will see yourselves imaged. If you are frivolous, they will be so also; if you have no understanding of the scope of their duty, they also will forget it; they will listen,—they can listen,—to no other interpretation of it than that uttered from your lips. Bid them be brave;—they will be brave for you; bid them be cowards; and how noble soever they be;—they will quail for you. Bid them be wise, and they will be wise for you; mock at their counsel, they will be fools for you: such and so absolute is your rule over them. You fancy, perhaps, as you have been told so often, that a wife's rule should only be over her husband's house, not over his mind. Ah, no! the true rule is just the reverse of that; a true wife, in her husband's house, is his servant; it is in his heart that she is queen. Whatever of the best he can conceive, it is her part to be; whatever of highest he can hope, it is hers to promise; all that is dark in him she must purge into purity; all that is fail-
ing in him she must strengthen into truth: from her, through all the world's clamour, he must win his praise; in her, through all the world's warfare, he must find his peace.

And, now, but one word more. You may wonder, perhaps, that I have spoken all this night in praise of war. Yet, truly, if it might be, I, for one, would fain join in the cadence of hammer-strokes that should beat swords into ploughshares: and that this cannot be, is not the fault of us men. It is your fault. Wholly yours. Only by your command, or by your permission, can any contest take place among us. And the real, final, reason for all the poverty, misery, and rage of battle, throughout Europe, is simply that you women, however good, however religious, however self-sacrificing for those whom you love, are too selfish and too thoughtless to take pains for any creature out of your own immediate circles. You fancy that you are sorry for the pain of others. Now I just tell you this, that if the usual course of war, instead of unroofing peasants' houses, and ravaging peasants' fields, merely broke the china upon your own drawing-room tables, no war in civilised countries would last a week. I tell you more, that at whatever moment you chose to put a period to war, you could do it with less trouble than you take any day to go out to dinner. You know, or at least you might know if you would think, that every battle you hear of has made many widows and orphans. We have, none of us, heart enough truly to mourn with these. But at least we might put on the outer symbols of mourning with them. Let but every Christian lady who has conscience toward God, vow that she will mourn, at least outwardly, for His killed creatures. Your praying is useless, and your churchgoing mere mockery of God, if you have not plain obedience in you enough for this. Let every lady in the upper classes of civilised Europe simply vow that, while any cruel war proceeds, she will wear black:—a mute's black,—with no jewel, no ornament, no excuse for, or evasion into, prettiness.—I tell you again, no war would last a week.

And lastly. You women of England are all now shrieking with one voice, you and your clergymen together.—because
you hear of your Bibles being attacked. If you choose to obey your Bibles, you will never care who attacks them. It is just because you never fulfil a single downright precept of the Book, that you are so careful for its credit: and just because you don't care to obey its whole words, that you are so particular about the letters of them. The Bible tells you to dress plainly,—and you are mad for finery; the Bible tells you to have pity on the poor,—and you crush them under your carriage-wheels; the Bible tells you to do judgment and justice,—and you do not know, nor care to know, so much as what the Bible word 'justice means.' Do but learn so much of God's truth as that comes to; know what He means when He tells you to be just: and teach your sons, that their bravery is but a fool's boast, and their deeds but a firebrand's tossing, unless they are indeed Just men, and Perfect in the Fear of God;—and you will soon have no more war, unless it be indeed such as is willed by Him, of whom, though Prince of Peace, it is also written, 'In Righteousness He doth judge, and make war.'
MUNERA PULVERIS

SIX ESSAYS

ON THE ELEMENTS OF

POLITICAL ECONOMY

The following pages contain, I believe, the first accurate analysis of the laws of Political Economy which has been published in England. Many treatises, within their scope, correct, have appeared in contradiction of the views popularly received; but no exhaustive examination of the subject was possible to any person unacquainted with the value of the products of the highest industries, commonly called the "Fine Arts;" and no one acquainted with the nature of those industries has, so far as I know, attempted, or even approached, the task.

So that, to the date (1863) when these Essays were published, not only the chief conditions of the production of wealth had remained unstated, but the nature of wealth itself had never been defined. "Every one has a notion, sufficiently correct for common purposes, of what is meant by wealth," wrote Mr. Mill, in the outset of his treatise; and contentedly proceeded, as if a chemist should proceed to investigate the laws of chemistry without endeavouring to ascertain the nature of fire or water, because every one had a notion of them, "sufficiently correct for common purposes."

But even that apparently indisputable statement was untrue. There is not one person in ten thousand who has a notion sufficiently correct, even for the commonest purposes, of "what is meant" by wealth; still less of what wealth everlastingly is, whether we mean it or not; which it is the business of every student of economy to ascertain. We, indeed, know (either by experience or in imagination) what it is to be able to provide ourselves with luxurious food, and handsome clothes; and if Mr. Mill had thought that wealth consisted
only in these, or in the means of obtaining these, it would have been easy for him to have so defined it with perfect scientific accuracy. But he knew better: he knew that some kinds of wealth consisted in the possession, or power of obtaining, other things than these; but, having, in the studies of his life, no clue to the principles of essential value, he was compelled to take public opinion as the ground of his science; and the public, of course, willingly accepted the notion of a science founded on their opinions.

I had, on the contrary, a singular advantage, not only in the greater extent of the field of investigation opened to me by my daily pursuits, but in the severity of some lessons I accidentally received in the course of them.

When, in the winter of 1851, I was collecting materials for my work on Venetian architecture, three of the pictures of Tintoret on the roof of the School of St. Roch were hanging down in ragged fragments, mixed with lath and plaster, round the apertures made by the fall of three Austrian heavy shot. The city of Venice was not, it appeared, rich enough to repair the damage that winter; and buckets were set on the floor of the upper room of the school to catch the rain, which not only fell directly through the shot holes, but found its way, owing to the generally pervious state of the roof, through many of the canvases of Tintoret's in other parts of the ceiling.

It was a lesson to me, as I have just said, no less direct than severe; for I knew already at that time (though I have not ventured to assert, until recently at Oxford,) that the pictures of Tintoret in Venice were accurately the most precious articles of wealth in Europe, being the best existing productions of human industry. Now at the time that three of them were thus fluttering in moist rags from the roof they had adorned, the shops of the Rue Rivoli at Paris were, in obedience to a steadily-increasing public Demand, beginning to show a steadily-increasing Supply of elaborately-finished and coloured lithographs, representing the modern dances of delight, among which the cancan has since taken a distinguished place.
The labour employed on the stone of one of these lithographs is very much more than Tintoret was in the habit of giving to a picture of average size. Considering labour as the origin of value, therefore, the stone so highly wrought would be of greater value than the picture; and since also it is capable of producing a large number of immediately salable or exchangeable impressions, for which the "demand" is constant, the city of Paris naturally supposed itself, and on all hitherto believed or stated principles of political economy, was, infinitely richer in the possession of a large number of these lithographic stones, (not to speak of countless oil pictures and marble carvings of similar character), than Venice in the possession of those rags of mildewed canvas, flaunting in the south wind and its salt rain. And, accordingly, Paris provided (without thought of the expense) lofty arcades of shops, and rich recesses of innumerable private apartments, for the protection of these better treasures of hers from the weather.

Yet, all the while, Paris was not the richer for these possessions. Intrinsically, the delightful lithographs were not wealth, but polar contraries of wealth. She was, by the exact quantity of labour she had given to produce these, sunk below, instead of above, absolute Poverty. They not only were false Riches—they were true Debt, which had to be paid at last—and the present aspect of the Rue Rivoli shows in what manner.

And the faded stains of the Venetian ceiling, all the while, were absolute and inestimable wealth. Useless to their possessors as forgotten treasure in a buried city, they had in them, nevertheless, the intrinsic and eternal nature of wealth; and Venice, still possessing the ruins of them, was a rich city; only, the Venetians had not a notion sufficiently correct even for the very common purpose of inducing them to put slates on a roof, of what was "meant by wealth."

The vulgar economist would reply that his science had nothing to do with the qualities of pictures, but with their exchange-value only; and that his business was, exclusively, to consider whether the remains of Tintoret were worth as
many ten-and-sixpences as the impressions which might be taken from the lithographic stones.

But he would not venture, without reserve, to make such an answer, if the example be taken in horses, instead of pictures. The most dull economist would perceive, and admit, that a gentleman who had a fine stud of horses was absolutely richer than one who had only ill-bred and broken-winded ones. He would instinctively feel, though his pseudo-science had never taught him, that the price paid for the animals, in either case, did not alter the fact of their worth: that the good horse, though it might have been bought by chance for a few guineas, was not therefore less valuable, nor the owner of the galled jade any the richer, because he had given a hundred for it.

So that the economist, in saying that his science takes no account of the qualities of pictures, merely signifies that he cannot conceive of any quality of essential badness or goodness existing in pictures; and that he is incapable of investigating the laws of wealth in such articles. Which is the fact. But, being incapable of defining intrinsic value in pictures, it follows that he must be equally helpless to define the nature of intrinsic value in painted glass, or in painted pottery, or in patterned stuffs, or in any other national produce requiring true human ingenuity. Nay, though capable of conceiving the idea of intrinsic value with respect to beasts of burden, no economist has endeavoured to state the general principles of National Economy, even with regard to the horse or the ass. And, in fine, the modern political economists have been, without exception, incapable of apprehending the nature of intrinsic value at all.

And the first specialty of the following treatise consists in its giving at the outset, and maintaining as the foundation of all subsequent reasoning, a definition of Intrinsic Value, and Intrinsic Contrary-of-Value; the negative power having been left by former writers entirely out of account, and the positive power left entirely undefined.

But, secondly: the modern economist, ignoring intrinsic value, and accepting the popular estimate of things as the
only ground of his science, has imagined himself to have as-
certained the constant laws regulating the relation of this
popular demand to its supply; or, at least, to have proved
that demand and supply were connected by heavenly balance,
over which human foresight had no power. I chanced, by
singular coincidence, lately to see this theory of the law of
demand and supply brought to as sharp practical issue in an-
other great siege, as I had seen the theories of intrinsic value
brought, in the siege of Venice.

I had the honour of being on the committee under the
presidentship of the Lord Mayor of London, for the victual-
ling of Paris after her surrender. It became, at one period of
our sittings, a question of vital importance at what moment
the law of demand and supply would come into operation, and
what the operation of it would exactly be: the demand, on
this occasion, being very urgent indeed; that of several mill-
ions of people within a few hours of utter starvation, for any
kind of food whatsoever. Nevertheless, it was admitted, in
the course of debate, to be probable that the divine principle
of demand and supply might find itself at the eleventh hour,
and some minutes over, in want of carts and horses; and we
ventured so far to interfere with the divine principle as to
provide carts and horses, with haste which proved, happily,
in time for the need; but not a moment in advance of it. It
was farther recognized by the committee that the divine prin-
ciple of demand and supply would commence its operations
by charging the poor of Paris twelve-pence for a penny's
worth of whatever they wanted; and would end its operations
by offering them twelve-pence worth for a penny, of whatever
they didn't want. Whereupon it was concluded by the com-
mittee that the tiny knot, on this special occasion, was scarcely
"dignus vindice," by the divine principle of demand and sup-
ply: and that we would venture, for once, in a profane man-
ner, to provide for the poor of Paris what they wanted, when
they wanted it. Which, to the value of the sums entrusted
to us, it will be remembered we succeeded in doing.

But the fact is that the so-called "law," which was felt to
be false in this case of extreme exigence, is alike false in cases
of less exigence. It is false always, and everywhere. Nay, to such an extent is its existence imaginary, that the vulgar economists are not even agreed in their account of it; for some of them mean by it, only that prices are regulated by the relation between demand and supply, which is partly true; and others mean that the relation itself is one with the process of which it is unwise to interfere; a statement which is not only, as in the above instance, untrue; but accurately the reverse of the truth: for all wise economy, political or domestic, consists in the resolved maintenance of a given relation between supply and demand, other than the instinctive; or (directly) natural, one.

Similarly, vulgar political economy asserts for a "law" that wages are determined by competition.

Now I pay my servants exactly what wages I think necessary to make them comfortable. The sum is not determined at all by competition; but sometimes by my notions of their comfort and deserving, and sometimes by theirs. If I were to become penniless to-morrow, several of them would certainly still serve me for nothing.

In both the real and supposed cases the so-called "law" of vulgar political economy is absolutely set at defiance. But I cannot set the law of gravitation at defiance, nor determine that in my house I will not allow ice to melt, when the temperature is above thirty-two degrees. A true law outside of my house, will remain a true one inside of it. It is not, therefore, a law of Nature that wages are determined by competition. Still less is it a law of State, or we should not now be disputing about it publicly, to the loss of many millions of pounds to the country. The fact which vulgar economists have been weak enough to imagine a law, is only that, for the last twenty years a number of very senseless persons have attempted to determine wages in that manner; and have, in a measure, succeeded in occasionally doing so.

Both in definition of the elements of wealth, and in statement of the laws which govern its distribution, modern political economy has been thus absolutely incompetent, or absolutely false. And the following treatise is not, as it has been
asserted with dull pertinacity, an endeavour to put sentiment in the place of science; but it contains the exposure of what insolently pretended to be a science; and the definition, hitherto unassailed—and I do not fear to assert, unassailable—of the material elements with which political economy has to deal, and the moral principles in which it consists; being not itself a science, but "a system of conduct founded on the sciences, and impossible, except under certain conditions of moral culture." Which is only to say, that industry, frugality, and discretion, the three foundations of economy, are moral qualities, and cannot be attained without moral discipline: a flat truism, the reader may think, thus stated, yet a truism which is denied both vociferously, and in all endeavour, by the entire populace of Europe; who are at present hopeful of obtaining wealth by tricks of trade, without industry; who, possessing wealth, have lost in the use of it even the conception,—how much more the habit?—of frugality; and who, in the choice of the elements of wealth, cannot so much as lose—since they have never hitherto at any time possessed,—the faculty of discretion.

Now if the teachers of the pseudo-science of economy had ventured to state distinctly even the poor conclusions they had reached on the subjects respecting which it is most dangerous for a populace to be indiscreet, they would have soon found, by the use made of them, which were true, and which false.

Now if we are to look in any quarter for a systematic and exhaustive statement of the principles of a given science, it must certainly be from its Professor at Cambridge.

Take the last edition of Professor Fawcett's *Manual of Political Economy*, and forming, first clearly in your mind these three following questions, see if you can find an answer to them.

I. Does expenditure of capital on the production of luxu-
rious dress and furniture tend to make a nation rich or poor?

II. Does the payment, by the nation, of a tax on its land, or on the produce of it, to a certain number of private persons, to be expended by them as they please, tend to make the nation rich or poor?

III. Does the payment, by the nation, for an indefinite period, of interest on money borrowed from private persons, tend to make the nation rich or poor?

These three questions are, all of them, perfectly simple, and primarily vital. Determine these, and you have at once a basis for national conduct in all important particulars. Leave them undetermined, and there is no limit to the distress which may be brought upon the people by the cunning of its knaves, and the folly of its multitudes.

I will take the three in their order.

I. Dress. The general impression on the public mind at this day is, that the luxury of the rich in dress and furniture is a benefit to the poor. Probably not even the blindest of our political economists would venture to assert this in so many words. But where do they assert the contrary? During the entire period of the reign of the late Emperor it was assumed in France, as the first principle of fiscal government, that a large portion of the funds received as rent from the provincial labourer should be expended in the manufacture of ladies' dresses in Paris. Where is the political economist in France, or England, who ventured to assert the conclusions of his science as adverse to this system? As early as the year 1857 I had done my best to show the nature of the error, and to give warning of its danger;* but not one of the men who had the foolish ears of the people intent on their words, dared to follow me in speaking what would have been an offence to the powers of trade; and the powers of trade in Paris had their full way for fourteen years more,—with this result, to-day,—as told us in precise and curt terms by the Minister of Public Instruction,—†

* Political Economy of Art. (Smith and Elder, 1857, pp. 65-76.)
† See report of speech of M. Jules Simon, in Pall Mall Gazette of October 27, 1871.
"We have replaced glory by gold, work by speculation, faith and honour by scepticism. To absolve or glorify immorality; to make much of loose women; to gratify our eyes with luxury, our ears with the tales of orgies; to aid in the manœuvres of public robbers, or to applaud them; to laugh at morality, and only believe in success; to love nothing but pleasure, adore nothing but force; to replace work with a fecundity of fancies; to speak without thinking; to prefer noise to glory; to erect sneering into a system, and lying into an institution—is this the spectacle that we have seen?—is this the society that we have been?"

Of course, other causes, besides the desire of luxury in furniture and dress, have been at work to produce such consequences; but the most active cause of all has been the passion for these passions unrebuked by the clergy, and, for the most part, provoked by economists, as advantageous to commerce; nor need we think that such results have been arrived at in France only; we are ourselves following rapidly on the same road. France, in her old wars with us, never was so fatally our enemy as she has been in the fellowship of fashion, and the freedom of trade: nor, to my mind, is any fact recorded of Assyrian or Roman luxury more ominous, or ghastly, than one which came to my knowledge a few weeks ago, in England; a respectable and well-to-do father and mother, in a quiet north country town, being turned into the streets in their old age, at the suit of their only daughter's milliner.

II. Rent. The following account of the real nature of rent is given, quite accurately, by Professor Fawcett, at page 112 of the last edition of his Political Economy:—

"Every country has probably been subjugated, and grants of vanquished territory were the ordinary rewards which the conquering chief bestowed upon his more distinguished followers. Lands obtained by force had to be defended by force; and before law had asserted her supremacy, and property was made secure, no baron was able to retain his possessions, unless those who lived on his estates were prepared to
As property became secure, and landlords felt that the power of the State would protect them in all the rights of property, every vestige of these feudal tenures was abolished, and the relation between landlord and tenant has thus become purely commercial. A landlord offers his land to any one who is willing to take it; he is anxious to receive the highest rent he can obtain. What are the principles which regulate the rent which may thus be paid?"

These principles the Professor goes on contentedly to investigate, never appearing to contemplate for an instant the possibility of the first principle in the whole business—the maintenance, by force, of the possession of land obtained by force, being ever called in question by any human mind. It is, nevertheless, the nearest task of our day to discover how far original theft may be justly encountered by reactionary theft, or whether reactionary theft be indeed theft at all; and farther, what, excluding either original or corrective theft, are the just conditions of the possession of land.

III. Debt. Long since, when, a mere boy, I used to sit silently listening to the conversation of the London merchants who, all of them good and sound men of business, were wont occasionally to meet round my father's dining-table; nothing used to surprise me more than the conviction openly expressed by some of the soundest and most cautious of them, that "if there were no National debt they would not know what to do with their money, or where to place it safely." At the 399th page of his Manual, you will find Professor Fawcett giving exactly the same statement.

"In our own country, this certainty against risk of loss is provided by the public funds;"

and again, as on the question of rent, the Professor proceeds without appearing for an instant to be troubled by any misgiving that there may be an essential difference between the effects on national prosperity of a Government paying interest

* The omitted sentences merely amplify the statement; they in no wise modify it.
on money which it spent in fire works fifty years ago, and of a
Government paying interest on money to be employed to-day
on productive labour.

That difference, which the reader will find stated and ex-
amined at length, in §§ 127–129 of this volume, it is the busi-
ness of economists, before approaching any other question re-
lying to government, fully to explain. And the paragraphs
to which I refer, contain, I believe, the only definite statement
of it hitherto made.

The practical result of the absence of any such statement is,
that capitalists, when they do not know what to do with their
money, persuade the peasants, in various countries, that the
said peasants want guns to shoot each other with. The peas-
ants accordingly borrow guns, out of the manufacture of which
the capitalists get a percentage, and men of science much
amusement and credit. Then the peasants shoot a certain
number of each other, until they get tired; and burn each
other’s homes down in various places. Then they put the
guns back into towers, arsenals, &c., in ornamental patterns;
(and the victorious party put also some ragged flags in
churches). And then the capitalists tax both, annually, ever
afterwards, to pay interest on the loan of the guns and gun-
powder. And that is what capitalists call “knowing what to
do with their money;” and what commercial men in general
call “practical” as opposed to “sentimental” Political Econ-
omy.

Eleven years ago, in the summer of 1860, perceiving then
fully, (as Carlyle, had done long before), what distress was
about to come on the said populace of Europe through these
errors of their teachers, I began to do the best I might, to
combat them, in the series of papers for the Cornhill Magazine,
since published under the title of Unto this Last. The editor
of the Magazine was my friend, and ventured the insertion of
the three first essays; but the outcry against them became
then too strong for any editor to endure, and he wrote to me,
with great discomfort to himself, and many apologies to me,
that the Magazine must only admit one Economical Essay
more.
I made, with his permission, the last one longer than the rest, and gave it blunt conclusion as well as I could—and so the book now stands; but, as I had taken not a little pains with the Essays, and knew that they contained better work than most of my former writings, and more important truths than all of them put together, this violent reprobation of them by the Cornhill public set me still more gravely thinking; and, after turning the matter hither and thither in my mind for two years more, I resolved to make it the central work of my life to write an exhaustive treatise on Political Economy. It would not have been begun, at that time, however, had not the editor of Fraser's Magazine written to me, saying that he believed there was something in my theories, and would risk the admission of what I chose to write on this dangerous subject; whereupon, cautiously, and at intervals, during the winter of 1862-63, I sent him, and he ventured to print, the preface of the intended work, divided into four chapters. Then, though the Editor had not wholly lost courage, the Publisher indignantly interfered; and the readers of Fraser, as those of the Cornhill, were protected, for that time, from farther disturbance on my part. Subsequently, loss of health, family distress, and various untoward chances, prevented my proceeding with the body of the book;—seven years have passed ineffectually; and I am now fain to reprint the Preface by itself, under the title which I intended for the whole.

Not discontentedly; being, at this time of life, resigned to the sense of failure; and also, because the preface is complete in itself as a body of definitions, which I now require for reference in the course of my Letters to Workmen; by which also, in time, I trust less formally to accomplish the chief purpose of Munera Pulveris, practically summed in the two paragraphs 27 and 28: namely, to examine the moral results and possible rectifications of the laws of distribution of wealth, which have prevailed hitherto without debate among men. Laws which ordinary economists assume to be inviolable, and which ordinary socialists imagine to be on the eve of total abrogation. But they are both alike deceived.
The laws which at present regulate the possession of wealth are unjust, because the motives which provoke to its attainment are impure; but no socialism can effect their abrogation, unless it can abrogate also covetousness and pride, which it is by no means yet in the way of doing. Nor can the change be, in any case, to the extent that has been imagined. Extremes of luxury may be forbidden, and agony of penury relieved; but nature intends, and the utmost efforts of socialism will not hinder the fulfilment of her intention, that a provident person shall always be richer than a spendthrift; and an ingenious one more comfortable than a fool. But, indeed, the adjustment of the possession of the products of industry depends more on their nature than their quantity, and on wise determination therefore of the aims of industry. A nation which desires true wealth, desires it moderately, and can therefore distribute it with kindness, and possess it with pleasure; but one which desires false wealth, desires it immoderately, and can neither dispense it with justice, nor enjoy it in peace.

Therefore, needing, constantly in my present work, to refer to the definitions of true and false wealth given in the following Essays, I republish them with careful revisal. They were written abroad; partly at Milan, partly during a winter residence on the south-eastern slope of the Mont Salève, near Geneva; and sent to London in as legible MS. as I could write; but I never revised the press sheets, and have been obliged, accordingly, now to amend the text here and there, or correct it in unimportant particulars. Wherever any modification has involved change in the sense, it is enclosed in square brackets; and what few explanatory comments I have felt it necessary to add, have been indicated in the same manner. No explanatory comments, I regret to perceive, will suffice to remedy the mischief of my affected concentration of language, into the habit of which I fell by thinking too long over particular passages, in many and many a solitary walk towards the mountains of Bonneville or Annecy. But I never intended the book for anything else than a dictionary of reference, and that for earnest readers; who will, I have good
hope, if they find what they want in it, forgive the affectedly curt expressions.

The Essays, as originally published, were, as I have just stated, four in number. I have now, more conveniently, divided the whole into six chapters; and (as I purpose throughout this edition of my works) numbered the paragraphs.

I inscribed the first volume of this series to the friend who aided me in chief sorrow. Let me inscribe the second to the friend and guide who has urged me to all chief labour, Thomas Carlyle.

I would that some better means were in my power of showing reverence to the man who alone, of all our masters of literature, has written, without thought of himself, what he knew it to be needful for the people of his time to hear, if the will to hear were in them: whom, therefore, as the time draws near when his task must be ended, Republican and Free-thoughted England assaults with impatient reproach; and out of the abyss of her cowardice in policy and dishonour in trade, sets the hacks of her literature to speak evil, grateful to her ears, of the Solitary Teacher who has asked her to be brave for the help of Man, and just, for the love of God.

MUNERA PULVERIS.

"Te maris et terre numeroque carentis arenæ
Mensorem cohibent, Archyta,
Pulveris exigui prope litus parva Matinum
Munera."

CHAPTER I.
DEFINITIONS.

1. As domestic economy regulates the acts and habits of a household, Political economy regulates those of a society or State, with reference to the means of its maintenance.

Political economy is neither an art nor a science; but a system of conduct and legislature, founded on the sciences, directing the arts, and impossible, except under certain conditions of moral culture.

2. The study which lately in England has been called Political Economy is in reality nothing more than the investigation of some accidental phenomena of modern commercial operations, nor has it been true in its investigation even of these. It has no connection whatever with political economy, as understood and treated of by the great thinkers of past ages; and as long as its unscholarly and undefined statements are allowed to pass under the same name, every word written on the subject by those thinkers—and chiefly the words of Plato, Xenophon, Cicero and Bacon—must be nearly useless to mankind. The reader must not, therefore, be surprised at the care and insistence with which I have retained the literal and earliest sense of all important terms used in these papers;
for a word is usually well made at the time it is first wanted; its youngest meaning has in it the full strength of its youth; subsequent senses are commonly warped or weakened; and as all careful thinkers are sure to have used their words accurately, the first condition, in order to be able to avail ourselves of their sayings at all, is firm definition of terms.

3. By the "maintenance" of a State is to be understood the support of its population in healthy and happy life; and the increase of their numbers, so far as that increase is consistent with their happiness. It is not the object of political economy to increase the numbers of a nation at the cost of common health or comfort; nor to increase indefinitely the comfort of individuals, by sacrifice of surrounding lives, or possibilities of life.

4. The assumption which lies at the root of nearly all erroneous reasoning on political economy,—namely, that its object is to accumulate money or exchangeable property,—may be shown in a few words to be without foundation. For no economist would admit national economy to be legitimate which proposed to itself only the building of a pyramid of gold. He would declare the gold to be wasted, were it to remain in the monumental form, and would say it ought to be employed. But to what end? Either it must be used only to gain more gold, and build a larger pyramid, or for some purpose other than the gaining of gold. And this other purpose, however at first apprehended, will be found to resolve itself finally into the service of man;—that is to say, the extension, defence, or comfort of his life. The golden pyramid may perhaps be providently built, perhaps improvidently; but the wisdom or folly of the accumulation can only be determined by our having first clearly stated the aim of all economy, namely, the extension of life.

If the accumulation of money, or of exchangeable property, were a certain means of extending existence, it would be useless, in discussing economical questions, to fix our attention upon the more distant object—life—instead of the immediate one—money. But it is not so. Money may sometimes be accumulated at the cost of life, or by limitations of it; that is
to say, either by hastening the deaths of men, or preventing their births. It is therefore necessary to keep clearly in view the ultimate object of economy; and to determine the expediency of minor operations with reference to that ulterior end.

5. It has been just stated that the object of political economy is the continuance not only of life, but of healthy and happy life. But all true happiness is both a consequence and cause of life: it is a sign of its vigor, and source of its continuance. All true suffering is in like manner a consequence and cause of death. I shall therefore, in future, use the word "Life" singly: but let it be understood to include in its signification the happiness and power of the entire human nature, body and soul.

6. That human nature, as its Creator made it, and maintains it wherever His laws are observed, is entirely harmonious. No physical error can be more profound, no moral error more dangerous, than that involved in the monkish doctrine of the opposition of body to soul. No soul can be perfect in an imperfect body: no body perfect without perfect soul. Every right action and true thought sets the seal of its beauty on person and face; every wrong action and foul thought its seal of distortion; and the various aspects of humanity might be read as plainly as a printed history, were it not that the impressions are so complex that it must always in some cases (and, in the present state of our knowledge, in all cases) be impossible to decipher them completely. Nevertheless, the face of a consistently just, and of a consistently unjust person, may always be rightly distinguished at a glance; and if the qualities are continued by descent through a generation or two, there arises a complete distinction of race. Both moral and physical qualities are communicated by descent, far more than they can be developed by education; (though both may be destroyed by want of education), and there is as yet no ascertained limit to the nobleness of person and mind which the human creature may attain, by persevering observance of the laws of God respecting its birth and training.

7. We must therefore yet farther define the aim of political economy to be "The multiplication of human life at the high-
est standard." It might at first seem questionable whether we should endeavour to maintain a small number of persons of the highest type of beauty and intelligence, or a larger number of an inferior class. But I shall be able to show in the sequel, that the way to maintain the largest number is first to aim at the highest standard. Determine the noblest type of man, and aim simply at maintaining the largest possible number of persons of that class, and it will be found that the largest possible number of every healthy subordinate class must necessarily be produced also.

8. The perfect type of manhood, as just stated, involves the perfections (whatever we may hereafter determine these to be) of his body, affections, and intelligence. The material things, therefore, which it is the object of political economy to produce and use, (or accumulate for use,) are things which serve either to sustain and comfort the body, or exercise rightly the affections and form the intelligence.* Whatever truly serves either of these purposes is "useful" to man, wholesome, healthful, helpful, or holy. By seeking such things, man prolongs and increases his life upon the earth.

On the other hand, whatever does not serve either of these purposes,—much more whatever counteracts them,—is in like manner useless to man, unwholesome, unhelpful, or unholy; and by seeking such things man shortens and diminishes his life upon the earth.

9. And neither with respect to things useful or useless can man's estimate of them alter their nature. Certain substances being good for his food, and others noxious to him, what he thinks or wishes respecting them can neither change, nor prevent, their power. If he eats corn, he will live; if nightshade, he will die. If he produce or make good and beautiful things, they will Re-Create him; (note the solemnity and weight of the word); if bad and ugly things, they will "corrupt" or "break in pieces"—that is, in the exact degree of their power, Kill him. For every hour of labour, however enthusiastic or well intended, which he spends for that which is not bread, so much possibility of life is lost to him. His

* See Appendix I.
fancies, likings, beliefs, however brilliant, eager, or obstinate, are of no avail if they are set on a false object. Of all that he has laboured for, the eternal law of heaven and earth measures out to him for reward, to the utmost atom, that part which he ought to have laboured for, and withdraws from him (or enforces on him, it may be) inexorably, that part which he ought not to have laboured for until, on his summer threshing-floor, stands his heap of corn; little or much, not according to his labour, but to his discretion. No "commercial arrangements," no painting of surfaces, nor alloying of substances, will avail him a pennyweight. Nature asks of him calmly and inevitably, What have you found, or formed—the right thing or the wrong? By the right thing you shall live; by the wrong you shall die.

10. To thoughtless persons it seems otherwise. The world looks to them as if they could cozen it out of some ways and means of life. But they cannot cozen ir: they can only cozen their neighbours. The world is not to be cheated of a grain; not so much as a breath of its air can be drawn surreptitiously. For every piece of wise work done, so much life is granted; for every piece of foolish work, nothing; for every piece of wicked work, so much death is allotted. This is as sure as the courses of day and night. But when the means of life are once produced, men, by their various struggles and industries of accumulation or exchange, may variously gather, waste, restrain, or distribute them; necessitating, in proportion to the waste or restraint, accurately, so much more death. The rate and range of additional death are measured by the rate and range of waste; and are inevitable;—the only question (determined mostly by fraud in peace, and force in war) is, Who is to die, and how?

11. Such being the everlasting law of human existence, the essential work of the political economist is to determine what are in reality useful or life-giving things, and by what degrees and kinds of labour they are attainable and distributable. This investigation divides itself under three great heads;—the studies, namely, of the phenomena, first, of Wealth; secondly, of Money; and thirdly, of Riches.
These terms are often used as synonymous, but they signify entirely different things. "Wealth" consists of things in themselves valuable; "Money," of documentary claims to the possession of such things; and "Riches" is a relative term, expressing the magnitude of the possessions of one person or society as compared with those of other persons or societies.

The study of Wealth is a province of natural science:—it deals with the essential properties of things.

The study or Money is a province of commercial science:—it deals with conditions of engagement and exchange.

The study of Riches is a province of moral science:—it deals with the due relations of men to each other in regard of material possessions; and with the just laws of their association for purposes of labour.

I shall in this first chapter shortly sketch out the range of subjects which will come before us as we follow these three branches of inquiry.

12. And first of Wealth, which, it has been said, consists of things essentially valuable. We now, therefore, need a definition of "value."

"Value" signifies the strength, or "availing" of anything towards the sustaining of life, and is always two-fold; that is to say, primarily, INTRINSIC, and secondarily, EFFECTUAL.

The reader must, by anticipation, be warned against confusing value with cost, or with price. *Value is the life-giving power of anything; cost, the quantity of labour required to produce it; price, the quantity of labour which its possessor will take in exchange for it.* Cost and price are commercial conditions, to be studied under the head of money.

13. Intrinsic value is the absolute power of anything to support life. A sheaf of wheat of given quality and weight has in it a measurable power of sustaining the substance of the body; a cubic foot of pure air, a fixed power of sustaining its warmth; and a cluster of flowers of given beauty a fixed power of enlivening or animating the senses and heart.

[* Observe these definitions,—they are of much importance,—and connect with them the sentences in italics on this and the next page.]
It does not in the least affect the intrinsic value of the wheat, the air, or the flowers, that men refuse or despise them. Used or not, their own power is in them, and that particular power is in nothing else.

14. But in order that this value of theirs may become effectual, a certain state is necessary in the recipient of it. The digesting, breathing, and perceiving functions must be perfect in the human creature before the food, air, or flowers can become of their full value to it. The production of effectual value, therefore, always involves two needs: first, the production of a thing essentially useful; then the production of the capacity to use it. Where the intrinsic value and acceptant capacity come together there is Effectual value, or wealth; where there is either no intrinsic value, or no acceptant capacity, there is no effectual value; that is to say, no wealth. A horse is no wealth to us if we cannot ride, nor a picture if we cannot see, nor can any noble thing be wealth, except to a noble person. As the aptness of the user increases, the effectual value of the thing used increases; and in its entirety can co-exist only with perfect skill of use, and fitness of nature.

15. Valuable material things may be conveniently referred to five heads:

(i.) Land, with its associated air, water, and organisms.
(ii.) Houses, furniture, and instruments.
(iii.) Stored or prepared food, medicine, and articles of bodily luxury, including clothing.
(iv.) Books.
(v.) Works of art.

The conditions of value in these things are briefly as follows:

16. (i.) Land. Its value is twofold; first, as producing food and mechanical power; secondly, as an object of sight and thought, producing intellectual power.

Its value, as a means of producing food and mechanical power, varies with its form (as mountain or plain), with its substance (in soil or mineral contents), and with its climate. All these conditions of intrinsic value must be known and complied with by the men who have to deal with it, in order to
give effectual value; but at any given time and place, the intrinsic value is fixed: such and such a piece of land, with its associated lakes and seas, rightly treated in surface and substance, can produce precisely so much food and power, and no more.

The second element of value in land being its beauty, united with such conditions of space and form as are necessary for exercise, and for fullness of animal life, land of the highest value in these respects will be that lying in temperate climates, and boldly varied in form; removed from unhealthy or dangerous influences (as of miasm or volcano); and capable of sustaining a rich fauna and flora. Such land, carefully tended by the hand of man, so far as to remove from it unsightlinesses and evidences of decay, guarded from violence, and inhabited, under man's affectionate protection, by every kind of living creature that can occupy it in peace, is the most precious "property" that human beings can possess.

17. (ii.) Buildings, furniture, and instruments.

The value of buildings consists, first, in permanent strength, with convenience of form, of size, and of position; so as to render employment peaceful, social intercourse easy, temperature and air healthy. The advisable or possible magnitude of cities and mode of their distribution in squares, streets, courts, &c.; the relative value of sites of land, and the modes of structure which are healthiest and most permanent, have to be studied under this head.

The value of buildings consists secondly in historical association, and architectural beauty, of which we have to examine the influence on manners and life.

The value of instruments consists, first, in their power of shortening labour, or otherwise accomplishing what human strength unaided could not. The kinds of work which are severally best accomplished by hand or by machine;—the effect of machinery in gathering and multiplying population, and its influence on the minds and bodies of such population; together with the conceivable uses of machinery on a colossal scale in accomplishing mighty and useful works, hitherto un-
thought of, such as the deepening of large river channels;—changing the surface of mountainous districts;—irrigating tracts of desert in the torrid zone;—breaking up, and thus rendering capable of quicker fusion, edges of ice in the northern and southern Arctic seas, &c., so rendering parts of the earth habitable which hitherto have been lifeless, are to be studied under this head.

The value of instruments is, secondarily, in their aid to abstract sciences. The degree in which the multiplication of such instruments should be encouraged, so as to make them, if large, easy of access to numbers (as costly telescopes), or so cheap as that they might, in a serviceable form, become a common part of the furniture of households, is to be considered under this head.*

18. (iii.) Food, medicine, and articles of luxury. Under this head we shall have to examine the possible methods of obtaining pure food in such security and equality of supply as to avoid both waste and famine: then the economy of medicine and just range of sanitary law: finally the economy of luxury, partly an aesthetic and partly an ethical question.

19. (iv.) Books. The value of these consists,

First, in their power of preserving and communicating the knowledge of facts.

Secondly, in their power of exciting vital or noble emotion and intellectual action. They have also their corresponding negative powers of disguising and effacing the memory of facts, and killing the noble emotions, or exciting base ones. Under these two heads we have to consider the economical and educational value, positive and negative, of literature;—the means of producing and educating good authors, and the means and advisability of rendering good books generally accessible, and directing the reader’s choice to them.

[* I cannot now recast these sentences, pedantic in their generalization, and intended more for index than statement, but I must guard the reader from thinking that I ever wish for cheapness by bad quality. A poor boy need not always learn mathematics; but, if you set him to do so, have the farther kindness to give him good compasses, not cheap ones, whose points bend like lead.]
20. (v.) Works of art. The value of these is of the same nature as that of books; but the laws of their production and possible modes of distribution are very different, and require separate examination.

21. II.—Money. Under this head, we shall have to examine the laws of currency and exchange; of which I will note here the first principles.

Money has been inaccurately spoken of as merely a means of exchange. But it is far more than this. It is a documentary expression of legal claim. It is not wealth, but a documentary claim to wealth, being the sign of the relative quantities of it, or of the labour producing it, to which, at a given time, persons, or societies, are entitled.

If all the money in the world, notes and gold, were destroyed in an instant, it would leave the world neither richer nor poorer than it was. But it would leave the individual inhabitants of it in different relations.

Money is, therefore, correspondent in its nature to the title-deed of an estate. Though the deed be burned, the estate still exists, but the right to it has become disputable.

22. The real worth of money remains unchanged, as long as the proportion of the quantity of existing money to the quantity of existing wealth or available labour remains unchanged.

If the wealth increases, but not the money, the worth of the money increases; if the money increases, but not the wealth, the worth of the money diminishes.

23. Money, therefore, cannot be arbitrarily multiplied, any more than title-deeds can. So long as the existing wealth or available labour is not fully represented by the currency, the currency may be increased without diminution of the assigned worth of its pieces. But when the existing wealth, or available labour is once fully represented, every piece of money thrown into circulation diminishes the worth of every other existing piece, in the proportion it bears to the number of them, provided the new piece be received with equal credit;
if not, the depreciation of worth takes place, according to the
degree of its credit.

24. When, however, new money, composed of some sub-
stance of supposed intrinsic value (as of gold), is brought into
the market, or when new notes are issued which are sup-
posed to be deserving of credit, the desire to obtain the money
will, under certain circumstances, stimulate industry: an ad-
ditional quantity of wealth is immediately produced, and if
this be in proportion to the new claims advanced, the value
of the existing currency is undepreciated. If the stimulus
given be so great as to produce more goods than are pro-
portioned to the additional coinage, the worth of the exist-
ing currency will be raised.

Arbitrary control and issues of currency affect the produc-
tion of wealth, by acting on the hopes and fears of men, and
are, under certain circumstances, wise. But the issue of ad-
tional currency to meet the exigencies of immediate ex-
 pense, is merely one of the disguised forms of borrowing or
taxing. It is, however, in the present low state of economical
knowledge, often possible for governments to venture on an
issue of currency, when they could not venture on an addi-
tional loan or tax, because the real operation of such issue is
not understood by the people, and the pressure of it is irreg-
ularly distributed, and with an unperceived gradation.

25. The use of substances of intrinsic value as the materials
of a currency, is a barbarism;—a remnant of the conditions of
barter, which alone render commerce possible among savage
nations. It is, however, still necessary, partly as a mechanical
check on arbitrary issues; partly as a means of exchanges
with foreign nations. In proportion to the extension of civi-
lization, and increase of trustworthiness in Governments, it will
cease. So long as it exists, the phenomena of the cost and
price of the articles used for currency are mingled with those
proper to currency itself, in an almost inextricable manner:
and the market worth of bullion is affected by multitudinous
accidental circumstances, which have been traced, with more
or less success, by writers on commercial operations: but
with these variations the true political economist has no more
to do than an engineer, fortifying a harbour of refuge against
Atlantic tide, has to concern himself with the cries or quarrels
of children who dig pools with their fingers for its streams
among the sand.

26. III.—Riches. According to the various industry, ca-
pacity, good fortune, and desires of men, they obtain greater
or smaller share of, and claim upon, the wealth of the world.

The inequalities between these shares, always in some de-
gree just and necessary, may be either restrained by law or
circumstance within certain limits; or may increase indefi-
nitely.

Where no moral or legal restraint is put upon the exercise
of the will and intellect of the stronger, shrewder, or more
covetous men, these differences become ultimately enormous.
But as soon as they become so distinct in their extremes as
that, on one side, there shall be manifest redundancy of pos-
session, and on the other manifest pressure of need,—the
terms "riches" and "poverty" are used to express the op-
posite states; being contrary only as the terms "warmth"
and "cold" are contraries, of which neither implies an actual
degree, but only a relation to other degrees, of temperature.

27. Respecting riches, the economist has to inquire, first,
into the advisable modes of their collection; secondly, into
the advisable modes of their administration.

Respecting the collection of national riches, he has to in-
quire, first, whether he is justified in calling the nation rich, if
the quantity of wealth it possesses relatively to the wealth of
other nations, be large; irrespectively of the manner of its
distribution. Or does the mode of distribution in any wise
affect the nature of the riches? Thus, if the king alone be
rich—suppose Croesus or Mausolus—are the Lydians or
Carians therefore a rich nation? Or if a few slave-masters
are rich, and the nation is otherwise composed of slaves, is it
to be called a rich nation? For if not, and the ideas of a cer-
tain mode of distribution or operation in the riches, and of a
certain degree of freedom in the people, enter into our idea of
riches as attributed to a people, we shall have to define the
degree of fluency, or circulative character which is essential to
the nature of common wealth; and the degree of independence of action required in its possessors. Questions which look as if they would take time in answering.*

28. And farther. Since the inequality, which is the condition of riches, may be established in two opposite modes—namely, by increase of possession on the one side, and by decrease of it on the other—we have to inquire, with respect to any given state of riches, precisely in what manner the correlative poverty was produced: that is to say, whether by being surpassed only, or being depressed also; and if by being depressed, what are the advantages, or the contrary, conceivable in the depression. For instance, it being one of the commonest advantages of being rich to entertain a number of servants, we have to inquire, on the one side, what economical process produced the riches of the master; and on the other, what economical process produced the poverty of the persons who serve him; and what advantages each, on his own side, derives from the result.

29. These being the main questions touching the collection of riches, the next, or last, part of the inquiry is into their administration.

Their possession involves three great economical powers which require separate examination: namely, the powers of selection, direction, and provision.

The power of Selection relates to things of which the supply is limited (as the supply of best things is always). When it becomes matter of question to whom such things are to belong, the richest person has necessarily the first choice, unless some arbitrary mode of distribution be otherwise determined upon. The business of the economist is to show how this choice may be a wise one.

The power of Direction arises out of the necessary relation of rich men to poor, which ultimately, in one way or another,

[* I regret the ironical manner in which this passage, one of great importance in the matter of it, was written. The gist of it is, that the first of all inquiries respecting the wealth of any nation is not, how much it has; but whether it is in a form that can be used, and in the possession of persons who can use it.]
involves the direction of, or authority over, the labour of the poor; and this nearly as much over their mental as their bodily labour. The business of the economist is to show how this direction may be a Just one.

The power of Provision is dependent upon the redundance of wealth, which may of course by active persons be made available in preparation for future work or future profit; in which function riches have generally received the name of capital; that is to say, of head-, or source-material. The business of the economist is to show how this provision may be a Distant one.

30. The examination of these three functions of riches will embrace every final problem of political economy;—and, above, or before all, this curious and vital problem,—whether, since the wholesome action of riches in these three functions will depend (it appears), on the Wisdom, Justice, and Farsightedness of the holders; and it is by no means to be assumed that persons primarily rich, must therefore be just and wise,—it may not be ultimately possible so, or somewhat so, to arrange matters, as that persons primarily just and wise, should therefore be rich?

Such being the general plan of the inquiry before us, I shall not limit myself to any consecutive following of it, having hardly any good hope of being able to complete so laborious a work as it must prove to me; but from time to time, as I have leisure, shall endeavour to carry forward this part or that, as may be immediately possible; indicating always with accuracy the place which the particular essay will or should take in the completed system.
CHAPTER II.

STORE-KEEPING.

31. The first chapter having consisted of little more than definition of terms, I purpose, in this, to expand and illustrate the given definitions.

The view which has here been taken of the nature of wealth, namely, that it consists in an intrinsic value developed by a vital power, is directly opposed to two nearly universal conceptions of wealth. In the assertion that value is primarily intrinsic, it opposes the idea that anything which is an object of desire to numbers, and is limited in quantity, so as to have rated worth in exchange, may be called, or virtually become, wealth. And in the assertion that value is, secondarily, dependent upon power in the possessor, it opposes the idea that the worth of things depends on the demand for them, instead of on the use of them. Before going farther, we will make these two positions clearer.

32. I. First. All wealth is intrinsic, and is not constituted by the judgment of men. This is easily seen in the case of things affecting the body; we know, that no force of fantasy will make stones nourishing, or poison innocent; but it is less apparent in things affecting the mind. We are easily—perhaps willingly—misled by the appearance of beneficial results obtained by industries addressed wholly to the gratification of fanciful desire; and apt to suppose that whatever is widely coveted, dearly bought, and pleasurable in possession, must be included in our definition of wealth. It is the more difficult to quit ourselves of this error because many things which are true wealth in moderate use, become false wealth in immoderate; and many things are mixed of good and evil,—as mostly, books, and works of art,—out of which one person will get the good, and another the evil; so that it seems as if
there were no fixed good or evil in the things themselves, but only in the view taken, and use made of them.

But that is not so. The evil and good are fixed; in essence, and in proportion. And in things in which evil depends upon excess, the point of excess, though indefinable, is fixed; and the power of the thing is on the hither side for good, and on the farther side for evil. And in all cases this power is inherent, not dependent on opinion or choice. Our thoughts of things neither make, nor mar their eternal force; nor—which is the most serious point for future consideration—can they prevent the effect of it (within certain limits) upon ourselves.

33. Therefore, the object of any special analysis of wealth will be not so much to enumerate what is serviceable, as to distinguish what is destructive; and to show that it is inevitably destructive; that to receive pleasure from an evil thing is not to escape from, or alter the evil of it, but to be altered by it; that is, to suffer from it to the utmost, having our own nature, in that degree, made evil also. And it may be shown farther, that, through whatever length of time or subtleties of connexion the harm is accomplished, (being also less or more according to the fineness and worth of the humanity on which it is wrought), still, nothing but harm ever comes of a bad thing.

34. So that, in sum, the term wealth is never to be attached to the accidental object of a morbid desire, but only to the constant object of a legitimate one.* By the fury of ignorance, and fitfulness of caprice, large interests may be continually attached to things unserviceable or hurtful; if their nature could be altered by our passions, the science of Political Economy would remain, what it has been hitherto among us, the weighing of clouds, and the portioning out of shadows. But of ignorance there is no science; and of caprice no law. Their disturbing forces interfere with the operations of faithful

[* Remember carefully this statement, that Wealth consists only in the things which the nature of humanity has rendered in all ages, and must render in all ages to come, (that is what I meant by "constant"), the objects of legitimate desire. And see Appendix II.]
Economy, but have nothing in common with them: she, the calm arbiter of national destiny, regards only essential power for good in all that she accumulates, and alike disdains the wanderings* of imagination, and the thirsts of disease.

35. II. Secondly. The assertion that wealth is not only intrinsic, but dependent, in order to become effectual, on a given degree of vital power in its possessor, is opposed to another popular view of wealth;—namely, that though it may always be constituted by caprice, it is, when so constituted, a substantial thing, of which given quantities may be counted as existing here, or there, and exchangeable at rated prices.

In this view there are three errors. The first and chief is the overlooking the fact that all exchangeableness of commodity, or effective demand for it, depends on the sum of capacity for its use existing, here or elsewhere. The book we cannot read, or picture we take no delight in, may indeed be called part of our wealth, in so far as we have power of exchanging either for something we like better. But our power of effecting such exchange, and yet more, of effecting it to advantage, depends absolutely on the number of accessible persons who can understand the book, or enjoy the painting, and who will dispute the possession of them. Thus the actual worth of either, even to us, depends no more on their essential goodness than on the capacity existing somewhere for the perception of it; and it is vain in any completed system of production to think of obtaining one without the other. So that, though the true political economist knows that co-existence of capacity for use with temporary possession cannot be always secured, the final fact, on which he bases all action and administration, is that, in the whole nation, or group of nations, he has to deal with, for every atom of intrinsic value produced he must with exactest chemistry produce its twin atom of acceptant digestion, or understanding capacity; or, in the degree of his failure, he has no wealth. Nature's challenge to us is, in earnest, as the Assyrians mock; "I will give thee two thousand horses, if thou be able on thy part to set riders

[* The Wanderings, observe, not the Right goings, of Imagination. She is very far from despising these.]
upon them." Bavieca's paces are brave, if the Cid backs him; but woe to us, if we take the dust of capacity, wearing the armour of it, for capacity itself, for so all procession, however goodly in the show of it, is to the tomb.

36. The second error in this popular view of wealth is, that in giving the name of wealth to things which we cannot use, we in reality confuse wealth with money. The land we have no skill to cultivate, the book which is sealed to us, or dress which is superfluous, may indeed be exchangeable, but as such are nothing more than a cumbrous form of bank-note, of doubtful or slow convertibility. As long as we retain possession of them, we merely keep our bank-notes in the shape of gravel or clay, of book-leaves, or of embroidered tissue. Circumstances may, perhaps, render such forms the safest, or a certain complacency may attach to the exhibition of them; into both these advantages we shall inquire afterwards; I wish the reader only to observe here, that exchangeable property which we cannot use is, to us personally, merely one of the forms of money, not of wealth.

37. The third error in the popular view is the confusion of Guardianship with Possession; the real state of men of property being, too commonly, that of curators, not possessors, of wealth.

A man's power over his property is at the widest range of it, fivefold; it is power of Use, for himself, Administration, to others, Ostentation, Destruction, or Bequest: and possession is in use only, which for each man is sternly limited; so that such things, and so much of them as he can use, are, indeed, well for him, or Wealth; and more of them, or any other things, are ill for him, or Illth.* Plunged to the lips in Orinoco, he shall drink to his thirst measure; more, at his peril: with a thousand oxen on his lands, he shall eat to his hunger measure; more, at his peril. He cannot live in two houses at once; a few bales of silk or wool will suffice for the fabric of all the clothes he can ever wear, and a few books will probably hold all the furniture good for his brain. Beyond these, in the best of us but narrow, capacities, we have

* See Appendix III.
but the power of administering, or mal-administering, wealth: (that is to say, distributing, lending, or increasing it);—of exhibiting it (as in magnificence of retinue or furniture),—of destroying, or, finally, of bequeathing it. And with multitudes of rich men, administration degenerates into curatorship; they merely hold their property in charge, as Trustees, for the benefit of some person or persons to whom it is to be delivered upon their death; and the position, explained in clear terms, would hardly seem a covetable one. What would be the probable feelings of a youth, on his entrance into life, to whom the career hoped for him was proposed in terms such as these: “You must work unremittingly, and with your utmost intelligence, during all your available years, you will thus accumulate wealth to a large amount; but you must touch none of it, beyond what is needful for your support. Whatever sums you gain, beyond those required for your decent and moderate maintenance, and whatever beautiful things you may obtain possession of, shall be properly taken care of by servants, for whose maintenance you will be charged, and whom you will have the trouble of superintending, and on your death-bed you shall have the power of determining to whom the accumulated property shall belong, or to what purposes be applied.”

38. The labour of life, under such conditions, would probably be neither zealous nor cheerful; yet the only difference between this position and that of the ordinary capitalist is the power which the latter supposes himself to possess, and which is attributed to him by others, of spending his money at any moment. This pleasure, taken in the imagination of power to part with that with which we have no intention of parting, is one of the most curious, though commonest forms of the Eidolon, or Phantasm of Wealth. But the political economist has nothing to do with this idealism, and looks only to the practical issue of it—namely, that the holder of wealth, in such temper, may be regarded simply as a mechanical means of collection; or as a money-chest with a slit in it, not only receptant but suctional, set in the public thoroughfare;—chest of which only Death has the key, and evil Chance the distri-
bution of the contents. In his function of Lender (which, however, is one of administration, not use, as far as he is himself concerned), the capitalist takes, indeed, a more interesting aspect; but even in that function, his relations with the state are apt to degenerate into a mechanism for the convenient contraction of debt;—a function the more mischievous, because a nation invariably appeases its conscience with respect to an unjustifiable expense, by meeting it with borrowed funds, expresses its repentance of a foolish piece of business, by letting its tradesmen wait for their money, and always leaves its descendants to pay for the work which will be of the least advantage to them.*

39. Quit of these three sources of misconception, the reader will have little farther difficulty in apprehending the real nature of Effectual value. He may, however, at first not without surprise, perceive the consequences involved in his acceptance of the definition. For if the actual existence of wealth be dependent on the power of its possessor, it follows that the sum of wealth held by the nation, instead of being constant, or calculable, varies hourly, nay, momentarily, with the number and character of its holders! and that in changing hands, it changes in quantity. And farther, since the worth of the currency is proportioned to the sum of material wealth which it represents, if the sum of the wealth changes, the worth of the currency changes. And thus both the sum of the property, and power of the currency, of the state, vary momentarily as the character and number of the holders. And not only so, but different rates and kinds of variation are caused by the character of the holders of different kinds of wealth. The transitions of value caused by the character of the holders of land differ in mode from those caused by character in holders of works of art; and these again from those caused by character in holders of machinery or other working capital. But we cannot examine these special phe-

[* I would beg the reader's very close attention to these 37th and 38th paragraphs. It would be well if a dogged conviction could be enforced on nations, as on individuals, that, with few exceptions, what they cannot at present pay for, they should not at present have.]
nomena of any kind of wealth until we have a clear idea of
the way in which true currency expresses them; and of the
resulting modes in which the cost and price of any article are
related to its value. To obtain this we must approach the
subject in its first elements.

40. Let us suppose a national store of wealth, composed of
material things either useful, or believed to be so, taken charge
of by the Government,* and that every workman, having pro-
duced any article involving labour in its production, and for
which he has no immediate use, brings it to add to this store,
receiving from the Government, in exchange, an order either
for the return of the thing itself, or of its equivalent in other
things, such as he may choose out of the store, at any time
when he needs them. The question of equivalence itself
(how much wine a man is to receive in return for so much
corn, or how much coal in return for so much iron) is a quite
separate one, which we will examine presently. For the time,
let it be assumed that this equivalence has been determined,
and that the Government order, in exchange for a fixed weight
of any article (called, suppose a), is either for the return of
that weight of the article itself, or of another fixed weight of
the article b, or another of the article c, and so on.

Now, supposing that the labourer speedily and continu-
ally presents these general orders, or, in common language,
"spends the money," he has neither changed the circum-
stances of the nation, nor his own, except in so far as he may
have produced useful and consumed useless articles, or vice
versâ. But if he does not use, or uses in part only, the orders
he receives, and lays aside some portion of them; and thus
every day bringing his contribution to the national store, lays
by some per-centage of the orders received in exchange for it,
he increases the national wealth daily by as much as he does
not use of the received order, and to the same amount ac-
cumulates a monetary claim on the Government. It is, of course,
always in his power, as it is his legal right, to bring forward
this accumulation of claim, and at once to consume, destroy,
or distribute, the sum of his wealth. Supposing he never

* See Appendix IV.
does so, but dies, leaving his claim to others, he has enriched the State during his life by the quantity of wealth over which that claim extends, or has, in other words, rendered so much additional life possible in the State, of which additional life he bequeaths the immediate possibility to those whom he invests with his claim. Supposing him to cancel the claim, he would distribute this possibility of life among the nation at large.

41. We hitherto consider the Government itself as simply a conservative power, taking charge of the wealth entrusted to it.

But a Government may be more or less than a conservative power. It may be either an improving, or destructive one.

If it be an improving power, using all the wealth entrusted to it to the best advantage, the nation is enriched in root and branch at once, and the Government is enabled, for every order presented, to return a quantity of wealth greater than the order was written for, according to the fructification obtained in the interim. This ability may be either concealed, in which case the currency does not completely represent the wealth of the country, or it may be manifested by the continual payment of the excess of value on each order, in which case there is (irrespective, observe, of collateral results afterwards to be examined) a perpetual rise in the worth of the currency, that is to say, a fall in the price of all articles represented by it.

42. But if the Government be destructive, or a consuming power, it becomes unable to return the value received on the presentation of the order.

This inability may either be concealed by meeting demands to the full, until it issue in bankruptcy, or in some form of national debt;—or it may be concealed during oscillatory movements between destructiveness and productiveness, which result on the whole in stability;—or it may be manifested by the consistent return of less than value received on each presented order, in which case there is a consistent fall in the worth of the currency, or rise in the price of the things represented by it.
43. Now, if for this conception of a central Government, we substitute that of a body of persons occupied in industrial pursuits, of whom each adds in his private capacity to the common store, we at once obtain an approximation to the actual condition of a civilized mercantile community, from which approximation we might easily proceed into still completer analysis. I purpose, however, to arrive at every result by the gradual expansion of the simpler conception; but I wish 'the reader to observe, in the meantime, that both the social conditions thus supposed (and I will by anticipation say also, all possible social conditions), agree in two great points; namely, in the primal importance of the supposed national store or stock, and in its destructibility or improveability by the holders of it.

44. I. Observe that in both conditions, that of central Government-holding, and diffused private-holding, the quantity of stock is of the same national moment. In the one case, indeed, its amount may be known by examination of the persons to whom it is confided; in the other it cannot be known but by exposing the private affairs of every individual. But, known or unknown, its significance is the same under each condition. The riches of the nation consist in the abundance, and their wealth depends on the nature, of this store.

45. II. In the second place, both conditions, (and all other possible ones) agree in the destructibility or improveability of the store by its holders. Whether in private hands, or under Government charge, the national store may be daily consumed, or daily enlarged, by its possessors; and while the currency remains apparently unaltered, the property it represents may diminish or increase.

46. The first question, then, which we have to put under our simple conception of central Government, namely, "What store has it?" is one of equal importance, whatever may be the constitution of the State; while the second question—namely, "Who are the holders of the store?" involves the discussion of the constitution of the State itself.

The first inquiry resolves itself into three heads:
1. What is the nature of the store?
2. What is its quantity in relation to the population?
3. What is its quantity in relation to the currency?

The second inquiry into two:

1. Who are the Holders of the store, and in what proportions?
2. Who are the Claimants of the store, (that is to say, the holders of the currency,) and in what proportions?

We will examine the range of the first three questions in the present paper; of the two following, in the sequel.

47. I. Question First. What is the nature of the store? Has the nation hitherto worked for and gathered the right thing or the wrong? On that issue rest the possibilities of its life.

For example, let us imagine a society, of no great extent, occupied in procuring and laying up store of corn, wine, wool, silk, and other such preservable materials of food and clothing; and that it has a currency representing them. Imagine farther, that on days of festivity, the society, discovering itself to derive satisfaction from pyrotechnics, gradually turns its attention more and more to the manufacture of gunpowder; so that an increasing number of labourers, giving what time they can spare to this branch of industry, bring increasing quantities of combustibles into the store, and use the general orders received in exchange to obtain such wine, wool, or corn, as they may have need of. The currency remains the same, and represents precisely the same amount of material in the store, and of labour spent in producing it. But the corn and wine gradually vanish, and in their place, as gradually, appear sulphur and saltpetre, till at last the labourers who have consumed corn and supplied nitre, presenting on a festal morning some of their currency to obtain materials for the feast, discover that no amount of currency will command anything Festive, except Fire. The supply of rockets is unlimited, but that of food, limited, in a quite final manner; and the whole currency in the hands of the society represents an infinite power of detonation, but none of existence.

48. This statement, caricatured as it may seem, is only ex-
aggerated in assuming the persistence of the folly to extremity, unchecked, as in reality it would be, by the gradual rise in price of food. But it falls short of the actual facts of human life in expression of the depth and intensity of the folly itself. For a great part (the reader would not believe how great until he saw the statistics in detail) of the most earnest and ingenious industry of the world is spent in producing munitions of war; gathering, that is to say the materials, not of festive, but of consuming fire; filling its stores with all power of the instruments of pain, and all affluence of the ministries of death. It was no true Trionfo della Morte* which men have seen and feared (sometimes scarcely feared) so long; wherein he brought them rest from their labours. We see, and share, another and higher form of his triumph now. Task-master, instead of Releaser, he rules the dust of the arena no less than of the tomb; and, content once in the grave whither man went, to make his works to cease and his devices to vanish,—now, in the busy city and on the serviceable sea, makes his work to increase, and his devices to multiply.

49. To this doubled loss, or negative power of labour, spent in producing means of destruction, we have to add, in our estimate of the consequences of human folly, whatever more insidious waste of toil there is in production of unnecessary luxury. Such and such an occupation (it is said) supports so many labourers, because so many obtain wages in following it; but it is never considered that unless there be a supporting power in the product of the occupation, the wages given to one man are merely withdrawn from another. We cannot say of any trade that it maintains such and such a number of persons, unless we know how and where the money, now spent in the purchase of its produce, would have been spent, if that produce had not been manufactured. The purchasing funds truly support a number of people in making

[* I little thought, what Trionfo della Morte would be, for this very cause, and in literal fulfilment of the closing words of the 47th paragraph, over the fields and houses of Europe, and over its fairest city—within seven years from the day I wrote it.]
This; but (probably) leave unsupported an equal number who are making, or could have made That. The manufacturers of small watches thrive at Geneva;—it is well;—but where would the money spent on small watches have gone, had there been no small watches to buy?

50. If the so frequently uttered aphorism of mercantile economy—"labour is limited by capital," were true, this question would be a definite one. But it is untrue; and that widely. Out of a given quantity of funds for wages, more or less labour is to be had, according to the quantity of will with which we can inspire the workman; and the true limit of labour is only in the limit of this moral stimulus of the will, and of the bodily power. In an ultimate, but entirely unpractical sense, labour is limited by capital, as it is by matter—that is to say, where there is no material, there can be no work,—but in the practical sense, labour is limited only by the great original capital of head, heart, and hand. Even in the most artificial relations of commerce, labour is to capital as fire to fuel: out of so much fuel, you can have only so much fire; but out of so much fuel, you shall have so much fire,—not in proportion to the mass of combustible, but to the force of wind that fans and water that quenches; and the appliance of both. And labour is furthered, as conflagration is, not so much by added fuel, as by admitted air.*

51. For which reasons, I had to insert, in § 49, the qualifying "probably;" for it can never be said positively that the purchase-money, or wages fund of any trade is withdrawn from some other trade. The object itself may be the stimulus of the production of the money which buys it; that is to say, the work by which the purchaser obtained the means of buying it, would not have been done by him unless he had wanted that particular thing. And the production of any article not intrinsically (nor in the process of manufacture) injurious, is

[* The meaning of which is, that you may spend a great deal of money, and get very little work for it, and that little bad; but having good "air" or "spirit," to put life into it, with very little money, you may get a great deal of work, and all good; which, observe, is an arithmetical, not at all a poetical or visionary circumstance.]
useful, if the desire of it causes productive labour in other directions.

52. In the national store, therefore, the presence of things intrinsically valueless does not imply an entirely correlative absence of things valuable. We cannot be certain that all the labour spent on vanity has been diverted from reality, and that for every bad thing produced, a precious thing has been lost. In great measure, the vain things represent the results of roused indolence; they have been carved, as toys, in extra time; and, if they had not been made, nothing else would have been made. Even to munitions of war this principle applies; they partly represent the work of men who, if they had not made spears, would never have made pruning hooks, and who are incapable of any activities but those of contest.

53. Thus then, finally, the nature of the store has to be considered under two main lights; the one, that of its immediate and actual utility; the other, that of the past national character which it signifies by its production, and future character which it must develop by its use. And the issue of this investigation will be to show us that

Economy does not depend merely on principles of "demand and supply," but primarily on what is demanded, and what is supplied; which I will beg of you to observe, and take to heart.

54. II. Question Second.—What is the quantity of the store, in relation to the population?

It follows from what has been already stated that the accurate form in which this question has to be put is—"What quantity of each article composing the store exists in proportion to the real need for it by the population?" But we shall for the time assume, in order to keep all our terms at the simplest, that the store is wholly composed of useful articles, and accurately proportioned to the several needs for them.

Now it cannot be assumed, because the store is large in proportion to the number of the people, that the people must be in comfort; nor because it is small, that they must be in distress. An active and economical race always produces
more than it requires, and lives (if it is permitted to do so) in competence on the produce of its daily labour. The quantity of its store, great or small, is therefore in many respects indifferent to it, and cannot be inferred from its aspect. Similarly an inactive and wasteful population, which cannot live by its daily labour, but is dependent, partly or wholly, on consumption of its store, may be (by various difficulties, hereafter to be examined, in realizing or getting at such store) retained in a state of abject distress, though its possessions may be immense. But the results always involved in the magnitude of store are, the commercial power of the nation, its security, and its mental character. Its commercial power, in that according to the quantity of its store, may be the extent of its dealings; its security, in that according to the quantity of its store are its means of sudden exertion or sustained endurance; and its character, in that certain conditions of civilization cannot be attained without permanent and continually accumulating store, of great intrinsic value, and of peculiar nature.*

55. Now, seeing that these three advantages arise from largeness of store in proportion to population, the question arises immediately, "Given the store—is the nation enriched by diminution of its numbers? Are a successful national speculation, and a pestilence, economically the same thing?

This is in part a sophistical question; such as it would be to ask whether a man was richer when struck by disease which must limit his life within a predicable period, than he was when in health. He is enabled to enlarge his current expenses, and has for all purposes a larger sum at his immediate disposal (for; given the fortune, the shorter the life, the larger the annuity); yet no man considers himself richer because he is condemned by his physician.

56. The logical reply is that, since Wealth is by definition only the means of life, a nation cannot be enriched by its own mortality. Or in shorter words, the life is more than the meat; and existence itself, more wealth than the means of existence. Whence, of two nations who have equal store, the

[* More especially, works of great art.]
more numerous is to be considered the richer, provided the type of the inhabitant be as high (for, though the relative bulk of their store be less, its relative efficiency, or the amount of effectual wealth, must be greater). But if the type of the population be deteriorated by increase of its numbers, we have evidence of poverty in its worst influence; and then, to determine whether the nation in its total may still be justifiably esteemed rich, we must set or weigh, the number of the poor against that of the rich.

To effect which piece of scale-work, it is of course necessary to determine, first, who are poor and who are rich; nor this only, but also how poor and how rich they are. Which will prove a curious thermometrical investigation; for we shall have to do for gold and for silver, what we have done for quicksilver;—determine, namely, their freezing-point, their zero, their temperate and fever-heat points; finally, their vaporescent point, at which riches, sometimes explosively, as lately in America, "make to themselves wings:"—and correspondently, the number of degrees below zero at which poverty, ceasing to brace with any wholesome cold, burns to the bone.*

57. For the performance of these operations, in the strictest sense scientific, we will first look to the existing so-called "science" of Political Economy; we will ask it to define for us the comparatively and superlatively rich, and the comparatively and superlatively poor; and on its own terms—if any terms it can pronounce—examine, in our prosperous England, how many rich and how many poor people there are; and whether the quantity and intensity of the poverty is indeed so overbalanced by the quantity and intensity of wealth,

[* The meaning of that, in plain English, is, that we must find out how far poverty and riches are good or bad for people, and what is the difference between being miserably poor—so as, perhaps, to be driven to crime, or to pass life in suffering—and being blessedly poor, in the sense meant in the Sermon on the Mount. For I suppose the people who believe that sermon, do not think (if they ever honestly ask themselves what they do think), either that Luke vi. 24. is a merely poetical exclamation, or that the Beatitude of Poverty has yet been attained in St. Martin’s Lane and other back streets of London.]
that we may permit ourselves a luxurious blindness to it, and call ourselves, complacently, a rich country. And if we find no clear definition in the existing science, we will endeavour for ourselves to fix the true degrees of the scale, and to apply them.*

58. Question Third. What is the quantity of the store in relation to the Currency?

We have seen that the real worth of the currency, so far as dependent on its relation to the magnitude of the store, may vary, within certain limits, without affecting its worth in exchange. The diminution or increase of the represented wealth may be unperceived, and the currency may be taken either for more or less than it is truly worth. Usually it is taken for much more; and its power in exchange, or credit-power, is thus increased up to a given strain upon its relation to existing wealth. This credit-power is of chief importance in the thoughts, because most sharply present to the experience, of a mercantile community: but the conditions of its stability † and all other relations of the currency to the mate-

[* Large plans! — Eight years are gone, and nothing done yet. But I keep my purpose of making one day this balance, or want of balance, visible, in those so seldom used scales of Justice.]

† These are nearly all briefly represented by the image used for the force of money by Dante, of mast and sail:—

Quali dal vento le gonfiate vele
Caggiono avvolte, poi chè l'alber fiacca
Tal cadde a terra la fiera crudele.

The image may be followed out, like all of Dante's, into as close detail as the reader chooses. Thus the stress of the sail must be proportioned to the strength of the mast, and it is only in unforeseen danger that a skilful seaman ever carries all the canvas his spars will bear; states of mercantile languor are like the flap of the sail in a calm; of mercantile precaution, like taking in reefs; and mercantile ruin is instant on the breaking of the mast.

[I mean by credit-power, the general impression on the national mind that a sovereign, or any other coin, is worth so much bread and cheese — so much wine — so much horse and carriage — or so much fine art: it may be really worth, when tried, less or more than is thought: the thought of it is the credit-power.]
rial store are entirely simple in principle, if not in action. Far other than simple are the relations of the currency to the available labour which it also represents. For this relation is involved not only with that of the magnitude of the store to the number, but with that of the magnitude of the store to the mind, of the population. Its proportion to their number, and the resulting worth of currency, are calculable; but its proportion to their will for labour is not. The worth of the piece of money which claims a given quantity of the store is, in exchange, less or greater according to the facility of obtaining the same quantity of the same thing without having recourse to the store. In other words it depends on the immediate Cost and Price of the thing. We must now, therefore, complete the definition of these terms.

59. All cost and price are counted in Labour. We must know first, therefore, what is to be counted as Labour.

I have already defined labour to be the Contest of the life of man with an opposite. Literally, it is the quantity of "Lapse," loss, or failure of human life, caused by any effort. It is usually confused with effort itself, or the application of power (opera); but there is much effort which is merely a mode of recreation, or of pleasure. The most beautiful actions of the human body, and the highest results of the human intelligence, are conditions, or achievements, of quite unlabourous,—nay, of recreative,—effort. But labour is the suffering in effort. It is the negative quantity, or quantity of de-feat, which has to be counted against every Fact, or Deed of men. In brief, it is "that quantity of our toil which we die in."

We might, therefore, a priori, conjecture (as we shall ultimately find), that it cannot be bought, nor sold. Everything else is bought and sold for Labour, but labour itself cannot be bought nor sold for anything, being priceless.* The idea

* The object of Political Economy is not to buy, nor to sell labour, but to spare it. Every attempt to buy or sell it is, in the outcome, ineffectual; so far as successful, it is not sale, but Betrayal; and the purchase-money is a part of that thirty pieces which bought, first the great-
that it is a commodity to be bought or sold, is the alpha and omega of Politico-Economic fallacy.

60. This being the nature of labour, the "Cost" of anything is the quantity of labour necessary to obtain it;—the quantity for which, or at which, it "stands" (constat). It is literally the "Constancy" of the thing;—you shall win it—move it—come at it, for no less than this.

Cost is measured and measurable (using the accurate Latin terms) only in "labour," not in "opera."* It does not matter how much work a thing needs to produce it; it matters only how much distress. Generally the more the power it requires, the less the distress; so that the noblest works of man cost less than the meanest.

True labour, or spending of life, is either of the body, in fatigue or pain; of the temper or heart (as in perseverance of search for things,—patience in waiting for them,—fortitude or degradation in suffering for them, and the like), or of the intellect. All these kinds of labour are supposed to be included in the general term, and the quantity of labour is then expressed by the time it lasts. So that a unit of labour is "an hour's work" or a day's work, as we may determine.†

61. Cost, like value, is both intrinsic and effectual. Intrinsic cost is that of getting the thing in the right way; effect-
est of labours, and afterwards the burial-field of the Stranger; for this purchase-money, being in its very smallness or vileness the exactly measured opposite of the "vilis annona amicorum," makes all men strangers to each other.

* Cicero's distinction, "sordidi quæstus, quorum opera, non quorum artes emuntur," admirable in principle, is inaccurate in expression, because Cicero did not practically know how much operative dexterity is necessary in all the higher arts; but the cost of this dexterity is incalculable. Be it great or small, the "cost" of the mere perfectness of touch in a hammer-stroke of Donatello's, or a pencil-touch of Correggio's, is inestimable by any ordinary arithmetic.

[Old notes, these, more embarrassing I now perceive, than elucidatory; but right, and worth retaining.]

† Only observe, as some labour is more destructive of life than other labour, the hour or day of the more destructive toil is supposed to include proportionate rest. Though men do not, or cannot, usually take such rest, except in death.
Cost is that of getting the thing in the way we set about it. But intrinsic cost cannot be made a subject of analytical investigation, being only partially discoverable, and that by long experience. Effectual cost is all that the political Economist can deal with; that is to say, the cost of the thing under existing circumstances, and by known processes.

Cost, being dependent much on application of method, varies with the quantity of the thing wanted, and with the number of persons who work for it. It is easy to get a little of some things, but difficult to get much; it is impossible to get some things with few hands, but easy to get them with many.

62. The cost and value of things, however difficult to determine accurately, are thus both dependent on ascertainable physical circumstances.*

* There is, therefore, observe, no such thing as cheapness (in the common use of that term), without some error or injustice. A thing is said to be cheap, not because it is common, but because it is supposed to be sold under its worth. Everything has its proper and true worth at any given time, in relation to everything else; and at that worth should be bought and sold. If sold under it, it is cheap to the buyer by exactly so much as the seller loses, and no more. Putrid meat, at twopence a pound, is not "cheaper" than wholesome meat at sevenpence a pound; it is probably much dearer; but if, by watching your opportunity, you can get the wholesome meat for sixpence a pound, it is cheaper to you by a penny, which you have gained, and the seller has lost. The present rage for cheapness is either, therefore, simply and literally a rage for badness of all commodities, or it is an attempt to find persons whose necessities will force them to let you have more than you should for your money. It is quite easy to produce such persons, and in large numbers; for the more distress there is in a nation, the more cheapness of this sort you can obtain, and your boasted cheapness is thus merely a measure of the extent of your national distress.

There is, indeed, a condition of apparent cheapness, which we have some right to be triumphant in; namely, the real reduction in cost of articles by right application of labour. But in this case the article is only cheap with reference to its former price; the so-called cheapness is only our expression for the sensation of contrast between its former and existing prices. So soon as the new methods of producing the article are established, it ceases to be esteemed either cheap or dear, at the new price, as at the old one, and is felt to be cheap only when accident enables it to be purchased beneath this new value. And it is no ad-
But their price is dependent on the human will. Such and such a thing is demonstrably good for so much. And it may demonstrably be had for so much.

But it remains questionable, and in all manner of ways questionable, whether I choose to give so much.*

This choice is always a relative one. It is a choice to give a price for this, rather than for that;—a resolution to have the thing, if getting it does not involve the loss of a better thing. Price depends, therefore, not only on the cost of the commodity itself, but on its relation to the cost of every other attainable thing.

vantage to produce the article more easily, except as it enables you to multiply your population. Cheapness of this kind is merely the discovery that more men can be maintained on the same ground; and the question how many you will maintain in proportion to your additional means, remains exactly in the same terms that it did before.

A form of immediate cheapness results, however, in many cases, without distress, from the labour of a population where food is redundant, or where the labour by which the food is produced leaves much idle time on their hands, which may be applied to the production of "cheap" articles.

All such phenomena indicate to the political economist places where the labour is unbalanced. In the first case, the just balance is to be effected by taking labourers from the spot where pressure exists, and sending them to that where food is redundant. In the second, the cheapness is a local accident, disadvantageous to the local purchaser, disadvantageous to the local producer. It is one of the first duties of commerce to extend the market, and thus give the local producer his full advantage.

Cheapness caused by natural accidents of harvest, weather, &c., is always counterbalanced, in due time, by natural scarcity, similarly caused. It is the part of wise government, and healthy commerce, so to provide in times and places of plenty for times and places of dearth, as that there shall never be waste, nor famine.

Cheapness caused by gluts of the market is merely a disease of clumsy and wanton commerce.

* Price has been already defined (p. 9) to be the quantity of labour which the possessor of a thing is willing to take for it. It is best to consider the price to be that fixed by the possessor, because the possessor has absolute power of refusing sale, while the purchaser has no absolute power of compelling it; but the effectual or market price is that at which their estimates coincide.
Farther. The power of choice is also a relative one. It depends not merely on our own estimate of the thing, but on everybody else's estimate; therefore on the number and force of the will of the concurrent buyers, and on the existing quantity of the thing in proportion to that number and force.

Hence the price of anything depends on four variables.

(1.) Its cost.
(2.) Its attainable quantity at that cost.
(3.) The number and power of the persons who want it.
(4.) The estimate they have formed of its desirableness.

Its value only affects its price so far as it is contemplated in this estimate; perhaps, therefore, not at all.

63. Now, in order to show the manner in which price is expressed in terms of a currency, we must assume these four quantities to be known, and the "estimate of desirableness," commonly called the Demand, to be certain. We will take the number of persons at the lowest. Let A and B be two labourers who "demand," that is to say, have resolved to labour for, two articles, a and b. Their demand for these articles (if the reader likes better, he may say their need) is to be conceived as absolute, their existence depending on the getting these two things. Suppose, for instance, that they are bread and fuel, in a cold country, and let a represent the least quantity of bread, and b the least quantity of fuel, which will support a man's life for a day. Let a be producible by an hour's labour, but b only by two hours' labour.

Then the cost of a is one hour, and of b two (cost, by our definition, being expressible in terms of time). If, therefore, each man worked both for his corn and fuel, each would have to work three hours a day. But they divide the labour for its greater ease.* Then if A works three hours, he produces $3a$, which is one $a$ more than both the men want. And if B works three hours, he produces only $1\frac{1}{2} b$, or half of $b$ less than both want. But if A work three hours and B six, A has

* This "greater ease" ought to be allowed for by a diminution in the times of the divided work; but as the proportion of times would remain the same, I do not introduce this unnecessary complexity into the calculation.
3 a, and B has 3 b, a maintenance in the right proportion for both for a day and half; so that each might take half a day's rest. But as B has worked double time, the whole of this day's rest belongs in equity to him. Therefore the just exchange should be, A giving two a for one b, has one a and one b;—maintenance for a day. B giving one b for two a, has two a and two b; maintenance for two days.

But B cannot rest on the second day, or A would be left without the article which B produces. Nor is there any means of making the exchange just, unless a third labourer is called in. Then one workman, A, produces a, and two, B and C, produce b:—A, working three hours, has three a;—B, three hours, 1\(\frac{1}{2}\) b;—C, three hours, 1\(\frac{1}{2}\) b. B and C each give half of b for a, and all have their equal daily maintenance for equal daily work.

To carry the example a single step farther, let three articles, a, b, and c be needed.

Let a need one hour's work, b two, and c four; then the day's work must be seven hours, and one man in a day's work can make 7 a, or 3\(\frac{1}{2}\) b, or 1\(\frac{7}{3}\) c.

Therefore one A works for a, producing 7 a; two B's work for b, producing 7 b; four C's work for c, producing 7 c.

A has six a to spare, and gives two a for one b, and four a for one c. Each B has 2\(\frac{1}{2}\) b to spare, and gives \(\frac{1}{2}\) b for one a, and two b for one c.

Each C has \(\frac{7}{3}\) of c to spare, and gives \(\frac{1}{2}\) c for one b, and \(\frac{1}{4}\) of c for one a.

And all have their day's maintenance.

Generally, therefore, it follows that if the demand is constant,* the relative prices of things are as their costs, or as the quantities of labour involved in production.

64. Then, in order to express their prices in terms of a currency, we have only to put the currency into the form of orders for a certain quantity of any given article (with us it is in the form of orders for gold), and all quantities of other articles are priced by the relation they bear to the article which the currency claims.

* Compare *Unto this Last*, p. 115, *et seq.*
But the worth of the currency itself is not in the slightest degree founded more on the worth of the article which it either claims or consists in (as gold) than on the worth of every other article for which the gold is exchangeable. It is just as accurate to say, "so many pounds are worth an acre of land," as "an acre of land is worth so many pounds." The worth of gold, of land, of houses, and of food, and of all other things, depends at any moment on the existing quantities and relative demands for all and each; and a change in the worth of, or demand for, any one, involves an instantaneously correspondent change in the worth of, and demand for, all the rest; — a change as inevitable and as accurately balanced (though often in its process as untraceable) as the change in volume of the outflowing river from some vast lake, caused by change in the volume of the inflowing streams, though no eye can trace, nor instrument detect, motion, either on its surface, or in the depth.

65. Thus, then, the real working power or worth of the currency is founded on the entire sum of the relative estimates formed by the population of its possessions; a change in this estimate in any direction (and therefore every change in the national character), instantly alters the value of money, in its second great function of commanding labour. But we must always carefully and sternly distinguish between this worth of currency, dependent on the conceived or appreciated value of what it represents, and the worth of it, dependent on the existence of what it represents. A currency is true, or false, in proportion to the security with which it gives claim to the possession of land, house, horse, or picture; but a currency is strong or weak,* worth much, or worth little, in proportion to the degree of estimate in which the nation holds the house, horse, or picture which is claimed. Thus the power of the English currency has been, till of late, largely based on the national estimate of horses and of wine: so that a man

[* That is to say, the love of money is founded first on the intense-ness of desire for given things; a youth will rob the till, now-a-days, for pantomime tickets and cigars; the "strength" of the currency being irresistible to him, in consequence of his desire for those luxuries.]
might always give any price to furnish choicely his stable, or his cellar; and receive public approval therefor: but if he gave the same sum to furnish his library, he was called mad, or a biblio-maniac. And although he might lose his fortune by his horses, and his health or life by his cellar, and rarely lost either by his books, he was yet never called a Hippo-maniac nor an Oino-maniac; but only Biblio-maniac, because the current worth of money was understood to be legitimately founded on cattle and wine, but not on literature. The prices lately given at sales for pictures and MSS. indicate some tendency to change in the national character in this respect, so that the worth of the currency may even come in time to rest, in an acknowledged manner, somewhat on the state and keeping of the Bedford missal, as well as on the health of Caractacus or Blink Bonny; and old pictures be considered property, no less than old port. They might have been so before now, but that it is more difficult to choose the one than the other.

66. Now, observe, all these sources of variation in the power of the currency exist, wholly irrespective of the influences of vice, indolence, and improvidence. We have hitherto supposed, throughout the analysis, every professing labourer to labour honestly, heartily, and in harmony with his fellows. We have now to bring farther into the calculation the effects of relative industry, honour, and forethought; and thus to follow out the bearings of our second inquiry: Who are the holders of the Store and Currency, and in what proportions?

This, however, we must reserve for our next paper—noticing here only that, however distinct the several branches of the subject are, radically, they are so interwoven in their issues that we cannot rightly treat any one, till we have taken cognizance of all. Thus the need of the currency in proportion to number of population is materially influenced by the probable number of the holders in proportion to the non-holders; and this again, by the number of holders of goods, or wealth, in proportion to the non-holders of goods. For as, by definition, the currency is a claim to goods which are not possessed, its quantity indicates the number of claimants in
proportion to the number of holders; and the force and complexity of claim. For if the claims be not complex, currency as a means of exchange may be very small in quantity. A sells some corn to B, receiving a promise from B to pay in cattle, which A then hands over to C, to get some wine. C in due time claims the cattle from B; and B takes back his promise. These exchanges have, or might have been, all effected with a single coin or promise; and the proportion of the currency to the store would in such circumstances indicate only the circulating vitality of it—that is to say, the quantity and convenient divisibility of that part of the store which the habits of the nation keep in circulation. If a cattle breeder is content to live with his household chiefly on meat and milk, and does not want rich furniture, or jewels, or books—if a wine and corn grower maintains himself and his men chiefly on grapes and bread;—if the wives and daughters of families weave and spin the clothing of the household, and the nation, as a whole, remains content with the produce of its own soil and the work of its own hands, it has little occasion for circulating media. It pledges and promises little and seldom; exchanges only so far as exchange is necessary for life. The store belongs to the people in whose hands it is found, and money is little needed either as an expression of right, or practical means of division and exchange.

67. But in proportion as the habits of the nation become complex and fantastic (and they may be both, without therefore being civilized), its circulating medium must increase in proportion to its store. If every one wants a little of everything,—if food must be of many kinds, and dress of many fashions,—if multitudes live by work which, ministering to fancy, has its pay measured by fancy, so that large prices will be given by one person for what is valueless to another,—if there are great inequalities of knowledge, causing great inequalities of estimate,—and, finally, and worst of all, if the currency itself, from its largeness, and the power which the possession of it implies, becomes the sole object of desire with large numbers of the nation, so that the holding of it is disputed among them as the main object of life:—in each
and all of these cases, the currency necessarily enlarges in proportion to the store; and as a means of exchange and division, as a bond of right, and as an object of passion, has a more and more important and malignant power over the nation's dealings, character, and life.

Against which power, when, as a bond of Right, it becomes too conspicuous and too burdensome, the popular voice is apt to be raised in a violent and irrational manner, leading to revolution instead of remedy. Whereas all possibility of Economy depends on the clear assertion and maintenance of this bond of right, however burdensome. The first necessity of all economical government is to secure the unquestioned and unquestionable working of the great law of Property—that a man who works for a thing shall be allowed to get it, keep it, and consume it, in peace; and that he who does not eat his cake to-day, shall be seen, without grudging, to have his cake to-morrow. This, I say, is the first point to be secured by social law; without this, no political advance, nay, no political existence, is in any sort possible. Whatever evil, luxury, iniquity, may seem to result from it, this is nevertheless the first of all Equities; and to the enforcement of this, by law and by police-truncheon, the nation must always primarily set its mind—that the cupboard door may have a firm lock to it, and no man's dinner be carried off by the mob, on its way home from the baker's. Which, thus fearlessly asserting, we shall endeavour in next paper to consider how far it may be practicable for the mob itself, also, in due breadth of dish, to have dinners to carry home.
CHAPTER III.

COIN-KEEPING.

68. It will be seen by reference to the last chapter that our present task is to examine the relation of holders of store to holders of currency; and of both to those who hold neither. In order to do this, we must determine on which side we are to place substances such as gold, commonly known as bases of currency. By aid of previous definitions the reader will now be able to understand closer statements than have yet been possible.

69. The currency of any country consists of every document acknowledging debt, which is transferable in the country.*

This transferableness depends upon its intelligibility and credit. Its intelligibility depends chiefly on the difficulty of forging anything like it;—its credit much on national character, but ultimately always on the existence of substantial means of meeting its demand.†

As the degrees of transferableness are variable, (some documents passing only in certain places, and others passing, if at all, for less than their inscribed value), both the mass, and, so to speak, fluidity, of the currency, are variable. True or perfect currency flows freely, like a pure stream; it becomes sluggish or stagnant in proportion to the quantity of less

[* Remember this definition: it is of great importance as opposed to the imperfect ones usually given. When first these essays were published, I remember one of their reviewers asking contemptuously, "Is half-a-crown a document?" it never having before occurred to him that a document might be stamped as well as written, and stamped on silver as well as on parchment.]

[† I do not mean the demand of the holder of a five-pound note for five pounds, but the demand of the holder of a pound for a pound's worth of something good.]
transferable matter which mixes with it, adding to its bulk, but diminishing its purity. [Articles of commercial value, on which bills are drawn, increase the currency indefinitely; and substances of intrinsic value if stamped or signed without restriction so as to become acknowledgments of debt, increase it indefinitely also.] Every bit of gold found in Australia, so long as it remains uncoined, is an article offered for sale like any other; but as soon as it is coined into pounds, it diminishes the value of every pound we have now in our pockets.

70. Legally authorized or national currency, in its perfect condition, is a form of public acknowledgment of debt, so regulated and divided that any person presenting a commodity of tried worth in the public market, shall, if he please, receive in exchange for it a document giving him claim to the return of its equivalent, (1) in any place, (2) at any time, and (3) in any kind.

When currency is quite healthy and vital, the persons entrusted with its management are always able to give on demand either;

A. The assigning document for the assigned quantity of goods. Or,

B. The assigned quantity of goods for the assigning document.

If they cannot give document for goods, the national exchange is at fault.

If they cannot give goods for document, the national credit is at fault.

The nature and power of the document are therefore to be examined under the three relations it bears to Place, Time, and Kind.

71. (1.) It gives claim to the return of equivalent wealth in any Place. Its use in this function is to save carriage, so that parting with a bushel of corn in London, we may receive an order for a bushel of corn at the Antipodes, or elsewhere. To be perfect in this use, the substance of currency must be to the maximum portable, credible, and intelligible. Its non-acceptance or discredit results always from some form of ignorance or dishonour: so far as such interruptions rise out
of differences in denomination, there is no ground for their continuance among civilized nations. It may be convenient in one country to use chiefly copper for coinage, in another silver, and in another gold,—reckoning accordingly in centimes, francs, or zecchins: but that a franc should be different in weight and value from a shilling, and a zwanziger vary from both, is wanton loss of commercial power.

72. (2.) It gives claim to the return of equivalent wealth at any Time. In this second use, currency is the exponent of accumulation: it renders the laying-up of store at the command of individuals unlimitedly possible;—whereas, but for its intervention, all gathering would be confined within certain limits by the bulk of property, or by its decay, or the difficulty of its guardianship. "I will pull down my barns and build greater," cannot be a daily saying; and all material investment is enlargement of care. The national currency transfers the guardianship of the store to many; and preserves to the original producer the right of re-entering on its possession at any future period.

73. (3.) It gives claim (practical, though not legal) to the return of equivalent wealth in any Kind. It is a transferable right, not merely to this or that, but to anything; and its power in this function is proportioned to the range of choice. If you give a child an apple or a toy, you give him a determinate pleasure, but if you give him a penny, an indeterminate one, proportioned to the range of selection offered by the shops in the village. The power of the world's currency is similarly in proportion to the openness of the world's fair, and, commonly, enhanced by the brilliancy of external aspect, rather than solidity of its wares.

74. We have said that the currency consists of orders for equivalent goods. If equivalent, their quality must be guaranteed. The kinds of goods chosen for specific claim must, therefore, be capable of test, while, also, that a store may be kept in hand to meet the call of the currency, smallness of bulk, with great relative value, is desirable; and indestructibility, over at least a certain period, essential.

Such indestructibility, and facility of being tested, are
MUNERA PULVERIS.

united in gold; its intrinsic value is great, and its imaginary value greater; so that, partly through indolence, partly through necessity and want of organization, most nations have agreed to take gold for the only basis of their curren-
cies;—with this grave disadvantage, that its portability en-
abling the metal to become an active part of the medium of exchange, the stream of the currency itself becomes opaque with gold—half currency and half commodity, in unison of functions which partly neutralize, partly enhance each other's force.

75. They partly neutralize, since in so far as the gold is commodity, it is bad currency, because liable to sale; and in so far as it is currency, it is bad commodity, because its ex-
change value interferes with its practical use. Especially its employment in the higher branches of the arts becomes un-
safe on account of its liability to be melted down for exchange.

Again. They partly enhance, since in so far as the gold has acknowledged intrinsic value, it is good currency, be-
cause everywhere acceptable; and in so far as it has legal exchangeable value, its worth as a commodity is increased. We want no gold in the form of dust or crystal; but we seek for it coined, because in that form it will pay baker and butcher. And this worth in exchange not only absorbs a large quantity in that use,* but greatly increases the effect

*[Read and think over, the following note very carefully.]

The waste of labour in obtaining the gold, though it cannot be estimated by help of any existing data, may be understood in its bearing on entire economy by supposing it limited to transactions between two persons. If two farmers in Australia have been ex-
changing corn and cattle with each other for years, keeping their accounts of reciprocal debt in any simple way, the sum of the posses-
sions of either would not be diminished, though the part of it which was lent or borrowed were only reckoned by marks on a stone, or notches on a tree; and the one counted himself accordingly, so many scratches, or so many notches, better than the other. But it would soon be seriously diminished if, discovering gold in their fields, each resolved only to accept golden counters for a reckoning; and accord-
ingly, whenever he wanted a sack of corn or a cow, was obliged to go and wash sand for a week before he could get the means of giving a receipt for them.
on the imagination of the quantity used in the arts. Thus, in brief, the force of the functions is increased, but their precision blunted, by their unison.

76. These inconveniences, however, attach to gold as a basis of currency on account of its portability and preciousness. But a far greater inconvenience attaches to it as the only legal basis of currency. Imagine gold to be only attainable in masses weighing several pounds each, and its value, like that of malachite or marble, proportioned to its largeness of bulk;—it could not then get itself confused with the currency in daily use, but it might still remain as its basis; and this second inconvenience would still affect it, namely, that its significance as an expression of debt varies, as that of every other article would, with the popular estimate of its desirableness, and with the quantity offered in the market. My power of obtaining other goods for gold depends always on the strength of public passion for gold, and on the limitation of its quantity, so that when either of two things happen—that the world esteems gold less, or finds it more easily—my right of claim is in that degree effaced; and it has been even gravely maintained that a discovery of a mountain of gold would cancel the National Debt; in other words, that men may be paid for what costs much in what costs nothing. Now, it is true that there is little chance of sudden convulsion in this respect; the world will not so rapidly increase in wisdom as to despise gold on a sudden; and perhaps may [for a little time] desire it more eagerly the more easily it is obtained; nevertheless, the right of debt ought not to rest on a basis of imagination; nor should the frame of a national currency vibrate with every miser’s panic, and every merchant’s imprudence.

77. There are two methods of avoiding this insecurity, which would have been fallen upon long ago, if, instead of calculating the conditions of the supply of gold, men had only considered how the world might live and manage its affairs without gold at all.* One is, to base the currency on

*It is difficult to estimate the curious futility of discussions such as that which lately occupied a section of the British Association, on the
substances of truer intrinsic value; the other, to base it on several substances instead of one. If I can only claim gold, the discovery of a golden mountain starves me; but if I can claim bread, the discovery of a continent of corn-fields need not trouble me. If, however, I wish to exchange my bread for other things, a good harvest will for the time limit my power in this respect; but if I can claim either bread, iron, or silk at pleasure, the standard of value has three feet instead of one, and will be proportionately firm. Thus, ultimately, the steadiness of currency depends upon the breadth of its base; but the difficulty of organization increasing with this breadth, the discovery of the condition at once safest and most convenient* can only be by long analysis, which must for the present be deferred. Gold or silver† may always be retained in limited use, as a luxury of coinage and questionless standard, of one weight and alloy among all nations, varying only in the die. The purity of coinage, when metallic, is closely indicative of the honesty of the system of revenue, and even of the general dignity of the State.‡

absorption of gold, while no one can produce even the simplest of the data necessary for the inquiry. To take the first occurring one,—What means have we of ascertaining the weight of gold employed this year in the toilettes of the women of Europe (not to speak of Asia); and, supposing it known, what means of conjecturing the weight by which, next year, their fancies, and the changes of style among their jewellers, will diminish or increase it?

*See, in Pope's epistle to Lord Bathurst, his sketch of the difficulties and uses of a currency literally "pecuniary"—(consisting of herds of cattle).

"His Grace will game—to White's a bull be led," &c.

†Perhaps both; perhaps silver only. It may be found expedient ultimately to leave gold free for use in the arts. As a means of reckoning, the standard might be, and in some cases has already been, entirely ideal.—See Mill's Political Economy, book iii. chap. vii. at beginning.

‡The purity of the drachma and zecchin were not without significance of the state of intellect, art, and policy, both in Athens and Venice; —a fact first impressed upon me ten years ago, when, in taking daguerreotypes at Venice, I found no purchaseable gold pure enough to gild them with, except that of the old Venetian zecchin.
78. Whatever the article or articles may be which the national currency promises to pay, a premium on that article indicates bankruptcy of the government in that proportion, the division of its assets being restrained only by the remaining confidence of the holders of notes in the return of prosperity to the firm. Currencies of forced acceptance, or of unlimited issue, are merely various modes of disguising taxation, and delaying its pressure, until it is too late to interfere with the cause of pressure. To do away with the possibility of such disguise would have been among the first results of a true economical science, had any such existed; but there have been too many motives for the concealment, so long as it could by any artifices be maintained, to permit hitherto even the founding of such a science.

79. And indeed, it is only through evil conduct, wilfully persisted in, that there is any embarrassment, either in the theory or working of currency. No exchequer is ever embarrassed, nor is any financial question difficult of solution, when people keep their practice honest, and their heads cool. But when governments lose all office of pilotage, protection, or scrutiny; and live only in magnificence of authorized larceny, and polished mendicity; or when the people, choosing Speculation (the s usually redundant in the spelling) instead of Toil, visit no dishonesty with chastisement, that each may with impunity take his dishonest turn;—there are no tricks of financial terminology that will save them; all signature and mintage do but magnify the ruin they retard; and even the riches that remain, stagnant or current, change only from the slime of Avernus to the sand of Phlegethon—quicksand at the embouchure;—land fluently recommended by recent auctioneers as “eligible for building leases.”

80. Finally, then, the power of true currency is fourfold.

(1.) Credit power. Its worth in exchange, dependent on public opinion of the stability and honesty of the issuer.

(2.) Real worth. Supposing the gold, or whatever else the currency expressly promises, to be required from the issuer, for all his notes; and that the call cannot be met in full. Then the actual worth of the document would be, and its act-
ual worth at any moment is, therefore to be defined as, what the division of the assets of the issuer would produce for it.

(3.) The exchange power of its base. Granting that we can get five pounds in gold for our note, it remains a question how much of other things we can get for five pounds in gold. The more of other things exist, and the less gold, the greater this power.

(4.) The power over labour, exercised by the given quantity of the base, or of the things to be got for it. The question in this case is, how much work, and (question of questions!) whose work, is to be had for the food which five pounds will buy. This depends on the number of the population, on their gifts, and on their dispositions, with which, down to their slightest humours, and up to their strongest impulses, the power of the currency varies.

81. Such being the main conditions of national currency, we proceed to examine those of the total currency, under the broad definition, "transferable acknowledgment of debt;"*

* Under which term, observe, we include all documents of debt, which, being honest, might be transferable, though they practically are not transferred; while we exclude all documents which are in reality worthless, though in fact transferred temporarily, as bad money is. The document of honest debt, not transferred, is merely to paper currency as gold withdrawn from circulation is to that of bullion. Much confusion has crept into the reasoning on this subject from the idea that the withdrawal from circulation is a definable state, whereas it is a graduated state, and indefinable. The sovereign in my pocket is withdrawn from circulation as long as I choose to keep it there. It is no otherwise withdrawn if I bury it, nor even if I choose to make it, and others, into a golden cup, and drink out of them; since a rise in the price of the wine, or of other things, may at any time cause me to melt the cup and throw it back into currency; and the bullion operates on the prices of the things in the market as directly, though not as forcibly, while it is in the form of a cup as it does in the form of a sovereign. No calculation can be founded on my humour in either case. If I like to handle rouleaus, and therefore keep a quantity of gold, to play with, in the form of jointed basaltic columns, it is all one in its effect on the market as if I kept it in the form of twisted filigree, or, steadily "amicus lamiae," beat the narrow gold pieces into broad ones, and dined off them. The probability is greater that I break the rouleau than that I melt the plate; but the increased probability is not calculable. Thus,
among the many forms of which there are in effect only two, distinctly opposed; namely, the acknowledgments of debts which will be paid, and of debts which will not. Documents, whether in whole or part, of bad debt, being to those of good debt as bad money to bullion, we put for the present these forms of imposture aside (as in analysing a metal we should wash it clear of dross), and then range, in their exact quantities, the true currency of the country on one side, and the store or property of the country on the other. We place gold, and all such substances, on the side of documents, as far as they operate by signature;—on the side of store as far as they operate by value. Then the currency represents the quantity of debt in the country, and the store the quantity of its possession. The ownership of all the property is divided between the holders of currency and holders of store, and whatever the claiming value of the currency is at any moment, that value is to be deducted from the riches of the storeholders.

82. Farther, as true currency represents by definition debts which will be paid, it represents either the debtor's wealth, or his ability and willingness; that is to say, either wealth existing in his hands transferred to him by the creditor, or wealth which, as he is at some time surely to return it, he is either increasing, or, if diminishing, has the will and strength to reproduce. A sound currency therefore, as by its increase it represents enlarging debt, represents also enlarging means; but in this curious way, that a certain quantity of it marks the deficiency of the wealth of the country from what it would have been if that currency had not existed.* In this respect documents are only withdrawn from the currency when cancelled, and bullion when it is so effectually lost as that the probability of finding it is no greater than of finding new gold in the mine.

* For example, suppose an active peasant, having got his ground into good order and built himself a comfortable house, finding time still on his hands, sees one of his neighbours little able to work, and ill-lodged, and offers to build him also a house, and to put his land in order, on condition of receiving for a given period rent for the building and tithe of the fruits. The offer is accepted, and a document given promissory of rent and tithe. This note is money. It can only be good money if
it is like the detritus of a mountain; assume that it lies at a fixed angle, and the more the detritus, the larger must be the mountain; but it would have been larger still, had there been none.

83. Farther, though, as above stated, every man possessing money has usually also some property beyond what is necessary for his immediate wants, and men possessing property usually also hold currency beyond what is necessary for their immediate exchanges, it mainly determines the class to which they belong, whether in their eyes the money is an adjunct of the property, or the property of the money. In the first case the holder's pleasure is in his possessions, and in his money subordinately, as the means of bettering or adding to them. In the second, his pleasure is in his money, and in his possessions only as representing it. (In the first case the money is as an atmosphere surrounding the wealth, rising from it and raining back upon it; but in the second, it is as a deluge, with the wealth floating, and for the most part perishing in it.*) The shortest distinction between the men is that the one wishes always to buy, and the other to sell.

84. Such being the great relations of the classes, their several characters are of the highest importance to the nation; for on the character of the store-holders chiefly depend the preservation, display, and serviceableness of its wealth; on that of the currency-holders, its distribution; on that of both, its reproduction.

We shall, therefore, ultimately find it to be of incomparably greater importance to the nation in whose hands the thing is the man who has incurred the debt so far recovers his strength as to be able to take advantage of the help he has received, and meet the demand of the note; if he lets his house fall to ruin, and his field to waste, his promissory note will soon be valueless: but the existence of the note at all is a consequence of his not having worked so stoutly as the other. Let him gain as much as to be able to pay back the entire debt; the note is cancelled, and we have two rich store-holders and no currency.

[* You need not trouble yourself to make out the sentence in parenthesis, unless you like, but do not think it is mere metaphor. It states a fact which I could not have stated so shortly, but by metaphor.]
put, than how much of it is got; and that the character of the holders may be conjectured by the quality of the store; for such and such a man always asks for such and such a thing; nor only asks for it, but if it can be bettered, betters it: so that possession and possessor reciprocally act on each other, through the entire sum of national possession. The base nation, asking for base things, sinks daily to deeper vileness of nature and weakness in use; while the noble nation, asking for noble things, rises daily into diviner eminence in both; the tendency to degradation being surely marked by "ἀραξία;" that is to say, (expanding the Greek thought), by carelessness as to the hands in which things are put, consequent dispute for the acquisition of them, disorderliness in the accumulation of them, inaccuracy in the estimate of them, and bluntness in conception as to the entire nature of possession.

85. The currency-holders always increase in number and influence in proportion to the bluntness of nature and clumsiness of the store-holders; for the less use people can make of things, the more they want of them, and the sooner weary of them, and want to change them for something else; and all frequency of change increases the quantity and power of currency. The large currency-holder himself is essentially a person who never has been able to make up his mind as to what he will have, and proceeds, therefore, in vague collection and aggregation, with more and more infuriate passion, urged by complacency in progress, vacancy in idea, and pride of conquest.

While, however, there is this obscurity in the nature of possession of currency, there is a charm in the seclusion of it, which is to some people very enticing. In the enjoyment of real property, others must partly share. The groom has some enjoyment of the stud, and the gardener of the garden; but the money is, or seems, shut up; it is wholly enviable. No one else can have part in any complacencies arising from it.

The power of arithmetical comparison is also a great thing to unimaginative people. They know always they are so much better than they were, in money; so much better than others,
in money; but wit cannot be so compared, nor character. My neighbour cannot be convinced that I am wiser than he is, but he can, that I am worth so much more; and the universality of the conviction is no less flattering than its clearness. Only a few can understand,—none measure—and few will willingly adore, superiorities in other things; but everybody can understand money, everybody can count it, and most will worship it.

86. Now, these various temptations to accumulation would be politically harmless if what was vainly accumulated had any fair chance of being wisely spent. For as accumulation cannot go on for ever, but must some day end in its reverse—if this reverse were indeed a beneficial distribution and use, as irrigation from reservoir, the fever of gathering, though perilous to the gatherer, might be serviceable to the community. But it constantly happens (so constantly, that it may be stated as a political law having few exceptions), that what is unreasonably gathered is also unreasonably spent by the persons into whose hands it finally falls. Very frequently it is spent in war, or else in a stupefying luxury, twice hurtful, both in being indulged by the rich and witnessed by the poor. So that the mal tener and mal dare are as correlative as complementary colours; and the circulation of wealth, which ought to be soft, steady, strong, far-sweeping, and full of warmth, like the Gulf stream, being narrowed into an eddy, and concentrated on a point, changes into the alternate suction and surrender of Charybdis. Which is indeed, I doubt not, the true meaning of that marvellous fable, "infinite," as Bacon said of it, "in matter of meditation." *

87. It is a strange habit of wise humanity to speak in enigmas only, so that the highest truths and usefulest laws must be hunted for through whole picture-galleries of dreams, which to the vulgar seem dreams only. Thus Homer, the Greek tragedians, Plato, Dante, Chaucer, Shakspeare, and Goethe, have hidden all that is chiefly serviceable in their

[* What follows, to the end of the chapter, was a note only, in the first printing; but for after service, it is of more value than any other part of the book, so I have put it into the main text.]
work, and in all the various literature they absorbed and re-
embodied, under types which have rendered it quite useless to
the multitude. What is worse, the two primal declarers of
moral discovery, Homer and Plato, are partly at issue; for
Plato's logical power quenched his imagination, and he be-
came incapable of understanding the purely imaginative ele-
ment either in poetry or painting: he therefore somewhat
overrates the pure discipline of passionate art in song and
music, and misses that of meditative art. There is, however,
a deeper reason for his distrust of Homer. His love of justice,
and reverently religious nature, made him dread, as death,
every form of fallacy; but chiefly, fallacy respecting the
world to come (his own myths being only symbolic exponents
of a rational hope). We shall perhaps now every day dis-
cover more clearly how right Plato was in this, and feel our-
selves more and more wonderstruck that men such as Homer
and Dante (and, in an inferior sphere, Milton), not to speak
of the great sculptors and painters of every age, have permit-
ted themselves, though full of all nobleness and wisdom, to
coin idle imaginations of the mysteries of eternity, and guide
the faiths of the families of the earth by the courses of their
own vague and visionary arts: while the indisputable truths
of human life and duty, respecting which they all have but
one voice, lie hidden behind these veils of phantasy, unsought,
and often unsuspected. I will gather carefully, out of Dante
and Homer, what, in this kind, bears on our subject, in its
due place; the first broad intention of their symbols may be
sketched at once.

88. The rewards of a worthy use of riches, subordinate to
other ends, are shown by Dante in the fifth and sixth orbs of
Paradise; for the punishment of their unworthy use, three
places are assigned; one for the avaricious and prodigal
whose souls are lost, (Hell, canto 7); one for the avaricious
and prodigal whose souls are capable of purification, (Purga-
tory, canto 19); and one for the usurers, of whom none can
be redeemed (Hell, canto 17). The first group, the largest in
all hell ("gente piu che altrove troppa," compare Virgil's
"quae maxima turba"), meet in contrary currents, as the
waves of Charybdis, casting weights at each other from opposite sides. This weariness of contention is the chief element of their torture; so marked by the beautiful lines beginning "Or puoi, figliuol," &c.: (but the usurers, who made their money inactively, *sit* on the sand, equally without rest, however. "Di qua, di la, soccorrien, &c.) For it is not avarice, but contention for riches, leading to this double misuse of them, which, in Dante's light, is the unredeemable sin. The place of its punishment is guarded by Plutus, "the great enemy," and "la fiara crudele," a spirit quite different from the Greek Plutus, who, though old and blind, is not cruel, and is curable, so as to become far-sighted. (οὐ τυφλὸς ἄλλ' ἐν βλέπων.—Plato's epithets in first book of the *Laws.*) Still more does this Dantesque type differ from the resplendent Plutus of Goethe in the second part of *Faust*, who is the personified power of wealth for good or evil—not the passion for wealth; and again from the Plutus of Spenser, who is the passion of mere aggregation. Dante's Plutus is specially and definitely the Spirit of Contention and Competition, or Evil Commerce; because, as I showed before, this kind of commerce "makes all men strangers;" his speech is therefore unintelligible, and no single soul of all those ruined by him has recognizable features.

On the other hand, the redeemable sins of avarice and prodigality are, in Dante's sight, those which are without deliberate or calculated operation. The lust, or lavishness, of riches can be purged, so long as there has been no servile consistency of dispute and competition for them. The sin is spoken of as that of degradation by the love of earth; it is purified by deeper humiliation—the souls crawl on their bellies; their chant is, "my soul cleaveth unto the dust." But the spirits thus condemned are all recognizable, and even the worst examples of the thirst for gold, which they are compelled to tell the histories of during the night, are of men swept by the passion of avarice into violent crime, but not sold to its steady work.

89. The precept given to each of these spirits for its deliverance is—Turn thine eyes to the lucre (lure) which the
Eternal King rolls with the mighty wheels. Otherwise, the wheels of the "Greater Fortune," of which the constellation is ascending when Dante's dream begins. Compare George Herbert—

"Lift up thy head;
Take stars for money; stars, not to be told
By any art, yet to be purchased."

And Plato's notable sentence in the third book of the Polity. —"Tell them they have divine gold and silver in their souls for ever; that they need no money stamped of men—neither may they otherwise than impiously mingle the gathering of the divine with the mortal treasure, for through that which the law of the multitude has coined, endless crimes have been done and suffered; but in their's is neither pollution nor sorrow."

90. At the entrance of this place of punishment an evil spirit is seen by Dante, quite other than the "Gran Nemico." The great enemy is obeyed knowingly and willingly; but this spirit—feminine—and called a Siren—is the "Deceitfulness of riches," ἀπάτη πλούτου of the Gospels, winning obedience by guile. This is the Idol of riches, made doubly phantasmal by Dante's seeing her in a dream. She is lovely to look upon, and enchants by her sweet singing, but her womb is loathsome. Now, Dante does not call her one of the Sirens carelessly, any more than he speaks of Charybdis carelessly; and though he had got at the meaning of the Homeric fable only through Virgil's obscure tradition of it, the clue he has given us is quite enough. Bacon's interpretation, "the Sirens, or pleasures," which has become universal since his time, is opposed alike to Plato's meaning and Homer's. The Sirens are not pleasures, but Desires: in the Odyssey they are the phantoms of vain desire; but in Plato's Vision of Destiny, phantoms of divine desire; singing each a different note on the circles of the distaff of Necessity, but forming one harmony, to which the three great Fates put words. Dante, however, adopted the Homeric conception of them, which was that they were demons of the Imagination, not carnal; (desire of the eyes; not lust of the flesh); therefore said to be daughters of the Muses. Yet not of the Muses, heavenly or historical.
but of the Muse of pleasure; and they are at first winged, because even vain hope excites and helps when first formed; but afterwards, contending for the possession of the imagination with the Muses themselves, they are deprived of their wings.

91. And thus we are to distinguish the Siren power from the power of Circe, who is no daughter of the Muses, but of the strong elements, Sun and Sea; her power is that of frank, and full vital pleasure, which, if governed and watched, nourishes men; but, unwatched, and having no "moly," bitterness or delay, mixed with it, turns men into beasts, but does not slay them,—leaves them, on the contrary, power of revival. She is herself indeed an Enchantress;—pure Animal life; transforming—or degrading—but always wonderful (she puts the stores on board the ship invisibly, and is gone again, like a ghost); even the wild beasts rejoice and are softened around her cave; the transforming poisons she gives to men are mixed with no rich feast, but with pure and right nourishment,—Pramnian wine, cheese, and flour; that is, wine, milk, and corn, the three great sustainers of life—it is their own fault if these make swine of them; (see Appendix V.) and swine are chosen merely as the type of consumption; as Plato's ὑπνολίος, in the second book of the Polity, and perhaps chosen by Homer with a deeper knowledge of the likeness in variety of nourishment, and internal form of body.

"Et quel est, s'il vous plaît, cet audacieux animal qui se permet d'être bâti au dedans comme une jolie petite fille?"

"Hélas! chère enfant, j'ai honte de le nommer, et il ne faudra pas m'en vouloir. C'est . . . c'est le cochon. Ce n'est pas précisément flatteur pour vous; mais nous en sommes tous là, et si cela vous contrarie par trop, il faut aller vous plaindre au bon Dieu qui a voulu que les choses fussent arrangées ainsi: seulement le cochon, qui ne pense qu'à manger, a l'estomac bien plus vaste que nous et c'est toujours une consolation."—(Histoire d'une Bouchée de Pain, Lettre ix.)

92. But the deadly Sirens are in all things opposed to the Circean power. They promise pleasure, but never give it. They nourish in no wise; but slay by slow death. And
whereas they corrupt the heart and the head, instead of merely betraying the senses, there is no recovery from their power; they do not tear nor scratch, like Scylla, but the men who have listened to them are poisoned, and waste away. Note that the Sirens' field is covered, not merely with the bones, but with the skins, of those who have been consumed there. They address themselves, in the part of the song which Homer gives, not to the passions of Ulysses, but to his vanity, and the only man who ever came within hearing of them, and escaped untempted, was Orpheus, who silenced the vain imaginations by singing the praises of the gods.

93. It is, then, one of these Sirens whom Dante takes as the phantasm or deceitfulness of riches; but note further, that she says it was her song that deceived Ulysses. Look back to Dante's account of Ulysses' death, and we find it was not the love of money, but pride of knowledge, that betrayed him; whence we get the clue to Dante's complete meaning: that the souls whose love of wealth is pardonable have been first deceived into pursuit of it by a dream of its higher uses, or by ambition. His Siren is therefore the Philotimé of Spenser, daughter of Mammon—

"Whom all that folk with such contention
Do flock about, my deare, my daughter is—
Honour and dignitie from her alone
Derived are."

By comparing Spenser's entire account of this Philotimé with Dante's of the Wealth-Siren, we shall get at the full meaning of both poets; but that of Homer lies hidden much more deeply. For his Sirens are indefinite; and they are desires of any evil thing; power of wealth is not specially indicated by him, until, escaping the harmonious danger of imagination, Ulysses has to choose between two practical ways of life, indicated by the two rocks of Scylla and Charybdis. The monsters that haunt them are quite distinct from the rocks themselves, which, having many other subordinate significations, are in the main Labour and Idleness, or getting and spending; each with its attendant monster, or betraying
demon. The rock of gaining has its summit in the clouds, invisible, and not to be climbed; that of spending is low, but marked by the cursed fig-tree, which has leaves, but no fruit. We know the type elsewhere; and there is a curious lateral allusion to it by Dante when Jacopo di Sant' Andrea, who had ruined himself by profusion and committed suicide, scatters the leaves of the bush of Lotto degli Agli, endeavouring to hide himself among them. We shall hereafter examine the type completely; here I will only give an approximate rendering of Homer's words, which have been obscured more by translation than even by tradition.

94. "They are overhanging rocks. The great waves of blue water break round them; and the blessed Gods call them the Wanderers.

"By one of them no winged thing can pass—not even the wild doves that bring ambrosia to their father Jove—but the smooth rock seizes its sacrifice of them." (Not even ambrosia to be had without Labour. The word is peculiar—as a part of anything is offered for sacrifice; especially used of heave-offering.) "It reaches the wide heaven with its top, and a dark blue cloud rests on it, and never passes; neither does the clear sky hold it, in summer nor in harvest. Nor can any man climb it—not if he had twenty feet and hands, for it is smooth as though it were hewn.

"And in the midst of it is a cave which is turned the way of hell. And therein dwells Scylla, whining for prey: her cry, indeed, is no louder than that of a newly-born whelp: but she herself is an awful thing—not can any creature see her face and be glad; no, though it were a god that rose against her. For she has twelve feet, all fore-feet, and six necks, and terrible heads on them; and each has three rows of teeth, full of black death.

"But the opposite rock is lower than this, though but a bow-shot distant; and upon it there is a great fig-tree, full of leaves; and under it the terrible Charybdis sucks down the black water. Thrice in the day she sucks it down, and thrice casts it up again: be not thou there when she sucks down, for Neptune himself could not save thee."
[Thus far went my rambling note, in Fraser's Magazine. The Editor sent me a compliment on it—of which I was very proud; what the Publisher thought of it, I am not informed; only I know that eventually he stopped the papers. I think a great deal of it myself, now, and have put it all in large print accordingly, and should like to write more; but will, on the contrary, self-denyingly, and in gratitude to any reader who has got through so much, end my chapter.]
CHAPTER IV.

COMMERCE.

95. As the currency conveys right of choice out of many things in exchange for one, so Commerce is the agency by which the the power of choice is obtained; so that countries producing only timber can obtain for their timber silk and gold; or, naturally producing only jewels and frankincense, can obtain for them cattle and corn. In this function, commerce is of more importance to a country in proportion to the limitations of its products, and the restlessness of its fancy;—generally of greater importance towards Northern latitudes.

96. Commerce is necessary, however, not only to exchange local products, but local skill. Labour requiring the agency of fire can only be given abundantly in cold countries; labour requiring suppleness of body and sensitiveness of touch, only in warm ones; labour involving accurate vivacity of thought only in temperate ones; while peculiar imaginative actions are produced by extremes of heat and cold, and of light and darkness. The production of great art is limited to climates warm enough to admit of repose in the open air, and cool enough to render such repose delightful. Minor variations in modes of skill distinguish every locality. The labour which at any place is easiest, is in that place cheapest; and it becomes often desirable that products raised in one country should be wrought in another. Hence have arisen discussions on "International values" which will be one day remembered as highly curious exercises of the human mind. For it will be discovered, in due course of tide and time, that international value is regulated just as inter-provincial or inter-parishional value is. Coals and hops are exchanged between Northumberland and
Kent on absolutely the same principles as iron and wine between Lancashire and Spain. The greater breadth of an arm of the sea increases the cost, but does not modify the principle of exchange; and a bargain written in two languages will have no other economical results than a bargain written in one. The distances of nations are measured, not by seas, but by ignorances; and their divisions determined, not by dialects, but by enmities.*

97. Of course, a system of international values may always be constructed if we assume a relation of moral law to physical geography; as, for instance, that it is right to cheat or rob across a river, though not across a road; or across a sea, though not across a river, &c.;—again, a system of such values may be constructed by assuming similar relations of taxation to physical geography; as, for instance, that an article should be taxed in crossing a river, but not in crossing a road; or in being carried fifty miles, but not in being carried five, &c.; such positions are indeed not easily maintained when once put in logical form; but one law of international value is maintainable in any form: namely, that the farther your neighbour lives from you, and the less he understands you, the more you are bound to be true in your dealings with him; because your power over him is greater in proportion to his ignorance, and his remedy more difficult in proportion to his distance.†

98. I have just said the breadth of sea increases the cost of exchange. Now note that exchange, or commerce, in itself, is always costly; the sum of the value of the goods being diminished by the cost of their conveyance, and by the maintenance of the persons employed in it; so that it is only when there is advantage to both producers (in getting the one thing for the

[* I have repeated the substance of this and the next paragraph so often since, that I am ashamed and weary. The thing is too true, and too simple, it seems, for anybody ever to believe. Meantime, the theories of "international values," as explained by Modern Political Economy, have brought about last year's pillage of France by Germany, and the affectionate relations now existing in consequence between the inhabitants of the right and left banks of the Rhine.]

[† I wish some one would examine and publish accurately the late dealings of the Governors of the Cape with the Caffirs.]
other) greater than the loss in conveyance, that the exchange is expedient. And it can only be justly conducted when the porters kept by the producers (commonly called merchants) expect mere pay, and not profit.* For in just commerce there are but three parties—the two persons or societies exchanging, and the agent or agents of exchange; the value of the things to be exchanged is known by both the exchangers, and each receives equal value, neither gaining nor losing (for whatever one gains the other loses). The intermediate agent is paid a known per-centage by both, partly for labour in conveyance, partly for care, knowledge, and risk; every attempt at concealment of the amount of the pay indicates either effort on the part of the agent to obtain unjust profit, or effort on the part of the exchangers to refuse him just pay. But for the most part it is the first, namely, the effort on the part of the merchant to obtain larger profit (so-called) by buying cheap and selling dear. Some part, indeed, of this larger gain is deserved, and might be openly demanded, because it is the reward of the merchant’s knowledge, and foresight of probable necessity; but the greater part of such gain is unjust; and unjust in this most fatal way, that it depends, first, on keeping the exchangers ignorant of the exchange value of the articles; and, secondly, on taking advantage of the buyer’s need and the seller’s poverty. It is, therefore, one of the essential, and quite the most fatal, forms of usury; for usury means merely taking an exorbitant † sum for the use of anything; and it is no matter whether the exorbitance is on loan or exchange, on rent, or on price—the essence of the usury being that it is obtained by advantage of opportunity or necessity, and not as due reward for labour. All the great

[* By “pay,” I mean wages for labour or skill; by “profit,” gain dependent on the state of the market.]

[† Since I wrote this, I have worked out the question of interest of money, which always, until lately, had embarrassed and defeated me; and I find that the payment of interest of any amount whatever is real “usury,” and entirely unjustifiable. I was shown this chiefly by the pamphlets issued by Mr. W. C. Sillar, though I greatly regret the impatience which causes Mr. Sillar to regard usury as the radical crime in political economy. There are others worse, that act with it.]
thinkers, therefore, have held it to be unnatural and impious, in so far as it feeds on the distress of others, or their folly.* Nevertheless, attempts to repress it by law must for ever be ineffective; though Plato, Bacon, and the First Napoleon—all three of them men who knew somewhat more of humanity than the "British merchant" usually does—tried their hands at it, and have left some (probably) good moderate forms of law, which we will examine in their place. But the only final check upon it must be radical purifying of the national character, for being, as Bacon calls it, "concessum propter duri- tiem cordis," it is to be done away with by touching the heart only; not, however, without medicinal law—as in the case of the other permission, "propter duritiem." But in this more than in anything (though much in all, and though in this he would not himself allow of their application, for his own laws against usury are sharp enough), Plato's words in the fourth book of the Polity are true, that neither drugs, nor charms, nor burnings, will touch a deep-lying political sore, any more than a deep bodily one; but only right and utter change of constitution: and that "they do but lose their labour who think that by any tricks of law they can get the better of these mischiefs of commerce, and see not that they hew at a Hydra."

99. And indeed this Hydra seems so unslayable, and sin sticks so fast between the joinings of the stones of buying and selling, that "to trade" in things, or literally "cross- give" them, has warped itself, by the instinct of nations, into their worst word for fraud; for, because in trade there cannot but be trust, and it seems also that there cannot but also be injury in answer to it, what is merely fraud between enemies becomes treachery among friends: and "trader," "traditor," and "traitor" are but the same word. For which simplicity of language there is more reason than at first appears: for as in true commerce there is no "profit," so in true commerce there is no "sale." The idea of sale is that of an

* Hence Dante's companionship of Cahors, Inf., canto xi., supported by the view taken of the matter throughout the middle ages, in common with the Greeks.
interchange between enemies respectively endeavouring to get the better one of another; but commerce is an exchange between friends; and there is no desire but that it should be just, any more than there would be between members of the same family.* The moment there is a bargain over the potage, the family relation is dissolved:—typically, “the days of mourning for my father are at hand.” Whereupon follows the resolve, “then will I slay my brother.”

100. This inhumanity of mercenary commerce is the more notable because it is a fulfilment of the law that the corruption of the best is the worst. For as, taking the body natural for symbol of the body politic, the governing and forming powers may be likened to the brain, and the labouring to the limbs, the mercantile, presiding over circulation and communication of things in changed utilities, is symbolized by the heart; and, if that hardens, all is lost. And this is the ultimate lesson which the leader of English intellect meant for us, (a lesson, indeed, not all his own, but part of the old wisdom of humanity), in the tale of the Merchant of Venice; in which the true and incorrupt merchant,—kind and free beyond every other Shakspearian conception of men,—is opposed to the corrupted merchant, or usurer; the lesson being deepened by the expression of the strange hatred which the corrupted merchant bears to the pure one, mixed with intense scorn,—

“This is the fool that lent out money gratis; look to him, jailer,” (as to lunatic no less than criminal) the enmity, observe, having its symbolism literally carried out by being aimed straight at the heart, and finally foiled by a literal appeal to the great moral law that flesh and blood cannot be weighed, enforced by “Portia”† (“Portion”), the type of di-

[* I do not wonder when I re-read this, that people talk about my “sentiment.” But there is no sentiment whatever in the matter. It is a hard and bare commercial fact, that if two people deal together who don’t try to cheat each other, they will in a given time, make more money out of each other than if they do. See § 104.]

† Shakspeare would certainly never have chosen this name had he been forced to retain the Roman spelling. Like Perdita, “lost lady,”
vine Fortune, found, not in gold, nor in silver, but in lead, that is to say, in endurance and patience, not in splendour; and finally taught by her lips also, declaring, instead of the law and quality of "merces," the greater law and quality of mercy, which is not strained, but drops as the rain, blessing him that gives and him that takes. And observe that this "mercy" is not the mean "Misericordia," but the mighty "Gratia," answered by Gratitude, (observe Shylock's leaning on the, to him detestable, word, gratis, and compare the relations of Grace to Equity given in the second chapter of the second book of the Memorabilia;) that is to say, it is the gracious or loving, instead of the strained, or competing manner, of doing things, answered, not only with "merces" or pay, but with "merci" or thanks. And this is indeed the meaning of the great benediction "Grace, mercy, and peace," for there can be no peace without grace, (not even by help of rifled cannon), nor even without triplicity of graciousness, for the Greeks, who began but with one Grace, had to open their scheme into three before they had done.

101. With the usual tendency of long repeated thought, to take the surface for the deep, we have conceived these goddesses as if they only gave loveliness to gesture; whereas

or Cordelia, "heart-lady," Portia is "fortune" lady. The two great relative groups of words, Fortuna, fero, and fors—Portio, porto, and pars (with the lateral branch, op-portune, im-portune, opportunity, &c.), are of deep and intricate significance; their various senses of bringing, abstracting, and sustaining being all centralized by the wheel (which bears and moves at once), or still better, the ball (spera) of Fortune,—"Volve sua spera, e beata si gode:" the motive power of this wheel distinguishing its goddess from the fixed majesty of Necessitas with her iron nails; or ἀνάγκη, with her pillar of fire and iridescent orbits, fixed at the centre. Portus and porta, and gate in its connexion with gain, form another interesting branch group; and Mors, the concentration of delaying, is always to be remembered with Fors, the concentration of bringing and bearing, passing on into Fortis and Fortitude.

[This note is literally a mere memorandum for the future work which I am now completing in Fors Clavigera; it was printed partly in vanity, but also with real desire to get people to share the interest I found in the careful study of the leading words in noble languages. Compare the next note.]
their true function is to give graciousness to deed, the other loveliness arising naturally out of that. In which function Charis becomes Charitas;* and has a name and praise even greater than that of Faith or Truth, for these may be maintained sullenly and proudly; but Charis is in her countenance always gladdening (Aglaia), and in her service instant and humble; and the true wife of Vulcan, or Labour. And it is not until her sincerity of function is lost, and her mere beauty contemplated instead of her patience, that she is born again of the foam flake, and becomes Aphrodité; and it is then only that she becomes capable of joining herself to war and to the enmities of men, instead of to labour and their services. Therefore the fable of Mars and Venus is chosen by Homer, picturing himself as Demodocus, to sing at the games in the court of Alcinous. Phaëacia is the Homeric island of Atlantis; an image of noble and wise government, concealed, (how slightly!) merely by the change of a short vowel for a long

* As Charis becomes Charitas, the word "Cher," or "Dear," passes from Shylock's sense of it (to buy cheap and sell dear) into Antonio's sense of it: emphasized with the final i in tender "Cheri," and hushed to English calmness in our noble "Cherish." The reader must not think that any care can be misspent in tracing the connexion and power of the words which we have to use in the sequel. (See Appendix VI.) Much education sums itself in making men economize their words, and understand them. Nor is it possible to estimate the harm which has been done, in matters of higher speculation and conduct, by loose verbiage, though we may guess at it by observing the dislike which people show to having anything about their religion said to them in simple words, because then they understand it. Thus congregations meet weekly to invoke the influence of a Spirit of Life and Truth; yet if any part of that character were intelligibly expressed to them by the formulas of the service, they would be offended. Suppose, for instance, in the closing benediction, the clergyman were to give vital significance to the vague word "Holy," and were to say, "the fellowship of the Helpful and Honest Ghost be with you, and remain with you always," what would be the horror of many, first at the irreverence of so intelligible an expression; and secondly, at the discomfortable occurrence of the suspicion that while throughout the commercial dealings of the week they had denied the propriety of Help, and possibility of Honesty, the Person whose company they had been now asking to be blessed with could have no fellowship with cruel people or knaves.
one in the name of its queen; yet misunderstood by all later writers, (even by Horace, in his "pinguis, Phæaxque"). That fable expresses the perpetual error of men in thinking that grace and dignity can only be reached by the soldier, and never by the artisan; so that commerce and the useful arts have had the honour and beauty taken away, and only the Fraud and Pain left to them, with the lucre. Which is, indeed, one great reason of the continual blundering about the offices of government with respect to commerce. The higher classes are ashamed to employ themselves in it; and though ready enough to fight for (or occasionally against) the people, —to preach to them,—or judge them, will not break bread for them; the refined upper servant who has willingly looked after the burnishing of the armoury and ordering of the library, not liking to set foot in the larder.

102. Farther still. As Charis becomes Charitas on the one side, she becomes—better still—Chara, Joy, on the other; or rather this is her very mother’s milk and the beauty of her childhood; for God brings no enduring Love, nor any other good, out of pain; nor out of contention; but out of joy and harmony. And in this sense, human and divine, music and gladness, and the measures of both, come into her name; and Cher becomes full-vowelled Cheer, and Cheerful; and Chara opens into Choir and Choral.*

103. And lastly. As Grace passes into Freedom of action, Charis becomes Eleuthera, or Liberality; a form of liberty quite curiously and intensely different from the thing usually

* "τὰ μὲν οὖν ἄλλα ζῶν οὐκ ἔχειν αἰσθησιν τῶν ἐν ταῖς κυνήσεις τάξεων οὐδὲ ἀταξίων, οἷς δὴ ῥυθμὸς ὄνομα καὶ ἁρμονία: ἡμῶν δὲ οὐ γέλα ποιεῖν τοὺς θεοὺς ἄριστῳ (Apollo, the Muses, and Bacchus—the grave Bacchus, that is—ruling the choir of age; or Bacchus restraining; 'σαβί τε, cum Berecyntio cornu, tympana,' &c.) συγχορεύσεις δὲ δοσολατοι, τούτους εἶναι καὶ τοὺς δεδακτος τὴν ἑυρυθμίαν τε καὶ ἑμπαθείαν αἰσθησιν μετα 'ἡδονῆς . . . χαράν τε ἄνωμακέναι παρὰ τῆς χαράς ἐμοτυον ὄνομα." "Other animals have no perception of order nor of disorder in motion; but for us, Apollo and Bacchus and the Muses are appointed to mingle in our dances; and these are they who have given us the sense of delight in rhythm and harmony. And the name of choir, choral dance, (we may believe,) came from chara (delight)."—Lawes, book ii.
understood by “Liberty” in modern language: indeed, much more like what some people would call slavery: for a Greek always understood, primarily, by liberty, deliverance from the law of his own passions (or from what the Christian writers call bondage of corruption), and this a complete liberty: not being merely safe from the Siren, but also unbound from the mast, and not having to resist the passion, but making it fawn upon, and follow him—(this may be again partly the meaning of the fawning beasts about the Circean cave; so, again, George Herbert—

Correct thy passion's spite,
Then may the beasts draw thee to happy light)—

And it is only in such generosity that any man becomes capable of so governing others as to take true part in any system of national economy. Nor is there any other eternal distinction between the upper and lower classes than this form of liberty, Eleutheria, or benignity, in the one, and its opposite of slavery, Douleia, or malignity, in the other; the separation of these two orders of men, and the firm government of the lower by the higher, being the first conditions of possible wealth and economy in any state,—the Gods giving it no greater gift than the power to discern its true freemen, and “malignum spernere vulgus.”

104. While I have traced the finer and higher laws of this matter for those whom they concern, I have also to note the material law—vulgarily expressed in the proverb, “Honesty is the best policy.” That proverb is indeed wholly inapplicable to matters of private interest. It is not true that honesty, as far as material gain is concerned, profits individuals. A clever and cruel knave will in a mixed society always be richer than an honest person can be. But Honesty is the best “policy,” if policy mean practice of State. For fraud gains nothing in a State. It only enables the knaves in it to live at the expense of honest people; while there is for every act of fraud, however small, a loss of wealth to the
community. Whatever the fraudulent person gains, some other person loses, as fraud produces nothing; and there is, besides, the loss of the time and thought spent in accomplishing the fraud, and of the strength otherwise obtainable by mutual help (not to speak of the fevers of anxiety and jealousy in the blood, which are a heavy physical loss, as I will show in due time). Practically, when the nation is deeply corrupt, cheat answers to cheat; every one is in turn imposed upon, and there is to the body politic the dead loss of the ingenuity, together with the incalculable mischief of the injury to each defrauded person, producing collateral effect unexpectedly. My neighbour sells me bad meat: I sell him in return flawed iron. We neither of us get one atom of pecuniary advantage on the whole transaction, but we both suffer unexpected inconvenience; my men get scurvy, and his cattle-truck runs off the rails.

105. The examination of this form of Charis must, therefore, lead us into the discussion of the principles of government in general, and especially of that of the poor by the rich, discovering how the Graciousness joined with the Greatness, or Love with Majestas, is the true Dei Gratia, or Divine Right, of every form and manner of King; i.e., specifically, of the thrones, dominations, princedoms, virtues, and powers of the earth:—of the thrones, stable, or "ruling," literally right-doing powers ("rex eris, recte si facies") :—of the dominations—lordly, edifying, dominant and harmonious powers; chiefly domestic, over the "built thing," domus, or house; and inherently twofold, Dominus and Domina; Lord and Lady:—of the Princeps, pre-eminent, incipient, creative, and demonstrative powers; thus poetic and mercantile, in the "princeps carmen deduxisse" and the merchant-prince:—of the Virtues or Courages; militant, guiding, or Ducal powers:—and finally of the Strengths, or Forces pure; magistral powers, of the More over the less, and the forceful and free over the weak and servile elements of life.

Subject enough for the next paper, involving "economical" principles of some importance, of which, for theme, here is a sentence, which I do not care to translate, for it would sound
harsh in English,* though, truly, it is one of the tenderest ever uttered by man; which may be meditated over, or rather 
through, in the meanwhile, by any one who will take the 
pains:—

"Αρ' οὖν, ἀδελφε, ἀνεπιστήμων μὲν ἐγχειροῦντι δὲ ἥρεται ζημία ἐστὶν, οὕτω καὶ ἀδελφος, οὕτως τε αὐτῷ μὴ ἐπιστάμενος ἐγχειρ ἥρεται, ζημία ἐστὶ; 

[* My way now, is to say things plainly, if I can, whether they sound 
harsh or not;—this is the translation—"Is it possible, then, that as a 
horse is only a mischief to any one who attempts to use him without 
knowing how, so also our brother, if we attempt to use him without 
knowing how, may be a mischief to us?"]
CHAPTER V.

GOVERNMENT.

106. It remains for us, as I stated in the close of the last chapter, to examine first the principles of government in general, and then those of the government of the Poor by the Rich.

The government of a state consists in its customs, laws, and councils, and their enforcements.

I. Customs.

As one person primarily differs from another by fineness of nature, and, secondarily, by fineness of training, so also, a polite nation differs from a savage one, first, by the refinement of its nature, and secondly by the delicacy of its customs.

In the completeness of custom, which is the nation's self-government, there are three stages—first, fineness in method of doing or of being;—called the manner or moral of acts; secondly, firmness in holding such method after adoption, so that it shall become a habit in the character: i.e., a constant "having" or "behaving;" and, lastly, ethical power in performance and endurance, which is the skill following on habit, and the ease reached by frequency of right doing.

The sensibility of the nation is indicated by the fineness of its customs; its courage, continence, and self-respect by its persistence in them.

By sensibility I mean its natural perception of beauty, fitness, and rightness; or of what is lovely, decent, and just: faculties dependent much on race, and the primal signs of fine breeding in man; but cultivable also by education, and necessarily perishing without it. True education has, indeed, no other function than the development of these
faculties, and of the relative will. It has been the great error of modern intelligence to mistake science for education. You do not educate a man by telling him what he knew not, but by making him what he was not.

And making him what he will remain for ever: for no wash of weeds will bring back the faded purple. And in that dyeing there are two processes—first, the cleansing and wringing-out, which is the baptism with water; and then the infusing of the blue and scarlet colours, gentleness and justice, which is the baptism with fire.

107.* The customs and manners of a sensitive and highly-trained race are always Vital: that is to say, they are orderly manifestations of intense life, like the habitual action of the fingers of a musician. The customs and manners of a vile and rude race, on the contrary, are conditions of decay: they are not, properly speaking, habits, but incrustations; not restraints, or forms, of life; but gangrenes, noisome, and the beginnings of death.

And generally, so far as custom attaches itself to indolence instead of action, and to prejudice instead of perception, it takes this deadly character, so that thus

Custom hangs upon us with a weight
Heavy as frost, and deep almost as life.

But that weight, if it become impetus, (living instead of dead weight) is just what gives value to custom, when it works with life, instead of against it.

108. The high ethical training of a nation implies perfect Grace, Pitifulness, and Peace; it is irreconcilably inconsistent with filthy or mechanical employments,—with the desire of money,—and with mental states of anxiety, jealousy, or indifference to pain. The present insensibility of the upper classes of Europe to the surrounding aspects of suffering, uncleanness, and crime, binds them not only into one responsibility with the sin, but into one dishonour with the foulness,

[* Think over this paragraph carefully; it should have been much expanded to be quite intelligible; but it contains all that I want it to contain.]*
MUNERA PULVERIS. 91

which rot at their thresholds. The crimes daily recorded in the police-courts of London and Paris (and much more those which are unrecorded) are a disgrace to the whole body politic;* they are, as in the body natural, stains of disease on a face of delicate skin, making the delicacy itself frightful. Similarly, the filth and poverty permitted or ignored in the midst of us are as dishonourable to the whole social body, as in the body natural it is to wash the face, but leave the hands and feet foul. Christ's way is the only true one: begin at the feet; the face will take care of itself.

109. Yet, since necessarily, in the frame of a nation, nothing but the head can be of gold, and the feet, for the work they have to do, must be part of iron, part of clay;—foul or mechanical work is always reduced by a noble race to the minimum in quantity; and, even then, performed and endured, not without sense of degradation, as a fine temper is wounded by the sight of the lower offices of the body. The highest conditions of human society reached hitherto have cast such work to slaves; but supposing slavery of a politically defined kind to be done away with, mechanical and foul employment must, in all highly organized states, take the aspect either of punishment or probation. All criminals should at once be set to the most dangerous and painful forms of it, especially to work in mines and at furnaces,† so as to relieve

* "The ordinary brute, who flourishes in the very centre of ornate life, tells us of unknown depths on the verge of which we totter, being bound to thank our stars every day we live that there is not a general outbreak, and a revolt from the yoke of civilization."—Times leader, Dec. 25, 1862. Admitting that our stars are to be thanked for our safety, whom are we to thank for the danger?

† Our politicians, even the best of them, regard only the distress caused by the failure of mechanical labour. The degradation caused by its excess is a far more serious subject of thought, and of future fear. I shall examine this part of our subject at length hereafter. There can hardly be any doubt, at present, cast on the truth of the above passages, as all the great thinkers are unanimous on the matter. Plato's words are terrific in their scorn and pity whenever he touches on the mechanical arts. He calls the men employed in them not even human, but partially and diminutively human, "ἀνθρώπισκοι," and opposes such work to noble occupations, not merely as prison is opposed to freedom.
the innocent population as far as possible: of merely rough (not mechanical) manual labour, especially agricultural, a large portion should be done by the upper classes;—bodily health, and sufficient contrast and repose for the mental functions, being unattainable without it; what necessarily inferior labour remains to be done, as especially in manufactures, should, and always will, when the relations of society are reverent and harmonious, fall to the lot of those who, for the time, are fit for nothing better. For as, whatever the perfectness of the educational system, there must remain infinite differences between the natures and capacities of men; and these differing natures are generally rangeable under the two qualities of lordly, (or tending towards rule, construction, and harmony), and servile (or tending towards misrule, destruction, and discord); and, but as a convict's dishonoured prison is to the temple (escape from them being like that of a criminal to the sanctuary); and the destruction caused by them being of soul no less than body.—Rep. vi. 9. Compare Laws, v. 11. Xenophon dwells on the evil of occupations at the furnace and especially their "ἀσχολία, want of leisure."—Econ. i. 4. (Modern England, with all its pride of education, has lost that first sense of the word "school;" and till it recover that, it will find no other rightly.) His word for the harm to the soul is to "break" it, as we say of the heart.—Econ. i. 6. And herein, also, is the root of the scorn, otherwise apparently most strange and cruel, with which Homer, Dante, and Shakspeare always speak of the populace; for it is entirely true that, in great states, the lower orders are low by nature as well as by task, being precisely that part of the commonwealth which has been thrust down for its coarseness or unworthiness (by coarseness I mean especially insensibility and irreverence—the "profane" of Horace); and when this ceases to be so, and the corruption and profanity are in the higher instead of the lower orders, there arises, first, helpless confusion; then, if the lower classes deserve power, ensues swift revolution, and they get it; but if neither the populace nor their rulers deserve it, there follows mere darkness and dissolution, till, out of the putrid elements, some new capacity of order rises, like grass on a grave; if not, there is no more hope, nor shadow of turning, for that nation. Atropos has her way with it.

So that the law of national health is like that of a great lake or sea, in perfect but slow circulation, letting the dregs fall continually to the lowest place, and the clear water rise; yet so as that there shall be no neglect of the lower orders, but perfect supervision and sympathy, so that if one member suffer, all members shall suffer with it.
since the lordly part is only in a state of profitableness while ruling, and the servile only in a state of redeemableness while serving, the whole health of the state depends on the manifest separation of these two elements of its mind; for, if the servile part be not separated and rendered visible in service, it mixes with, and corrupts, the entire body of the state; and if the lordly part be not distinguished, and set to rule, it is crushed and lost, being turned to no account, so that the rarest qualities of the nation are all given to it in vain.*

II. Laws.

110. These are the definitions and bonds of custom, or of what the nation desires should become custom.

Law is either archic,† (of direction), meristic, (of division), or critic, (of judgment).

Archic law is that of appointment and precept: it defines what is and is not to be done.

Meristic law is that of balance and distribution: it defines what is and is not to be possessed.

Critic law is that of discernment and award: it defines what is and is not to be suffered.

111. A. Archic Law. If we choose to unite the laws of precept and distribution under the head of "statutes," all law

* "ὀλγής, καὶ ἄλλως γεγορομένης." (Little, and that little born in vain.)

The bitter sentence never was so true as at this day.

† This following note is a mere cluster of memoranda, but I keep it for reference.] Thetic, or Thesnic, would perhaps be a better term than archic; but liable to be confused with some which we shall want relating to Theoria. The administrators of the three great divisions of law are severally Archons, Merists, and Dicasts. The Archons are the true princes, or beginners of things; or leaders (as of an orchestra). The Merists are properly the Domini, or Lords of houses and nations. The Dicasts, properly, the judges, and that with Olympian justice, which reaches to heaven and hell. The violation of archic law is ἀμαρτία (error), πονηρία (failure), or πλημμέλεια (discord). The violation of meristic law is ἀνομία (iniquity). The violation of critic law is ἀδικία (injury). Iniquity is the central generic term; for all law is fatal: it is the division to men of their fate; as the fold of their pasture, it is νόμος; as the assigning of their portion, μοῖρα.
is simply either of statute or judgment; that is, first the establishment of ordinance, and, secondly, the assignment of the reward, or penalty, due to its observance or violation.

To some extent these two forms of law must be associated, and, with every ordinance, the penalty of disobedience to it be also determined. But since the degrees and guilt of disobedience vary, the determination of due reward and punishment must be modified by discernment of special fact, which is peculiarly the office of the judge, as distinguished from that of the lawgiver and law-sustainer, or king; not but that the two offices are always theoretically, and in early stages, or limited numbers, of society, are often practically, united in the same person or persons.

112. Also, it is necessary to keep clearly in view the distinction between these two kinds of law, because the possible range of law is wider in proportion to their separation. There are many points of conduct respecting which the nation may wisely express its will by a written precept or resolve, yet not enforce it by penalty: * and the expedient degree of penalty is always quite a separate consideration from the expediency of the statute; for the statute may often be better enforced by mercy than severity, and is also easier in the bearing, and less likely to be abrogated. Farther, laws of precept have reference especially to youth, and concern themselves with training; but laws of judgment to manhood, and concern themselves with remedy and reward. There is a highly curious feeling in the English mind against educational law: we think no man's liberty should be interfered with till he has done irrevocable wrong; whereas it is then just too late for the only gracious and kingly interference, which is to hinder him from doing it. Make your educational laws strict, and

[* This is the only sentence which, in revising these essays, I am now inclined to question; but the point is one of extreme difficulty. There might be a law, for instance, of curfew, that candles should be put out, unless for necessary service, at such and such an hour, the idea of "necessary service" being quite indefinable, and no penalty possible; yet there would be a distinct consciousness of illegal conduct in young ladies' minds who danced by candlelight till dawn.]
your criminal ones may be gentle; but, leave youth its liberty, and you will have to dig dungeons for age. And it is good for a man that he “wear the yoke in his youth:” for the reins may then be of silken thread; and with sweet chime of silver bells at the bridle; but, for the captivity of age, you must forge the iron fetter, and cast the passing bell.

113. Since no law can be, in a final or true sense, established, but by right, (all unjust laws involving the ultimate necessity of their own abrogation), the law-giving can only become a law-sustaining power in so far as it is Royal, or “right doing;”—in so far, that is, as it rules, not mis-rules, and orders, not dis-orders, the things submitted to it. Throned on this rock of justice, the kingly power becomes established and establishing; “θείος,” or divine, and, therefore, it is literally true that no ruler can err, so long as he is a ruler, or ἀρχων οὐδεὶς ἀμαρτάνει τότε ὅταν ἀρχων ἔτη; perverted by careless thought, which has cost the world somewhat, into—“the king can do no wrong.”

114. B. Meristic Law,* or that of the tenure of property, first determines what every individual possesses by right, and secures it to him; and what he possesses by wrong, and deprives him of it. But it has a far higher provisory function: it determines what every man should possess, and puts it within his reach on due conditions; and what he should not possess, and puts this out of his reach, conclusively.

115. Every article of human wealth has certain conditions attached to its merited possession; when these are unobserved, possession becomes rapine. And the object of meristic law is not only to secure to every man his rightful share (the share, that is, which he has worked for, produced, or received by gift from a rightful owner), but to enforce the due conditions of possession, as far as law may conveniently reach; for instance, that land shall not be wantonly allowed to run to waste, that streams shall not be poisoned by the persons through whose properties they pass, nor air be rendered un-

[* Read this and the next paragraph with attention; they contain clear statements, which I cannot mend, of things most necessary.]
wholesome beyond given limits. Laws of this kind exist already in rudimentary degree, but need large development: the just laws respecting the possession of works of art have not hitherto been so much as conceived, and the daily loss of national wealth, and of its use, in this respect, is quite incalculable. And these laws need revision quite as much respecting property in national as in private hands. For instance: the public are under a vague impression that, because they have paid for the contents of the British Museum, every one has an equal right to see and to handle them. But the public have similarly paid for the contents of Woolwich arsenal; yet do not expect free access to it, or handling of its contents. The British Museum is neither a free circulating library, nor a free school: it is a place for the safe preservation, and exhibition on due occasion, of unique books, unique objects of natural history, and unique works of art; its books can no more be used by everybody than its coins can be handled, or its statues cast. There ought to be free libraries in every quarter of London, with large and complete reading-rooms attached; so also free educational museums should be open in every quarter of London, all day long, until late at night, well lighted, well catalogued, and rich in contents both of art and natural history. But neither the British Museum nor National Gallery is a school; they are treasuries; and both should be severely restricted in access and in use. Unless some order of this kind is made, and that soon, for the MSS. department of the Museum, (its superintendents have sorrowfully told me this, and repeatedly), the best MSS. in the collection will be destroyed, irretrievably, by the careless and continual handling to which they are now subjected.

Finally, in certain conditions of a nation's progress, laws limiting accumulation of any kind of property may be found expedient.

116. C. Critic Law determines questions of injury, and assigns due rewards and punishments to conduct.

Two curious economical questions arise laterally with respect to this branch of law, namely, the cost of crime, and
the cost of judgment. The cost of crime is endured by nations ignorantly, that expense being nowhere stated in their budgets; the cost of judgment, patiently, (provided only it can be had pure for the money), because the science, or perhaps we ought rather to say the art, of law, is felt to found a noble profession and discipline; so that civilized nations are usually glad that a number of persons should be supported by exercise in oratory and analysis. But it has not yet been calculated what the practical value might have been, in other directions, of the intelligence now occupied in deciding, through courses of years, what might have been decided as justly, had the date of judgment been fixed, in as many hours. Imagine one half of the funds which any great nation devotes to dispute by law, applied to the determination of physical questions in medicine, agriculture, and theoretic science; and calculate the probable results within the next ten years!

I say nothing yet of the more deadly, more lamentable loss, involved in the use of purchased, instead of personal, justice—"ἐπάκτῳ παρ' ἄλλων—ἀπορία οἰκεῖων."

117. In order to true analysis of critic law, we must understand the real meaning of the word "injury."

We commonly understand by it, any kind of harm done by one man to another; but we do not define the idea of harm: sometimes we limit it to the harm which the sufferer is conscious of; whereas much the worst injuries are those he is unconscious of; and, at other times, we limit the idea to violence, or restraint; whereas much the worse forms of injury are to be accomplished by indolence, and the withdrawal of restraint.

118. "Injury" is then simply the refusal, or violation of, any man's right or claim upon his fellows: which claim, much talked of in modern times, under the term "right," is mainly resolvable into two branches: a man's claim not to be hindered from doing what he should; and his claim to be hindered from doing what he should not; these two forms of hindrance being intensified by reward, help, and fortune, or Fors, on one side, and by punishment, impediment, and ever final arrest, or Mors, on the other.
119. Now, in order to a man's obtaining these two rights, it is clearly needful that the worth of him should be approximately known; as well as the want of worth, which has, unhappily, been usually the principal subject of study for critic law, careful hitherto only to mark degrees of de-merit, instead of merit;—assigning, indeed, to the Deficiencies (not always, alas! even to these) just estimate, fine, or penalty; but to the Efficiencies, on the other side, which are by much the more interesting, as well as the only profitable part of its subject, assigning neither estimate nor aid.

120. Now, it is in this higher and perfect function of critic law, enabling instead of disabling, that it becomes truly Kingly, instead of Draconic: (what Providence gave the great, wrathful legislator his name?): that is, it becomes the law of man and of life, instead of the law of the worm and of death—both of these laws being set in changeless poise one against another, and the enforcement of both being the eternal function of the lawgiver, and true claim of every living soul: such claim being indeed strong to be mercifully hindered, and even, if need be, abolished, when longer existence means only deeper destruction, but stronger still to be mercifully helped, and recreated, when longer existence and new creation mean nobler life. So that reward and punishment will be found to resolve themselves mainly* into help and hindrance; and these again will issue naturally from true recognition of deserving, and the just reverence and just wrath which follow instinctively on such recognition.

121. I say, "follow," but, in reality, they are part of the recognition. Reverence is as instinctive as anger;—both of them instant on true vision: it is sight and understanding that we have to teach, and these are reverence. Make a man perceive worth, and in its reflection he sees his own relative unworth, and worships thereupon inevitably, not with stiff courtesy, but rejoicingly, passionately, and, best of all, restfully: for the inner capacity of awe and love is infinite in

[* Mainly; not altogether. Conclusive reward of high virtue is loving and crowning, not helping; and conclusive punishment of deep vice is hating and crushing, not merely hindering.]
man; and only in finding these, can we find peace. And the common insolences and petulances of the people, and their talk of equality, are not irreverence in them in the least, but mere blindness, stupefaction, and fog in the brains,* the first sign of any cleansing away of which is, that they gain some power of discerning, and some patience in submitting to their true counsellors and governors. In the mode of such discernment consists the real "constitution" of the state, more than in the titles or offices of the discerned person; for it is no matter, save in degree of mischief, to what office a man is appointed, if he cannot fulfil it.

122. III. Government by Council.

This is the determination, by living authority, of the national conduct to be observed under existing circumstances; and the modification or enlargement, abrogation or enforcement, of the code of national law according to present needs or purposes. This government is necessarily always by council, for though the authority of it may be vested in one person, that person cannot form any opinion on a matter of public interest but by (voluntarily or involuntarily) submitting himself to the influence of others.

This government is always twofold—visible and invisible. The visible government is that which nominally carries on the national business; determines its foreign relations, raises taxes, levies soldiers, orders war or peace, and otherwise becomes the arbiter of the national fortune. The invisible government is that exercised by all energetic and intelligent men, each in his sphere, regulating the inner will and secret ways of the people, essentially forming its character, and preparing its fate.

Visible governments are the toys of some nations, the diseases of others, the harness of some, the burdens of more,

* Compare Chaucer's "villany" (clownishness).

    Full foul and chorlishe seemed she,
    And eke villainous for to be,
    And little coulde of nurture
    To worship any creature.
the necessity of all. Sometimes their career is quite distinct from that of the people, and to write it, as the national history, is as if one should number the accidents which befall a man's weapons and wardrobe, and call the list his biography. Nevertheless, a truly noble and wise nation necessarily has a noble and wise visible government, for its wisdom issues in that conclusively.

123. Visible governments are, in their agencies, capable of three pure forms, and of no more than three.

They are either monarchies, where the authority is vested in one person; oligarchies, when it is vested in a minority; or democracies, when vested in a majority.

But these three forms are not only, in practice, variously limited and combined, but capable of infinite difference in character and use, receiving specific names according to their variations; which names, being nowise agreed upon, nor consistently used, either in thought or writing, no man can at present tell, in speaking of any kind of government, whether he is understood; nor, in hearing, whether he understands. Thus we usually call a just government by one person a monarchy, and an unjust or cruel one, a tyranny: this might be reasonable if it had reference to the divinity of true government; but to limit the term "oligarchy" to government by a few rich people, and to call government by a few wise or noble people "aristocracy," is evidently absurd, unless it were proved that rich people never could be wise, or noble people rich; and farther absurd, because there are other distinctions in character, as well as riches or wisdom (greater purity of race, or strength of purpose, for instance), which may give the power of government to the few. So that if we had to give names to every group or kind of minority, we should have verbiage enough. But there is only one right name—"oligarchy."

124. So also the terms "republic" and "democracy" *[ are

[*I leave this paragraph, in every syllable, as it was written, during the rage of the American war; it was meant to refer, however, chiefly to the Northerns: what modifications its hot and partial terms require I will give in another place: let it stand here as it stood.]
confused, especially in modern use; and both of them are liable to every sort of misconception. A republic means, properly, a polity in which the state, with its all, is at every man’s service, and every man, with his all, at the state’s service—(people are apt to lose sight of the last condition), but its government may nevertheless be oligarchic (consular, or decemviral, for instance), or monarchic (dictatorial). But a democracy means a state in which the government rests directly with the majority of the citizens. And both these conditions have been judged only by such accidents and aspects of them as each of us has had experience of; and sometimes both have been confused with anarchy, as it is the fashion at present to talk of the “failure of republican institutions in America,” when there has never yet been in America any such thing as an institution, but only defiance of institution; neither any such thing as a res-publica, but only a multitudinous res-privata; every man for himself. It is not republicanism which fails now in America; it is your model science of political economy, brought to its perfect practice. There you may see competition, and the “law of demand and supply” (especially in paper), in beautiful and unhindered operation.* Lust of wealth, and trust in it; vulgar faith in magnitude and multitude, instead of nobleness; besides that faith natural to backwoodsmen—“lucum ligna,” †—perpetual self-contemplation, issuing in passionate vanity; total ignorance of the finer and higher arts, and of all that they teach and bestow; and the discontent of energetic minds unoccupied, frantic with hope of comprehended change, and progress they know not whither; ‡—these are the things that

* Supply and demand! Alas! for what noble work was there ever any audible “demand” in that poor sense (Past and Present)? Nay, the demand is not loud, even for ignoble work. See “Average Earnings of Betty Taylor,” in Times of 4th February of this year [1863]: “Worked from Monday morning at 8 A.M. to Friday night at 5.30 p.m. for 1s. 5½d.”—Laissez faire. [This kind of slavery finds no Abolitionists that I hear of.]

† “That the sacred grove is nothing but logs.”

‡ Ames, by report of Waldo Emerson, says “that a monarchy is a merchantman, which sails well, but will sometimes strike on a rock, and
have "failed" in America; and yet not altogether failed—it is not collapse, but collision; the greatest railroad accident on record, with fire caught from the furnace, and Catiline's quenching "non aquâ, sed ruinâ." But I see not, in any of our talk of them, justice enough done to their erratic strength of purpose, nor any estimate taken of the strength of endurance of domestic sorrow, in what their women and children suppose a righteous cause. And out of that endurance and suffering, its own fruit will be born with time; [not abolition of slavery, however. See § 130.] and Carlyle's prophecy of them (June, 1850), as it has now come true in the first clause, will, in the last:—

"America, too, will find that caucuses, divisionalists, stump-oratory, and speeches to Buncombe will not carry men to the immortal gods; that the Washington Congress, and constitutional battle of Kilkenny cats is there, as here, naught for such objects; quite incompetent for such; and, in fine, that said sublime constitutional arrangement will require to be (with terrible throes, and travail such as few expect yet) remodelled, abridged, extended, suppressed, torn asunder, put together again—not without heroic labour and effort, quite other than that of the stump-orator and the revival preacher, one day."

125.† Understand, then, once for all, that no form of government, provided it be a government at all, is, as such, to be either condemned or praised, or contested for in anywise, but go to the bottom; whilst a republic is a raft, which would never sink, but then your feet are always in the water.** Yes, that is comfortable; and though your raft cannot sink (being too worthless for that), it may go to pieces, I suppose, when the four winds (your only pilots) steer competitively from its four corners, and carry it, ἀδυνατά, and then more than your feet will be in the water.

[* "Not with water, but with ruin." The worst ruin being that which the Americans chiefly boast of. They sent all their best and honestest youths, Harvard University men and the like, to that accursed war; got them nearly all shot; wrote pretty biographies (to the ages of 17, 18, 19) and epitaphs for them; and so, having washed all the salt out of the nation in blood, left themselves to putrefaction, and the morality of New York.]

[† This paragraph contains the gist of all that precede.]
by fools. But all forms of government are good just so far as they attain this one vital necessity of policy—that the wise and kind, few or many, shall govern the unwise and unkind; and they are evil so far as they miss of this, or reverse it. Nor does the form, in any case, signify one whit, but its firmness, and adaptation to the need; for if there be many foolish persons in a state, and few wise, then it is good that the few govern; and if there be many wise, and few foolish, then it is good that the many govern; and if many be wise, yet one wiser, then it is good that one should govern; and so on. Thus, we may have "the ant's republic, and the realm of bees," both good in their kind; one for groping, and the other for building; and nobler still, for flying;—the Ducal monarchy* of those

Intelligent of seasons, that set forth
The aery caravan, high over seas.

126. Nor need we want examples, among the inferior creatures, of dissoluteness, as well as resoluteness, in government. I once saw democracy finely illustrated by the beetles of North Switzerland, who by universal suffrage, and elytric acclamation, one May twilight, carried it, that they would fly over the Lake of Zug; and flew short, to the great disfigurement of the Lake of Zug,—Κανθάρον λυμήν—over some leagues square, and to the close of the cockchafer democracy for that year. Then, for tyranny, the old fable of the frogs and the stork finely touches one form of it; but truth will image it more closely than fable, for tyranny is not complete when it is only over the idle, but when it is over the laborious and the blind. This description of pelicans and climbing perch, which I find quoted in one of our popular natural histories, out of Sir Emerson Tennant's Ceylon, comes as near as may be to the true image of the thing:

[* Whenever you are puzzled by any apparently mistaken use of words in these essays, take your dictionary, remembering I had to fix terms, as well as principles. A Duke is a "dux" or "leader;" the flying wedge of cranes is under a "ducal monarch"—a very different personage from a queen-bee. The Venetians, with a beautiful instinct, gave the name to their King of the Sea.]
"Heavy rains came on, and as we stood on the high ground, we observed a pelican on the margin of the shallow pool gorging himself; our people went towards him, and raised a cry of 'Fish, fish!' We hurried down, and found numbers of fish struggling upward through the grass, in the rills formed by the trickling of the rain. There was scarcely water to cover them, but nevertheless they made rapid progress up the bank, on which our followers collected about two baskets of them. They were forcing their way up the knoll, and had they not been interrupted, first by the pelican and afterwards by ourselves, they would in a few minutes have gained the highest point, and descended on the other side into a pool which formed another portion of the tank. In going this distance, however, they must have used muscular exertion enough to have taken them half a mile on level ground; for at these places all the cattle and wild animals of the neighbourhood had latterly come to drink, so that the surface was everywhere indented with footmarks, in addition to the cracks in the surrounding baked mud, into which the fish tumbled in their progress. In those holes, which were deep, and the sides perpendicular, they remained to die, and were carried off by kites and crows."*  

127. But whether governments be bad or good, one general disadvantage seems to attach to them in modern times—that they are all costly.† This, however, is not essentially the fault of the governments. If nations choose to play at war, they will always find their governments willing to lead the game, and soon coming under that term of Aristophanes, "καπηλαυν ἀσπιδων," "shield-sellers." And when (πημ' ἐπὶ πηματις ‡) the shields take the form of iron ships, with ap-
paratus "for defence against liquid fire,"—as I see by latest accounts they are now arranging the decks in English dockyards—they become costly biers enough for the grey convoy of chief mourner waves, wreathed with funereal foam, to bear back the dead upon; the massy shoulders of those corpse-bearers being intended for quite other work, and to bear the living, and food for the living, if we would let them.

128. Nor have we the least right to complain of our governments being expensive, so long as we set the government to do precisely the work which brings no return. If our present doctrines of political economy be just, let us trust them to the utmost; take that war business out of the government's hands, and test therein the principles of supply and demand. Let our future sieges of Sebastopol be done by contract—no capture, no pay—(I admit that things might sometimes go better so); and let us sell the commands of our prospective battles, with our vicarages, to the lowest bidder; so may we have cheap victories, and divinity. On the other hand, if we have so much suspicion of our science that we dare not trust it on military or spiritual business, would it not be but reasonable to try whether some authoritative handling may not prosper in matters utilitarian? If we were to set our governments to do useful things instead of mischievous, possibly even the apparatus itself might in time come to be less costly. The machine, applied to the building of the house, might perhaps pay, when it seems not to pay, applied to pulling it down. If we made in our dockyards ships to carry timber and coals, instead of cannon, and with provision for the brightening of domestic solid culinary fire, instead of for the scattering of liquid hostile fire, it might have some effect on the taxes. Or suppose that we tried the experiment on land instead of water carriage; already the government, not unapproved, carries letters and parcels for us; larger packages may in time follow;—even general merchandise—why not, at last, ourselves? Had the money spent in local mistakes and vain private litigation, on the railroads of England, been laid out, instead, under proper government restraint, on really useful railroad work, and had no absurd expense been in-
curred in ornamenting stations, we might already have had,—what ultimately it will be found we must have,—quadruple rails, two for passengers, and two for traffic, on every great line; and we might have been carried in swift safety, and watched and warded by well-paid pointsmen, for half the present fares. [For, of course, a railroad company is merely an association of turnpike-keepers, who make the tolls as high as they can, not to mend the roads with, but to pocket. The public will in time discover this, and do away with turnpikes on railroads, as on all other public-ways.]

129. Suppose it should thus turn out, finally, that a true government set to true work, instead of being a costly engine, was a paying one? that your government, rightly organized, instead of itself subsisting by an income-tax, would produce its subjects some subsistence in the shape of an income dividend?—police, and judges duly paid besides, only with less work than the state at present provides for them.

A true government set to true work!—Not easily to be imagined, still less obtained; but not beyond human hope or ingenuity. Only you will have to alter your election systems somewhat, first. Not by universal suffrage, nor by votes purchasable with beer, is such government to be had. That is to say, not by universal equal suffrage. Every man upwards of twenty, who has been convicted of no legal crime, should have his say in this matter; but afterwards a louder voice, as he grows older, and approves himself wiser. If he has one vote at twenty, he should have two at thirty, four at forty, ten at fifty. For every single vote which he has with an income of a hundred a year, he should have ten with an income of a thousand, (provided you first see to it that wealth is, as nature intended it to be, the reward of sagacity and industry—not of good luck in a scramble or a lottery). For every single vote which he had as subordinate in any business, he should have two when he became a master; and every office and authority nationally bestowed, implying trustworthiness and intellect, should have its known proportional number of votes attached to it. But into the detail and working of a true system in these matters we cannot now enter; we are con-
cerned as yet with definitions only, and statements of first principles, which will be established now sufficiently for our purposes when we have examined the nature of that form of government last on the list in § 105,—the purely "Magistral," exciting at present its full share of public notice, under its ambiguous title of "slavery."

130. I have not, however, been able to ascertain in definite terms, from the declaimers against slavery, what they understand by it. If they mean only the imprisonment or compulsion of one person by another, such imprisonment or compulsion being in many cases highly expedient, slavery, so defined, would be no evil in itself, but only in its abuse; that is, when men are slaves, who should not be, or masters, who should not be, or even the fittest characters for either state, placed in it under conditions which should not be. It is not, for instance, a necessary condition of slavery, nor a desirable one, that parents should be separated from children, or husbands from wives; but the institution of war, against which people declaim with less violence, effects such separations,—not unfrequently in a very permanent manner. To press a sailor, seize a white youth by conscription for a soldier, or carry off a black one for a labourer, may all be right acts, or all wrong ones, according to needs and circumstances. It is wrong to scourge a man unnecessarily. So it is to shoot him. Both must be done on occasion; and it is better and kinder to flog a man to his work, than to leave him idle till he robs, and flog him afterwards. The essential thing for all creatures is to be made to do right; how they are made to do it—by pleasant promises, or hard necessities, pathetic oratory, or the whip—is comparatively immaterial.* To be deceived is perhaps as incompatible with human dignity as to be whipped; and I suspect the last method to be not the worst, for the help of many individuals. The Jewish nation thrived under it, in the hand of a monarch reputed not unwise; it is only the change of whip for scorpion which is inexpedient; and

[* Permit me to enforce and reinforce this statement, with all earnestness. It is the sum of what needs most to be understood in the matter of education.]
that change is as likely to come to pass on the side of license as of law. For the true scorpion whips are those of the nation's pleasant vices, which are to it as St. John's locusts—crown on the head, ravin in the mouth, and sting in the tail. If it will not bear the rule of Athena and Apollo, who shepherd without smiting (οὖ παρηγόρητας νέμοντες), Athena at last calls no more in the corners of the streets; and then follows the rule of Tisiphone, who smites without shepherding.

131. If, however, by slavery, instead of absolute compulsion, is meant the purchase, by money, of the right of compulsion, such purchase is necessarily made whenever a portion of any territory is transferred, for money, from one monarch to another: which has happened frequently enough in history, without its being supposed that the inhabitants of the districts so transferred became therefore slaves. In this, as in the former case, the dispute seems about the fashion of the thing, rather than the fact of it. There are two rocks in mid-sea, on each of which, neglected equally by instructive and commercial powers, a handful of inhabitants live as they may. Two merchants bid for the two properties, but not in the same terms. One bids for the people, buys them, and sets them to work, under pain of scourge; the other bids for the rock, buys it, and throws the inhabitants into the sea. The former is the American, the latter the English method, of slavery; much is to be said for, and something against, both, which I hope to say in due time and place.*

132. If, however, slavery mean not merely the purchase of the right of compulsion, but the purchase of the body and soul of the creature itself for money, it is not, I think, among the black races that purchases of this kind are most extensively made, or that separate souls of a fine make fetch the highest price. This branch of the inquiry we shall have occasion also to follow out at some length, for in the worst instances of the selling of souls, we are apt to get, when we ask if the sale is valid, only Pyrrhon's answer †—"None can know."

[* A pregnant paragraph, meant against English and Scotch landlords who drive their people off the land.]

[† In Lucian's dialogue, "'The sale of lives.'"]
133. The fact is that slavery is not a political institution at all, but an inherent, natural, and eternal inheritance of a large portion of the human race—to whom, the more you give of their own free will, the more slaves they will make themselves. In common parlance, we idly confuse captivity with slavery, and are always thinking of the difference between pine-trunks (Ariel in the pine), and cowslip-bells ("in the cowslip-bell I lie"), or between carrying wood and drinking (Caliban's slavery and freedom), instead of noting the far more serious differences between Ariel and Caliban themselves, and the means by which, practically, that difference may be brought about or diminished.

134.* Plato's slave, in the Polity, who, well dressed and washed, aspires to the hand of his master's daughter, corresponds curiously to Caliban attacking Prospero's cell; and there is an undercurrent of meaning throughout, in the Tempest as well as in the Merchant of Venice; referring in this case to government, as in that to commerce. Miranda † ("the wonderful," so addressed first by Ferdinand, "Oh, you wonder!") corresponds to Homer's Arete: Ariel and Caliban are

[* I raise this analysis of the Tempest into my text; but it is nothing but a hurried note, which I may never have time to expand. I have retouched it here and there a little, however.]

† Of Shakspeare's names I will afterwards speak at more length; they are curiously—often barbarously—much by Providence,—but assuredly not without Shakspeare's cunning purpose—mixed out of the various traditions he confusedly adopted, and languages which he imperfectly knew. Three of the clearest in meaning have been already noticed. Desdemona, "διόδαμονα," "miserable fortune," is also plain enough. Othello is, I believe, "the careful;" all the calamity of the tragedy arising from the single flaw and error in his magnificently collected strength. Ophelia, "serviceableness," the true lost wife of Hamlet, is marked as having a Greek name by that of her brother, Laertes; and its signification is once exquisitely alluded to in that brother's last word of her, where her gentle preciousness is opposed to the uselessness of the churlish clergy—"A ministering angel shall my sister be, when thouliest howling." Hamlet is, I believe, connected in some way with "homely" the entire event of the tragedy turning on betrayal of home duty. Hermione (ἐρμα), "pillar-like," (ἡ εἴδος ἔχε χρυσὸς Ἀφροδίτης). Titania (τιτάνη), "the queen;" Benedict and Beatrice, "blessed and blessing;" Valentine and Proteus, enduring (or strong), (valens), and changeful. Iago and Iachimo have evidently
respectively the spirits of faithful and imaginative labour, opposed to rebellious, hurtful and slavish labour. Prospero ("for hope"), a true governor, is opposed to Sycorax, the mother of slavery, her name "Swine-raven," indicating at once brutality and deathfulness; hence the line—

"As wicked dew as e'er my mother brushed, with raven's feather,"—&c.

For all these dreams of Shakespeare, as those of true and strong men must be, are "φαντάσματα θεία, καὶ σκιά τῶν ὀντῶν"—divine phantasms, and shadows of things that are. We hardly tell our children, willingly, a fable with no purport in it; yet we think God sends his best messengers only to sing fairy tales to us, fond and empty. The Tempest is just like a grotesque in a rich missal, "clasped where paynims pray." Ariel is the spirit of generous and free-hearted service, in early stages of human society oppressed by ignorance and wild tyranny: venting groans as fast as mill-wheels strike; in shipwreck of states, dreadful; so that "all but mariners plunge in the brine, and quit the vessel, then all afire with me," yet having in itself the will and sweetness of truest peace, whence that is especially called "Ariel's" song, "Come unto these yellow sands, and there, take hands," "courtesied when you have, and kissed, the wild waves whist:" (mind, it is "cortesia," not "curtsey,"') and read "quiet" for "whist," if you want the full sense. Then you may indeed foot it fealty, and sweet spirits bear the burden for you—with watch in the night, and call in early morning. The vis viva in elemental transformation follows—"Full fathom five thy father lies, of his bones are coral made." Then, giving rest after labour, it "fetches dew from the still vext Bermoothes, and, with a charm joined to their suffered labour, leaves men asleep." Snatching away the feast of the cruel, it seems to them as a harpy; followed by the utterly vile, who cannot see it in any shape, but to whom it is the picture of nobody, it still gives shrill harmony to their false and mocking catch, "Thought is the same root—probably the Spanish Iago, Jacob, "the supplanter," Leonatus, and other such names, are interpreted, or played with, in the plays themselves. For the interpretation of Sycorax, and reference to her raven's feather, I am indebted to Mr. John R. Wise.
free;” but leads them into briers and foul places, and at last hollas the hounds upon them. Minister of fate against the great criminal, it joins itself with the “incensed seas and shores”—the sword that layeth at it cannot hold, and may “with bemocked-at stabs as soon kill the still-closing waters, as diminish one dowle that is in its plume.” As the guide and aid of true love, it is always called by Prospero “fine.” (the French “fine,” not the English), or “delicate”—another long note would be needed to explain all the meaning in this word. Lastly, its work done, and war, it resolves itself into the elements. The intense significance of the last song, “Where the bee sucks,” I will examine in its due place.

The types of slavery in Caliban are more palpable, and need not be dwelt on now: though I will notice them also, severally, in their proper places;—the heart of his slavery is in his worship: “That’s a brave god, and bears celestial—liquor.” But, in illustration of the sense in which the Latin “benignus” and “malignus” are to be coupled with Eleutheria and Douleia, note that Caliban’s torment is always the physical reflection of his own nature—“cramps” and “side stiches that shall pen thy breath up; thou shalt be pinched, as thick as honeycombs:” the whole nature of slavery being one cramp and cretinous contraction. Fancy this of Ariel! You may fetter him, but you set no mark on him; you may put him to hard work and far journey, but you cannot give him a cramp.

135. I should dwell, even in these prefatory papers, at more length on this subject of slavery, had not all I would say been said already, in vain, (not, as I hope, ultimately in vain), by Carlyle, in the first of the Latter-day Pamphlets, which I commend to the reader’s gravest reading; together with that as much neglected, and still more immediately needed, on model prisons, and with the great chapter on “Permanence” (fifth of the last section of “Past and Present”), which sums what is known, and foreshadows, or rather forelights, all that is to be learned of National Discipline. I have only here farther to examine the nature of one world-wide and everlasting form of slavery, wholesome in use, as deadly in abuse;—the service of the rich by the poor.
CHAPTER VI.

MASTERSHIP.

136. As in all previous discussions of our subject, we must study the relation of the commanding rich to the obeying poor in its simplest elements, in order to reach its first principles.

The simplest state of it, then, is this: * a wise and provident person works much, consumes little, and lays by a store; an improvident person works little, consumes all his produce, and lays by no store. Accident interrupts the daily work, or renders it less productive; the idle person must then starve, or be supported by the provident one, who, having him thus at his mercy, may either refuse to maintain him altogether, or, which will evidently be more to his own interest, say to him, “I will maintain you, indeed, but you shall now work hard, instead of indolently, and instead of being allowed to lay by what you save, as you might have done, had you remained independent, I will take all the surplus. You would not lay it up for yourself; it is wholly your own fault that has thrown you into my power, and I will force you to work, or starve; yet you shall have no profit of your work, only your daily bread for it; [and competition shall determine how much of that †].” This mode of treatment has now be-

* In the present general examination, I concede so much to ordinary economists as to ignore all innocent poverty. I adapt my reasoning, for once, to the modern English practical mind, by assuming poverty to be always criminal; the conceivable exceptions we will examine afterwards.

[† I have no terms of English, and can find none in Greek nor Latin, nor in any other strong language known to me, contemptuous enough to attach to the bestial idiotism of the modern theory that wages are to be measured by competition.]
come so universal that it is supposed to be the only natural—nay, the only possible one; and the market wages are calmly defined by economists as "the sum which will maintain the labourer."

137. The power of the provident person to do this is only checked by the correlative power of some neighbour of similarly frugal habits, who says to the labourer—"I will give you a little more than this other provident person: come and work for me."

The power of the provident over the improvident depends thus, primarily, on their relative numbers; secondarily, on the modes of agreement of the adverse parties with each other. The accidental level of wages is a variable function of the number of provident and idle persons in the world, of the enmity between them as classes, and of the agreement between those of the same class. It depends, from beginning to end, on moral conditions.

138. Supposing the rich to be entirely selfish, it is always for their interest that the poor should be as numerous as they can employ, and restrain. For, granting that the entire population is no larger than the ground can easily maintain—that the classes are stringently divided—and that there is sense or strength of hand enough with the rich to secure obedience; then, if nine-tenths of a nation are poor, the remaining tenth have the service of nine persons each;* but, if eight-tenths are poor, only of four each; if seven-tenths are poor, of two and a third each; if six-tenths are poor, of one and a half each; and if five-tenths are poor, of only one each. But, practically, if the rich strive always to obtain more power over the poor, instead of to raise them—and if, on the other hand, the poor become continually more vicious and numerous, through neglect and oppression,—though the range of the power of

* I say nothing yet of the quality of the servants, which, nevertheless, is the gist of the business. Will you have Paul Veronese to paint your ceiling, or the plumber from over the way? Both will work for the same money; Paul, if anything, a little the cheaper of the two, if you keep him in good humour; only you have to discern him first, which will need eyes.
the rich increases, its tenure becomes less secure; until, at last, the measure of iniquity being full, revolution, civil war, or the subjection of the state to a healthier or stronger one, closes the moral corruption, and industrial disease.*

139. It is rarely, however, that things come to this extremity. Kind persons among the rich, and wise among the poor, modify the connexion of the classes: the efforts made to raise and relieve on the one side, and the success of honest toil on the other, bind and blend the orders of society into the confused tissue of half-felt obligation, sullenly-rendered obedience, and variously-directed, or mis-directed toil, which form the warp of daily life. But this great law rules all the wild design: that success (while society is guided by laws of competition) signifies always so much victory over your neighbour as to obtain the direction of his work, and to take the profits of it. This is the real source of all great riches. No man can become largely rich by his personal toil.† The work of his own hands, wisely directed, will indeed always maintain himself and his family, and make fitting provision for his age. But it is only by the discovery of some method of taxing the labour of others that he can become opulent. Every increase of his capital enables him to extend this taxation more widely; that is, to invest larger funds in the maintenance of labourers, —to direct, accordingly, vaster and yet vaster masses of labour, and to appropriate its profits.

140. There is much confusion of idea on the subject of this appropriation. It is, of course, the interest of the employer to disguise it from the persons employed; and, for his own comfort and complacency, he often desires no less to disguise it from himself. And it is matter of much doubt with me, how far the foul and foolish arguments used habitually on this subject are indeed the honest expression of foul and fool-

[* I have not altered a syllable in these three paragraphs, 137, 138, 139, on revision; but have much italicised: the principles stated being as vital, as they are little known.]

† By his art he may; but only when its produce, or the sight or hearing of it, becomes a subject of dispute, so as to enable the artist to tax the labour of multitudes highly, in exchange for his own.
ish convictions;—or rather (as I am sometimes forced to conclue from the irritation with which they are advanced) are resolutely dishonest, wilful, and malicious sophisms, arranged so as to mask, to the last moment, the real laws of economy, and future duties of men. By taking a simple example, and working it thoroughly out, the subject may be rescued from all but such determined misrepresentation.

141. Let us imagine a society of peasants, living on a river-shore, exposed to destructive inundation at somewhat extended intervals; and that each peasant possesses of this good, but imperilled, ground, more than he needs to cultivate for immediate subsistence. We will assume farther (and with too great probability of justice), that the greater part of them indolently keep in tillage just as much land as supplies them with daily food;—that they leave their children idle, and take no precautions against the rise of the stream. But one of them, (we will say but one, for the sake of greater clearness) cultivates carefully all the ground of his estate; makes his children work hard and healthily; uses his spare time and theirs in building a rampart against the river; and, at the end of some years, has in his storehouses large reserves of food and clothing,—in his stables a well-tended breed of cattle, and around his fields a wedge of wall against flood.

The torrent rises at last—sweeps away the harvests, and half the cottages of the careless peasants, and leaves them destitute. They naturally come for help to the provident one, whose fields are unwasted, and whose granaries are full. He has the right to refuse it to them: no one disputes this right.* But he will probably not refuse it; it is not his interest to do so, even were he entirely selfish and cruel. The only question with him will be on what terms his aid is to be granted.

142. Clearly, not on terms of mere charity. To maintain his neighbours in idleness would be not only his ruin, but theirs. He will require work from them, in exchange for their maintenance; and, whether in kindness or cruelty, all

[* Observe this; the legal right to keep what you have worked for, and use it as you please, is the corner-stone of all economy: compare the end of Chap. II.]
the work they can give. Not now the three or four hours they were wont to spend on their own land, but the eight or ten hours they ought to have spent.* But how will he apply this labour? The men are now his slaves;—nothing less, and nothing more. On pain of starvation, he can force them to work in the manner, and to the end, he chooses. And it is by his wisdom in this choice that the worthiness of his mastership is proved, or its unworthiness. Evidently, he must first set them to bank out the water in some temporary way, and to get their ground cleansed and resown; else, in any case, their continued maintenance will be impossible. That done, and while he has still to feed them, suppose he makes them raise a secure rampart for their own ground against all future flood, and rebuild their houses in safer places, with the best material they can find; being allowed time out of their working hours to fetch such material from a distance. And for the food and clothing advanced, he takes security in land that as much shall be returned at a convenient period.

143. We may conceive this security to be redeemed, and the debt paid at the end of a few years. The prudent peasant has sustained no loss; but is no richer than he was, and has had all his trouble for nothing. But he has enriched his neighbours materially; bettered their houses, secured their land, and rendered them, in worldly matters, equal to himself. In all rational and final sense, he has been throughout their true Lord and King.

144. We will next trace his probable line of conduct, presuming his object to be exclusively the increase of his own fortune. After roughly recovering and cleansing the ground, he allows the ruined peasantry only to build huts upon it, such as he thinks protective enough from the weather to keep them in working health. The rest of their time he occupies, first in pulling down, and rebuilding on a magnificent scale, his own house, and in adding large dependencies to it. This done, in exchange for his continued supply of corn, he

[* I should now put the time of necessary labour rather under than over the third of the day.]
buys as much of his neighbours' land as he thinks he can superintend the management of; and makes the former owners securely embank and protect the ceded portion. By this arrangement, he leaves to a certain number of the peasantry only as much ground as will just maintain them in their existing numbers; as the population increases, he takes the extra hands, who cannot be maintained on the narrowed estates, for his own servants; employs some to cultivate the ground he has bought, giving them of its produce merely enough for subsistence; with the surplus, which, under his energetic and careful superintendence, will be large, he maintains a train of servants for state, and a body of workmen, whom he educates in ornamental arts. He now can splendidly decorate his house, lay out its grounds magnificently, and richly supply his table, and that of his household and retinue. And thus, without any abuse of right, we should find established all the phenomena of poverty and riches, which (it is supposed necessarily) accompany modern civilization. In one part of the district, we should have unhealthy land, miserable dwellings, and half-starved poor; in another, a well-ordered estate, well-fed servants, and refined conditions of highly educated and luxurious life.

145. I have put the two cases in simplicity, and to some extremity. But though in more complex and qualified operation, all the relations of society are but the expansion of these two typical sequences of conduct and result. I do not say, observe, that the first procedure is entirely recommendable; or even entirely right; still less, that the second is wholly wrong. Servants, and artists, and splendour of habitation and retinue, have all their use, propriety, and office. But I am determined that the reader shall understand clearly what they cost; and see that the condition of having them is the subjection to us of a certain number of imprudent or unfortunate persons (or, it may be, more fortunate than their masters), over whose destinies we exercise a boundless control. "Riches" mean eternally and essentially this; and God send at last a time when those words of our best-reputed economist shall be true, and we shall indeed "all know what
it is to be rich;" * that it is to be slave-master over farthest earth, and over all ways and thoughts of men. Every operative you employ is your true servant: distant or near, subject to your immediate orders, or ministering to your widely-communicated caprice,—for the pay he stipulates, or the price he tempts,—all are alike under this great dominion of the gold. The milliner who makes the dress is as much a servant (more so, in that she uses more intelligence in the service) as the maid who puts it on; the carpenter who smooths the door, as the footman who opens it; the tradesmen who supply the table, as the labourers and sailors who supply the tradesmen. Why speak of these lower services? Painters and singers (whether of note or rhyme,) jesters and storytellers, moralists, historians, priests,—so far as these, in any degree, paint, or sing, or tell their tale, or charm their charm, or "perform" their rite, for pay,—in so far, they are all slaves; abject utterly, if the service be for pay only; abject less and less in proportion to the degrees of love and of wisdom which enter into their duty, or can enter into it, according as their function is to do the bidding and the work of a manly people;—or to amuse, tempt, and deceive, a childish one.

146. There is always, in such amusement and temptation, to a certain extent, a government of the rich by the poor, as of the poor by the rich; but the latter is the prevailing and necessary one, and it consists, when it is honourable, in the collection of the profits of labour from those who would have misused them, and the administration of those profits for the service either of the same persons in future, or of others; and when it is dishonourable, as is more frequently the case in modern times, it consists in the collection of the profits of labour from those who would have rightly used them, and their appropriation to the service of the collector himself.

147. The examination of these various modes of collection and use of riches will form the third branch of our future inquiries; but the key to the whole subject lies in the clear understanding of the difference between selfish and unselfish

[* See Preface to Unto this Lust.]
expenditure. It is not easy, by any course of reasoning, to enforce this on the generally unwilling hearer; yet the definition of unselfish expenditure is brief and simple. It is expenditure which, if you are a capitalist, does not pay you, but pays somebody else; and if you are a consumer, does not please you, but pleases somebody else. Take one special instance, in further illustration of the general type given above. I did not invent that type, but spoke of a real river, and of real peasantry, the languid and sickly race which inhabits, or haunts—for they are often more like spectres than living men—the thorny desolation of the banks of the Arve in Savoy. Some years ago, a society, formed at Geneva, offered to embank the river for the ground which would have been recovered by the operation; but the offer was refused by the (then Sardinian) government. The capitalists saw that this expenditure would have "paid" if the ground saved from the river was to be theirs. But if, when the offer that had this aspect of profit was refused, they had nevertheless persisted in the plan, and merely taking security for the return of their outlay, lent the funds for the work, and thus saved a whole race of human souls from perishing in a pestiferous fen (as, I presume, some among them would, at personal risk, have dragged any one drowning creature out of the current of the stream, and not expected payment therefor), such expenditure would have precisely corresponded to the use of his power made, in the first instance, by our supposed richer peasant—it would have been the king's, of grace, instead of the usurer's, for gain.

148. "Impossible, absurd, Utopian!" exclaim nine-tenths of the few readers whom these words may find.

No, good reader, this is not Utopian: but I will tell you what would have seemed, if we had not seen it, Utopian on the side of evil instead of good; that ever men should have come to value their money so much more than their lives, that if you call upon them to become soldiers, and take chance of a bullet through their heart, and of wife and children being left desolate, for their pride's sake, they will do it gaily, without thinking twice; but if you ask them, for their country's sake,
to spend a hundred pounds without security of getting back a
hundred-and-five,* they will laugh in your face.

149. Not but that also this game of life-giving and taking
is, in the end, somewhat more costly than other forms of play
might be. Rifle practice is, indeed, a not unhealthy pastime,
and a feather on the top of the head is a pleasing appendage;
but while learning the stops and fingering of the sweet instru-
ment, does no one ever calculate the cost of an overture?
What melody does Tityrus meditate on his tenderly spiral
pipe? The leaden seed of it, broad-cast, true, conical "Dents
de Lion" seed—needing less allowance for the wind than is
usual with that kind of herb—what crop are you likely to have
of it? Suppose, instead of this volunteer marching and
countermarching, you were to do a little volunteer ploughing
and counter-ploughing? It is more difficult to do it straight:
the dust of the earth, so disturbed, is more grateful than for
merely rhythmic footsteps. Golden cups, also, given for good
ploughing, would be more suitable in colour: (ruby glass, for
the wine which "giveth his colour" on the ground, might be
fitter for the rifle prize in ladies' hands). Or, conceive a little
volunteer exercise with the spade, other than such as is needed

* I have not hitherto touched on the subject of interest of money; it
is too complex, and must be reserved for its proper place in the body of
the work. The definition of interest (apart from compensation for risk)
is, "the exponent of the comfort of accomplished labour, separated from
its power;" the power being what is lent: and the French economists
who have maintained the entire illegality of interest are wrong; yet by
no means so curiously or wildly wrong as the English and French ones
opposed to them, whose opinions have been collected by Dr. Whewell
at page 41 of his Lectures; it never seeming to occur to the mind of the
compiler, any more than to the writers whom he quotes, that it is quite
possible, and even (according to Jewish proverb) prudent, for men to
hoard as ants and mice do, for use, not usury; and lay by something
for winter nights, in the expectation of rather sharing than lending the
scrapings. My Savoyard squirrels would pass a pleasant time of it un-
der the snow-laden pine-branches, if they always declined to economize
because no one would pay them interest on nuts.

[I leave this note as it stood: but, as I have above stated, should now
side wholly with the French economists spoken of, in asserting the ab-
olute illegality of interest.]
for moat and breastwork, or even for the burial of the fruit of the leaden avena-seed, subject to the shrill Lemures’ criticism—

Wer hat das Haus so schlecht gebauet?

If you were to embank Lincolnshire more stoutly against the sea? or strip the peat of Solway, or plant Plinlimmon moors with larch—then, in due season, some amateur reaping and threshing?

"Nay, we reap and thresh by steam, in these advanced days."

I know it, my wise and economical friends. The stout arms God gave you to win your bread by, you would fain shoot your neighbours, and God’s sweet singers with; * then you invoke the fiends to your farm-service; and—

When young and old come forth to play
On a sulphurous holiday,
Tell how the darkling goblin sweat.
(His feast of cinders duly set),
And, belching night, where breathed the morn,
His shadowy flail hath threshed the corn
That ten day-labourers could not end.

150. Going back to the matter in hand, we will press the example closer. On a green knoll above that plain of the

* Compare Chaucer’s feeling respecting birds (from Canace’s falcon, to the nightingale, singing, “Domine, labia—” to the Lord of Love), with the usual modern British sentiments on this subject. Or even Cowley’s:—

"What prince’s choir of music can excel
That which within this shade does dwell,
To which we nothing pay, or give,
They, like all other poets, live
Without reward, or thanks for their obliging pains!
’Tis well if they become not prey."

Yes; it is better than well; particularly since the seed sown by the wayside has been protected by the peculiar appropriation of part of the church-rates in our country parishes. See the remonstrance from a “Country Parson,” in The Times of June 4th (or 5th; the letter is dated June
Arve, between Cluse and Bonneville, there was, in the year 1860, a cottage, inhabited by a well-doing family—man and wife, three children, and the grandmother. I call it a cottage, but in truth, it was a large chimney on the ground, wide at the bottom, so that the family might live round the fire; lighted by one small broken window, and entered by an unclosing door. The family, I say, was “well-doing;” at least it was hopeful and cheerful; the wife healthy, the children, for Savoyards, pretty and active, but the husband threatened with decline, from exposure under the cliffs of the Mont Vergi by day, and to draughts between every plank of his chimney in the frosty nights.

"Why could he not plaster the chinks?" asks the practical reader. For the same reason that your child cannot wash its face and hands till you have washed them many a day for it, and will not wash them when it can, till you force it.

151. I passed this cottage often in my walks, had its window and door mended; sometimes mended also a little the meal of sour bread and broth, and generally got kind greeting and smile from the face of young or old; which greeting, this year, narrowed itself into the half-recognizing stare of the elder child, and the old woman’s tears; for the father and mother were both dead,—one of sickness, the other of sorrow. It happened that I passed not alone, but with a companion, a practised English joiner, who, while these people were dying of cold, had been employed from six in the morning to six in the evening, for two months, in fitting, without nails, the panels of a single door in a large house in London. Three days of his work taken, at the right time, from fastening the oak panels with useless precision, and ap-

3rd,) 1862:—"I have heard at a vestry meeting a good deal of higgling over a few shillings’ outlay in cleaning the church; but I have never heard any dissatisfaction expressed on account of that part of the rate which is invested in 50 or 100 dozens of birds’ heads."

[If we could trace the innermost of all causes of modern war, I believe it would be found, not in the avarice nor ambition of nations, but in the mere idleness of the upper classes. They have nothing to do but to teach the peasantry to kill each other.]
plied to fasten the larch timbers with decent strength, would
have saved these Savoyards' lives. He would have been main-
tained equally; (I suppose him equally paid for his work by the
owner of the greater house, only the work not consumed self-
ishly on his own walls;) and the two peasants, and eventually,
probably their children, saved.

152. There are, therefore,—let me finally enforce, and
leave with the reader, this broad conclusion,—three things
to be considered in employing any poor person. It is not
enough to give him employment. You must employ him
first to produce useful things; secondly, of the several (sup-
pose equally useful) things he can equally well produce, you
must set him to make that which will cause him to lead the
healthiest life; lastly, of the things produced, it remains a
question of wisdom and conscience how much you are to take
yourself, and how much to leave to others. A large quantity,
remember, unless you destroy it, *must* always be so left at
one time or another; the only questions you have to decide
are, not *what* you will give, but *when*, and *how*, and *to whom*,
you will give. The natural law of human life is, of course,
that in youth a man shall labour and lay by store for his old
age, and when age comes, shall use what he has laid by,
gradually slackening his toil, and allowing himself more frank
use of his store; taking care always to leave himself as much
as will surely suffice for him beyond any possible length of
life. What he has gained, or by tranquil and unanxious toil
continues to gain, more than is enough for his own need, he
ought so to administer, while he yet lives, as to see the good
of it again beginning, in other hands; for thus he has him-
self the greatest sum of pleasure from it, and faithfully uses
his sagacity in its control. Whereas most men, it appears,
dislike the sight of their fortunes going out into service again,
and say to themselves,—"I can indeed nowise prevent this
money from falling at last into the hands of others, nor hinder
the good of it from becoming theirs, not mine; but at least
let a merciful death save me from being a witness of their
satisfaction; and may God so far be gracious to me as to let
no good come of any of this money of mine before my eyes."
158. Supposing this feeling un conquerable, the safest way of rationally indulging it would be for the capitalist at once to spend all his fortune on himself, which might actually, in many cases, be quite the rightest as well as the pleasantest thing to do, if he had just tastes and worthy passions. But, whether for himself only, or through the hands, and for the sake, of others also, the law of wise life is, that the maker of the money shall also be the spender of it, and spend it, approximately, all, before he dies; so that his true ambition as an economist should be, to die, not as rich, but as poor, as possible,* calculating the ebb tide of possession in true and calm proportion to the ebb tide of life. Which law, checking the wing of accumulative desire in the mid-volley,† and leading to peace of possession and fulness of fruition in old age, is also wholesome, in that by the freedom of gift, together with present help and counsel, it at once endears and dignifies age in the sight of youth, which then no longer strips the bodies of the dead, but receives the grace of the living. Its chief use would (or will be, for men are indeed capable of attaining to this much use of their reason), that some temperance and measure will be put to the acquisitiveness of commerce.§ For as things stand, a man holds it his duty to be

[* See the Life of Fenelon.  "The labouring peasantry were at all times the objects of his tenderest care; his palace at Cambray, with all his books and writings, being consumed by fire, he bore the misfortune with unruffled calmness, and said it was better his palace should be burnt than the cottage of a poor peasant." (These thoroughly good men always go too far, and lose their power over the mass.) He died exemplifying the mean he had always observed between prodigality and avarice, leaving neither debts nor money.]

† καὶ περίαν ἡγουμένου εἶναι μη τὸ τὴν οὕσιαν ἐλάττω ποιεῖν ἄλλα τὸ τὴν ἀπληστικάν πλεῖο.  "And thinking (wisely) that poverty consists not in making one's possessions less, but one's avarice more."—Luces, v. 8. Read the context, and compare. "He who spends for all that is noble, and gains by nothing but what is just, will hardly be notably wealthy, or distressfully poor."—Luces, v. 42.

‡ The fury of modern trade arises chiefly out of the possibility of making sudden fortunes by largeness of transaction, and accident of discovery or contrivance. I have no doubt that the final interest of every nation is to check the action of these commercial lotteries; and
temperate in his food, and of his body, but for no duty to be temperate in his riches, and of his mind. He sees that he ought not to waste his youth and his flesh for luxury; but he will waste his age, and his soul, for money, and think he does no wrong; nor know the delirium tremens of the intellect for disease. But the law of life is, that a man should fix the sum he desires to make annually, as the food he desires to eat daily; and stay when he has reached the limit, refusing increase of business, and leaving it to others, so obtaining due freedom of time for better thoughts.* How the gluttony of business is punished, a bill of health for the principals of the richest city houses, issued annually, would show in a sufficiently impressive manner.

154. I know, of course, that these statements will be received by the modern merchant as an active border rider of the sixteenth century would have heard of its being proper for men of the Marches to get their living by the spade, instead of the spur. But my business is only to state veracities and necessities; I neither look for the acceptance of the one, nor hope for the nearness of the other. Near or distant, the day will assuredly come when the merchants of a state shall be its true ministers of exchange, its porters, in the double sense of carriers and gate-keepers, bringing all lands into frank and faithful communication, and knowing for their master of guild, Hermes the herald, instead of Mercury the gain-guarder.

155. And now, finally, for immediate rule to all who will accept it.

The distress of any population means that they need food, house-room, clothes, and fuel. You can never, therefore, be wrong in employing any labourer to produce food, house-room, clothes, or fuel; but you are always wrong if you employ him to produce nothing, (for then some other labourer that all great accidental gains or losses should be national,—not individual. But speculation absolute, unconnected with commercial effort, is an unmitigated evil in a state, and the root of countless evils beside.

[*I desire in the strongest terms to reinforce all that is contained in this paragraph.]
must be worked double time to feed him); and you are generally wrong, at present, if you employ him (unless he can do nothing else) to produce works of art or luxuries; because modern art is mostly on a false basis, and modern luxury is criminally great.*

156. The way to produce more food is mainly to bring in fresh ground, and increase facilities of carriage;—to break rock, exchange earth, drain the moist, and water the dry, to mend roads, and build harbours of refuge. Taxation thus spent will annihilate taxation, but spent in war, it annihilates revenue.

157. The way to produce house-room is to apply your force first to the humblest dwellings. When your brick-layers are out of employ, do not build splendid new streets, but better the old ones; send your paviours and slaters to the poorest villages, and see that your poor are healthily lodged, before you try your hand on stately architecture. You will find its stateliness rise better under the trowel afterwards; and we do

* It is especially necessary that the reader should keep his mind fixed on the methods of consumption and destruction, as the true sources of national poverty. Men are apt to call every exchange “expenditure,” but it is only consumption which is expenditure. A large number of the purchases made by the richer classes are mere forms of interchange of unused property, wholly without effect on national prosperity. It matters nothing to the state whether, if a china pipkin be rated as worth a hundred pounds, A has the pipkin and B the pounds, or A the pounds and B the pipkin. But if the pipkin is pretty, and A or B breaks it, there is national loss, not otherwise. So again, when the loss has really taken place, no shifting of the shoulders that bear it will do away with the reality of it. There is an intensely ludicrous notion in the public mind respecting the abolition of debt by denying it. When a debt is denied, the lender loses instead of the borrower, that is all; the loss is precisely, accurately, everlastingly the same. The Americans borrow money to spend in blowing up their own houses. They deny their debt, by one-third already [1863], gold being at fifty premium; and they will probably deny it wholly. That merely means that the holders of the notes are to be the losers instead of the issuers. The quantity of loss is precisely equal, and irrevocable; it is the quantity of human industry spent in effecting the explosion, plus the quantity of goods exploded. Honour only decides who shall pay the sum lost not whether it is to be paid or not. Paid it must be, and to the uttermost farthing.
do not yet build so well that we need hasten to display our skill to future ages. Had the labour which has decorated the Houses of Parliament filled, instead, rents in walls and roofs throughout the county of Middlesex; and our deputies met to talk within massive walls that would have needed no stucco for five hundred years,—the decoration might have been afterwards, and the talk now. And touching even our highly conscientious church building, it may be well to remember that in the best days of church plans, their masons called themselves "logeurs du bon Dieu;" and that since, according to the most trusted reports, God spends a good deal of His time in cottages as well as in churches, He might perhaps like to be a little better lodged there also.

158. The way to get more clothes is—not, necessarily, to get more cotton. There were words written twenty years ago * which would have saved many of us some shivering, had they been minded in time. Shall we read them again?

"The Continental people, it would seem, are importing our machinery, beginning to spin cotton, and manufacture for themselves; to cut us out of this market, and then out of that! Sad news, indeed; but irremediable. By no means the saddest news—the saddest news, is that we should find our national existence, as I sometimes hear it said, depend on selling manufactured cotton at a farthing an ell cheaper than any other people. A most narrow stand for a great nation to base itself on! A stand which, with all the Corn-law abrogations conceivable, I do not think will be capable of enduring.

"My friends, suppose we quitted that stand; suppose we came honestly down from it and said—'This is our minimum of cotton prices; we care not, for the present, to make cotton any cheaper. Do you, if it seem so blessed to you, make cotton cheaper. Fill your lungs with cotton fur; your heart

[* (Past and Present, Chap. IX. of Third Section.) To think that for these twenty—now twenty-six—years, this one voice of Carlyle's has been the only faithful and useful utterance in all England, and has sounded through all these years in vain! See Fors Clavigera, Letter X.]
with copperas fumes, with rage and mutiny; become ye the general gnomes of Europe, slaves of the lamp! ’ I admire a nation which fancies it will die if it do not undersell all other nations to the end of the world. Brothers, we will cease to undersell them; we will be content to equal-sell them; to be happy selling equally with them! I do not see the use of underselling them: cotton-cloth is already twopence a yard, or lower; and yet bare backs were never more numerous among us. Let inventive men cease to spend their existence incessantly contriving how cotton can be made cheaper; and try to invent a little how cotton at its present cheapness could be somewhat justlier divided among us.

"Let inventive men consider—whether the secret of this universe does after all consist in making money. With a hell which means—‘failing to make money,’ I do not think there is any heaven possible that would suit one well. In brief, all this Mammon gospel of supply-and-demand, competition, laissez faire, and devil take the hindmost (foremost, is it not, rather, Mr. Carlyle?), ‘begins to be one of the shabbiest gospels ever preached.’"

159. The way to produce more fuel * is first to make your coal mines safer, by sinking more shafts; then set all your convicts to work in them, and if, as is to be hoped, you succeed in diminishing the supply of that sort of labourer, consider what means there may be, first, of growing forest where its growth will improve climate; secondly, of splintering the forests which now make continents of fruitful land pathless and poisonous, into fagots for fire;—so gaining at once dominion icerwards and sunwards. Your steam power has been given (you will find eventually) for work such as that: and not for excursion trains, to give the labourer a moment’s breath, at the peril of his breath for ever, from amidst the cities which it has crushed into masses of corruption. When you know how to build cities, and how to rule them, you will be able to

[* We don’t want to produce more fuel just now, but much less; and to use what we get for cooking and warming ourselves, instead of for running from place to place.]
breathe in their streets, and the "excursion" will be the afternoon's walk or game in the fields round them.

160. "But nothing of this work will pay?"

No; no more than it pays to dust your rooms, or wash your doorsteps. It will pay; not at first in currency, but in that which is the end and the source of currency,—in life; (and in currency richly afterwards). It will pay in that which is more than life,—in light, whose true price has not yet been reckoned in any currency, and yet into the image of which, all wealth, one way or other, must be cast. For your riches must either be as the lightning, which,

Begot but in a cloud,
Though shining bright, and speaking loud,
Whilst it begins, concludes its violent race;
And, where it gilds, it wounds the place;

or else, as the lightning of the sacred sign, which shines from one part of the heaven to the other. There is no other choice; you must either take dust for deity, spectre for possession, fettered dream for life, and for epitaph, this reversed verse of the great Hebrew hymn of economy (Psalm cxii.):—"He hath gathered together, he hath stripped the poor, his iniquity remaineth for ever:"—or else, having the sun of justice to shine on you, and the sincere substance of good in your possession, and the pure law and liberty of life within you, leave men to write this better legend over your grave:—

"He hath dispersed abroad. He hath given to the poor.
His righteousness remaineth for ever."
APPENDICES.

I have brought together in these last pages a few notes, which were not properly to be incorporated with the text, and which, at the bottom of pages, checked the reader's attention to the main argument. They contain, however, several statements to which I wish to be able to refer, or have already referred, in other of my books, so that I think right to preserve them.

APPENDIX I.—(p. 22.)

The greatest of all economists are those most opposed to the doctrine of "laissez faire," namely, the fortifying virtues, which the wisest men of all time have arranged under the general heads of Prudence, or Discretion (the spirit which discerns and adopts rightly); Justice (the spirit, which rules and divides rightly); Fortitude (the spirit which persists and endures rightly); and Temperance (the spirit which stops and refuses rightly). These cardinal and sentinel virtues are not only the means of protecting and prolonging life itself, but they are the chief guards, or sources, of the material means of life, and the governing powers and princes of economy. Thus, precisely according to the number of just men in a nation, is their power of avoiding either intestine or foreign war. All disputes may be peaceably settled, if a sufficient number of persons have been trained to submit to the principles of justice, while the necessity for war is in direct ratio to the number of unjust persons who are incapable of determining a quarrel but by violence. Whether the injustice take the form of the desire of dominion, or of refusal to submit to it, or of lust of territory, or lust of money, or of
mere irregular passion and wanton will, the result is economically the same;—loss of the quantity of power and life consumed in repressing the injustice, added to the material and moral destruction caused by the fact of war. The early civil wars of England, and the existing * war in America, are curious examples—these under monarchical, this under republican, institutions—of the results on large masses of nations of the want of education in principles of justice. But the mere dread or distrust resulting from the want of the inner virtues of Faith and Charity prove often no less costly than war itself. The fear which France and England have of each other costs each nation about fifteen millions sterling annually, besides various paralyses of commerce; that sum being spent in the manufacture of means of destruction instead of means of production. There is no more reason in the nature of things that France and England should be hostile to each other than that England and Scotland should be, or Lancashire and Yorkshire; and the reciprocal terrors of the opposite sides of the English Channel are neither more necessary, more economical, nor more virtuous, than the old riding and reiving on the opposite flanks of the Cheviots, or than England's own weaving for herself of crowns of thorn, from the stems of her Red and White roses.

APPENDIX II.—(p. 34.)

Few passages of the book which at least some part of the nations at present most advanced in civilization accept as an expression of final truth, have been more distorted than those bearing on Idolatry. For the idolatry there denounced is neither sculpture, nor veneration of sculpture. It is simply the substitution of an "Eidolon," phantasm, or imagination of Good, for that which is real and enduring; from the Highest Living Good, which gives life, to the lowest material good

[* Written in 1862. I little thought that when I next corrected my type, the "existing" war best illustrative of the sentence, would be between Frenchmen in the Elysian Fields of Paris.]
which ministers to it. The Creator, and the things created, which He is said to have “seen good” in creating, are in this their eternal goodness appointed always to be “worshipped,” —i. e., to have goodness and worth ascribed to them from the heart; and the sweep and range of idolatry extend to the rejection of any or all of these, “calling evil good, and good evil,—putting bitter for sweet, and sweet for bitter.” * For in that rejection and substitution we betray the first of all Loyalties, to the fixed Law of life, and with resolute opposite loyalty serve our own imagination of good, which is the law, not of the House, but of the Grave, (otherwise called the law of “mark missing,” which we translate “law of Sin”); these “two masters,” between whose services we have to choose, being otherwise distinguished as God and Mammon, which Mammon, though we narrowly take it as the power of money only, is in truth the great evil Spirit of false and fond desire, or “Covetousness, which is Idolatry.” So that Iconoclasm—image-breaking—is easy; but an Idol cannot be broken—it must be forsaken; and this is not so easy, either to do, or persuade to doing. For men may readily be convinced of the weakness of an image; but not of the emptiness of an imagination.

APPENDIX III.—(p. 36.)

I have not attempted to support, by the authority of other writers, any of the statements made in these papers; indeed, if such authorities were rightly collected, there would be no occasion for my writing at all. Even in the scattered passages referring to this subject in three books of Carlyle’s—Sartor Resartus, Past and Present, and the Latter Day Pamphlets,—all has been said that needs to be said, and far better than I shall ever say it again. But the habit of the public mind at present is to require everything to be uttered diffusely, loudly, and a hundred times over, before it will listen; and it has revolted against these papers of mine as if they con-

* Compare the close of the Fourth Lecture in Aratra Pentelici.
tained things daring and new, when there is not one assertion in them of which the truth has not been for ages known to the wisest, and proclaimed by the most eloquent of men. It would be [I had written will be; but have now reached a time of life for which there is but one mood—the conditional,] a far greater pleasure to me hereafter, to collect their words than to add to mine; Horace's clear rendering of the substance of the passages in the text may be found room for at once,

Si quis emat eitharas, emptas comportet in unum
Nec studio citharae, nec Musae deditus uli;
Si scalpra et formas non sutor, nautica vela
Aversus mercaturis, delirus et amens
Undique dicatur merito. Qui discrepat istis
Qui nummos aurumque recondit, nescius uti
Compositis; metuensque velut contingere sacrum?

[Which may be roughly thus translated:—

"Were anybody to buy fiddles, and collect a number, being in no wise given to fiddling, nor fond of music: or if, being no cobbler, he collected awls and lasts, or, having no mind for sea-adventure, bought sails, every one would call him a madman, and deservedly. But what difference is there between such a man and one who lays by coins and gold, and does not know how to use, when he has got them?"]

With which it is perhaps desirable also to give Xenophon's statement, it being clearer than any English one can be, owing to the power of the general Greek term for wealth, "useable things."

[I have cut out the Greek because I can't be troubled to correct the accents, and am always nervous about them; here it is in English, as well as I can do it:—

"This being so, it follows that things are only property to the man who knows how to use them; as flutes, for instance, are property to the man who can pipe upon them respectably; but to one who knows not how to pipe, they are no property, unless he can get rid of them advantageously. . . For if they are not sold, the flutes are no property (being service-
able for nothing); but, sold, they become property. To which Socrates made answer,—‘and only then if he knows how to sell them, for if he sell them to another man who cannot play on them, still they are no property.’”

APPENDIX IV.—(p. 39.)

The reader is to include here in the idea of “Government,” any branch of the Executive, or even any body of private persons, entrusted with the practical management of public interests unconnected directly with their own personal ones. In theoretical discussions of legislative interference with political economy, it is usually, and of course unnecessarily, assumed that Government must be always of that form and force in which we have been accustomed to see it;—that its abuses can never be less, nor its wisdom greater, nor its powers more numerous. But, practically, the custom in most civilized countries is, for every man to deprecate the interference of Government as long as things tell for his personal advantage, and to call for it when they cease to do so. The request of the Manchester Economists to be supplied with cotton by Government (the system of supply and demand having, for the time, fallen sorrowfully short of the expectations of scientific persons from it), is an interesting case in point. It were to be wished that less wide and bitter suffering, suffering, too, of the innocent, had been needed to force the nation, or some part of it, to ask itself why a body of men, already confessedly capable of managing matters both military and divine, should not be permitted, or even requested, at need, to provide in some wise for sustenance as well as for defence; and secure, if it might be,—(and it might, I think, even the rather be),—purity of bodily, as well as of spiritual, aliment? Why, having made many roads for the passage of armies, may they not make a few for the conveyance of food; and after organizing, with applause, various schemes of theological instruction for the Public, organize,
moreover, some methods of bodily nourishment for them? Or is the soul so much less trustworthy in its instincts than the stomach, that legislation is necessary for the one, but inapplicable to the other.

---

APPENDIX V.—(p. 70.)

I debated with myself whether to make the note on Homer longer by examining the typical meaning of the shipwreck of Ulysses, and his escape from Charybdis by help of her figtree; but as I should have had to go on to the lovely myth of Leucothea's veil, and did not care to spoil this by a hurried account of it, I left it for future examination; and, three days after the paper was published, observed that the reviewers, with their customary helpfulness, were endeavouring to throw the whole subject back into confusion by dwelling on this single (as they imagined) oversight. I omitted also a note on the sense of the word λυγρός, with respect to the pharmacy of Circe, and herb-fields of Helen, (compare its use in Odyssey, xvii., 473, &c.), which would farther have illustrated the nature of the Circean power. But, not to be led too far into the subtleties of these myths, observe respecting them all, that even in very simple parables, it is not always easy to attach indisputable meaning to every part of them. I recollect some years ago, throwing an assembly of learned persons who had met to delight themselves with interpretations of the parable of the prodigal son, (interpretations which had up to that moment gone very smoothly,) into mute indignation, by inadvertently asking who the unprodigal son was, and what was to be learned by his example. The leading divine of the company, Mr. Molyneux, at last explained to me that the unprodigal son was a lay figure, put in for dramatic effect, to make the story prettier, and that no note was to be taken of him. Without, however, admitting that Homer put in the last escape of Ulysses merely to make his story prettier, this is nevertheless true of all Greek myths, that they have many opposite lights and
shades; they are as changeful as opal, and like opal, usually have one colour by reflected, and another by transmitted light. But they are true jewels for all that, and full of noble enchantment for those who can use them; for those who cannot, I am content to repeat the words I wrote four years ago, in the appendix to the Two Paths—

"The entire purpose of a great thinker may be difficult to fathom, and we may be over and over again more or less mistaken in guessing at his meaning; but the real, profound, nay, quite bottomless and unredeemable mistake, is the fool's thought, that he had no meaning."

APPENDIX VI.—(p. 84.)

The derivation of words is like that of rivers: there is one real source, usually small, unlikely, and difficult to find, far up among the hills; then, as the word flows on and comes into service, it takes in the force of other words from other sources, and becomes quite another word—often much more than one word, after the junction—a word as it were of many waters, sometimes both sweet and bitter. Thus the whole force of our English "charity" depends on the guttural in "charis" getting confused with the c of the Latin "carus;" thenceforward throughout the middle ages, the two ideas ran on together, and both got confused with St. Paul's \( \dot{a} \gamma \dot{a} \pi \eta \), which expresses a different idea in all sorts of ways; our "charity" having not only brought in the entirely foreign sense of almsgiving, but lost the essential sense of contentment, and lost much more in getting too far away from the "charis" of the final Gospel benedictions. For truly it is fine Christianity we have come to, which, professing to expect the perpetual grace or charity of its Founder, has not itself grace or charity enough to hinder it from overreaching its friends in sixpenny bargains; and which, supplicating evening and morning the forgiveness of its own debts, goes forth at noon to take its fellow-servants by the throat, saying,—not merely "Pay me that thou owest," but "Pay me that thou owest me not."
It is true that we sometimes wear Ophelia's rue with a difference, and call it "Herb o' grace o' Sundays," taking consolation out of the offertory with—"Look, what he layeth out, it shall be paid him again." Comfortable words indeed, and good to set against the old royalty of Largesse—

Whose moste joie was, I wis,
When that she gave, and said, "Have this."

[I am glad to end, for this time, with these lovely words of Chaucer. We have heard only too much lately of "Indiscriminate charity," with implied reproval, not of the Indiscrimination merely, but of the Charity also. We have partly succeeded in enforcing on the minds of the poor the idea that it is disgraceful to receive; and are likely, without much difficulty, to succeed in persuading not a few of the rich that it is disgraceful to give. But the political economy of a great state makes both giving and receiving graceful; and the political economy of true religion interprets the saying that "it is more blessed to give than to receive," not as the promise of reward in another life for mortified selfishness in this, but as pledge of bestowal upon us of that sweet and better nature, which does not mortify itself in giving.]

Brantwood, Coniston,
5th October, 1871.

THE END.
PRE-RAPHAELITISM

BY THE AUTHOR

OF

"MODERN PAINTERS"

NEW YORK
JOHN W. LOVELL COMPANY
150 Worth Street, corner Mission Place
To
FRANCIS HAWKSWORTH FAWKES, ESQ.
OF FARNLEY
THOSE PAGES
WHICH OWE THEIR PRESENT FORM TO ADVANTAGES GRANTED
BY HIS KINDNESS
ARE AFFECTIONATELY INSCRIBED
BY HIS OBLIGED FRIEND
JOHN RUSKIN
Eight years ago, in the close of the first volume of "Modern Painters," I ventured to give the following advice to the young artists of England:

"They should go to nature in all singleness of heart, and walk with her laboriously and trustingly, having no other thought but how best to penetrate her meaning; rejecting nothing, selecting nothing, and scorning nothing." Advice which, whether bad or good, involved infinite labor and humiliation in the following it; and was therefore, for the most part, rejected.

It has, however, at last been carried out, to the very letter, by a group of men who, for their reward, have been assailed with the most scurrilous abuse which I ever recollect seeing issue from the public press. I have, therefore, thought it due to them to contradict the directly false statements which have been made respecting their works; and to point out the kind of merit which, however deficient in some respects, those works possess beyond the possibility of dispute.

Denmark Hill,
Aug. 1851.
People usually reason in some such fashion as this: "I don’t seem quite fit for a head-manager in the firm of ——— & Co., therefore, in all probability, I am fit to be Chancellor of the Exchequer." Whereas, they ought rather to reason thus: "I don’t seem quite fit to be head-manager in the firm of ——— & Co., but I daresay I might do something in a small green-grocery business; I used to be a good judge of peas;" that is to say, always trying lower instead of trying higher, until they find bottom: once well set on the ground, a man may build up by degrees, safely, instead of disturbing every one in his neighborhood by perpetual catastrophes. But this kind of humility is rendered especially difficult in these days, by the contumely thrown on men in humble employments. The very removal of the massy bars which once separated one class of society from another, has rendered it tenfold more shameful in foolish people’s, i.e. in most people’s eyes, to remain in the lower grades of it, than ever it was before. When a man born of an artisan was looked upon as an entirely different species of animal from a man born of a noble, it made him no more uncomfortable or ashamed to remain that different species of animal, than it makes a horse ashamed to remain a horse, and not to become a giraffe. But now that a man may make money, and rise in the world, and associate himself, unreproached, with people once far above him, not only is the natural discontentedness of humanity developed to an unheard-of extent, whatever a man’s position, but it becomes a veritable shame to him to remain in the state he was born in, and everybody thinks it his duty to try to be a “gentleman.” Persons who have any influence in the management of public institutions for charitable education know how common this feeling has become. Hardly a day passes but they receive letters from mothers who want all their six or eight sons to go to college, and make the grand tour in the long vacation, and who think there is something wrong in the foundations of society, because this is not possible. Out of every ten letters of this kind, nine will allege, as the reason of the writers’ importunity, their desire to keep their families in such and such a “station of life.” There is no real desire
for the safety, the discipline, or the moral good of the children, only a panic horror of the inexpressibly pitiable calamity of their living a ledge or two lower on the molehill of the world—a calamity to be averted at any cost whatever, of struggle, anxiety, and shortening of life itself. I do not believe that any greater good could be achieved for the country, than the change in public feeling on this head, which might be brought about by a few benevolent men, undeniably in the class of "gentlemen," who would, on principle, enter into some of our commonest trades, and make them honorable; showing that it was possible for a man to retain his dignity, and remain, in the best sense, a gentleman, though part of his time was every day occupied in manual labor, or even in serving customers over a counter. I do not in the least see why courtesy, and gravity, and sympathy with the feelings of others, and courage, and truth, and piety, and what else goes to make up a gentleman's character, should not be found behind a counter as well as elsewhere, if they were demanded, or even hoped for, there.

Let us suppose, then, that the man's way of life and manner of work have been discreetly chosen; then the next thing to be required is, that he do not over-work himself therein. I am not going to say anything here about the various errors in our systems of society and commerce, which appear (I am not sure if they ever do more than appear) to force us to over-work ourselves merely that we may live; nor about the still more fruitful cause of unhealthy toil—the incapability, in many men, of being content with the little that is indeed necessary to their happiness. I have only a word or two to say about one special cause of over-work—the ambitious desire of doing great or clever things, and the hope of accomplishing them by immense efforts: hope as vain as it is pernicious; not only making men over-work themselves, but rendering all the work they do unwholesome to them. I say it is a vain hope, and let the reader be assured of this (it is a truth all-important to the best interests of humanity). No great intellectual thing was ever done by great effort; a great thing can only be done by a great man, and he does it without
effort. Nothing is, at present, less understood by us than
this—nothing is more necessary to be understood. Let me
try to say it as clearly, and explain it as fully as I may.

I have said no great intellectual thing: for I do not mean
the assertion to extend to things moral. On the contrary, it
seems to me that just because we are intended, as long as we
live, to be in a state of intense moral effort, we are not in-
tended to be in intense physical or intellectual effort. Our
full energies are to be given to the soul's work—to the great
fight with the Dragon—the taking the kingdom of heaven by
force. But the body's work and head's work are to be done
quietly, and comparatively without effort. Neither limbs nor
brain are ever to be strained to their utmost; that is not the
way in which the greatest quantity of work is to be got out of
them: they are never to be worked furiously, but with tran-
quillity and constancy. We are to follow the plough from
sunrise to sunset, but not to pull in race-boats at the twilight:
we shall get no fruit of that kind of work, only disease of the
heart.

How many pangs would be spared to thousands, if this
great truth and law were but once sincerely, humbly under-
stood,—that if a great thing can be done at all, it can be done
easily; that, when it is needed to be done, there is perhaps
only one man in the world who can do it; but he can do it
without any trouble—without more trouble, that is, than it
costs small people to do small things; nay, perhaps, with less.
And yet what truth lies more openly on the surface of all
human phenomena? Is not the evidence of Ease on the very
front of all the greatest works in existence? Do they not say
plainly to us, not, "there has been a great effort here," but,
"there has been a great power here"? It is not the weari-
ness of mortality, but the strength of divinity, which we have
to recognise in all mighty things; and that is just what we
now never recognise, but think that we are to do great things,
by help of iron bars and perspiration:—alas! we shall do
nothing that way but lose some pounds of our own weight.

Yet, let me not be misunderstood, nor this great truth be
supposed anywise resolvable into the favorite dogma of young
men, that they need not work if they have genius. The fact is, that a man of genius is always far more ready to work than other people, and gets so much more good from the work that he does, and is often so little conscious of the inherent divinity in himself, that he is very apt to ascribe all his capacity to his work, and to tell those who ask how he came to be what he is: "If I am anything, which I much doubt, I made myself so merely by labor." This was Newton's way of talking, and I suppose it would be the general tone of men whose genius had been devoted to the physical sciences. Genius in the Arts must commonly be more self-conscious, but in whatever field, it will always be distinguished by its perpetual, steady, well-directed, happy, and faithful labor in accumulating and disciplining its powers, as well as by its gigantic, incommunicable facility in exercising them. Therefore, literally, it is no man's business whether he has genius or not: work he must, whatever he is, but quietly and steadily; and the natural and unforced results of such work will be always the things that God meant him to do, and will be his best. No agonies nor heart-rendings will enable him to do any better. If he be a great man, they will be great things; if a small man, small things; but always, if thus peacefully done, good and right; always, if restlessly and ambitiously done, false, hollow, and despicable.

Then the third thing needed was, I said, that a man should be a good judge of his work; and this chiefly that he may not be dependent upon popular opinion for the manner of doing it, but also that he may have the just encouragement of the sense of progress, and an honest consciousness of victory: how else can he become

"That awful independent on to-morrow,  
Whose yesterdays look backwards with a smile."

I am persuaded that the real nourishment and help of such a feeling as this is nearly unknown to half the workmen of the present day. For whatever appearance of self-complacency there may be in their outward bearing, it is visible enough,
by their feverish jealousy of each other, how little confidence they have in the sterling value of their several doings. Conceit may puff a man up, but never prop him up; and there is too visible distress and hopelessness in men's aspects to admit of the supposition that they have any stable support of faith in themselves.

I have stated these principles generally, because there is no branch of labor to which they do not apply: But there is one in which our ignorance or forgetfulness of them has caused an incalculable amount of suffering: and I would endeavor now to reconsider them with especial reference to it,—the branch of the Arts.

In general, the men who are employed in the Arts have freely chosen their profession, and suppose themselves to have special faculty for it; yet, as a body, they are not happy men. For which this seems to me the reason, that they are expected, and themselves expect, to make their bread by being clever—not by steady or quiet work; and are, therefore, for the most part, trying to be clever, and so living in an utterly false state of mind and action.

This is the case, to the same extent, in no other profession or employment. A lawyer may indeed suspect that, unless he has more wit than those around him, he is not likely to advance in his profession; but he will not be always thinking how he is to display his wit. He will generally understand, early in his career, that wit must be left to take care of itself, and that it is hard knowledge of law and vigorous examination and collation of the facts of every case entrusted to him, which his clients will mainly demand; this it is which he has to be paid for; and this is healthy and measurable labor, payable by the hour. If he happen to have keen natural perception and quick wit, these will come into play in their due time and place, but he will not think of them as his chief power; and if he have them not, he may still hope that industry and conscientiousness may enable him to rise in his profession without them. Again in the case of clergymen: that they are sorely tempted to display their eloquence or wit, none who know their own hearts will deny, but then they know this to be a
temptation: they never would suppose that cleverness was all that was to be expected from them, or would sit down deliberately to write a clever sermon: even the dullest or vainest of them would throw some veil over their vanity, and pretend to some profitableness of purpose in what they did. They would not openly ask of their hearers—Did you think my sermon ingenious, or my language poetical? They would early understand that they were not paid for being ingenious, nor called to be so, but to preach truth; that if they happened to possess wit, eloquence, or originality, these would appear and be of service in due time, but were not to be continually sought after or exhibited: and if it should happen that they had them not, they might still be serviceable pastors without them.

Not so with the unhappy artist. No one expects any honest or useful work of him; but every one expects him to be ingenious. Originality, dexterity, invention, imagination, every thing is asked of him except what alone is to be had for asking—honesty and sound work, and the due discharge of his function as a painter. What function? asks the reader in some surprise. He may well ask; for I suppose few painters have any idea what their function is, or even that they have any at all.

And yet surely it is not so difficult to discover. The faculties, which when a man finds in himself, he resolves to be a painter, are, I suppose, intenseness of observation and facility of imitation. The man is created an observer and an imitator; and his function is to convey knowledge to his fellow-men, of such things as cannot be taught otherwise than ocularly. For a long time this function remained a religious one: it was to impress upon the popular mind the reality of the objects of faith, and the truth of the histories of Scripture, by giving visible form to both. That function has now passed away, and none has as yet taken its place. The painter has no profession, no purpose. He is an idler on the earth, chasing the shadows of his own fancies.

But he was never meant to be this. The sudden and universal Naturalism, or inclination to copy ordinary natural
objects, which manifested itself among the painters of Europe, at the moment when the invention of printing superseded their legendary labors, was no false instinct. It was misunderstood and misapplied, but it came at the right time, and has maintained itself through all kinds of abuse; presenting in the recent schools of landscape, perhaps only the first fruits of its power. That instinct was urging every painter in Europe at the same moment to his true duty—the faithful representation of all objects of historical interest, or of natural beauty existent at the period; representations such as might at once aid the advance of the sciences, and keep faithful record of every monument of past ages which was likely to be swept away in the approaching eras of revolutionary change.

The instinct came, as I said, exactly at the right moment; and let the reader consider what amount and kind of general knowledge might by this time have been possessed by the nations of Europe, had their painters understood and obeyed it. Suppose that, after disciplining themselves so as to be able to draw, with unerring precision, each the particular kind of subject in which he most delighted, they had separated into two great armies of historians and naturalists;—that the first had painted with absolute faithfulness every edifice, every city, every battle-field, every scene of the slightest historical interest, precisely and completely rendering their aspect at the time; and that their companions, according to their several powers, had painted with like fidelity the plants and animals, the natural scenery, and the atmospheric phenomena of every country on the earth—suppose that a faithful and complete record were now in our museums of every building destroyed by war, or time, or innovation, during these last 200 years—suppose that each recess of every mountain chain of Europe had been penetrated, and its rocks drawn with such accuracy that the geologist's diagram was no longer necessary—suppose that every tree of the forest had been drawn in its noblest aspect, every beast of the field in its savage life—that all these gatherings were already in our national galleries, and that the painters of the present day were
laboring, happily and earnestly, to multiply them, and put such means of knowledge more and more within reach of the common people—would not that be a more honorable life for them, than gaining precarious bread by "bright effects?" They think not, perhaps. They think it easy, and therefore contemptible, to be truthful; they have been taught so all their lives. But it is not so, whoever taught it them. It is most difficult, and worthy of the greatest men's greatest effort, to render, as it should be rendered, the simplest of the natural features of the earth; but also be it remembered, no man is confined to the simplest; each may look out work for himself where he chooses, and it will be strange if he cannot find something hard enough for him. The excuse is, however, one of the lips only; for every painter knows that when he draws back from the attempt to render nature as she is, it is oftener in cowardice than in disdain.

I must leave the reader to pursue this subject for himself; I have not space to suggest to him the tenth part of the advantages which would follow, both to the painter from such an understanding of his mission, and to the whole people, in the results of his labor. Consider how the man himself would be elevated: how content he would become, how earnest, how full of all accurate and noble knowledge, how free from envy—knowing creation to be infinite, feeling at once the value of what he did, and yet the nothingness. Consider the advantage to the people; the immeasurably larger interest given to art itself; the easy, pleasurable, and perfect knowledge conveyed by it, in every subject; the far greater number of men who might be healthily and profitably occupied with it as a means of livelihood; the useful direction of myriads of inferior talents, now left fading away in misery. Conceive all this, and then look around at our exhibitions, and behold the "cattle pieces," and "sea pieces," and "fruit pieces," and "family pieces;" the eternal brown cows in ditches, and white sails in squalls, and sliced lemons in saucers, and foolish faces in simpers;—and try to feel what we are, and what we might have been.

Take a single instance in one branch of archaeology. Let
those who are interested in the history of religion consider what a treasure we should now have possessed, if, instead of painting pots, and vegetables, and drunken peasantry, the most accurate painters of the seventeenth and eighteenth centuries had been set to copy, line for line, the religious and domestic sculpture on the German, Flemish, and French cathedrals and castles; and if every building destroyed in the French or in any other subsequent revolution, had thus been drawn in all its parts with the same precision with which Gerard Douw or Miers paint basreliefs of Cupids. Consider, even now, what incalculable treasure is still left in ancient basreliefs, full of every kind of legendary interest, of subtle expression, of priceless evidence as to the character, feelings, habits, histories, of past generations, in neglected and shattered churches and domestic buildings, rapidly disappearing over the whole of Europe—treasure which, once lost, the labor of all men living cannot bring back again; and then look at the myriads of men, with skill enough, if they had but the commonest schooling, to record all this faithfully, who are making their bread by drawing dances of naked women from academy models, or idealities of chivalry fitted out with Wardour Street armor, or eternal scenes from Gil Blas, Don Quixote, and the Vicar of Wakefield, or mountain sceneries with young idiots of Londoners wearing Highland bonnets and brandishing rifles in the foregrounds. Do but think of these things in the breadth of their inexpressible imbecility, and then go and stand before that broken basrelief in the southern gate of Lincoln Cathedral, and see if there is no fibre of the heart in you that will break too.

But is there to be no place left, it will be indignantly asked, for imagination and invention, for poetical power, or love of ideal beauty? Yes; the highest, the noblest place—that which these only can attain when they are all used in the cause, and with the aid of truth. Wherever imagination and sentiment are, they will either show themselves without forcing; or, if capable of artificial development, the kind of training which such a school of art would give them would be the best they could receive. The infinite absurdity and failure
of our present training consists mainly in this, that we do not rank imagination and invention high enough, and suppose that they can be taught. Throughout every sentence that I ever have written, the reader will find the same rank attributed to these powers,—the rank of a purely divine gift, not to be attained, increased, or in any wise modified by teaching, only in various ways capable of being concealed or quenched. Understand this thoroughly; know once for all, that a poet on canvas is exactly the same species of creature as a poet in song, and nearly every error in our methods of teaching will be done away with. For who among us now thinks of bringing men up to be poets?—of producing poets by any kind of general recipe or method of cultivation? Suppose even that we see in youth that which we hope may, in its development, become a power of this kind, should we instantly, supposing that we wanted to make a poet of him, and nothing else, forbid him all quiet, steady, rational labor? Should we force him to perpetual spinning of new crudities out of his boyish brain, and set before him, as the only objects of his study, the laws of versification which criticism has supposed itself to discover in the works of previous writers? Whatever gifts the boy had, would much be likely to come of them so treated? unless, indeed, they were so great as to break through all such snares of falsehood and vanity, and build their own foundation in spite of us; whereas if, as in cases numbering millions against units, the natural gifts were too weak to do this, could any thing come of such training but utter inanity and spuriousness of the whole man? But if we had sense, should we not rather restrain and bridle the first flame of invention in early youth, heaping material on it as one would on the first sparks and tongues of a fire which we desired to feed into greatness? Should we not educate the whole intellect into general strength, and all the affections into warmth and honesty, and look to heaven for the rest? This, I say, we should have sense enough to do, in order to produce a poet in words: but, it being required to produce a poet on canvas, what is our way of setting to work? We begin, in all probability, by telling the youth of fifteen or sixteen, that Nature
is full of faults, and that he is to improve her; but that Raphael is perfection, and that the more he copies Raphael the better; that after much copying of Raphael, he is to try what he can do himself in a Raphaelian manner: that is to say, he is to try to do something very clever, all out of his own head, but yet this clever something is to be properly subjected to Raphaelian rules, is to have a principal light occupying one-seventh of its space, and a principal shadow occupying one-third of the same; that no two people's heads in the picture are to be turned the same way, and that all the personages represented are to possess ideal beauty of the highest order, which ideal beauty consists partly in a Greek outline of nose, partly in proportions expressible in decimal fractions between the lips and chin; but partly also in that degree of improvement which the youth of sixteen is to bestow upon God's work in general. This I say is the kind of teaching which through various channels, Royal Academy lecturings, press criticisms, public enthusiasm, and not least by solid weight of gold, we give to our young men. And we wonder we have no painters!

But we do worse than this. Within the last few years some sense of the real tendency of such teaching has appeared in some of our younger painters. It only could appear in the younger ones, our older men having become familiarised with the false system, or else having passed through it and forgotten it, not well knowing the degree of harm they had sustained. This sense appeared, among our youths,—increased,—matured into resolute action. Necessarily, to exist at all, it needed the support both of strong instincts and of considerable self-confidence, otherwise it must at once have been borne down by the weight of general authority and received canon law. Strong instincts are apt to make men strange, and rude; self-confidence, however well founded, to give much of what they do or say the appearance of impertinence. Look at the self-confidence of Wordsworth, stiffening every other sentence of his prefaces into defiance; there is no more of it than was needed to enable him to do his work, yet it is not a little ungraceful here and there. Suppose this stubbornness and self-trust in
a youth, laboring in an art of which the executive part is confessedly to be best learnt from masters, and we shall hardly wonder that much of his work has a certain awkwardness and stiffness in it, or that he should be regarded with disfavor by many, even the most temperate, of the judges trained in the system he was breaking through, and with utter contempt and reprobation by the envious and the dull. Consider, farther, that the particular system to be overthrown was, in the present case, one of which the main characteristic was the pursuit of beauty at the expense of manliness and truth; and it will seem likely, a priori, that the men intended successfully to resist the influence of such a system should be endowed with little natural sense of beauty, and thus rendered dead to the temptation it presented. Summing up these conditions, there is surely little cause for surprise that pictures painted, in a temper of resistance, by exceedingly young men, of stubborn instincts and positive self-trust, and with little natural perception of beauty, should not be calculated, at the first glance, to win us from works enriched by plagiarism, polished by convention, invested with all the attractiveness of artificial grace, and recommended to our respect by established authority.

We should, however, on the other hand, have anticipated, that in proportion to the strength of character required for the effort, and to the absence of distracting sentiments, whether respect for precedent, or affection for ideal beauty, would be the energy exhibited in the pursuit of the special objects which the youths proposed to themselves, and their success in attaining them.

All this has actually been the case, but in a degree which it would have been impossible to anticipate. That two youths, of the respective ages of eighteen and twenty, should have conceived for themselves a totally independent and sincere method of study, and enthusiastically persevered in it against every kind of dissuasion and opposition, is strange enough; that in the third or fourth year of their efforts they should have produced works in many parts not inferior to the best of Albert Durer, this is perhaps not less strange. But the
loudness and universality of the howl which the common critics of the press have raised against them, the utter absence of all generous help or encouragement from those who can both measure their toil and appreciate their success, and the shrill, shallow laughter of those who can do neither the one nor the other,—these are strangest of all—unimaginable unless they had been experienced.

And as if these were not enough, private malice is at work against them, in its own small, slimy way. The very day after I had written my second letter to the Times in the defence of the Pre-Raphaelites, I received an anonymous letter respecting one of them, from some person apparently hardly capable of spelling, and about as vile a specimen of petty malignity as ever blotted paper. I think it well that the public should know this, and so get some insight into the sources of the spirit which is at work against these men—how first roused it is difficult to say, for one would hardly have thought that mere eccentricity in young artists could have excited an hostility so determined and so cruel;—hostility which hesitated at no assertion, however impudent. That of the "absence of perspective" was one of the most curious pieces of the hue and cry which began with the Times, and died away in feeble maundering in the Art Union; I contradicted it in the Times—I here contradict it directly for the second time. There was not a single error in perspective in three out of the four pictures in question. But if otherwise, would it have been anything remarkable in them? I doubt, if with the exception of the pictures of David Roberts, there were one architectural drawing in perspective on the walls of the Academy; I never met but with two men in my life who knew enough of perspective to draw a Gothic arch in a retiring plane, so that its lateral dimensions and curvatures might be calculated to scale from the drawing. Our architects certainly do not, and it was but the other day that, talking to one of the most distinguished among them, the author of several most valuable works, I found he actually did not know how to draw a circle in perspective. And in this state of general science our writers for the press take it upon them to tell us, that the forest trees
in Mr. Hunt's *Sylvia*, and the bunches of lilies in Mr. Collins's *Convent Thoughts*, are out of perspective.*

It might not, I think, in such circumstances, have been ungraceful or unwise in the Academicians themselves to have defended their young pupils, at least by the contradiction of statements directly false respecting them,† and the direction

*It was not a little curious, that in the very number of the Art Union which repeated this direct falsehood about the Pre-Raphaelite rejection of "linear perspective" (by-the-bye, the next time J. B. takes upon him to speak of any one connected with the Universities, he may as well first ascertain the difference between a Graduate and an Under-Graduate), the second plate given should have been of a picture of Bonington's,—a professional landscape painter, observe,—for the want of *aerial* perspective in which the Art Union itself was obliged to apologise, and in which the artist has committed nearly as many blunders in *linear* perspective as *here* are lines in the picture.

†These false statements may be reduced to three principal heads, and directly contradicted in succession.

The first, the current fallacy of society as well as of the press, was, that the Pre-Raphaelites imitated the *errors* of early painters.

A falsehood of this kind could not have obtained credence anywhere but in England, few English people, comparatively, having ever seen a picture of early Italian Masters. If they had, they would have known that the Pre-Raphaelite pictures are just as superior to the early Italian in skill of manipulation, power of drawing, and knowledge of effect, as inferior to them in grace of design; and that in a word, there is not a shadow of resemblance between the two styles. The Pre-Raphaelites imitate no pictures: they paint from nature only. But they have opposed themselves as a body to that kind of teaching above described, which only began after Raphael's time; and they have opposed themselves as sternly to the entire feeling of the Renaissance schools; a feeling compounded of indolence, infidelity, sensuality, and shallow pride. Therefore they have called themselves Pre-Raphaelites. If they adhere to their principles, and paint nature as it is around them, with the help of modern science, with the earnestness of the men of the thirteenth and fourteenth centuries, they will, as I said, found a new and noble school in England. If their sympathies with the early artists lead them into mediævalism or Romanism, they will of course come to nothing. But I believe there is no danger of this, at least for the strongest among them. There may be some weak ones, whom the Tractarian heresies may touch; but if so, they will drop off like decayed branches from a strong stem. I hope all things from the school.

The second falsehood was, that the Pre-Raphaelites did not draw
of the mind and sight of the public to such real merit as they possess. If Sir Charles Eastlake, Mulready, Edwin and Charles Landseer, Cope, and Dyce would each of them simply state their own private opinion respecting their paintings, sign it, and publish it, I believe the act would be of more service to English art than any thing the Academy has done since it was founded. But as I cannot hope for this, I can only ask the public to give their pictures careful examination, and look at them at once with the indulgence and the respect which I have endeavored to show they deserve.

Yet let me not be misunderstood. I have adduced them only as examples of the kind of study which I would desire to see substituted for that of our modern schools, and of singular success in certain characters, finish of detail, and brilliancy of color. What faculties, higher than imitative, may be in these men, I do not yet venture to say; but I do say, that if they exist, such faculties will manifest themselves in due time all the more forcibly because they have received training so severe.

For it is always to be remembered that no one mind is like another, either in its powers or perceptions; and while the main principles of training must be the same for all, the result in each will be as various as the kinds of truth which each will apprehend; therefore, also, the modes of effort, even in men whose inner principles and final aims are exactly the same. Suppose, for instance, two men, equally honest, equally industrious, equally impressed with a humble desire to render some part of what they saw in nature faithfully; and, otherwise, trained in convictions such as I have above endeavored to induce. But one of them is quiet in temperament, has a feeble memory, no invention, and excessively keen sight. The other is impatient in temperament, has a memory which nothing well. This was asserted, and could have been asserted only by persons who had never looked at the pictures.

The third falsehood was, that they had no system of light and shade. To which it may be simply replied that their system of light and shade is exactly the same as the Sun's; which is, I believe, likely to outlast that of the Renaissance, however brilliant.
escapes, an invention which never rests, and is comparatively near-sighted.

Set them both free in the same field in a mountain valley. One sees everything, small and large, with almost the same clearness; mountains and grasshoppers alike; the leaves on the branches, the veins in the pebbles, the bubbles in the stream: but he can remember nothing, and invent nothing. Patiently he sets himself to his mighty task; abandoning at once all thoughts of seizing transient effects, or giving general impressions of that which his eyes present to him in microscopical dissection, he chooses some small portion out of the infinite scene, and calculates with courage the number of weeks which must elapse before he can do justice to the intensity of his perceptions, or the fulness of matter in his subject.

Meantime, the other has been watching the change of the clouds, and the march of the light along the mountain sides; he beholds the entire scene in broad, soft masses of true gradation, and the very feebleness of his sight is in some sort an advantage to him, in making him more sensible of the aerial mystery of distance, and hiding from him the multitudes of circumstances which it would have been impossible for him to represent. But there is not one change in the casting of the jagged shadows along the hollows of the hills, but it is fixed on his mind for ever; not a flake of spray has broken from the sea of cloud about their bases, but he has watched it as it melts away, and could recall it to its lost place in heaven by the slightest effort of his thoughts. Not only so, but thousands and thousands of such images, of older scenes, remain congregated in his mind, each mingling in new associations with those now visibly passing before him, and these again confused with other images of his own ceaseless, sleepless imagination, flashing by in sudden troops. Fancy how his paper will be covered with stray symbols and blots, and undecipherable short-hand:—as for his sitting down to “draw from Nature,” there was not one of the things which he wished to represent that stayed for so much as five seconds together: but none of them escaped, for all that: they are
sealed up in that strange storehouse of his; he may take one of them out, perhaps, this day twenty years, and paint it in his dark room, far away. Now, observe, you may tell both of these men, when they are young, that they are to be honest, that they have an important function, and that they are not to care what Raphael did. This you may wholesomely impress on them both. But fancy the exquisite absurdity of expecting either of them to possess any of the qualities of the other.

I have supposed the feebleness of sight in the last, and of invention in the first painter, that the contrast between them might be more striking; but, with very slight modification, both the characters are real. Grant to the first considerable inventive power, with exquisite sense of color; and give to the second, in addition to all his other faculties, the eye of an eagle; and the first is John Everett Millais, the second Joseph Mallard William Turner.

They are among the few men who have defied all false teaching, and have, therefore, in great measure, done justice to the gifts with which they were entrusted. They stand at opposite poles, marking culminating points of art in both directions; between them, or in various relations to them, we may class five or six more living artists who, in like manner, have done justice to their powers. I trust that I may be pardoned for naming them, in order that the reader may know how the strong innate genius in each has been invariably accompanied with the same humility, earnestness, and industry in study.

It is hardly necessary to point out the earnestness or humility in the works of William Hunt; but it may be so to suggest the high value they possess as records of English rural life, and still life. Who is there who for a moment could contend with him in the unaffected, yet humorous truth with which he has painted our peasant children? Who is there who does not sympathize with him in the simple love with which he dwells on the brightness and bloom of our summer fruit and flowers? And yet there is something to be regretted concerning him: why should he be allowed continually to
paint the same bunches of hot-house grapes, and supply to the Water Color Society a succession of pineapples with the regularity of a Covent Garden fruiterer? He has of late discovered that primrose banks are lovely; but there are other things grow wild besides primroses: what undreamt-of loveliness might he not bring back to us, if he would lose himself for a summer in Highland foregrounds; if he would paint the heather as it grows, and the foxglove and the harebell as they nestle in the clefts of the rocks, and the mosses and bright lichens of the rocks themselves. And then, cross to the Jura, and bring back a piece of Jura pasture in spring; with the gentians in their earliest blue, and the soldanelle beside the fading snow! And return again, and paint a gray wall of Alpine crag, with budding roses crowning it like a wreath of rubies. That is what he was meant to do in this world; not to paint bouquets in china vases.

I have in various other places expressed my sincere respect for the works of Samuel Prout: his shortness of sight has necessarily prevented their possessing delicacy of finish or fulness of minor detail; but I think that those of no other living artist furnish an example so striking of innate and special instinct, sent to do a particular work at the exact and only period when it was possible. At the instant when peace had been established all over Europe, but when neither national character nor national architecture had as yet been seriously changed by promiscuous intercourse or modern "improvement;" when, however, nearly every ancient and beautiful building had been long left in a state of comparative neglect, so that its aspect of partial ruinousness, and of separation from recent active life, gave to every edifice a peculiar interest—half sorrowful, half sublime;—at that moment Prout was trained among the rough rocks and simple cottages of Cornwall, until his eye was accustomed to follow with delight the rents and breaks, and irregularities which, to another man, would have been offensive; and then, gifted with infinite readiness in composition, but also with infinite affection for the kind of subjects he had to portray, he was sent to preserve, in an almost innumerable series of drawings,
every one made on the spot, the aspect borne, at the beginning of the nineteenth century, by cities which, in a few years more, rekindled wars, or unexpected prosperities, were to ravage, or renovate, into nothingness.

It seems strange to pass from Prout to John Lewis; but there is this fellowship between them, that both seem to have been intended to appreciate the characters of foreign countries more than of their own—nay, to have been born in England chiefly that the excitement of strangeness might enhance to them the interest of the scenes they had to represent. I believe John Lewis to have done more entire justice to all his powers (and they are magnificent ones) than any other man amongst us. His mission was evidently to portray the comparatively animal life of the southern and eastern families of mankind. For this he was prepared in a somewhat singular way—by being led to study, and endowed with altogether peculiar apprehension of, the most sublime characters of animals themselves. Rubens, Rembrandt, Snyders, Tintoret, and Titian, have all, in various ways, drawn wild beasts magnificently; but they have in some sort humanized or demonized them, making them either ravenous fiends or educated beasts, that would draw cars, and had respect for hermits. The sullen isolation of the brutal nature; the dignity and quietness of the mighty limbs; the shaggy mountainous power, mingled with grace, as of a flowing stream; the stealthy restraint of strength and wrath in every soundless motion of the gigantic frame; all this seems never to have been seen, much less drawn, until Lewis drew and himself engraved a series of animal subjects, now many years ago. Since then, he has devoted himself to the portraiture of those European and Asiatic races, among whom the refinements of civilization exist without its laws or its energies, and in whom the fierceness, indolence, and subtlety of animal nature are associated with brilliant imagination and strong affections. To this task he has brought not only intense perception of the kind of character, but powers of artistical composition like those of the great Venetians, displaying, at the same time, a refinement of drawing almost miraculous, and appre-
ciable only, as the minuteness of nature itself are appreciable, by the help of the microscope. The value, therefore, of his works, as records of the aspect of the scenery and inhabitants of the south of Spain and of the East, in the earlier part of the nineteenth century, is quite above all estimate.

I hardly know how to speak of Mulready: in delicacy and completion of drawing, and splendor of color, he takes place beside John Lewis and the pre-Raphaelites; but he has, throughout his career, displayed no definiteness in choice of subject. He must be named among the painters who have studied with industry, and have made themselves great by doing so; but having obtained a consummate method of execution, he has thrown it away on subjects either altogether uninteresting, or above his powers, or unfit for pictorial representation. "The Cherry Woman," exhibited in 1850, may be named as an example of the first kind; the "Burchell and Sophia" of the second (the character of Sir William Thornhill being utterly missed); the "Seven Ages" of the third; for this subject cannot be painted. In the written passage, the thoughts are progressive and connected; in the picture they must be co-existent, and yet separate; nor can all the characters of the ages be rendered in painting at all. One may represent the soldier at the cannon's mouth, but one cannot paint the "bubble reputation" which he seeks. Mulready, therefore, while he has always produced exquisite pieces of painting, has failed in doing anything which can be of true or extensive use. He has, indeed, understood how to discipline his genius, but never how to direct it.

Edwin Landseer is the last painter but one whom I shall name: I need not point out to any one acquainted with his earlier works, the labor, or watchfulness of nature which they involve, nor need I do more than allude to the peculiar faculties of his mind. It will at once be granted that the highest merits of his pictures are throughout found in those parts of them which are least like what had before been accomplished; and that it was not by the study of Raphael that he attained his eminent success, but by a healthy love of Scotch terriers.

None of these painters, however, it will be answered, afford
examples of the rise of the highest imaginative power out of close study of matters of fact. Be it remembered, however, that the imaginative power, in its magnificence, is not to be found every day. Lewis has it in no mean degree; but we cannot hope to find it at its highest more than once in an age. We have had it once, and must be content.

Towards the close of the last century, among the various drawings executed, according to the quiet manner of the time, in greyish blue, with brown foregrounds, some began to be noticed as exhibiting rather more than ordinary diligence and delicacy, signed W. Turner.* There was nothing, however, in them at all indicative of genius, or even of more than ordinary talent, unless in some of the subjects a large perception of space, and excessive clearness and decision in the arrangement of masses. Gradually and cautiously the blues became mingled with delicate green, and then with gold; the browns in the foreground became first more positive, and then were slightly mingled with other local colors; while the touch, which had at first been heavy and broken, like that of the ordinary drawing masters of the time, grew more and more refined and expressive, until it lost itself in a method of execution often too delicate for the eye to follow, rendering, with a precision before unexampled, both the texture and the form of every object. The style may be considered as perfectly formed about the year 1800, and it remained unchanged for twenty years.

During that period the painter had attempted, and with more or less success had rendered, every order of landscape subject, but always on the same principle, subduing the colors of nature into a harmony of which the key-notes are greyish green and brown; pure blues and delicate golden yellows being admitted in small quantity, as the lowest and highest limits of shade and light: and bright local colors in extremely small quantity in figures or other minor accessories.

Pictures executed on such a system are not, properly speak-

* He did not use his full signature, J. M. W., until about the year 1800.
ing, works in color at all; they are studies of light and shade, in which both the shade and the distance are rendered in the general hue which best expresses their attributes of coolness and transparency; and the lights and the foreground are executed in that which best expresses their warmth and solidity. This advantage may just as well be taken as not, in studies of light and shadow to be executed with the hand: but the use of two, three, or four colors, always in the same relations and places, does not in the least constitute the work a study of color, any more than the brown engravings of the Liber Studiorum; nor would the idea of color be in general more present to the artist’s mind, when he was at work on one of these drawings, than when he was using pure brown in the mezzo-tint engraving. But the idea of space, warmth, and freshness being not successfully expressible in a single tint, and perfectly expressible by the admission of three or four, he allows himself this advantage when it is possible, without in the least embarrassing himself with the actual color of the objects to be represented. A stone in the foreground might in nature have been cold grey, but it will be drawn nevertheless of a rich brown, because it is in the foreground; a hill in the distance might in nature be purple with heath, or golden with furze; but it will be drawn nevertheless of a cool grey, because it is in the distance.

This at least was the general theory,—carried out with great severity in many, both of the drawings and pictures executed by him during the period: in others more or less modified by the cautious introduction of color, as the painter felt his liberty increasing; for the system was evidently never considered as final, or as anything more than a means of progress: the conventional, easily manageable color, was visibly adopted, only that his mind might be at perfect liberty to address itself to the acquirement of the first and most necessary knowledge in all art—that of form. But as form, in landscape, implies vast bulk and space, the use of the tints which enabled him best to express them, was actually auxiliary to the mere drawing; and, therefore, not only permissible, but even necessary, while more brilliant or varied tints were never indulged
in, except when they might be introduced without the slightest danger of diverting his mind for an instant from his principal object. And, therefore, it will be generally found in the works of this period, that exactly in proportion to the importance and general toil of the composition, is the severity of the tint; and that the play of color begins to show itself first in slight and small drawings, where he felt that he could easily secure all that he wanted in form.

Thus the "Crossing the Brook," and such other elaborate and large compositions, are actually painted in nothing but grey, brown, and blue, with a point or two of severe local color in the figures; but in the minor drawings, tender passages of complicated color occur not unfrequently in easy places; and even before the year 1800 he begins to introduce it with evident joyfulness and longing in his rude and simple studies, just as a child, if it could be supposed to govern itself by a fully developed intellect, would cautiously, but with infinite pleasure, add now and then a tiny dish of fruit or other dangerous luxury to the simple order of its daily fare. Thus, in the foregrounds of his most severe drawings, we not unfrequently find him indulging in the luxury of a peacock; and it is impossible to express the joyfulness with which he seems to design its graceful form, and deepen with soft pencilling the bloom of its blue, after he has worked through the stern detail of his almost colorless drawing. A rainbow is another of his most frequently permitted indulgences; and we find him very early allowing the edges of his evening clouds to be touched with soft rose-color or gold; while, whenever the hues of nature in anywise fall into his system, and can be caught without a dangerous departure from it, he instantly throws his whole soul into the faithful rendering of them. Thus the usual brown tones of his foreground become warmed into sudden vigor, and are varied and enhanced with indescribable delight, when he finds himself by the shore of a moorland stream, where they truly express the stain of its golden rocks, and the darkness of its clear, Cairngorm-like pools, and the usual serenity of his aerial blue is enriched into the softness and depth of the sapphire, when it can deepen the distant
slumber of some Highland lake, or temper the gloomy shadows of the evening upon its hills.

The system of his color being thus simplified, he could address all the strength of his mind to the accumulation of facts of form; his choice of subject, and his methods of treatment, are therefore as various as his color is simple; and it is not a little difficult to give the reader who is unacquainted with his works, an idea either of their infinitude of aims, on the one hand, or of the kind of feeling which prevades them all, on the other. No subject was too low or too high for him; we find him one day hard at work on a cock and hen, with their family of chickens in a farm-yard; and bringing all the refinement of his execution into play to express the texture of the plumage; next day, he is drawing the Dragon of Colchis. One hour he is much interested in a gust of wind blowing away an old woman's cap; the next he is painting the fifth plague of Egypt. Every landscape painter before him had acquired distinction by confining his efforts to one class of subject. Hobbima painted oaks; Ruysdael, waterfalls and copses; Cuyp, river or meadow scenes in quiet afternoons; Salvator and Poussin, such kind of mountain scenery as people could conceive, who lived in towns in the seventeenth century. But I am well persuaded that if all the works of Turner, up to the year 1820, were divided into classes (as he has himself divided them in the Liber Studiorum), no preponderance could be assigned to one class over another. There is architecture, including a large number of formal "gentlemen's seats," I suppose drawings commissioned by the owners; then lowland pastoral scenery of every kind, including nearly all farming operations,—ploughing, harrowing, hedging and ditching, felling trees, sheep-washing, and I know not what else; then all kinds of town life—court-yards of inns, starting of mail coaches, interiors of shops, house-buildings, fairs, elections, &c.; then all kinds of inner domestic life—interiors of rooms, studies of costumes, of still life, and heraldry, including multitudes of symbolical vignettes; then marine scenery of every kind, full of local incident; every kind of boat and method of fishing for particular fish, being specifically drawn, round the
whole coast of England;—pilchard fishing at St. Ives, whiting fishing at Margate, herring at Loch Fyne; and all kinds of shipping, including studies of every separate part of the vessels, and many marine battle-pieces, two in particular of Trafalgar, both of high importance,—one of the Victory after the battle, now in Greenwich Hospital; another of the Death of Nelson, in his own gallery; then all kinds of mountain scenery, some idealised into compositions, others of definite localities; together with classical compositions, Romes and Carthages and such others, by the myriad, with mythological, historical, or allegorical figures,—nymphs, monsters, and spectres; heroes and divinities.*

What general feeling, it may be asked incredulously, can possibly pervade all this? This, the greatest of all feelings—an utter forgetfulness of self. Throughout the whole period with which we are at present concerned, Turner appears as a man of sympathy absolutely infinite—a sympathy so all-embracing, that I know nothing but that of Shakespeare comparable with it. A soldier's wife resting by the roadside is not beneath it; Rizpah, the daughter of Aiah, watching the dead bodies of her sons, not above it. Nothing can possibly be so mean as that it will not interest his whole mind, and carry away his whole heart; nothing so great or solemn but that he can raise himself into harmony with it; and it is impossible to prophesy of him at any moment, whether, the next, he will be in laughter or in tears.

This is the root of the man's greatness; and it follows as a matter of course that this sympathy must give him a subtle power of expression, even of the characters of mere material things, such as no other painter ever possessed. The man who can best feel the difference between rudeness and tenderness in humanity, perceives also more difference between the branches of an oak and a willow than any one else would; and, therefore, necessarily the most striking character of the drawings themselves is the speciality of whatever they represent—the thorough stiffness of what is stiff, and grace of what is

* I shall give a catalogue raisonnée of all this in the third volume of "Modern Painters."
graceful, and vastness of what is vast; but through and beyond all this, the condition of the mind of the painter himself is easily enough discoverable by comparison of a large number of the drawings. It is singularly serene and peaceful: in itself quite passionless, though entering with ease into the external passion which it contemplates. By the effort of its will it sympathises with tumult or distress, even in their extremes, but there is no tumult, no sorrow in itself, only a chastened and exquisitely peaceful cheerfulness, deeply meditative; touched without loss of its own perfect balance, by sadness on the one side, and stooping to playfulness upon the other. I shall never cease to regret the destruction, by fire, now several years ago, of a drawing which always seemed to me to be the perfect image of the painter's mind at this period,—the drawing of Brignal Church near Rokeby, of which a feeble idea may still be gathered from the engraving (in the Yorkshire series). The spectator stands on the "Brignal banks," looking down into the glen at twilight; the sky is still full of soft rays, though the sun is gone; and the Greta glances brightly in the valley, singing its evening-song; two white clouds, following each other, move without wind through the hollows of the ravine, and others lie couched on the far away moorlands; every leaf of the woods is still in the delicate air; a boy's kite, incapable of rising, has become entangled in their branches, he is climbing to recover it; and just behind it in the picture, almost indicated by it, the lowly church is seen in its secluded field between the rocks and the stream; and around it the low churchyard wall, and the few white stones which mark the resting places of those who can climb the rocks no more, nor hear the river sing as it passes.

There are many other existing drawings which indicate the same character of mind, though I think none so touching or so beautiful; yet they are not, as I said above, more numerous than those which express his sympathy with sublimer or more active scenes; but they are almost always marked by a tenderness of execution, and have a look of being beloved in every part of them, which shows them to be the truest expression of his own feelings.
One other characteristic of his mind at this period remains to be noticed—its reverence for talent in others. Not the reverence which acts upon the practices of men as if they were the laws of nature, but that which is ready to appreciate the power, and receive the assistance, of every mind which has been previously employed in the same direction, so far as its teaching seems to be consistent with the great text-book of nature itself. Turner thus studied almost every preceding landscape painter, chiefly Claude, Poussin, Vandevelde, Loutherbourgh, and Wilson. It was probably by the Sir George Beaumonts and other feeble conventionalists of the period, that he was persuaded to devote his attention to the works of these men; and his having done so will be thought, a few scores of years hence, evidence of perhaps the greatest modesty ever shown by a man of original power. Modesty at once admirable and unfortunate, for the study of the works of Vandevelde and Claude was productive of unmixed mischief to him; he spoiled many of his marine pictures, as for instance Lord Ellesmere's, by imitation of the former; and from the latter learned a false ideal, which confirmed by the notions of Greek art prevalent in London in the beginning of this century, has manifested itself in many vulgarities in his composition pictures, vulgarities which may perhaps be best expressed by the general term "Twickenham Classicism," as consisting principally in conceptions of ancient or of rural life such as have influenced the erection of most of our suburban villas. From Nicolo Poussin and Loutherbourgh he seems to have derived advantage; perhaps also from Wilson; and much in his subsequent travels from far higher men, especially Tintoret and Paul Veronese. I have myself heard him speaking with singular delight of the putting in of the beech leaves in the upper right-hand corner of Titian's Peter Martyr. I cannot in any of his works trace the slightest influence of Salvator; and I am not surprised at it, for though Salvator was a man of far higher powers than either Vandevelde or Claude, he was a wilful and gross caricaturist. Turner would condescend to be helped by feeble men, but could not be corrupted by false men. Besides, he had never himself seen classical life, and
Claude was represented to him as competent authority for it. But he had seen mountains and torrents, and knew therefore that Salvator could not paint them.

One of the most characteristic drawings of this period fortunately bears a date, 1818, and brings us within two years of another dated drawing, no less characteristic of what I shall henceforward call Turner's Second period. It is in the possession of Mr. Hawkesworth Fawkes of Farnley, one of Turner's earliest and truest friends; and bears the inscription, unusually conspicuous, heaving itself up and down over the éminences of the foreground—"Passage of Mont Cenis. J. M. W. Turner, January 15th, 1820."

The scene is on the summit of the pass close to the hospice, or what seems to have been a hospice at that time,—I do not remember such at present,—a small square-built house, built as if partly for a fortress, with a detached flight of stone steps in front of it, and a kind of drawbridge to the door. This building, about 400 or 500 yards off, is seen in a dim, ashy grey against the light, which by help of a violent blast of mountain wind has broken through the depth of clouds which hangs upon the crags. There is no sky, properly so called, nothing but this roof of drifting cloud; but neither is there any weight of darkness—the high air is too thin for it,—all savage, howling, and luminous with cold, the massy bases of the granite hills jutting out here and there grimly through the snow wreaths. There is a desolate-looking refuge on the left, with its number 16, marked on it in long ghastly figures, and the wind is drifting the snow off the roof and through its window in a frantic whirl; the near ground is all wan with half-thawed, half-trampled snow; a diligence in front, whose horses, unable to face the wind, have turned right round with fright, its passengers struggling to escape, jammed in the window; a little farther on is another carriage off the road, some figures pushing at its wheels, and its driver at the horses' heads, pulling and lashing with all his strength, his lifted arm stretched out against the light of the distance, though too far off for the whip to be seen.

Now I am perfectly certain that any one thoroughly accus-
tomed to the earlier works of the painter, and shown this picture for the first time, would be struck by two altogether new characters in it.

The first, a seeming enjoyment of the excitement of the scene, totally different from the contemplative philosophy with which it would formerly have been regarded. Every incident of motion and of energy is seized upon with indescribable delight, and every line of the composition animated with a force and fury which are now no longer the mere expression of a contemplated external truth, but have origin in some inherent feeling in the painter’s mind.

The second, that although the subject is one in itself almost incapable of color, and although, in order to increase the wildness of the impression, all brilliant local color has been refused even where it might easily have been introduced, as in the figures; yet in the low minor key which has been chosen, the melodies of color have been elaborated to the utmost possible pitch, so as to become a leading, instead of a subordinate, element in the composition; the subdued warm hues of the granite promontories, the dull stone color of the walls of the buildings, clearly opposed, even in shade, to the grey of the snow wreaths heaped against them, and the faint greens and ghastly blues of the glacier ice, being all expressed with delicacies of transition utterly unexampled in any previous drawings.

These, accordingly, are the chief characteristics of the works of Turner’s second period, as distinguished from the first,—a new energy inherent in the mind of the painter, diminishing the repose and exalting the force and fire of his conceptions, and the presence of Color, as at least an essential, and often a principal, element of design.

Not that it is impossible, or even unusual, to find drawings of serene subject, and perfectly quiet feeling, among the compositions of this period; but the repose is in them, just as the energy and tumult were in the earlier period, an external quality, which the painter images by an effort of the will: it is no longer a character inherent in himself. The "Ullswater," in the England series, is one of those which are in most per-
fect peace: in the "Cowes," the silence is only broken by the
dash of the boat's oars, and in the "Alnwick" by a stag
drinking; but in at least nine drawings out of ten, either sky,
water, or figures are in rapid motion, and the grandest draw-
ings are almost always those which have even violent action
in one or other, or in all: e. g. high force of Tees, Coventry,
Llanthony, Salisbury, Llanberis, and such others.

The color is, however, a more absolute distinction; and we
must return to Mr. Fawkes's collection in order to see how
the change in it was effected. That such a change would take
place at one time or other was of course to be securely antici-
pated, the conventional system of the first period being, as
above stated, merely a means of Study. But the immediate
cause was the journey of the year 1820. As might be guessed
from the legend on the drawing above described, "Passage
of Mont Cenis, January 15th, 1820," that drawing represents
what happened on the day in question to the painter himself.
He passed the Alps then in the winter of 1820; and either in
the previous or subsequent summer, but on the same journey,
he made a series of sketches on the Rhine, in body color, now
in Mr. Fawkes's collection. Every one of those sketches is
the almost instantaneous record of an effect of color or atmo-
sphere, taken strictly from nature, the drawing and the details
of every subject being comparatively subordinate, and the
color nearly as principal as the light and shade had been be-
fore,—certainly the leading feature, though the light and
shade are always exquisitely harmonized with it. And natu-
rally, as the color becomes the leading object, those times of
day are chosen in which it is most lovely; and whereas before,
at least five out of six of Turner's drawings represented ordi-
nary daylight, we now find his attention directed constantly
to the evening: and, for the first time, we have those rosy
lights upon the hills, those gorgeous falls of sun through
flaming heavens, those solemn twilights, with the blue moon
rising as the western sky grows dim, which have ever since
been the themes of his mightiest thoughts.

I have no doubt, that the immediate reason of this change
was the impression made upon him by the colors of the con-
When he first travelled on the Continent (1800), he was comparatively a young student; not yet able to draw form as he wanted, he was forced to give all his thoughts and strength to this primary object. But now he was free to receive other impressions; the time was come for perfecting his art, and the first sunset which he saw on the Rhine taught him that all previous landscape art was vain and valueless, that in comparison with natural color, the things that had been called paintings were mere ink and charcoal, and that all precedent and all authority must be cast away at once, and trodden under foot. He cast them away: the memories of Vandevelde and Claude were at once weeded out of the great mind they had encumbered; they and all the rubbish of the schools together with them; the waves of the Rhine swept them away for ever; and a new dawn rose over the rocks of the Siebengebirge.

There was another motive at work, which rendered the change still more complete. His fellow artists were already conscious enough of his superior power in drawing, and their best hope was, that he might not be able to color. They had begun to express this hope loudly enough for it to reach his ears. The engraver of one of his most important marine pictures told me, not long ago, that one day about the period in question, Turner came into his room to examine the progress of the plate, not having seen his own picture for several months. It was one of his dark early pictures, but in the foreground was a little piece of luxury, a pearly fish wrought into hues like those of an opal. He stood before the picture for some moments; then laughed, and pointed joyously to the fish;—"They say that Turner can't color!" and turned away.

Under the force of these various impulses the change was total. _Every subject thenceforth was primarily conceived in color_; and no engraving ever gave the slightest idea of any drawing of this period.

The artists who had any perception of the truth were in despair; the Beaumontites, classicalists, and "owl species" in general, in as much indignation as their dulness was capa-
They had deliberately closed their eyes to all nature, and had gone on inquiring, "Where do you put your brown tree?" A vast revelation was made to them at once, enough to have dazzled any one; but to them, light unendurable as incomprehensible. They "did to the moon complain," in one vociferous, unanimous, continuous "Tu whoo." Shrieking rose from all dark places at the same instant, just the same kind of shrieking that is now raised against the Pre-Raphaelites. Those glorious old Arabian Nights, how true they are! Mocking and whispering, and abuse loud and low by turns, from all the black stones beside the road, when one living soul is toiling up the hill to get the golden water. Mocking and whispering, that he may look back, and become a black stone like themselves.

Turner looked not back, but he went on in such a temper as a strong man must be in, when he is forced to walk with his fingers in his ears. He retired, into himself; he could look no longer for help, or counsel, or sympathy from any one; and the spirit of defiance in which he was forced to labor led him sometimes into violences, from which the slightest expression of sympathy would have saved him. The new energy that was upon him, and the utter isolation into which he was driven, were both alike dangerous, and many drawings of the time show the evil effects of both; some of them being hasty, wild, or experimental, and others little more than magnificent expressions of defiance of public opinion.

But all have this noble virtue—they are in everything his own: there are no more reminiscences of dead masters, no more trials of skill in the manner of Claude or Poussin; every faculty of his soul is fixed upon nature only, as he saw her, or as he remembered her.

I have spoken above of his gigantic memory: it is especially necessary to notice this, in order that we may understand the kind of grasp which a man of real imagination takes of all things that are once brought within his reach—grasp thenceforth not to be relaxed for ever.

On looking over any catalogues of his works, or of par-
ticular series of them, we shall notice the recurrence of the same subject two, three, or even many times. In any other artist this would be nothing remarkable. Probably most modern landscape painters multiply a favorite subject twenty, thirty, or sixty fold, putting the shadows and the clouds in different places, and "inventing," as they are pleased to call it, a new "effect" every time. But if we examine the successions of Turner's subjects, we shall find them either the records of a succession of impressions actually perceived by him at some favorite locality, or else repetitions of one impression received in early youth, and again and again realised as his increasing powers enabled him to do better justice to it. In either case we shall find them records of seen facts; never compositions in his room to fill up a favorite outline.

For instance, every traveller, at least every traveller of thirty years' standing, must love Calais, the place where he first felt himself in a strange world. Turner evidently loved it excessively. I have never catalogued his studies of Calais, but I remember, at this moment, five: there is first the "Pas de Calais," a very large oil painting, which is what he saw in broad daylight, as he crossed over, when he got near the French side. It is a careful study of French fishing boats running for the shore before the wind, with the picturesque old city in the distance. Then there is the "Calais Harbor" in the Liber Studiorum: that is what he saw just as he was going into the harbor,—a heavy brig warping out, and very likely to get in his way, or run against the pier, and bad weather coming on. Then there is the "Calais Pier," a large painting, engraved some years ago by Mr. Lupton:* that is what he saw when he had landed, and ran back directly to the pier to see what had become of the brig. The weather had got still worse, the fishwomen were being blown about, in a distressful manner on the pier head, and some more fishing boats were running in with all speed. Then there is the "Fortrouge," Calais: that is what he saw after he had been home to Dessein's, and dined, and went out again in the evening to walk on the sands, the tide being down. He had never

* The plate was, however, never published.
seen such a waste of sands before, and it made an impression on him. The shrimp girls were all scattered over them too, and moved about in white spots on the wild shore; and the storm had lulled a little, and there was a sunset—such a sunset,—and the bars of Fortrouge seen against it, skeleton-wise. He did not paint that directly; thought over it,—painted it a long while afterwards.

Then there is the vignette in the illustrations to Scott. That is what he saw as he was going home, meditatively; and the revolving lighthouse came blazing out upon him suddenly, and disturbed him. He did not like that so much; made a vignette of it, however, when he was asked to do a bit of Calais, twenty or thirty years afterwards, having already done all the rest.

Turner never told me all this, but any one may see it if he will compare the pictures. They might, possibly, not be impressions of a single day, but of two days or three; though in all human probability they were seen just as I have stated them;* but they are records of successive impressions, as plainly written as ever traveller's diary. All of them pure veracities. Therefore immortal.

I could multiply these series almost indefinitely from the rest of his works. What is curious, some of them have a kind of private mark running through all the subjects. Thus I know three drawings of Scarborough, and all of them have a starfish in the foreground: I do not remember any others of his marine subjects which have a starfish.

The other kind of repetition—the recurrence to one early impression—is however still more remarkable. In the collection of F. H. Bale, Esq., there is a small drawing of Llanthony Abbey. It is in his boyish manner, its date probably about 1793; evidently a sketch from nature, finished at home. It had been a showery day; the hills were partially concealed by the rain, and gleams of sunshine breaking out at intervals. A man was fishing in the mountain stream. The young

* And the more probably because Turner was never fond of staying long at any place, and was least of all likely to make a pause of two or three days at the beginning of his journey.
Turner sought a place of some shelter under the bushes; made his sketch, took great pains when he got home to imitate the rain, as he best could; added his child's luxury of a rainbow; put in the very bush under which he had taken shelter, and the fisherman, a somewhat ill-jointed and long-legged fisherman, in the courtly short breeches which were the fashion of the time.

Some thirty years afterwards, with all his powers in their strongest training, and after the total change in his feelings and principles which I have endeavored to describe, he undertook the series of "England and Wales," and in that series introduced the subject of Llanthony Abbey. And behold, he went back to his boy's sketch, and boy's thought. He kept the very bushes in their places, but brought the fisherman to the other side of the river, and put him, in somewhat less courtly dress, under their shelter, instead of himself. And then he set all his gained strength and new knowledge at work on the well-remembered shower of rain, that had fallen thirty years before, to do it better. The resultant drawing* is one of the very noblest of his second period.

Another of the drawings of the England series, Ulleswater, is the repetition of one in Mr. Fawkes's collection, which, by the method of its execution, I should conjecture to have been executed about the year 1808, or 1810: at all events, it is a very quiet drawing of the first period. The lake is quite calm; the western hills in grey shadow, the eastern massed in light. Helvellyn rising like a mist between them, all being mirrored in the calm water. Some thin and slightly evanescent cows are standing in the shallow water in front; a boat floats motionless about a hundred yards from the shore: the foreground is of broken rocks, with lovely pieces of copse on the right and left.

This was evidently Turner's record of a quiet evening by the shore of Ulleswater, but it was a feeble one. He could not at that time render the sunset colors: he went back to it therefore in the England series, and painted it again with his new power. The same hills are there, the same shadows,

the same cows,—they had stood in his mind, on the same spot, for twenty years,—the same boat, the same rocks, only the copse is cut away—it interfered with the masses of his color: some figures are introduced bathing, and what was grey, and feeble gold in the first drawing, becomes purple, and burning rose-color in the last.

But perhaps one of the most curious examples is in the series of subjects from Winchelsea. That in the Liber Studiorum, "Winchelsea, Sussex," bears date 1812, and its figures consist of a soldier speaking to a woman, who is resting on the bank beside the road. There is another small subject, with Winchelsea in the distance, of which the engraving bears date 1817. It has two women with bundles, and two soldiers toiling along the embankment in the plain, and a baggage waggon in the distance. Neither of these seems to have satisfied him, and at last he did another for the England series, of which the engraving bears date 1830. There is now a regiment on the march; the baggage waggon is there, having got no further on in the thirteen years, but one of the women is tired, and has fainted on the bank; another is supporting her against her bundle, and giving her drink; a third sympathetic woman is added, and the two soldiers have stopped, and one is drinking from his canteen.

Nor is it merely of entire scenes, or of particular incidents, that Turner's memory is thus tenacious. The slightest passages of color or arrangement that have pleased him—the fork of a bough, the casting of a shadow, the fracture of a stone—will be taken up again and again, and strangely worked into new relations with other thoughts. There is a single sketch from nature in one of the portfolios at Farnley, of a common wood-walk on the estate, which has furnished passages to no fewer than three of the most elaborate compositions in the Liber Studiorum.

I am thus tedious in dwelling on Turner's powers of memory, because I wish it to be thoroughly seen how all his greatness, all his infinite luxuriance of invention, depends on his taking possession of everything that he sees,—on his grasping all, and losing hold of nothing,—on his forgetting himself, and
forgetting nothing else. I wish it to be understood how every great man paints what he sees or did see, his greatness being indeed little else than his intense sense of fact. And thus Pre-Raphaelitism and Raphaelitism, and Turnerism, are all one and the same, so far as education can influence them. They are different in their choice, different in their faculties, but all the same in this, that Raphael himself, so far as he was great, and all who preceded or followed him who ever were great, became so by painting the truths around them as they appeared to each man's own mind, not as he had been taught to see them, except by the God who made both him and them.

There is, however, one more characteristic of Turner's second period, on which I have still to dwell, especially with reference to what has been above advanced respecting the fallacy of overtoil; namely, the magnificent ease with which all is done when it is successfully done. For there are one or two drawings of this time which are not done easily. Turner had in these set himself to do a fine thing to exhibit his powers; in the common phrase, to excel himself; so sure as he does this, the work is a failure. The worst drawings that have ever come from his hands are some of this second period, on which he has spent much time and laborious thought; drawings filled with incident from one side to the other, with skies stippled into morbid blue, and warm lights set against them in violent contrast; one of Bamborough Castle, a large water-color, may be named as an example. But the truly noble works are those in which, without effort, he has expressed his thoughts as they came, and forgotten himself; and in these the outpouring of invention is not less miraculous than the swiftness and obedience of the mighty hand that expresses it. Any one who examines the drawings may see the evidence of this facility, in the strange freshness and sharpness of every touch of color; but when the multitude of delicate touches, with which all the aerial tones are worked, is taken into consideration, it would still appear impossible that the drawing could have been completed with ease, unless we had direct evidence in the matter: fortunately, it is not wanting. There
is a drawing in Mr. Fawkes's collection of a man-of-war taking in stores: it is of the usual size of those of the England series, about sixteen inches by eleven: it does not appear one of the most highly finished, but is still farther removed from slightness. The hull of a first-rate occupies nearly one-half of the picture on the right, her bows towards the spectator, seen in sharp perspective from stem to stern, with all her portholes, guns, anchors, and lower rigging elaborately detailed; there are two other ships of the line in the middle distance, drawn with equal precision; a noble breezy sea dancing against their broad bows, full of delicate drawing in its waves; a store-ship beneath the hull of the larger vessel, and several other boats, and a complicated cloudy sky. It might appear no small exertion of mind to draw the detail of all this shipping down to the smallest ropes, from memory, in the drawing-room of a mansion in the middle of Yorkshire, even if considerable time had been given for the effort. But Mr. Fawkes sat beside the painter from the first stroke to the last. Turner took a piece of blank paper one morning after breakfast, outlined his ships, finished the drawing in three hours, and went out to shoot.

Let this single fact be quietly meditated upon by our ordinary painters, and they will see the truth of what was above asserted,—that if a great thing can be done at all, it can be done easily; and let them not torment themselves with twisting of compositions this way and that, and repeating, and experimenting, and scene-shifting. If a man can compose at all, he can compose at once, or rather he must compose in spite of himself. And this is the reason of that silence which I have kept in most of my works, on the subject of Composition. Many critics, especially the architects, have found fault with me for not "teaching people how to arrange masses;" for not "attributing sufficient importance to composition." Alas! I attribute far more importance to it than they do;—so much importance, that I should just as soon think of sitting down to teach a man how to write a Divina Commedia, or King Lear, as how to "compose," in the true sense, a single building or picture. The marvellous stupidity of this age
of lecturers is, that they do not see that what they call "principles of composition," are mere principles of common sense in everything, as well as in pictures and buildings;—A picture is to have a principal light? Yes; and so a dinner is to have a principal dish, and an oration a principal point, and an air of music a principal note, and every man a principal object. A picture is to have harmony of relation among its parts? Yes; and so is a speech well uttered, and an action well ordered, and a company well chosen, and a ragout well mixed. Composition! As if a man were not composing every moment of his life, well or ill, and would not do it instinctively in his picture as well as elsewhere, if he could. Composition of this lower or common kind is of exactly the same importance in a picture that it is in any thing else,—no more. It is well that a man should say what he has to say in good order and sequence, but the main thing is to say it truly. And yet we go on preaching to our pupils as if to have a principal light was every thing, and so cover our academy walls with Shacabac feasts, wherein the courses are indeed well ordered, but the dishes empty.

It is not, however, only in invention that men overwork themselves, but in execution also; and here I have a word to say to the Pre-Raphaelites specially. They are working too hard. There is evidence in failing portions of their pictures, showing that they have wrought so long upon them that their very sight has failed for weariness, and that the hand refused any more to obey the heart. And, besides this, there are certain qualities of drawing which they miss from over-carefulness. For, let them be assured, there is a great truth lurking in that common desire of men to see things done in what they call a "masterly," or "bold," or "broad," manner: a truth oppressed and abused, like almost every other in this world, but an eternal one nevertheless; and whatever mischief may have followed from men's looking for nothing else but this facility of execution, and supposing that a picture was assuredly all right if only it were done with broad dashes of the brush, still the truth remains the same:—that because it is not intended that men shall torment or weary themselves with any
Earthly labor, it is appointed that the noblest results should only be attainable by a certain ease and decision of manipulation. I only wish people understood this much of sculpture, as well as of painting, and could see that the finely finished statue is, in ninety-nine cases out of a hundred, a far more vulgar work than that which shows rough signs of the right hand laid to the workman's hammer: but at all events, in painting it is felt by all men, and justly felt. The freedom of the lines of nature can only be represented by a similar freedom in the hand that follows them; there are curves in the flow of the hair, and in the form of the features, and in the muscular outline of the body, which can in no wise be caught but by a sympathetic freedom in the stroke of the pencil. I do not care what example is taken, be it the most subtle and careful work of Leonardo himself, there will be found a play and power and ease in the outlines, which no slow effort could ever imitate. And if the Pre-Raphaelites do not understand how this kind of power, in its highest perfection, may be united with the most severe rendering of all other orders of truth, and especially of those with which they themselves have most sympathy, let them look at the drawings of John Lewis.

These then are the principal lessons which we have to learn from Turner, in his second or central period of labor. There is one more, however, to be received; and that is a warning; for towards the close of it, what with doing small conventional vignettes for publishers, making showy drawings from sketches taken by other people of places he had never seen, and touching up the bad engravings from his works submitted to him almost every day,—engravings utterly destitute of animation, and which had to be raised into a specious brilliancy by scratching them over with white, spotty lights, he gradually got inured to many conventionalities, and even falsities; and, having trusted for ten or twelve years almost entirely to his memory and invention, living I believe mostly in London, and receiving a new sensation only from the burning of the Houses of Parliament, he painted many pictures between 1830 and 1840 altogether unworthy of him. But he was not thus to close his career.
In the summer either of 1840 or 1841, he undertook another journey into Switzerland. It was then at least forty years since he had first seen the Alps; (the source of the Arveron, in Mr. Fawkes's collection, which could not have been painted till he had seen the thing itself, bears date 1800,) and the direction of his journey in 1840 marks his fond memory of that earliest one; for, if we look over the Swiss studies and drawings executed in his first period, we shall be struck with his fondness for the pass of the St. Gothard; the most elaborate drawing in the Farnley collection is one of the Lake of Lucerne from Fluelen; and, counting the Liber Studiorum subjects, there are, to my knowledge, six compositions taken at the same period from the pass of St. Gothard, and, probably, several others are in existence. The valleys of Sallenche, and Chamouni, and Lake of Geneva, are the only other Swiss scenes which seem to have made very profound impressions on him.

He returned in 1841 to Lucerne; walked up Mont Pilate on foot, crossed the St. Gothard, and returned by Lausanne and Geneva. He made a large number of colored sketches on this journey, and realised several of them on his return. The drawings thus produced are different from all that had preceded them, and are the first which belong definitely to what I shall henceforth call his Third period.

The perfect repose of his youth had returned to his mind, while the faculties of imagination and execution appeared in renewed strength; all conventionality being done away with by the force of the impression which he had received from the Alps, after his long separation from them. The drawings are marked by a peculiar largeness and simplicity of thought: most of them by deep serenity, passing into melancholy; all by a richness of color, such as he had never before conceived. They, and the works done in following years, bear the same relation to those of the rest of his life that the colors of sunset do to those of the day; and will be recognised, in a few years more, as the noblest landscapes ever yet conceived by human intellect.

Such has been the career of the greatest painter of this
century. Many a century may pass away before there rises such another; but what greatness any among us may be capable of, will, at least, be best attained by following in his path; by beginning in all quietness and hopefulness to use whatever powers we may possess to represent the things around us as we see and feel them; trusting to the close of life to give the perfect crown to the course of its labors, and knowing assuredly that the determination of the degree in which watchfulness is to be exalted into invention, rests with a higher will than our own. And, if not greatness, at least a certain good, is thus to be achieved; for though I have above spoken of the mission of the more humble artist, as if it were merely to be subservient to that of the antiquarian or the man of science, there is an ulterior aspect in which it is not subservient, but superior. Every archaeologist, every natural philosopher, knows that there is a peculiar rigidity of mind brought on by long devotion to logical and analytical inquiries. Weak men, giving themselves to such studies, are utterly hardened by them, and become incapable of understanding anything nobler, or even of feeling the value of the results to which they lead. But even the best men are in a sort injured by them, and pay a definite price, as in most other matters, for definite advantages. They gain a peculiar strength, but lose in tenderness, elasticity, and impressibility. The man who has gone, hammer in hand, over the surface of a romantic country, feels no longer, in the mountain ranges he has so laboriously explored, the sublimity or mystery with which they were veiled when he first beheld them, and with which they are adorned in the mind of the passing traveller. In his more informed conception, they arrange themselves like a dissected model: where another man would be awe-struck by the magnificence of the precipice, he sees nothing but the emergence of a fossiliferous rock, familiarised already to his imagination as extending in a shallow stratum, over a perhaps uninteresting district; where the unlearned spectator would be touched with strong emotion by the aspect of the snowy summits which rise in the distance, he sees only the culminating points of a metamorphic formation, with an uncomfortable web of fan-like
fissures radiating, in his imagination, through their centres.* That in the grasp he has obtained of the inner relations of all these things to the universe, and to man, that in the views which have been opened to him of natural energies such as no human mind would have ventured to conceive, and of past states of being, each in some new way bearing witness to the unity of purpose and everlastingly consistent providence of the Maker of all things, he has received reward well worthy the sacrifice, I would not for an instant deny; but the sense of the loss is not less painful to him if his mind be rightly constituted; and it would be with infinite gratitude that he would regard the man, who, retaining in his delineation of natural scenery a fidelity to the facts of science so rigid as to make his work at once acceptable and credible to the most sternly critical intellect, should yet invest its features again with the sweet veil of their daily aspect; should make them dazzling with the splendor of wandering light, and involve them in the unsearchableness of stormy obscurity; should restore to the divided anatomy its visible vitality of operation, clothe naked crags with soft forests, enrich the mountain ruins with bright pastures, and lead the thoughts from the monotonous recurrence of the phenomena of the physical world, to the sweet interests and sorrows of human life and death.

* This state of mind appears to have been the only one which Wordsworth had been able to discern in men of science; and in disdain of which, he wrote that short-sighted passage in the Excursion, Book III. l. 165—190, which is, I think, the only one in the whole range of his works which his true friends would have desired to see blotted out. What else has been found fault with as feeble or superfluous, is not so in the intense distinctive relief which it gives to his character. But these lines are written in mere ignorance of the matter they treat; in mere want of sympathy with the men they describe; for, observe, though the passage is put into the mouth of the Solitary, it is fully confirmed, and even rendered more scornful, by the speech which follows.

LECTURE

I. Of the Division of Arts ...................................... 9
II. Idolatry ...................................................... 26
III. Imagination .................................................. 44
IV. Likeness ..................................................... 72
V. Structure ..................................................... 94
VI. The School of Athens ..................................... 117
I must pray the readers of the following Lectures to remember that the duty at present laid on me at Oxford is of an exceptionally complex character. Directly, it is to awaken the interest of my pupils in a study which they have hitherto found unattractive, and imagined to be useless; but more imperatively, it is to define the principles by which the study itself should be guided; and to vindicate their security against the doubts with which frequent discussion has lately encumbered a subject which all think themselves competent to discuss. The possibility of such vindication is, of course, implied in the original consent of the Universities to the establishment of Art Professorships. Nothing can be made an element of education of which it is impossible to determine whether it is ill done or well; and the clear assertion that there is a canon law in formative Art is, at this time, a more important function of each University than the instruction of its younger members in any branch of practical skill. It matters comparatively little whether few or many of our students learn to draw; but it matters much that all who learn should be taught with accuracy. And the number who may be justifiably advised to give any part of the time they spend at college to the study of painting or sculpture ought to depend, and finally must depend, on their being certified that painting and sculpture, no less than language or than reasoning, have grammar and method,—that they permit a recognizable distinction between scholarship and ignorance, and enforce a constant distinction between Right and Wrong.

This opening course of Lectures on Sculpture is therefore restricted to the statement, not only of first principles, but of
those which were illustrated by the practice of one school, and by that practice in its simplest branch, the analysis of which could be certified by easily accessible examples, and aided by the indisputable evidence of photography.*

The exclusion of the terminal Lecture of the course from the series now published, is in order to mark more definitely this limitation of my subject; but in other respects the Lectures have been amplified in arranging them for the press, and the portions of them trusted at the time to extempore delivery, (not through indolence, but because explanations of detail are always most intelligible when most familiar,) have been in substance to the best of my power set down, and in what I said too imperfectly, completed.

In one essential particular I have felt it necessary to write what I would not have spoken. I had intended to make no reference, in my University Lectures, to existing schools of

* Photography cannot exhibit the character of large and finished sculpture; but its audacity of shadow is in perfect harmony with the more roughly picturesque treatment necessary in coins. For the rendering of all such frank relief, and for the better explanation of forms disturbed by the lustre of metal or polished stone, the method employed in the plates of this volume will be found, I believe, satisfactory. Casts are first taken from the coins, in white plaster; these are photographed, and the photograph printed by the heliotype process of Messrs. Edwards and Kidd. Plate XII. is exceptional, being a pure mezzotint engraving of the old school, excellently carried through by my assistant, Mr. Allen, who was taught, as a personal favour to myself, by my friend, and Turner's fellow-worker, Thomas Lupton. Plate IV. was intended to be a photograph from the superb vase in the British Museum, No. 564 in Mr. Newton's Catalogue; but its variety of colour defied photography, and after the sheets had gone to press I was compelled to reduce Le Normand's plate of it, which is unsatisfactory, but answers my immediate purpose.

The enlarged photographs for use in the Lecture Room were made for me with most successful skill by Sergeant Spackman, of South Kensington; and the help throughout rendered to me by Mr. Burgess is acknowledged in the course of the Lectures; though with thanks which must remain inadequate lest they should become tedious; for Mr. Burgess drew the subjects of Plates III., X., and XIII.; drew and engraved every woodcut in the book; and printed all the plates with his own hand.
Art, except in cases where it might be necessary to point out some undervalued excellence. The objects specified in the eleventh paragraph of my inaugural Lecture, might, I hoped, have been accomplished without reference to any works deserving of blame; but the Exhibition of the Royal Academy in the present year showed me a necessity of departing from my original intention. The task of impartial criticism* is now, unhappily, no longer to rescue modest skill from neglect; but to withstand the errors of insolent genius, and abate the influence of plausible mediocrity.

The Exhibition of 1871 was very notable in this important particular, that it embraced some representation of the modern schools of nearly every country in Europe: and I am well assured that looking back upon it after the excitement of that singular interest has passed away, every thoughtful judge of Art will confirm my assertion, that it contained not a single picture of accomplished merit; while it contained many that were disgraceful to Art, and some that were disgraceful to humanity.

It becomes, under such circumstances, my inevitable duty to speak of the existing conditions of Art with plainness enough to guard the youths whose judgments I am entrusted to form, from being misled, either by their own naturally vivid interest in what represents, however unworthily, the scenes and persons of their own day, or by the cunningly devised, and, without doubt, powerful allurements of Art which has long since confessed itself to have no other object than to allure. I have, therefore, added to the second of these Lectures such illustration of the motives and course of modern industry as naturally arose out of its subject, and shall continue

* A pamphlet by the Earl of Southesk, "Britain's Art Paradise," (Edmonston and Douglas, Edinburgh) contains an entirely admirable criticism of the most faultful pictures of the 1871 Exhibition. It is to be regretted that Lord Southesk speaks only to condemn; but indeed, in my own three days' review of the rooms, I found nothing deserving of notice otherwise, except Mr. Hook's always pleasant sketches from fisher-life, and Mr. Pettie's graceful and powerful, though too slightly painted, study from Henry VI.
in future to make similar applications; rarely, indeed, permitting myself, in the Lectures actually read before the University, to introduce subjects of instant, and therefore too exciting, interest; but completing the addresses which I prepare for publication in these, and in any other particulars, which may render them more widely serviceable.

The present course of Lectures will be followed, if I am able to fulfil the design of them, by one of a like elementary character on Architecture; and that by a third series on Christian Sculpture: but, in the meantime, my effort is to direct the attention of the resident students to Natural History, and to the higher branches of ideal Landscape: and it will be, I trust, accepted as sufficient reason for the delay which has occurred in preparing the following sheets for the press, that I have not only been interrupted by a dangerous illness, but engaged, in what remained to me of the summer, in an endeavour to deduce, from the overwhelming complexity of modern classification in the Natural Sciences, some forms capable of easier reference by Art students, to whom the anatomy of brutal and floral nature is often no less important than that of the human body.

The preparation of examples for manual practice, and the arrangement of standards for reference, both in Painting and Sculpture, had to be carried on meanwhile, as I was able. For what has already been done, the reader is referred to the Catalogue of the Educational Series, published at the end of the Spring Term; of what remains to be done I will make no anticipatory statement, being content to have ascribed to me rather the fault of narrowness in design, than of extravagance in expectation.

Denmark Hill,
25th November, 1871.
1. If, as is commonly believed, the subject of study which it is my special function to bring before you had no relation to the great interests of mankind, I should have less courage in asking for your attention to-day, than when I first addressed you; though, even then, I did not do so without painful dif-

fidence. For at this moment, even supposing that in other places it were possible for men to pursue their ordinary avo-
cations undisturbed by indignation or pity; here, at least, in the midst of the deliberative and religious influences of Eng-
land, only one subject, I am well assured, can seriously occupy your thoughts—the necessity, namely, of determining how it has come to pass, that in these recent days, iniquity the most reckless and monstrous can be committed unanimously, by men more generous than ever yet in the world’s history were de-
ceived into deeds of cruelty; and that prolonged agony of body and spirit, such as we should shrink from inflicting wil-
fully on a single criminal, has become the appointed and ac-
cepted portion of unnumbered multitudes of innocent per-
sons, inhabiting the districts of the world which, of all others, as it seemed, were best instructed in the laws of civilization, and most richly invested with the honour, and indulged in the felicity, of peace.

Believe me, however, the subject of Art—instead of being
foreign to these deep questions of social duty and peril,—is so vitally connected with them, that it would be impossible for me now to pursue the line of thought in which I began these lectures, because so ghastly an emphasis would be given to every sentence by the force of passing events. It is well, then, that in the plan I have laid down for your study, we shall now be led into the examination of technical details, or abstract conditions of sentiment; so that the hours you spend with me may be times of repose from heavier thoughts. But it chances strangely that, in this course of minutely detailed study, I have first to set before you the most essential piece of human workmanship, the plough, at the very moment when—(you may see the announcement in the journals either of yesterday or the day before)—the swords of your soldiers have been sent for to be sharpened, and not at all to be beaten into ploughshares. I permit myself, therefore, to remind you of the watchword of all my earnest writings—“Soldiers of the Ploughshare, instead of Soldiers of the Sword”—and I know it my duty to assert to you that the work we enter upon to-day is no trivial one, but full of solemn hope; the hope, namely, that among you there may be found men wise enough to lead the national passions towards the arts of peace, instead of the arts of war.

I say the work “we enter upon,” because the first four lectures I gave in the spring were wholly prefatory; and the following three only defined for you methods of practice. To-day we begin the systematic analysis and progressive study of our subject.

2. In general, the three great, or fine, Arts of Painting, Sculpture, and Architecture, are thought of as distinct from the lower and more mechanical formative arts, such as carpentry or pottery. But we cannot, either verbally, or with any practical advantage, admit such classification. How are we to distinguish painting on canvas from painting on china?—or painting on china from painting on glass?—or painting on glass from infusion of colour into any vitreous substance, such as enamel?—or the infusion of colour into glass and enamel from the infusion of colour into wool or silk, and weaving of
pictures in tapestry, or patterns in dress? You will find that although, in ultimately accurate use of the word, painting must be held to mean only the laying of a pigment on a surface with a soft instrument; yet, in broad comparison of the functions of Art, we must conceive of one and the same great artistic faculty, as governing every mode of disposing colours in a permanent relation on, or in, a solid substance; whether it be by tinting canvas, or dyeing stuffs; inlaying metals with fused flint, or coating walls with coloured stone.

3. Similarly the word "Sculpture,"—though in ultimate accuracy it is to be limited to the development of form in hard substances by cutting away portions of their mass—in broad definition, must be held to signify the reduction of any shapeless mass of solid matter into an intended shape, whatever the consistence of the substance, or nature of the instrument employed; whether we carve a granite mountain, or a piece of box-wood, and whether we use, for our forming instrument, axe, or hammer, or chisel, or our own hands, or water to soften, or fire to fuse;—whenever and however we bring a shapeless thing into shape, we do so under the laws of the one great Art of Sculpture.

4. Having thus broadly defined painting and sculpture, we shall see that there is, in the third place, a class of work separated from both, in a specific manner, and including a great group of arts which neither, of necessity, tint, nor for the sake of form merely, shape, the substances they deal with; but construct or arrange them with a view to the resistance of some external force. We construct, for instance, a table with a flat top, and some support of prop, or leg, proportioned in strength to such weights as the table is intended to carry. We construct a ship out of planks, or plates of iron, with reference to certain forces of impact to be sustained, and of inertia to be overcome; or we construct a wall or roof with distinct reference to forces of pressure and oscillation, to be sustained or guarded against; and therefore, in every case, with especial consideration of the strength of our materials, and the nature of that strength, elastic, tenacious, brittle, and the like.

Now although this group of arts nearly always involves the
putting of two or more separate pieces together, we must not define it by that accident. The blade of an oar is not less formed with reference to external force than if it were made of many pieces; and the frame of a boat, whether hollowed out of a tree-trunk, or constructed of planks nailed together; is essentially the same piece of art; to be judged by its buoyancy and capacity of progression. Still, from the most wonderful piece of all architecture, the human skeleton, to this simple one,* the ploughshare, on which it depends for its subsistence, the putting of two or more pieces together is curiously necessary to the perfectness of every fine instrument; and the peculiar mechanical work of Daedalus,—inlaying,—becomes all the more delightful to us in external aspect, because, as in the jawbone of a Saurian, or the wood of a bow, it is essential to the finest capacities of tension and resistance.

5. And observe how unbroken the ascent from this, the simplest architecture, to the loftiest. The placing of the timbers in a ship's stem, and the laying of the stones in a bridge buttress, are similar in art to the construction of the ploughshare, differing in no essential point, either in that they deal with other materials, or because, of the three things produced, one has to divide earth by advancing through it, another to divide water by advancing through it, and the third to divide water which advances against it. And again, the buttress of a bridge differs only from that of a cathedral in having less weight to sustain, and more to resist. We can find no term in the gradation, from the ploughshare to the cathedral buttress, at which we can set a logical distinction.

6. Thus then we have simply three divisions of Art—one, that of giving colours to substance; another, that of giving form to it without question of resistance to force; and the third, that of giving form or position which will make it capable of such resistance. All the fine arts are embraced

* I had a real ploughshare on my lecture-table; but it would interrupt the drift of the statements in the text too long if I attempted here to illustrate by figures the relation of the counter to the share, and of the hard to the soft pieces of metal in the share itself,
OF THE DIVISION OF ARTS.

under these three divisions. Do not think that it is only a logical or scientific affectation to mass them together in this manner; it is, on the contrary, of the first practical importance to understand that the painter's faculty, or mastery over colour, being as subtle as a musician's over sound, must be looked to for the government of every operation in which colour is employed; and that, in the same manner, the appliance of any art whatsoever to minor objects cannot be right, unless under the direction of a true master of that art. Under the present system, you keep your Academician occupied only in producing tinted pieces of canvas to be shown in frames, and smooth pieces of marble to be placed in niches; while you expect your builder or constructor to design coloured patterns in stone and brick, and your china-ware merchant to keep a separate body of workwomen who can paint china, but nothing else. By this division of labour, you ruin all the arts at once. The work of the Academician becomes mean and effeminate, because he is not used to treat colour on a grand scale and in rough materials; and your manufactures become base because no well educated person sets hand to them. And therefore it is necessary to understand, not merely as a logical statement, but as a practical necessity, that wherever beautiful colour is to be arranged, you need a Master of Painting; and wherever noble form is to be given, a Master of Sculpture; and wherever complex mechanical force is to be resisted, a Master of Architecture.

7. But over this triple division there must rule another yet more important. Any of these three arts may be either imitative of natural objects or limited to useful appliance. You may either paint a picture that represents a scene, or your street door, to keep it from rotting; you may mould a statue, or a plate; build the resemblance of a cluster of lotus stalks, or only a square pier. Generally speaking, Painting and Sculpture will be imitative, and Architecture merely useful; but there is a great deal of Sculpture—as this crystal ball* for instance, which is not imitative, and a great deal of

* A sphere of rock crystal, cut in Japan, enough imaginable by the reader, without a figure.
Architecture which, to some extent is so, as the so-called foils of Gothic apertures; and for many other reasons you will find it necessary to keep distinction clear in your minds between the arts—of whatever kind—which are imitative, and produce a resemblance or image of something which is not present; and those which are limited to the production of some useful reality, as the blade of a knife, or the wall of a house. You will perceive also, as we advance, that sculpture and painting are indeed in this respect only one art; and that we shall have constantly to speak and think of them as simply graphic, whether with chisel or colour, their principal function being to make us, in the words of Aristotle, "θεωρητικοι τον περὶ τὰ σωμάτα κάλλος" (Polit. 8, 3.), "having capacity and habit of contemplation of the beauty that is in material things;" while Architecture, and its co-relative arts, are to be practised under quite other conditions of sentiment.

8. Now it is obvious that so far as the fine arts consist either in imitation or mechanical construction, the right judgment of them must depend on our knowledge of the things they imitate, and forces they resist: and my function of teaching here would (for instance) so far resolve itself, either into demonstration that this painting of a peach,* does resemble a peach, or explanation of the way in which this ploughshare (for instance) is shaped so as to throw the earth aside with least force of thrust. And in both of these methods of study, though of course your own diligence must be your chief master, to a certain extent your Professor of Art can always guide you securely, and can show you, either that the image does truly resemble what it attempts to resemble, or that the structure is rightly prepared for the service it has to perform. But there is yet another virtue of fine art which is, perhaps, exactly that about which you will expect your Professor to teach you most, and which, on the contrary,* is exactly that about which you must teach yourselves all that it is essential to learn.

9. I have here in my hand one of the simplest possible

---

* One of William Hunt's peaches; not, I am afraid, imaginable altogether, but still less representable by figure.
examples of the union of the graphic and constructive powers,—one of my breakfast plates. Since all the finely architectural arts, we said, began in the shaping of the cup and the platter, we will begin, ourselves, with the platter.

Why has it been made round? For two structural reasons: first, that the greatest holding surface may be gathered into the smallest space; and secondly, that in being pushed past other things on the table, it may come into least contact with them.

![Fig. 1.](image)

Next, why has it a rim? For two other structural reasons; first, that it is convenient to put salt or mustard upon; but secondly and chiefly, that the plate may be easily laid hold of. The rim is the simplest form of continuous handle.

Farther, to keep it from soiling the cloth, it will be wise to put this ridge beneath, round the bottom; for as the rim is the simplest possible form of continuous handle, so this is the simplest form of continuous leg. And we get the section given beneath the figure for the essential one of a rightly made platter.
10. Thus far our art has been strictly utilitarian having respect to conditions of collision, of carriage, and of support. But now, on the surface of our piece of pottery, here are various bands and spots of colour which are presumably set there to make it pleasanter to the eye. Six of the spots, seen closely, you discover are intended to represent flowers. These then have as distinctly a graphic purpose as the other properties of the plate have an architectural one, and the first critical question we have to ask about them is, whether they are like roses or not. I will anticipate what I have to say in subsequent lectures so far as to assure you that, if they are to be like roses at all, the liker they can be, the better. Do not suppose, as many people will tell you, that because this is a common manufactured article, your roses on it are the better for being ill-painted, or half-painted. If they had been painted by the same hand that did this peach, the plate would have been all the better for it; but, as it chanced, there was no hand such as William Hunt's to paint them, and their graphic power is not distinguished. In any case, however, that graphic power must have been subordinate to their effect as pink spots, while the band of green-blue round the plate's edge, and the spots of gold, pretend to no graphic power at all, but are meaningless spaces of colour or metal. Still less have they any mechanical office: they add nowise to the serviceableness of the plate; and their agreeableness, if they possess any, depends, therefore, neither on any imitative, nor any structural, character; but on some inherent pleasantness in themselves, either of mere colours to the eye (as of taste to the tongue), or in the placing of those colours in relations which obey some mental principle of order, or physical principle of harmony.

11. These abstract relations and inherent pleasantnesses, whether in space, number, or time, and whether of colours or sounds, form what we may properly term the musical or harmonic element in every art; and the study of them is an entirely separate science. It is the branch of art-philosophy to which the word "aesthetics" should be strictly limited, being the inquiry into the nature of things that in themselves are
pleasant to the human senses or instincts, though they represent nothing, and serve for nothing, their only service being their pleasantness. Thus it is the province of æsthetics to tell you, (if you did not know it before,) that the taste and colour of a peach are pleasant, and to ascertain, if it be ascertainable, (and you have any curiosity to know,) why they are so.

12. The information would, I presume, to most of you, be gratuitous. If it were not, and you chanced to be in a sick state of body in which you disliked peaches, it would be, for the time, to you false information, and, so far as it was true of other people, to you useless. Nearly the whole study of æsthetics is in like manner either gratuitous or useless. Either you like the right things without being recommended to do so, or if you dislike them, your mind cannot be changed by lectures on the laws of taste. You recollect the story of Thackeray, provoked, as he was helping himself to strawberries, by a young coxcomb's telling him that "he never took fruit or sweets." "That" replied, or is said to have replied, Thackeray, "is because you are a sot, and a glutton." And the whole science of æsthetics is, in the depth of it, expressed by one passage of Goethe's in the end of the 2nd part of Faust; —the notable one that follows the song of the Lemures, when the angels enter to dispute with the fiends for the soul of Faust. They enter singing—"Pardon to sinners and life to the dust." Mephistopheles hears them first, and exclaims to his troop, "Discord I hear, and filthy jingling"—"Mistöne höre ich; garstiges Geklimper." This, you see, is the extreme of bad taste in music. Presently the angelic host begin strewing roses, which discomfits the diabolic crowd altogether. Mephistopheles in vain calls to them—"What do you duck and shrink for—is that proper hellish behaviour? Stand fast, and let them strew"—"Was duckt und zuckt ihr; ist das Hellen-brauch? So haltet stand, und lasst sie streuen." There you have, also, the extreme of bad taste in sight and smell. And in the whole passage is a brief embodiment for you of the ultimate fact that all æsthetics depend on the health of soul and body, and the proper exercise of both, not only through years, but generations. Only by harmony of
both collateral and successive lives can the great doctrine of
the Muses be received which enables men "χαίρειν ὑγιῶς,"
"to have pleasures rightly;" and there is no other definition
of the beautiful, nor of any subject of delight to the aesthetic
faculty, than that it is what one noble spirit has created, seen
and felt by another of similar or equal nobility. So much as
there is in you of ox, or of swine, perceives no beauty, and
creates none: what is human in you, in exact proportion to
the perfectness of its humanity, can create it, and receive.

13. Returning now to the very elementary form in which
the appeal to our aesthetic virtue is made in our breakfast-
plate, you notice that there are two distinct kinds of pleasant-
ness attempted. One by hues of colour; the other by pro-
portions of space. I have called these the musical elements
of the arts relating to sight; and there are indeed two com-
plete sciences, one of the combinations of colour, and the
other of the combinations of line and form, which might each
of them separately engage us in as intricate study as that of
the science of music. But of the two, the science of colour is,
in the Greek sense, the more musical, being one of the divi-
sions of the Apolline power; and it is so practically educa-
tional, that if we are not using the faculty for colour to dis-
cipline nations, they will infallibly use it themselves as a
means of corruption. Both music and colour are naturally
influences of peace; but in the war trumpet, and the war
shield, in the battle song and battle standard, they have con-
centrated by beautiful imagination the cruel passions of men;
and there is nothing in all the Divina Commedia of history
more grotesque, yet more frightful, than the fact that, from
the almost fabulous period when the insanity and impiety of
war wrote themselves in the symbols of the shields of the
Seven against Thebes, colours have been the sign and stimu-
lus of the most furious and fatal passions that have rent the
nations: blue against green, in the decline of the Roman Em-
pire; black against white, in that of Florence; red against
white, in the wars of the Royal houses in England; and at
this moment, red against white, in the contest of anarchy and
loyalty, in all the world.
14. On the other hand, the directly ethical influence of
colour in the sky, the trees, flowers, and coloured creatures
round us, and in our own various arts massed under the one
name of painting, is so essential and constant that we cease to
recognize it, because we are never long enough altogether de-
prived of it to feel our need; and the mental diseases induced
by the influence of corrupt colour are as little suspected, or
traced to their true source, as the bodily weaknesses resulting
from atmospheric miasmata.

15. The second musical science which belongs peculiarly to
sculpture (and to painting, so far as it represents form), con-
sists in the disposition of beautiful masses. That is to say,
beautiful surfaces limited by beautiful lines. Beautiful sur-
faces, observe; and remember what is noted in my fourth lect-
ure of the difference between a space and a mass. If you
have at any time examined carefully, or practised from, the
drawings of shells placed in your copying series, you cannot
but have felt the difference in the grace between the aspects
of the same line, when enclosing a rounded or unrounded
space. The exact science of sculpture is that of the relations
between outline and the solid form it limits; and it does not
matter whether that relation be indicated by drawing or carv-
ing, so long as the expression of solid form is the mental pur-
pose; it is the science always of the beauty of relation in three
dimensions. To take the simplest possible line of continuous
limit—the circle: the flat disc enclosed by it may indeed be
made an element of decoration, though a very meagre one:
but its relative mass, the ball, being gradated in three dimen-
sions, is always delightful. Here * is at once the simplest,
and in mere patient mechanism, the most skilful, piece of
sculpture I can possibly show you,—a piece of the purest
rock-crystal, chiselled, (I believe, by mere toil of hand,) into
a perfect sphere. Imitating nothing, constructing nothing;
sculpture for sculpture's sake, of purest natural substance into
simplest primary form.

16. Again. Out of the nacre of any mussel or oyster-shell
you might cut, at your pleasure, any quantity of small flat cir-

* The crystal ball above mentioned.
cular discs of the prettiest colour and lustre. To some extent, such tinsel or foil of shell is used pleasantly for decoration. But the mussel or oyster becoming itself an unwilling modeller, agglutinates its juice into three dimensions, and the fact of the surface being now geometrically gradated, together with the savage instinct of attributing value to what is difficult to obtain, make the little boss so precious in men's sight that wise eagerness of search for the kingdom of heaven can be likened to their eagerness of search for it; and the gates of Paradise can be no otherwise rendered so fair to their poor intelligence, as by telling them that every several gate was of "one pearl."

17. But take note here. We have just seen that the sum of the perceptive faculty is expressed in those words of Aristotle's "to take pleasure rightly" or straightly—\( \chi\alpha\iota\rho\epsilon\upsilon\nu\ \dot{o}\beta\theta\omega\varsigma. \) Now, it is not possible to do the direct opposite of that,—to take pleasure iniquitously or obliquely—\( \chi\alpha\iota\rho\epsilon\upsilon\nu\ \dot{\alpha}\delta\iota\kappa\iota\varsigma\omega\varsigma\) or \( \sigma\kappa\omega\lambda\iota\varsigma\omega\varsigma — \) more than you do in enjoying a thing because your neighbour cannot get it. You may enjoy a thing legitimately because it is rare, and cannot be seen often, (as you do a fine aurora, or a sunset, or an unusually lovely flower); that is Nature's way of stimulating your attention. But if you enjoy it because your neighbour cannot have it—and, remember, all value attached to pearls more than glass beads, is merely and purely for that cause,—then you rejoice through the worst of idolatries, covetousness; and neither arithmetic, nor writing, nor any other so-called essential of education, is now so vitally necessary to the population of Europe, as such acquaintance with the principles of intrinsic value, as may result in the iconoclasm of jewellery; and in the clear understanding that we are not in that instinct, civilized, but yet remain wholly savage, so far as we care for display of this selfish kind.

You think, perhaps, I am quitting my subject, and proceeding, as it is too often with appearance of justice alleged against me, into irrelevant matter. Pardon me; the end, not only of these lectures, but of my whole professorship, would be accomplished,—and far more than that,—if only the English nation could be made to understand that the beauty which is
indeed to be a joy for ever, must be a joy for all; and that
tough the idolatry may not have been wholly divine which
sculptured gods, the idolatry is wholly diabolic, which, for
vulgar display, sculpturesque diamonds.

18. To go back to the point under discussion. A pearl, or
a glass bead, may owe its pleasantness in some degree to its
lustre as well as to its roundness. But a mere and simple
ball of unpolished stone is enough for sculpturesque value.
You may have noticed that the quatrefoil used in the Ducale
Palace of Venice owes its complete loveliness in distant effect
to the finishing of its cusps. The extremity of the cusp is a
mere ball of Istrian marble; and consider how subtle the
faculty of sight must be, since it recognizes at any distance,
and is gratified by, the mystery of the termination of cusp ob-
tained by the gradated light on the ball.

In that Venetian tracery this simplest element of sculptured
form is used sparingly, as the most precious that can be em-
ployed to finish the façade. But alike in our own, and the
French, central Gothic, the ball-flower is lavished on every
line—and in your St. Mary’s spire, and the Salisbury spire,
and the towers of Notre Dame of Paris, the rich pleasantness
of decoration,—indeed, their so-called “decorated style,”—
consists only in being daintily beset with stone balls. It is
true the balls are modified into dim likeness of flowers; but
do you trace the resemblance to the rose in their distant, which
is their intended effect?

19. But farther, let the ball have motion; then the form it
generates will be that of a cylinder. You have, perhaps,
thought that pure Early English Architecture depended for
its charm on visibility of construction. It depends for its
charm altogether on the abstract harmony of groups of cylin-
ders,* arbitrarily bent into mouldings, and arbitrarily associ-

* All grandest effects in mouldings may be, and for the most part
have been, obtained by rolls and cavettos of circular (segmental) sec-
tion. More refined sections, as that of the fluting of a Doric shaft, are
only of use near the eye and in beautiful stone; and the pursuit of them
was one of the many errors of later Gothic. The statement in the text
that the mouldings, even of best time, “have no real relation to con-
ated as shafts, having no real relation to construction whatso-
ever, and a theoretical relation so subtle that none of us had
seen it, till Professor Willis worked it out for us.

20. And now, proceeding to analysis of higher sculpture,
you may have observed the importance I have attached to the
porch of San Zenone, at Verona, by making it, among your
standards, the first of the group which is to illustrate the sys-
tem of sculpture and architecture founded on faith in a future
life. That porch, fortunately represented in the photograph,
from which Plate I. has been engraved, under a clear and
pleasant light, furnishes you with examples of sculpture of
every kind from the flattest incised bas-relief to solid statues,
both in marble and bronze. And the two points I have been
pressing upon you are conclusively exhibited here, namely,—
(1). That sculpture is essentially the production of a pleasant
bossiness or roundness of surface; (2) that the pleasantness of
that bossy condition to the eye is irrespective of imitation on
one side, and of structure on the other.

21. (1.) Sculpture is essentially the production of a pleasant
bossiness or roundness of surface.

If you look from some distance at these two engravings of
Greek coins, (place the book open so that you can see the op-
posite plate three or four yards off,) you will find the relief on
each of them simplifies itself into a pearl-like portion of a
sphere, with exquisitely gradated light on its surface. When
you look at them nearer, you will see that each smaller por-
tion into which they are divided—cheek, or brow, or leaf, or
tress of hair—resolves itself also into a rounded or undulated
surface, pleasant by gradation of light. Every several sur-
face is delightful in itself, as a shell, or a tuft of rounded
moss, or the bossy masses of distant forest would be. That
these intricately modulated masses present some resemblance
to a girl's face, such as the Syracusans imagined that of the
water-goddess Arethusa, is entirely a secondary matter; the

struktion," is scarcely strong enough: they in fact contend with, and
deny the construction, their principal purpose seeming to be the con-
cealment of the joints of the voussoirs.
Plate I.—Porch of San Zenone. Verona.
primary condition is that the masses shall be beautifully rounded, and disposed with due discretion and order.

22. (2.) It is difficult for you, at first, to feel this order and beauty of surface, apart from the imitation. But you can see there is a pretty disposition of, and relation between, the projections of a fir-cone, though the studded spiral imitates nothing. Order exactly the same in kind, only much more complex; and an abstract beauty of surface rendered definite by increase and decline of light—(for every curve of surface has its own luminous law, and the light and shade on a parabolic solid differs, specifically, from that on an elliptical or spherical one)—it is the essential business of the sculptor to obtain; as it is the essential business of a painter to get good colour, whether he imitates anything or not. At a distance from the picture, or carving, where the things represented become absolutely unintelligible, we must yet be able to say, at a glance, "That is good painting, or good carving."

And you will be surprised to find, when you try the experiment, how much the eye must instinctively judge in this manner. Take the front of San Zenone for instance, Plate I. You will find it impossible without a lens, to distinguish in the bronze gates, and in great part of the wall, anything that their bosses represent. You cannot tell whether the sculpture is of men, animals, or trees; only you feel it to be composed of pleasant projecting masses; you acknowledge, that both gates and wall are, somehow, delightfully roughened; and only afterwards, by slow degrees, can you make out what this roughness means; nay, though here (Plate III.) I magnify* one of the bronze plates of the gate to a scale, which gives you the same advantage as if you saw it quite close, in the reality,—you may still be obliged to me for the information, that this boss represents the Madonna asleep in her little bed, and this smaller boss, the Infant Christ in His; and this at

*Some of the most precious work done for me by my assistant Mr. Burgess, during the course of these lectures, consisted in making enlarged drawings from portions of photographs. Plate III. is engraved from a drawing of his, enlarged from the original photograph of which Plate I. is a reduction.
the top, a cloud with an angel coming out of it, and these jagged bosses, two of the Three Kings, with their crowns on, looking up to the star, (which is intelligible enough I admit); but what this straggling, three-legged boss beneath signifies, I suppose neither you nor I can tell, unless it be the shepherd's dog, who has come suddenly upon the Kings with their crowns on, and is greatly startled at them.

23. Farther, and much more definitely, the pleasantness of the surface decoration is independent of structure; that is to say, of any architectural requirement of stability. The greater part of the sculpture here is exclusively ornamentation of a flat wall, or of door panelling; only a small portion of the church front is thus treated, and the sculpture has no more to do with the form of the building than a piece of a lace veil would have, suspended beside its gates on a festal day; the proportions of shaft and arch might be altered in a hundred different ways, without diminishing their stability; and the pillars would stand more safely on the ground than on the backs of these carved animals.

24. I wish you especially to notice these points, because the false theory that ornamentation should be merely decorated structure is so pretty and plausible, that it is likely to take away your attention from the far more important abstract conditions of design. Structure should never be contradicted, and in the best buildings it is pleasantly exhibited and enforced; in this very porch the joints of every stone are visible, and you will find me in the Fifth Lecture insisting on this clearness of its anatomy as a merit; yet so independent is the mechanical structure of the true design, that when I begin my Lectures on Architecture, the first building I shall give you as a standard will be one in which the structure is wholly concealed. It will be the Baptistry of Florence, which is, in reality, as much a buttressed chapel with a vaulted roof, as the Chapter House of York—but round it, in order to conceal that buttressed structure, (not to decorate, observe, but to conceal) a flat external wall is raised; simplifying the whole to a mere hexagonal box, like a wooden piece of Tunbridge ware, on the surface of which the eye and intellect are to be interested by
PLATE II.—THE ARETHUSA OF SYRACUSE.
PLATE III—THE WARNING TO THE KINGS.
San Zeno. Verona.
the relations of dimension and curve between pieces of encrusting marble of different colours, which have no more to do with the real make of the building than the diaper of a Harlequin's jacket has to do with his bones.

25. The sense of abstract proportion, on which the enjoyment of such a piece of art entirely depends, is one of the aesthetic faculties which nothing can develop but time and education. It belongs only to highly-trained nations; and, among them, to their most strictly refined classes, though the germs of it are found, as part of their innate power, in every people capable of art. It has for the most part vanished at present from the English mind, in consequence of our eager desire for excitement, and for the kind of splendour that exhibits wealth, careless of dignity; so that, I suppose, there are very few now even of our best-trained Londoners who know the difference between the design of Whitehall and that of any modern club-house in Pall-mall. The order and harmony which, in his enthusiastic account of the Theatre of Epidaurus, Pausanias insists on before beauty, can only be recognized by stern order and harmony in our daily lives; and the perception of them is as little to be compelled, or taught suddenly, as the laws of still finer choice in the conception of dramatic incident which regulate poetic sculpture.

26. And now, at last, I think, we can sketch out the subject before us in a clear light. We have a structural art, divine, and human, of which the investigation comes under the general term, Anatomy; whether the junctions or joints be in mountains, or in branches of trees, or in buildings, or in bones of animals. We have next a musical art, falling into two distinct divisions—one using colours, the other masses, for its elements of composition; lastly, we have an imitative art, concerned with the representation of the outward appearances of things. And, for many reasons, I think it best to begin with imitative Sculpture; that being defined as the art which, by the musical disposition of masses, imitates anything of which the imitation is justly pleasant to us; and does so in accordance with structural laws having due reference to the materials employed.
So that you see our task will involve the immediate inquiry what the things are of which the imitation is justly pleasant to us: what, in few words,—if we are to be occupied in the making of graven images—we ought to like to make images of. Secondly, after having determined its subject, what degree of imitation or likeness we ought to desire in our graven image; and lastly, under what limitations demanded by structure and material, such likeness may be obtained.

These inquiries I shall endeavour to pursue with you to some practical conclusion, in my next four lectures, and in the sixth, I will briefly sketch the actual facts that have taken place in the development of sculpture by the two greatest schools of it that hitherto have existed in the world.

27. The tenor of our next lecture then must be an inquiry into the real nature of Idolatry; that is to say, the invention and service of Idols: and, in the interval, may I commend to your own thoughts this question, not wholly irrelevant, yet which I cannot pursue; namely, whether the God to whom we have so habitually prayed for deliverance "from battle, murder, and sudden death," is indeed, seeing that the present state of Christendom is the result of a thousand years’ praying to that effect, "as the gods of the heathen who were but idols;" or whether—(and observe, one or other of these things must be true)—whether our prayers to Him have been, by this much, worse than Idolatry;—that heathen prayer was true prayer to false gods; and our prayers have been false prayers to the True One.

LECTURE II.

IDOLATRY.

November, 1870.

28. Beginning with the simple conception of sculpture as the art of fiction in solid substance, we are now to consider what its subjects should be. What—having the gift of imagery—should we by preference endeavour to image? A ques-
tion which is, indeed, subordinate to the deeper one—why we should wish to image anything at all.

29. Some years ago, having been always desirous that the education of women should begin in learning how to cook, I got leave, one day, for a little girl of eleven years old to exchange, much to her satisfaction, her schoolroom for the kitchen. But as ill fortune would have it, there was some pastry toward, and she was left unadvisedly in command of some delicately rolled paste; whereof she made no pies, but an unlimited quantity of cats and mice.

Now you may read the works of the gravest critics of art from end to end; but you will find, at last, they can give you no other true account of the spirit of sculpture than that it is an irresistible human instinct for the making of cats and mice, and other imitable living creatures, in such permanent form that one may play with the images at leisure.

Play with them, or love them, or fear them, or worship them. The cat may become the goddess Pasht, and the mouse, in the hand of the sculptured king, enforce his enduring words "ἐσ ἐμὲ τις ὑπερὶ ἐνω ἐνοεβὲς ἐστῶ;" but the great mimetic instinct underlies all such purpose; and is zooplastic, —life-shaping,—alike in the reverent and the impious.

30. Is, I say, and has been, hitherto; none of us dare say that it will be. I shall have to show you hereafter that the greater part of the technic energy of men, as yet, has indicated a kind of childhood; and that the race becomes, if not more wise, at least more manly,* with every gained century. I can fancy that all this sculpturing and painting of ours may be looked back upon, in some distant time, as a kind of doll-making, and that the words of Sir Isaac Newton may be smiled at no more: only it will not be for stars that we desert our stone dolls, but for men. When the day comes, as come it must, in which we no more deface and defile God's image in living clay, I am not sure that we shall any of us care so much for the images made of Him, in burnt clay.

31. But, hitherto, the energy of growth in any people may be almost directly measured by their passion for imitative art;

*Glance forward at once to § 75, read it, and return to this.
namely, for sculpture, or for the drama, which is living and speaking sculpture, or, as in Greece, for both; and in national as in actual childhood, it is not merely the making, but the making-believe; not merely the acting for the sake of the scene, but acting for the sake of acting, that is delightful. And, of the two mimetic arts, the drama, being more passionate, and involving conditions of greater excitement and luxury, is usually in its excellence the sign of culminating strength in the people; while fine sculpture, requiring always submission to severe law, is an unfailing proof of their being in early and active progress. *There is no instance of fine sculpture being produced by a nation either torpid, weak, or in decadence.* Their drama may gain in grace and wit; but their sculpture, in days of decline, is always base.

32. If my little lady in the kitchen had been put in command of colours, as well as of dough, and if the paste would have taken the colours, we may be sure her mice would have been painted brown, and her cats tortoise-shell; and this, partly indeed for the added delight and prettiness of colour itself, but more for the sake of absolute realization to her eyes and mind. Now all the early sculpture of the most accomplished nations has been thus coloured, rudely or finely; and, therefore, you see at once now necessary it is that we should keep the term "graphic" for imitative art generally; since no separation can at first be made between carving and painting, with reference to the mental powers exerted in, or addressed by, them. In the earliest known art of the world, a reindeer hunt may be scratched in outline on the flat side of a clean-picked bone, and a reindeer's head carved out of the end of it; both these are flint-knife work, and, strictly speaking, sculpture: but the scratched outline is the beginning of drawing, and the carved head of sculpture proper. When the spaces enclosed by the scratched outline are filled with colour, the colouring soon becomes a principal means of effect; so that, in the engraving of an Egyptian-colour bas-relief (S. 101), Rosellini has been content to miss the outlining incisions altogether, and represent it as a painting only. Its proper definition is, "painting accented by sculpture;"
on the other hand, in solid coloured statues,—Dresden china figures, for example,—we have pretty sculpture accented by painting; the mental purpose in both kinds of art being to obtain the utmost degree of realization possible, and the ocular impression being the same, whether the delineation is obtained by engraving or painting. For, as I pointed out to you in my fifth lecture, everything is seen by the eye as patches of colour, and of colour only; a fact which the Greeks knew well; so that when it becomes a question in the dialogue of Minos, "τίνι ὄντι τῇ ὅψει ὄραται τὰ ὀρώμενα," the answer is "αἰσθητεῖ τὰῦτῇ τῇ διὰ τῶν ὑφαλμῶν δῆλοις ἤμιν τὰ χρῶματα."—"What kind of power is the sight with which we see things? It is that sense which, through the eyes, can reveal colours to us."

33. And now observe that while the graphic arts begin in the mere mimetic effort, they proceed, as they obtain more perfect realization, to act under the influence of a stronger and higher instinct. They begin by scratching the reindeer, the most interesting object of sight. But presently, as the human creature rises in scale of intellect, it proceeds to scratch, not the most interesting object of sight only, but the most interesting object of imagination; not the reindeer, but the Maker and Giver of the reindeer. And the second great condition for the advance of the art of sculpture is that the race should possess, in addition to the mimetic instinct, the realistic or idolizing instinct; the desire to see as substantial the powers that are unseen, and bring near those that are far off, and to possess and cherish those that are strange. To make in some way tangible and visible the nature of the gods—to illustrate and explain it by symbols; to bring the immortals out of the recesses of the clouds, and make them Penates; to bring back the dead from darkness, and make them Lares.

34. Our conception of this tremendous and universal human passion has been altogether narrowed by the current idea that Pagan religious art consisted only, or chiefly, in giving personality to the gods. The personality was never doubted; it was visibility, interpretation, and possession that the hearts of men sought. Possession, first of all—the getting hold of
some hewn log of wild olive-wood that would fall on its knees if it was pulled from its pedestal—and, afterwards, slowly clearing manifestation; the exactly right expression is used in Lucian's dream,—Φειδίας ἐδείξε τον Δία; “Showed * Zeus;” manifested him, nay, in a certain sense, brought forth, or created, as you have it, in Anacreon's ode to the Rose, of the birth of Athena herself—

\[
\text{πολεμόκλονον τ' Ἀθηνήν}
\text{κορυφῆς ἔδεικνυ Ζεὺς.}
\]

But I will translate the passage from Lucian to you at length—it is in every way profitable.

35. "There came to me, in the healing † night, a divine dream, so clear that it missed nothing of the truth itself; yes, and still after all this time, the shapes of what I saw remain in my sight, and the sound of what I heard dwells in my ears"—(note the lovely sense of ἅπαξλος—the sound being as of a stream passing always by in the same channel,—“so distinct was everything to me. Two women laid hold of my hands and pulled me, each towards herself, so violently, that I had like to have been pulled asunder; and they cried out against one another,—the one, that she was resolved to have me to herself, being indeed her own, and the other that it was vain for her to claim what belonged to others;—and the one who first claimed me for her own was like a hard worker, and had strength as a man's; and her hair was dusty, and her hand full of horny places, and her dress fastened tight about her, and the folds of it loaded with white marble-dust, so that she looked just as my uncle used to look when he was filing stones: but the other was pleasant in features, and delicate in form, and orderly in her dress; and so in the end, they left

* There is a primary and vulgar sense of "exhibited" in Lucian's mind; but the higher meaning is involved in it.

† In the Greek, "ambrosial." Recollect always that ambrosia, as food of gods, is the continual restorer of strength; that all food is ambrosial when it nourishes, and that the night is called "ambrosial" because it restores strength to the soul through its peace, as, in the 23rd Psalm, the stillness of waters.
it to me to decide, after hearing what they had to say, with which of them I would go; and first the hard featured and masculine one spoke:—

36. "'Dear child, I am the Art of Image-sculpture, which yesterday you began to learn; and I am as one of your own people, and of your house, for your grandfather, (and she named my mother's father) 'was a stone-cutter; and both your uncles had good name through me: and if you will keep yourself well clear of the sillinesses and fluent follies that come from this creature,' (and she pointed to the other woman) 'and will follow me, and live with me, first of all, you shall be brought up as a man should be, and have strong shoulders; and, besides that, you shall be kept well quit of all restless desires, and you shall never be obliged to go away into any foreign places, leaving your own country and the people of your house; neither shall all men praise you for your talk.* And you must not despise this rude serviceableness of my body, neither this meanness of my dusty dress; for, pushing on in their strength from such things as these, that great Phidias revealed Zeus, and Polyclitus wrought out Hera, and Myron was praised, and Praxiteles marvelled at: therefore are these men worshipped with the gods.'"

37. There is a beautiful ambiguity in the use of the preposition with the genitive in this last sentence. "Pushing on from these things" means indeed, justly, that the sculptors rose from a mean state to a noble one; but not as leaving the mean state;—not as, from a hard life, attaining to a soft one,—but as being helped and strengthened by the rough life to do what was greatest. Again, "worshipped with the gods" does not mean that they are thought of as in any sense equal to, or like to, the gods, but as being on the side of the gods against what is base and ungodly; and that the kind of worth which is in them is therefore indeed worshipful, as having its source with the gods. Finally, observe that every one of the expressions, used of the four sculptors, is definitely the best

* I have italicised this final promise of blessedness, given by the noble Spirit of Workmanship. Compare Carlyle's 5th Latter-day pamphlet, throughout; but especially pp. 12-14, in the first edition.
that Lucian could have chosen. Phidias carved like one who had seen Zeus, and had only to reveal him; Polycletus, in labour of intellect, completed his sculpture by just law, and wrought out Hera; Myron was of all most praised, because he did best what pleased the vulgar; and Praxiteles, the most wondered at or admired, because he bestowed utmost exquisiteness of beauty.

38. I am sorry not to go on with the dream; the more refined lady, as you may remember, is liberal or gentlemanly Education, and prevails at last; so that Lucian becomes an author instead of a sculptor, I think to his own regret, though to our present benefit. One more passage of his I must refer you to, as illustrative of the point before us; the description of the temple of the Syrian Hieropolis, where he explains the absence of the images of the sun and moon. "In the temple itself," he says, "on the left hand as one goes in, there is set first the throne of the sun; but no form of him is thereon, for of these two powers alone, the sun and the moon, they show no carved images. And I also learned why this is their law, for they say that it is permissible, indeed, to make of the other gods, graven images, since the forms of them are not visible to all men. But Helios and Selenaia are everywhere clear-bright, and all men behold them; what need is there therefore for sculptured work of these, who appear in the air?"

39. This, then, is the second instinct necessary to sculpture; the desire for the manifestation, description, and companionship of unknown powers; and for possession of a bodily substance—the "bronze Strasbourg," which you can embrace, and hang immortelles on the head of—instead of an abstract idea. But if you get nothing more in the depth of the national mind than these two feelings, the mimetic and idolizing instincts, there may be still no progress possible for the arts except in delicacy of manipulation and accumulative caprice of design. You must have not only the idolizing instinct, but an ἰθαγή which chooses the right thing to idolize! Else, you will get states of art like those in China or India, non-progressive, and in great part diseased and frightful,
being wrought under the influence of foolish terror, or foolish admiration. So that a third condition, completing and confirming both the others, must exist in order to the development of the creative power.

40. This third condition is that the heart of the nation shall be set on the discovery of just or equal law, and shall be from day to day developing that law more perfectly. The Greek school of sculpture is formed during, and in consequence of, the national effort to discover the nature of justice; the Tuscan, during, and in consequence of, the national effort to discover the nature of justification. I assert to you at present briefly, what will, I hope, be the subject of prolonged illustration hereafter.

41. Now when a nation with mimetic instinct and imaginative longing is also thus occupied earnestly in the discovery of Ethic law, that effort gradually brings precision and truth into all its manual acts; and the physical progress of sculpture as in the Greek, so in the Tuscan, school, consists in gradually limiting what was before indefinite, in verifying what was inaccurate, and in humanizing what was monstrous. I might perhaps content you by showing these external phenomena, and by dwelling simply on the increasing desire of naturalness, which compels, in every successive decade of years, literally, in the sculptured images, the mimicked bones to come together, bone to his bone; and the flesh to come up upon them, until from a flattened and pinched handful of clay, respecting which you may gravely question whether it was intended for a human form at all;—by slow degrees, and added touch to touch, in increasing consciousness of the bodily truth,—at last the Aphrodite of Melos stands before you, a perfect woman. But all that search for physical accuracy is merely the external operation, in the arts, of the seeking for truth in the inner soul; it is impossible without that higher effort, and the demonstration of it would be worse than useless to you, unless I made you aware at the same time of its spiritual cause.

42. Observe farther; the increasing truth in representation is co-relative with increasing beauty in the thing to be repre-
sented. The pursuit of justice which regulates the imitative effort, regulates also the development of the race into dignity of person, as of mind; and their culminating art-skill attains the grasp of entire truth at the moment when the truth becomes most lovely. And then, ideal sculpture may go on safely into portraiture. But I shall not touch on the subject of portrait sculpture to-day; it introduces many questions of detail, and must be a matter for subsequent consideration.

43. These then are the three great passions which are concerned in true sculpture. I cannot find better, or, at least, more easily remembered, names for them than "the Instincts of Mimicry, Idolatry, and Discipline;" meaning, by the last, the desire of equity and wholesome restraint, in all acts and works of life. Now of these, there is no question but that the love of Mimicry is natural and right, and the love of Discipline is natural and right. But it looks a grave question whether the yearning for Idolatry, (the desire of companionship with images,) is right. Whether, indeed, if such an instinct be essential to good sculpture, the art founded on it can possibly be "fine" art.

44. I must now beg for your close attention, because I have to point out distinctions in modes of conception which will appear trivial to you, unless accurately understood; but of an importance in the history of art which cannot be overrated.

When the populace of Paris adorned the statue of Strasbourg with immortelles, none, even the simplest of the pious decorators, would suppose that the city of Strasbourg itself, or any spirit or ghost of the city, was actually there, sitting in the Place de la Concorde. The figure was delightful to them as a visible nucleus for their fond thoughts about Strasbourg; but never for a moment supposed to be Strasbourg.

Similarly, they might have taken delight in a statue purporting to represent a river instead of a city,—the Rhine, or Garonne, suppose,—and have been touched with strong emotion in looking at it, if the real river were dear to them, and yet never think for an instant that the statue was the river.
And yet again, similarly, but much more distinctly, they might take delight in the beautiful image of a god, because it gathered and perpetuated their thoughts about that god; and yet never suppose, nor be capable of being deceived by any arguments into supposing, that the statue was the god.

On the other hand, if a meteoric stone fell from the sky in the sight of a savage, and he picked it up hot, he would most probably lay it aside in some, to him, sacred place, and believe the stone itself to be a kind of god, and offer prayer and sacrifice to it.

In like manner, any other strange or terrifying object, such, for instance, as a powerfully noxious animal or plant, he would be apt to regard in the same way; and very possibly also construct for himself frightful idols of some kind, calculated to produce upon him a vague impression of their being alive; whose imaginary anger he might deprecate or avert with sacrifice, although incapable of conceiving in them any one attribute of exalted intellectual or moral nature.

45. If you will now refer to § 52–59 of my Introductory Lectures, you will find this distinction between a resolute conception, recognized for such, and an involuntary apprehension of spiritual existence, already insisted on at some length. And you will see more and more clearly as we proceed, that the deliberate and intellectually commanded conception is not idolatrous in any evil sense whatever, but is one of the grandest and wholesomest functions of the human soul; and that the essence of evil idolatry begins only in the idea or belief of a real presence of any kind, in a thing in which there is no such presence.

46. I need not say that the harm of the idolatry must depend on the certainty of the negative. If there be a real presence in a pillar of cloud, in an un-consuming flame, or in a still small voice, it is no sin to bow down before these.

But, as matter of historical fact, the idea of such presence has generally been both ignoble and false, and confined to nations of inferior race, who are often condemned to remain for ages in conditions of vile terror, destitute of thought. Nearly all Indian architecture and Chinese design arise out
of such a state: so also, though in a less gross degree, Ninevite and Phoenician art, early Irish, and Scandinavian; the latter, however, with vital elements of high intellect mingled in it from the first.

But the greatest races are never grossly subject to such terror, even in their childhood, and the course of their minds is broadly divisible into three distinct stages.

47. (I.) In their infancy they begin to imitate the real animals about them, as my little girl made the cats and mice, but with an undercurrent of partial superstition—a sense that there must be more in the creatures than they can see; also they catch up vividly any of the fancies of the baser nations round them, and repeat these more or less apishly, yet rapidly naturalizing and beautifying them. They then connect all kinds of shapes together, compounding meanings out of the old chimeras, and inventing new ones with the speed of a running wild-fire; but always getting more of man into their images, and admitting less of monster or brute; their own characters, meanwhile, expanding and purging themselves, and shaking off the feverish fancy, as springing flowers shake the earth off their stalks.

48. (II.) In the second stage, being now themselves perfect men and women, they reach the conception of true and great gods as existent in the universe; and absolutely cease to think of them as in any wise present in statues or images; but they have now learned to make these statues beautifully human, and to surround them with attributes that may concentrate their thoughts of the gods. This is, in Greece, accurately the Pindaric time, just a little preceding the Phidian; the Phidian is already dimmed with a faint shadow of infidelity; still, the Olympic Zeus may be taken as a sufficiently central type of a statue which was no more supposed to be Zeus, than the gold or elephants' tusks it was made of; but in which the most splendid powers of human art were exhausted in representing a believed and honoured God to the happy and holy imagination of a sincerely religious people.

49. (III.) The third stage of national existence follows, in which, the imagination having now done its utmost, and be-
ing partly restrained by the sanctities of tradition, which permit no farther change in the conceptions previously created, begins to be superseded by logical deduction and scientific investigation. At the same moment, the elder artists having done all that is possible in realizing the national conceptions of the Gods, the younger ones, forbidden to change the scheme of existing representations, and incapable of doing anything better in that kind, betake themselves to refine and decorate the old ideas with more attractive skill. Their aims are thus more and more limited to manual dexterity, and their fancy paralyzed. Also, in the course of centuries, the methods of every art continually improving, and being made subjects of popular inquiry, praise is now to be got, for eminence in these, from the whole mob of the nation; whereas intellectual design can never be discerned but by the few. So that in this third æra we find every kind of imitative and vulgar dexterity more and more cultivated; while design and imagination are every day less cared for, and less possible.

50. Meanwhile, as I have just said, the leading minds in literature and science become continually more logical and investigative; and, once that they are established in the habit of testing facts accurately, a very few years are enough to convince all the strongest thinkers that the old imaginative religion is untenable, and cannot any longer be honestly taught in its fixed traditional form, except by ignorant persons. And at this point the fate of the people absolutely depends on the degree of moral strength into which their hearts have been already trained. If it be a strong, industrious, chaste, and honest race, the taking its old gods, or at least the old forms of them, away from it, will indeed make it deeply sorrowful and amazed; but will in no whit shake its will, nor alter its practice. Exceptional persons, naturally disposed to become drunkards, harlots, and cheats, but who had been previously restrained from indulging these dispositions by their fear of God, will, of course, break out into open vice, when that fear is removed. But the heads of the families of the people, instructed in the pure habits and perfect delights of an honest life, and to whom the thought of a
Father in heaven had been a comfort, not a restraint, will assuredly not seek relief from the discomfort of their orphanage by becoming uncharitable and vile. Also the high leaders of their thought gather their whole strength together in the gloom; and at the first entrance of this valley of the Shadow of Death, look their new enemy full in the eyeless face of him, and subdue him, and his terror, under their feet. "Metus omnes, et inexorabile fatum, . . . strepitumque Acherontis avari." This is the condition of national soul expressed by the art, and the words, of Holbein, Durer, Shakspeare, Pope, and Goethe.

51. But if the people, at the moment when the trial of darkness approaches, be not confirmed in moral character, but are only maintaining a superficial virtue by the aid of a spectral religion; the moment the staff of their faith is broken, the character of the race falls like a climbing plant cut from its hold: then all the earthliest vices attack it as it lies in the dust; every form of sensual and insane sin is developed, and half a century is sometimes enough to close, in hopeless shame, the career of the nation in literature, art, and war.

52. Notably, within the last hundred years, all religion has perished from the practically active national mind of France and England. No statesman in the senate of either country would dare to use a sentence out of their acceptedly divine Revelation, as having now a literal authority over them for their guidance, or even a suggestive wisdom for their contemplation. England, especially, has cast her Bible full in the face of her former God; and proclaimed, with open challenge to Him, her resolved worship of His declared enemy, Mammon. All the arts, therefore, founded on religion, and sculpture chiefly, are here in England effete and corrupt, to a degree which arts never were hitherto in the history of mankind: and it is possible to show you the condition of sculpture living, and sculpture dead, in accurate opposition, by simply comparing the nascent Pisan school in Italy with the existing school in England.

53. You were perhaps surprised at my placing in your
educational series, as a type of original Italian sculpture, the pulpit by Niccola Pisano in the Duomo of Siena. I would rather, had it been possible, have given the pulpit by Giovanni Pisano in the Duomo of Pisa; but that pulpit is dispersed in fragments through the upper galleries of the Duomo, and the cloister of the Campo Santo; and the casts of its fragments now put together at Kensington are too coarse to be of use to you. You may partly judge, however, of the method of their execution by the eagle's head, which I have sketched from the marble in the Campo Santo (Edu., No. 113), and the lioness with her cubs, (Edu., No. 103, more carefully studied at Siena); and I will get you other illustrations in due time. Meanwhile, I want you to compare the main purpose of the Cathedral of Pisa, and its associated Bell Tower, Baptistery, and Holy Field, with the main purpose of the principal building lately raised for the people of London. In these days, we indeed desire no cathedrals; but we have constructed an enormous and costly edifice, which, in claiming educational influence over the whole London populace, and middle class, is verily the Metropolitan cathedral of this century,—the Crystal Palace.

54. It was proclaimed, at its erection, an example of a newly discovered style of architecture, greater than any hitherto known,—our best popular writers, in their enthusiasm, describing it as an edifice of Fairyland. You are nevertheless to observe that this novel production of fairy enchantment is destitute of every kind of sculpture, except the bosses produced by the heads of nails and rivets; while the Duomo of Pisa, in the wreathen work of its doors, in the foliage of its capitals, inlaid colour designs of its façade, embossed panels of its baptistery font, and figure sculpture of its two pulpits, contained the germ of a school of sculpture which was to maintain, through a subsequent period of four hundred years, the greatest power yet reached by the arts of the world in description of Form, and expression of Thought.

55. Now it is easy to show you the essential cause of the vast discrepancy in the character of these two buildings.

In the vault of the apse of the Duomo of Pisa, was a
colossal image of Christ, in coloured mosaic, bearing to the temple, as nearly as possible, the relation which the statue of Athena bore to the Parthenon; and in the same manner, concentrating the imagination of the Pisan on the attributes of the God in whom he believed.

In precisely the same position with respect to the nave of the building, but of larger size, as proportioned to the three or four times greater scale of the whole, a colossal piece of sculpture was placed by English designers, at the extremity of the Crystal Palace, in preparation for their solemnities in honour of the birthday of Christ, in December, 1867 or 1868.

That piece of sculpture was the face of the clown in a pantomime, some twelve feet high from brow to chin, which face, being moved by the mechanism which is our pride, every half minute opened its mouth from ear to ear, showed its teeth, and revolved its eyes, the force of these periodical seasons of expression being increased and explained by the illuminated inscription underneath "Here we are again."

56. When it is assumed, and with too good reason, that the mind of the English populace is to be addressed, in the principal Sacred Festival of its year, by sculpture such as this, I need scarcely point out to you that the hope is absolutely futile of advancing their intelligence by collecting within this building, (itself devoid absolutely of every kind of art, and so vilely constructed that those who traverse it are continually in danger of falling over the cross-bars that bind it together) examples of sculpture filched indiscriminately from the past work, bad and good, of Turks, Greeks, Romans, Moors, and Christians, miscoloured, misplaced, and misinterpreted;* here thrust into unseemly corners, and there mortised together into mere confusion of heterogeneous obstacle; pronouncing itself hourly more intolerable in weariness, until any kind of relief is sought from it in steam wheelbarrows or cheap toy-

* "Falsely represented," would be the better expression. In the case of the tomb of Queen Eleanor, for a single instance, the Gothic foliage of which one essential virtue is its change over every shield, is represented by a repetition of casts from one mould, of which the design itself is entirely conjectural.
shops; and most of all in beer and meat, the corks and the bones being dropped through the chinks in the damp deal flooring of the English Fairy Palace.

57. But you will probably think me unjust in assuming that a building prepared only for the amusement of the people can typically represent the architecture or sculpture of modern England. You may urge, that I ought rather to describe the qualities of the refined sculpture which is executed in large quantities for private persons belonging to the upper classes, and for sepulchral and memorial purposes. But I could not now criticise that sculpture with any power of conviction to you, because I have not yet stated to you the principles of good sculpture in general. I will, however, in some points, tell you the facts by anticipation.

58. We have much excellent portrait sculpture; but portrait sculpture, which is nothing more, is always third-rate work, even when produced by men of genius;—nor does it in the least require men of genius to produce it. To paint a portrait, indeed, implies the very highest gifts of painting; but any man, of ordinary patience and artistic feeling, can carve a satisfactory bust.

59. Of our powers in historical sculpture, I am, without question, just, in taking for sufficient evidence the monuments we have erected to our two greatest heroes by sea and land; namely, the Nelson Column, and the statue of the Duke of Wellington opposite Apsley House. Nor will you, I hope, think me severe,—certainly, whatever you may think me, I am using only the most temperate language, in saying of both these monuments, that they are absolutely devoid of high sculptural merit. But, consider how much is involved in the fact thus dispassionately stated, respecting the two monuments in the principal places of our capital, to our two greatest heroes.

60. Remember that we have before our eyes, as subjects of perpetual study and thought, the art of all the world for three thousand years past: especially, we have the best sculpture of Greece, for example of bodily perfection; the best of Rome, for example of character in portraiture; the best of Florence,
for example of romantic passion: we have unlimited access to books and other sources of instruction; we have the most perfect scientific illustrations of anatomy, both human and comparative; and, we have bribes for the reward of success, large, in the proportion of at least twenty to one, as compared with those offered to the artists of any other period. And with all these advantages, and the stimulus also of fame carried instantly by the press to the remotest corners of Europe, the best efforts we can make, on the grandest of occasions, result in work which it is impossible in any one particular to praise.

Now consider for yourselves what an intensity of the negation of the faculty of sculpture this implies in the national mind! What measures can be assigned to the gulf of incapacity, which can deliberately swallow up in the gorge of it the teaching and example of three thousand years, and produce as the result of that instruction, what it is courteous to call "nothing?"

61. That is the conclusion at which we arrive, on the evidence presented by our historical sculpture. To complete the measure of ourselves, we must endeavour to estimate the rank of the two opposite schools of sculpture employed by us in the nominal service of religion, and in the actual service of vice.

I am aware of no statue of Christ, nor of any apostle of Christ, nor of any scene related in the New Testament, produced by us within the last three hundred years, which has possessed even superficial merit enough to attract public attention.

Whereas the steadily immoral effect of the formative art which we learn, more or less apishly, from the French schools, and employ, but too gladly, in manufacturing articles for the amusement of the luxurious classes, must be ranked as one of the chief instruments used by joyful fiends and angry fates, for the ruin of our civilization.

If, after I have set before you the nature and principles of true sculpture, in Athens, Pisa, and Florence, you reconsider these facts,—(which you will then at once recognize as such),
—you will find that they absolutely justify my assertion that the state of sculpture in modern England, as compared with that of the great Ancients, is literally one of corrupt and dishonourable death, as opposed to bright and fameful life.

62. And now, will you bear with me, while I tell you finally why this is so?

The cause with which you are personally concerned is your own frivolity; though essentially this is not your fault, but that of the system of your early training. But the fact remains the same, that here, in Oxford, you, a chosen body of English youth, in no wise care for the history of your country, for its present dangers, or its present duties. You still, like children of seven or eight years old, are interested only in bats, balls, and oars: nay, including with you the students of Germany and France, it is certain that the general body of modern European youth have their minds occupied more seriously by the sculpture and painting of the bowls of their tobacco-pipes, than by all the divinest workmanship and passionate imagination of Greece, Rome, and Mediæval Chris-
tendom.

63. But the elementary causes, both of this frivolity in you, and of worse than frivolity in older persons, are the two forms of deadly Idolatry which are now all but universal in England.

The first of these is the worship of the Eidolon, or Phan-
tasm of Wealth; worship of which you will find the nature partly examined in the 37th paragraph of my Munera Pul-
verès; but which is briefly to be defined as the servile apprehension of an active power in Money, and the submission to it as the God of our life.

64. The second elementary cause of the loss of our nobly imaginative faculty, is the worship of the Letter, instead of the Spirit, in what we chiefly accept as the ordinance and teaching of Deity; and the apprehension of a healing sacredness in the act of reading the Book whose primal commands we refuse to obey.

No feather idol of Polynesia was ever a sign of a more shameful idolatry, than the modern notion in the minds of
certainly the majority of English religious persons, that the Word of God, by which the heavens were of old, and the earth, standing out of the water and in the water,—the Word of God which came to the prophets, and comes still for ever to all who will hear it, (and to many who will forbear); and which, called Faithful and True, is to lead forth, in the judgment, the armies of heaven,—that this “Word of God” may yet be bound at our pleasure in morocco, and carried about in a young lady’s pocket, with tasselled ribands to mark the passages she most approves of.

65. Gentlemen, there has hitherto been seen no instance, and England is little likely to give the unexampled spectacle, of a country successful in the noble arts, yet in which the youths were frivolous, the maidens falsely religious, the men, slaves of money, and the matrons, of vanity. Not from all the marble of the hills of Luni will such a people ever shape one statue that may stand nobly against the sky; not from all the treasures bequeathed to them by the great dead, will they gather, for their own descendants, any inheritance but shame.

LECTURE III.

IMAGINATION.

November, 1870.

66. The principal object of the preceding lecture (and I choose rather to incur your blame for tediousness in repeating, than for obscurity in defining it), was to enforce the distinction between the ignoble and false phase of Idolatry, which consists in the attribution of a spiritual power to a material thing; and the noble and truth-seeking phase of it, to which I shall in these lectures* give the general term of Imagina-

* I shall be obliged in future lectures, as hitherto in my other writings, to use the terms, Idolatry and Imagination in a more comprehensive sense; but here I use them for convenience sake, limitedly, to avoid the continual occurrence of the terms, noble and ignoble, or false and true, with reference to modes of conception.
tion;—that is to say, the invention of material symbols which may lead us to contemplate the character and nature of gods, spirits, or abstract virtues and powers, without in the least implying the actual presence of such Beings among us, or even their possession, in reality, of the forms we attribute to them.

67. For instance, in the ordinarily received Greek type of Athena, on vases of the Phidian time (sufficiently represented in the opposite woodcut), no Greek would have supposed the vase on which this was painted to be itself Athena, nor to contain Athena inside of it, as the Arabian fisherman’s casket contained the genie; neither did he think that this rude black painting, done at speed as the potter’s fancy urged his hand, represented anything like the form or aspect of the Goddess herself. Nor would he have thought so, even had the image been ever so beautifully wrought. The goddess might, indeed, visibly appear under the form of an armed virgin, as she might under that of a hawk or a swallow, when it pleased her to give such manifestation of her presence; but it did not, therefore, follow that she was constantly invested with any of these forms, or that the best which human skill could, even by her own aid, picture of her, was, indeed, a likeness of her. The real use, at all events, of this rude image, was only to signify to the eye and heart the facts of the existence, in some manner, of a Spirit of wisdom, perfect in gentleness, irresistible in anger; having also physical dominion over the air which is the life and breadth of all creatures, and clothed, to human eyes, with ægis of fiery cloud, and raiment of falling dew.

68. In the yet more abstract conception of the Spirit of agriculture, in which the wings of the chariot represent the winds of spring, and its crested dragons are originally a mere type of the seed with its twisted root piercing the ground, and sharp-edged leaves rising above it; we are in still less danger of mistaking the symbol for the presumed form of an actual Person. But I must, with persistence, beg of you to observe that in all the noble actions of imagination in this kind, the distinction from idolatry consists, not in the denial of
the being, or presence of the Spirit, but only in the due recognition of our human incapacity to conceive the one, or compel the other.

Fig. 3.

69. Farther—and for this statement I claim your attention still more earnestly. As no nation has ever attained real greatness during periods in which it was subject to any condition of Idolatry, so no nation has ever attained or persevered in greatness, except in reaching and maintaining a passionate Imagination of a spiritual estate higher than that of men; and of spiritual creatures nobler than men, having a quite real and personal existence, however imperfectly apprehended by us.
And all the arts of the present age deserving to be included under the name of sculpture have been degraded by us, and all principles of just policy have vanished from us,—and that totally,—for this double reason; that we are on one side, given up to idolatries of the most servile kind, as I showed you in the close of the last lecture,—while, on the other hand, we have absolutely ceased from the exercise of faithful imagination; and the only remnants of the desire of truth which remain in us have been corrupted into a prurient itch to discover the origin of life in the nature of the dust, and prove that the source of the order of the universe is the accidental concurrence of its atoms.

70. Under these two calamities of our time, the art of sculpture has perished more totally than any other, because the object of that art is exclusively the representation of form as the exponent of life. It is essentially concerned only with the human form, which is the exponent of the highest life we know; and with all subordinate forms only as they exhibit conditions of vital power which have some certain relation to humanity. It deals with the “particula undique desecta” of the animal nature, and itself contemplates, and brings forward for its disciples’ contemplation, all the energies of creation which transform the πῆλος, or lower still, the βόρβορος of the trivía, by Athena’s help, into forms of power;—(τὸ μὲν ὅλον ἀρχιτέκτων αὐτὸς ἦν. συνειργάζετο δὲ τοι καὶ ἦ Ἄθηνα ἐμπνέουσα τὸν πῆλον καὶ ἐμψυχά τοιούτα ἐναι τὰ πλάσματα;) but it has nothing whatever to do with the representation of forms not living, however beautiful, (as of clouds or waves); nor may it condescend to use its perfect skill, except in expressing the noblest conditions of life.

These laws of sculpture, being wholly contrary to the practice of our day, I cannot expect you to accept on my assertion, nor do I wish you to do so. By placing definitely good and bad sculpture before you, I do not doubt but that I shall

* “And in sum, he himself (Prometheus) was the master-maker, and Athena worked together with him, breathing into the clay, and caused the moulded things to have soul (psyche) in them.”—Lucian, Prometheus.
gradually prove to you the nature of all excelling and enduring qualities; but to-day I will only confirm my assertions by laying before you the statement of the Greeks themselves on the subject; given in their own noblest time, and assuredly authoritative, in every point which it embraces, for all time to come.

71. If any of you have looked at the explanation I have given of the myth of Athena in my Queen of the Air, you cannot but have been surprised that I took scarcely any note of the story of her birth. I did not, because that story is connected intimately with the Apolline myths; and is told of Athena, not essentially as the goddess of the air, but as the goddess of Art-Wisdom.

You have probably often smiled at the legend itself, or avoided thinking of it, as revolting. It is indeed, one of the most painful and childish of sacred myths; yet remember, ludicrous and ugly as it seems to us, this story satisfied the fancy of the Athenian people in their highest state; and if it did not satisfy—yet it was accepted by, all later mythologists: you may also remember I told you to be prepared to find that, given a certain degree of national intellect, the ruder the symbol, the deeper would be its purpose. And this legend of the birth of Athena is the central myth of all that the Greeks have left us respecting the power of their arts; and in it they have expressed, as it seemed good to them, the most important things they had to tell us on these matters. We may read them wrongly; but we must read them here, if anywhere.

72. There are so many threads to be gathered up in the legend, that I cannot hope to put it before you in total clearness, but I will take main points. Athena is born in the island of Rhodes; and that island is raised out of the sea by Apollo, after he had been left without inheritance among the gods. Zeus* would have cast the lot again, but Apollo

* His relations with the two great Titans, Themis and Mnemosyne, belong to another group of myths. The father of Athena is the lower and nearer physical Zeus, from whom Metis, the mother of Athena, long withdraws and disguises herself.
orders the golden-girdled Lachesis to stretch out her hands; and not now by chance or lot, but by noble enchantment, the island rises out of the sea.

Physically, this represents the action of heat and light on chaos, especially on the deep sea. It is the “Fiat lux” of Genesis, the first process in the conquest of Fate by Harmony. The island is dedicated to the Nymph Rhodos, by whom Apollo has the seven sons who teach ὑπάργυρα νόματα; because the rose is the most beautiful organism existing in matter not vital, expressive of the direct action of light on the earth, giving lovely form and colour at once; (compare the use of it by Dante as the form of the sainted crowd in highest heaven) and remember that, therefore, the rose is in the Greek mind, essentially a Doric flower, expressing the worship of Light, as the Iris or Ion is an Ionic one, expressing the worship of the Winds and Dew.

73. To understand the agency of Hephaestus at the birth of Athena, we must again return to the founding of the arts on agriculture by the hand. Before you can cultivate land you must clear it; and the characteristic weapon of Hephaestus,—which is as much his attribute as the trident is of Poseidon, and the rhabdos of Hermes, is not, as you would have expected, the hammer, but the clearing-axe—the doubled-edged ἐλέκυς, the same that Calypso gives Ulysses with which to cut down the trees for his home voyage; so that both the naval and agricultural strength of the Athenians are expressed by this weapon, with which they had to hew out their fortune. And you must keep in mind this agriculturally laborious character of Hephaestus, even when he is most distinctly the god of serviceable fire; thus Horace's perfect epithet for him “avidus” expresses at once the devouring eagerness of fire, and the zeal of progressive labour, for Horace gives it to him when he is fighting against the giants. And this rude symbol of his cleaving the forehead of Zeus with the axe, and giving birth to Athena signifies, indeed, physically the thrilling power of heat in the heavens, rending the clouds, and giving birth to the blue air; but far more deeply it signifies the subduing of adverse Fate by true labour; until, out of the chasm,
cleft by resolute and industrious fortitude, springs the Spirit of Wisdom.

74. Here (Fig. 4) is an early drawing of the myth, to which I shall have to refer afterwards in illustration of the childishness of the Greek mind at the time when its art-symbols were first fixed; but it is of peculiar value, because the physical character of Vulcan, as fire, is indicated by his wearing the ἐνδορόμιδας of Hermes, while the antagonism of Zeus, as the adverse chaos, either of cloud or of fate, is shown by his striking at Hephaestus with his thunderbolt. But Plate IV. gives you (as far as the light on the rounded vase will allow it to be deciphered) a characteristic representation of the scene, as conceived in later art.

75. I told you in a former lecture of this course that the entire Greek intellect was in a childish phase as compared to that of modern times. Observe, however, childishness does not necessarily imply universal inferiority: there may be a vigorous, acute, pure, and solemn childhood, and there may be a weak, foul, and ridiculous condition of advanced life; but the one is still essentially the childish, and the other the adult phase of existence.

76. You will find, then, that the Greeks were the first people that were born into complete humanity. All nations before them had been, and all around them still were, partly
savage, bestial, clay-encumbered, inhuman; still semi-goat, or semi-ant, or semi-stone, or semi-cloud. But the power of a new spirit came upon the Greeks, and the stones were filled with breath, and the clouds clothed with flesh; and then came the great spiritual battle between the Centaurs and Lapithæ; and the living creatures became "Children of Men." Taught, yet by the Centaur—sown, as they knew, in the fang—from the dappled skin of the brute, from the leprous scale of the serpent, their flesh came again as the flesh of a little child, and they were clean.

Fix your mind on this as the very central character of the Greek race—the being born pure and human out of the brutal misery of the past, and looking abroad, for the first time, with their children's eyes, wonderingly open, on the strange and divine world.

77. Make some effort to remember, so far as may be possible to you, either what you felt in yourselves when you were young, or what you have observed in other children, of the action of thought and fancy. Children are continually represented as living in an ideal world of their own. So far as I have myself observed, the distinctive character of a child is to live always in the tangible present, having little pleasure in memory, and being utterly impatient and tormented by anticipation: weak alike in reflection and forethought, but having an intense possession of the actual present, down to the shortest moments and least objects of it; possessing it, indeed, so intensely that the sweet childish days are as long as twenty days will be; and setting all the faculties of heart and imagination on little things, so as to be able to make anything out of them he chooses. Confined to a little garden, he does not imagine himself somewhere else, but makes a great garden out of that; possessed of an acorn-cup, he will not despise it and throw it away, and covet a golden one in its stead: it is the adult who does so. The child keeps his acorn-cup as a treasure, and makes a golden one out of it in his mind; so that the wondering grown-up person standing beside him is always tempted to ask concerning his treasures, not, "What would you have more than these?" but "What possibly can
you see in these?" for, to the bystander, there is a ludicrous and incomprehensible inconsistency between the child's words and the reality. The little thing tells him gravely, holding up the acorn-cup, that "this is a queen's crown, or a fairy's boat," and, with beautiful effrontery, expects him to believe the same. But observe—the acorn-cup must be there, and in his own hand. "Give it me;" then I will make more of it for myself. That is the child's one word, always.

Fig. 5.

78. It is also the one word of the Greek—"Give it me." Give me any thing definite here in my sight, then I will make more of it.

I cannot easily express to you how strange it seems to me that I am obliged, here in Oxford, to take the position of an apologist for Greek art; that I find, in spite of all the devotion of the admirable scholars who have so long maintained
in our public schools the authority of Greek literature, our younger students take no interest in the manual work of the people upon whose thoughts the tone of their early intellectual life has exclusively depended. But I am not surprised that the interest, if awakened, should not at first take the form of admiration. The inconsistency between an Homeric description of a piece of furniture or armour, and the actual rudeness of any piece of art approximating within even three or four centuries, to the Homeric period, is so great, that we at first cannot recognize the art as elucidatory of, or in any way related to, the poetic language.

79. You will find, however, exactly the same kind of discrepancy between early sculpture, and the languages of deed and thought, in the second birth, and childhood, of the world, under Christianity. The same fair thoughts and bright imaginations arise again; and similarly, the fancy is content with the rudest symbols by which they can be formalized to the eyes. You cannot understand that the rigid figure (2) with chequers or spots on its breast, and sharp lines of drapery to its feet, could represent, to the Greek, the healing majesty of heaven: but can you any better understand how a symbol so haggard as this (Fig. 5) could represent to the noblest hearts of the Christian ages the power and ministration of angels? Yet it not only did so, but retained in the rude undulatory and linear ornamentation of its dress, record of the thoughts intended to be conveyed by the spotted aegis and falling chiton of Athena, eighteen hundred years before. Greek and Venetian alike, in their noble childhood, knew with the same terror the coiling wind and congealed hail in heaven—saw with the same thankfulness the dew shed softly on the earth, and on its flowers; and both recognized, ruling these, and symbolized by them, the great helpful spirit of Wisdom, which leads the children of men to all knowledge, all courage, and all art.

80. Read the inscription written on the sarcophagus (Plate V.), at the extremity of which this angel is sculptured. It stands in an open recess in the rude brick wall of the west front of the church of St. John and Paul at Venice, being the
tomb of the two doges, father and son, Jacopo and Lorenzo Tiepolo. This is the inscription:

"Quos natura pares studiis, virtutibus, arte
 Edidit, illustres genitor natusque, sepulti
 Hâc sub rupe Duces. Venetum charissima proles
 Theupula collatis dedit hos celebranda triumphis.
 Omuia presentis donavit predia templi
 Dux Jacobus: valido fixit moderamine leges
 Urbis, et ingratam redimens certamine Jadram
 Dalmatiosque dedit patrie, post, Marte subactas
 Graiorum pelago maculavit sanguine classes.
 Suscipit oblatos princeps Laurentius Istros,
 Et domuit rigidos, ingenti strage cadentes,
 Bononie populos. Hinc subdita Cervia cessit.
 Fundavere vias pacis; fortique relieti
 Re, superos sacris petierunt mentibus ambo.

"Dominus Jacobus hobiit * M.CCLI. Dominus Laurentius hobiit M.CCLXXVIII."

You see, therefore, this tomb is an invaluable example of thirteenth century sculpture in Venice. In Plate VI., you have an example of the (coin) sculpture of the date accurately corresponding in Greece to the thirteenth century in Venice, when the meaning of symbols was everything and the workmanship comparatively nothing. The upper head is an Athena, of Athenian work in the seventh or sixth century—(the coin itself may have been struck later, but the archaic type was retained). The two smaller impressions below are the front and obverse of a coin of the same age from Corinth, the head of Athena on one side, and Pegasus, with the archaic Koppa, on the other. The smaller head is bare, the hair being looped up at the back and closely bound with an olive branch. You are to note this general outline of the head, already given in a more finished type in Plate II., as a most important elementary form in the finest sculpture, not of Greece only, but of all Christendom. In the upper head the hair is restrained still more closely by a round helmet, for the most part smooth,

*The Latin verses are of later date; the contemporary plain prose retains the Venetian guttural and aspirates.
Plate VI.—Archaic Athena of Athens and Corinth.
but embossed with a single flower tendril, having one bud, one flower, and above it, two olive leaves. You have thus the most absolutely restricted symbol possible to human thought of the power of Athena over the flowers and trees of the earth. An olive leaf by itself could not have stood for the sign of a tree, but the two can, when set in position of growth.

I would not give you the reverse of the coin on the same plate, because you would have looked at it only, laughed at it, and not examined the rest; but here it is, wonderfully engraved for you (Fig. 6): of it we shall have more to say afterwards.

81. And now as you look at these rude vestiges of the religion of Greece, and at the vestiges, still ruder, on the Ducal tomb, of the religion of Christendom, take warning against two opposite errors.

There is a school of teachers who will tell you that nothing but Greek art is deserving of study, and that all our work at this day should be an imitation of it.

Whenever you feel tempted to believe them, think of these portraits of Athena and her owl, and be assured that Greek art is not in all respects perfect, nor exclusively deserving of imitation.

There is another school of teachers who will tell you that Greek art is good for nothing; that the soul of the Greek was outcast, and that Christianity entirely superseded its faith, and excelled its works.

Whenever you feel tempted to believe them, think of this angel on the tomb of Jacopo Tiepolo; and remember, that Christianity, after it had been twelve hundred years existent as an imaginative power on the earth, could do no better work than this, though with all the former power of Greece to help it; nor was able to engrave its triumph in having stained its fleets in the seas of Greece with the blood of her people, but between barbarous imitations of the pillars which that people had invented.
82. Receiving these two warnings, receive also this lesson. In both examples, childish though it be, this Heathen and Christian art is alike sincere, and alike vividly imaginative: the actual work is that of infancy; the thoughts, in their visionary simplicity, are also the thoughts of infancy, but in their solemn virtue, they are the thoughts of men.

We, on the contrary, are now, in all that we do, absolutely without sincerity;—absolutely, therefore, without imagination, and without virtue. Our hands are dexterous with the vile and deadly dexterity of machines; our minds filled with incoherent fragments of faith, which we cling to in cowardice, without believing, and make pictures of in vanity, without loving. False and base alike, whether we admire or imitate, we cannot learn from the Heathen's art, but only pilfer it; we cannot revive the Christian's art, but only galvanize it; we are, in the sum of us, not human artists at all, but mechanisms of conceited clay, masked in the furs and feathers of living creatures, and convulsed with voltaic spasms, in mockery of animation.

83. You think, perhaps, that I am using terms unjustifiable in violence. They would, indeed, be unjustifiable, if, spoken from this chair, they were violent at all. They are, unhappily, temperate and accurate,—except in shortcoming of blame. For we are not only impotent to restore, but strong to defile, the work of past ages. Of the impotence, take but this one, utterly humiliating, and, in the full meaning of it, ghastly, example. We have lately been busy embanking, in the capital of the country, the river which, of all its waters, the imagination of our ancestors had made most sacred, and the bounty of nature most useful. Of all architectural features of the metropolis, that embankment will be, in future, the most conspicuous; and in its position and purpose it was the most capable of noble adornment.

For that adornment, nevertheless, the utmost which our modern poetical imagination has been able to invent, is a row of gas-lamps. It has, indeed, farther suggested itself to our minds as appropriate to gas-lamps set beside a river, that the gas should come out of fishes' tails; but we have not ingenuity
enough to cast so much as a smelt or a sprat for ourselves; so we borrow the shape of a Neapolitan marble, which has been the refuse of the plate and candlestick shops in every capital of Europe for the last fifty years. We cast that badly, and give lustre to the ill-cast fish with lacquer in imitation of bronze. On the base of their pedestals, towards the road, we put for advertisement's sake, the initials of the casting firm; and, for farther originality and Christianity's sake, the caduceus of Mercury; and to adorn the front of the pedestals towards the river, being now wholly at our wit's end, we can think of nothing better than to borrow the door-knocker which—again for the last fifty years—has disturbed and decorated two or three millions of London street-doors; and magnifying the marvellous device of it, a lion's head with a ring in its mouth (still borrowed from the Greek), we complete the embankment with a row of heads and rings, on a scale which enables them to produce, at the distance at which only they can be seen, the exact effect of a row of sentryboxes.

84. Farther. In the very centre of the city, and at the point where the Embankment commands a view of Westminster Abbey on one side and of St. Paul's on the other—that is to say, at precisely the most important and stately moment of its whole course—it has to pass under one of the arches of Waterloo Bridge, which, in the sweep of its curve, is as vast—it alone—as the Rialto at Venice, and scarcely less seemly in proportions. But over the Rialto, though of late and debased Venetian work, there still reigns some power of human imagination: on the two flanks of it are carved the Virgin and the Angel of the Annunciation; on the keystone the descending Dove. It is not, indeed, the fault of living designers that the Waterloo arch is nothing more than a gloomy and hollow heap of wedged blocks of blind granite. But just beyond the damp shadow of it, the new Embankment is reached by a flight of stairs, which are, in point of fact, the principal approach to it, a-foot, from central London; the descent from the very midst of the metropolis of England to the banks of the chief river of England; and for this approach, living designers are answerable.
85. The principal decoration of the descent is again a gas-lamp, but a shattered one, with a brass crown on the top of it or, rather, half-crown, and that turned the wrong way, the back of it to the river and causeway, its flame supplied by a visible pipe far wandering along the wall; the whole apparatus being supported by a rough cross-beam. Fastened to the centre of the arch above is a large placard, stating that the Royal Humane Society's drags are in constant readiness, and that their office is at 4, Trafalgar Square. On each side of the arch are temporary, but dismally old and battered boardings, across two angles capable of unseemly use by the British public. Above one of these is another placard, stating that this is the Victoria Embankment. The steps themselves—some forty of them—descend under a tunnel, which the shattered gas-lamp lights by night, and nothing by day. They are covered with filthy dust, shaken off from infinitude of filthy feet; mixed up with shreds of paper, orange-peel, foul straw, rags, and cigar ends, and ashes; the whole agglutinated, more or less, by dry saliva into slippery blotches and patches; or, when not so fastened, blown dismally by the sooty wind hither and thither, or into the faces of those who ascend and descend. The place is worth your visit, for you are not likely to find elsewhere a spot which, either in costly and ponderous brutality of building, or in the squalid and indecent accompaniment of it, is so far separated from the peace and grace of nature, and so accurately indicative of the methods of our national resistance to the Grace, Mercy, and Peace of Heaven.

86. I am obliged always to use the English word "Grace" in two senses, but remember that the Greek χάρις includes them both (the bestowing, that is to say of Beauty and Mercy); and especially it includes these in the passage of Pindar's first ode, which gives us the key to the right interpretation of the power of sculpture in Greece. You remember that I told you, in my Sixth Introductory Lecture (§ 151), that the mythic accounts of Greek sculpture begin in the legends of the family of Tantalus; and especially in the most grotesque legend of them all, the inlaying of the ivory shoul-
der of Pelops. At that story Pindar pauses—not, indeed, without admiration, nor alleging any impossibility in the circumstances themselves, but doubting the careless hunger of Demeter—and gives his own reading of the event, instead of the ancient one. He justifies this to himself, and to his hearers, by the plea that myths have, in some sort, or degree, (ποιό πιέ), led the mind of mortals beyond the truth: and then he goes on:

"Grace, which creates everything that is kindly and soothing for mortals, adding honour, has often made things at first untrustworthy, become trustworthy through Love."

87. I cannot, except in these lengthened terms, give you the complete force of the passage; especially of the ἀπιοτον ἐμῆσατο πιστῶν—"made it trustworthy by passionate desire that it should be so"—which exactly describes the temper of religious persons at the present day, who are kindly and sincere, in clinging to the forms of faith which either have long been precious to themselves, or which they feel to have been without question instrumental in advancing the dignity of mankind. And it is part of the constitution of humanity—a part which, above others, you are in danger of unwisely contemning under the existing conditions of our knowledge, that the things thus sought for belief with eager passion, do, indeed, become trustworthy to us; that, to each of us, they verily become what we would have them; the force of the μήνυς and μνήμη with which we seek after them, does, indeed, make them powerful to us for actual good or evil; and it is thus granted to us to create not only with our hands things that exalt or degrade our sight, but with our hearts also, things that exalt or degrade our souls; giving true substance to all that we hoped for; evidence to things that we have not seen, but have desired to see; and calling, in the sense of creating, things that are not, as though they were.

88. You remember that in distinguishing Imagination from Idolatry, I referred you to the forms of passionate affection with which a noble people commonly regards the rivers and springs of its native land. Some conception of personality or of spiritual power in the stream, is almost necessarily in-
volved in such emotion; and prolonged χάρις in the form of gratitude, the return of Love for benefits continually bestowed, at last alike in all the highest and the simplest minds, when they are honourable and pure, makes this untrue thing trustworthy; ἄπιστου ἐμφαστὸ πιστῶν, until it becomes to them the safe basis of some of the happiest impulses of their moral nature. Next to the marbles of Verona, given you as a primal type of the sculpture of Christianity, moved to its best energy in adorning the entrance of its temples, I have not unwillingly placed, as your introduction to the best sculpture of the religion of Greece, the forms under which it represented the personality of the fountain Arethusa. But, without restriction to those days of absolute devotion, let me simply point out to you how this untrue thing, made true by Love, has intimate and heavenly authority even over the minds of men of the most practical sense, the most shrewd wit, and the most severe precision of moral temper. The fair vision of Sabrina in *Comus*, the endearing and tender promise, "Fies nobilium tu quoque fontium," and the joyful and proud affection of the great Lombard's address to the lakes of his enchanted land,—

Te, Lari maxume, teque
Fluctibus et fremitu assurgens, Benace, marino,

may surely be remembered by you with regretful piety, when you stand by the blank stones which at once restrain and disgrace your native river, as the final worship rendered to it by modern philosophy. But a little incident which I saw last summer on its bridge at Wallingford, may put the contrast of ancient and modern feeling before you still more forcibly.

89. Those of you who have read with attention (none of us can read with too much attention), Molière's most perfect work, the *Misanthrope*, must remember Celiméne's description of her lovers, and her excellent reason for being unable to regard with any favour, "notre grand flandrin de vicomte,—depuis que je l'ai vu, trois quarts d'heure durant, cracher dans un puits pour faire des ronds." That sentence is worth noting, both in contrast to the reverence paid by the ancients to wells and springs, and as one of the most interesting traces of the
extension of the loathsome habit among the upper classes of Europe and America, which now renders all external grace, dignity, and decency, impossible in the thoroughfares of their principal cities. In connection wish that sentence of Molière's you may advisably also remember this fact, which I chanced to notice on the bridge of Wallingford. I was walking from end to end of it, and back again, one Sunday afternoon of last May, trying to conjecture what had made this especial bend and ford of the Thames so important in all the Anglo-Saxon wars. It was one of the few sunny afternoons of the bitter spring, and I was very thankful for its light, and happy in watching beneath it the flow and the glittering of the classical river, when I noticed a well-dressed boy, apparently just out of some orderly Sunday-school, leaning far over the parapet; watching, as I conjectured, some bird or insect on the bridge-buttress. I went up to him to see what he was looking at; but just as I got close to him, he started over to the opposite parapet, and put himself there into the same position, his object being, as I then perceived, to spit from both sides upon the heads of a pleasure party who were passing in a boat below.

90. The incident may seem to you too trivial to be noticed in this place. To me, gentlemen, it was by no means trivial. It meant, in the depth of it, such absence of all true χαρός, reverence, and intellect, as it is very dreadful to trace in the mind of any human creature, much more in that of a child educated with apparently every advantage of circumstance in a beautiful English country town, within ten miles of our University. Most of all, is it terrific when we regard it as the exponent (and this, in truth, it is), of the temper which, as distinguished from former methods, either of discipline or recreation, the present tenor of our general teaching fosters in the mind of youth;—teaching which asserts liberty to be a right, and obedience a degradation; and which, regardless alike of the fairness of nature and the grace of behaviour, leaves the insolent spirit and degraded senses to find their only occupation in malice, and their only satisfaction in shame.
91. You will, I hope, proceed with me, not scornfully any more, to trace, in the early art of a noble heathen nation, the feeling of what was at least a better childishness than this of ours; and the efforts to express, though with hands yet failing, and minds oppressed by ignorant phantasy, the first truth by which they knew that they lived; the birth of wisdom and of all her powers of help to man, as the reward of his resolute labour.

92. "'Αφαίστον τέχνασιν." Note that word of Pindar in the Seventh Olympic. This axe-blown of Vulcan's was to the Greek mind truly what Clytemnestra falsely asserts her to have been "τῆς δὲ δεξιᾶς χερῶς, ἔργων, δικαιὰς τέκτωνς"; physically, it meant the opening of the blue through the rent clouds of heaven, by the action of local terrestrial heat (of Hephaestus as opposed to Apollo, who shines on the surface of the upper clouds, but cannot pierce them; and, spiritually, it meant the first birth of prudent thought out of rude labour, the clearing-axe in the hand of the woodman being the practical elementary sign of his difference from the wild animals of the wood. Then he goes on, "From the high head of her Father, Athenaia rushing forth, cried with her great and exceeding cry; and the Heaven trembled at her, and the Earth Mother." The cry of Athena, I have before pointed out, physically distinguishes her, as the spirit of the air, from silent elemental powers; but in this grand passage of Pindar it is again the mythic cry of which he thinks; that is to say, the giving articulate words, by intelligence, to the silence of Fate. "Wisdom crieth aloud, she uttereth her voice in the streets," and Heaven and Earth tremble at her reproof.

93. Uttereth her voice in "the streets." For all men, that is to say; but to what work did the Greeks think that her voice was to call them? What was to be the impulse communicated by her prevailing presence; what the sign of the people's obedience to her?

This was to be the sign—"But she, the goddess herself, gave to them to prevail over the dwellers upon earth, with best-labouring hands in every art. And by their paths there were the likenesses of living and of creeping things; and the glory
was deep. For to the cunning workman, greater knowledge comes, undeceitful."

94. An infinitely pregnant passage, this, of which to-day you are to note mainly these three things: First, that Athena is the goddess of Doing, not at all of sentimental inaction. She is begotten, as it were, of the woodman's axe; her purpose is never in a word only, but in a word and a blow. She guides the hands that labour best, in every art.

95. Secondly. The victory given by Wisdom, the worker, to the hands that labour best, is that the streets and ways, κέλευθοι, shall be filled by likenesses of living and creeping things?

Things living, and creeping! Are the Reptile things not alive then? You think Pindar wrote that carelessly? or that, if he had only known a little modern anatomy, instead of "reptile" things, he would have said "monochondylyous" things? Be patient, and let us attend to the main points first.

Sculpture, it thus appears, is the only work of wisdom that the Greeks care to speak of; they think it involves and crowns every other. Image-making art; this is Athena's, as queenliest of the arts. Literature, the order and the strength of word, of course belongs to Apollo and the Muses; under Athena are the Substances and the Forms of things.

96. Thirdly. By this forming of Images there is to be gained a "deep"—that is to say—a weighty, and prevailing, glory; not a floating nor fugitive one. For to the cunning workman, greater knowledge comes, "undeceitful."

"Δαέντε." I am forced to use two English words to translate that single Greek one. The "cunning" workman, thoughtful in experience, touch, and vision of the thing to be done; no machine, witless, and of necessary motion; yet not cunning only, but having perfect habitual skill of hand also; the confirmed reward of truthful doing. Recollect, in connection with this passage of Pindar, Homer's three verses about getting the lines of ship-timber true, (II. xv. 410)
and the beautiful epithet of Persephone, "δαειρα," as the
Tryer and Knower of good work; and remembering these,
trust Pindar for the truth of his saying, that to the cunning
workman—(and let me solemnly enforce the words by adding
—that to him only,) knowledge comes undeceitful.

97. You may have noticed, perhaps, and with a smile, as
one of the paradoxes you often hear me blamed for too fondly
stating; what I told you in the close of my Third Introductory
Lecture, that "so far from art's being immoral, little else ex-
cept art is moral." I have now farther to tell you, that little
else, except art, is wise; that all knowledge, unaccompanied
by a habit of useful action, is too likely to become deceitful,
and that every habit of useful action must resolve itself into
some elementary practice of manual labour. And I would, in
all sober and direct earnestness advise you, whatever may be
the aim, predilection, or necessity of your lives, to resolve
upon this one thing at least, that you will enable yourselves
daily to do actually with your hands, something that is useful
to mankind. To do anything well with your hands, useful
or not;—to be, even in trifling, παλάμης δαήμων, is already
much;—when we come to examine the art of the middle ages
I shall be able to show you that the strongest of all influences
of right then brought to bear upon character was the neces-
sity for exquisite manual dexterity in the management of the
spear and bridle; and in your own experience most of you
will be able to recognize the wholesome effect, alike on body
and mind, of striving, within proper limits of time, to become
either good batsmen, or good oarsmen. But the bat and the
racer's oar are children's toys. Resolve that you will be men
in usefulness, as well as in strength; and you will find that
then also, but not till then, you can become men in under-
standing; and that every fine vision and subtle theorem will
present itself to you thenceforward undeceitfully, ἐποθημοσύγησιν
Ἀθήνης.

98. But there is more to be gathered yet from the words of
Pindar. He is thinking, in his brief, intense way, at once of
Athena's work on the soul, and of her literal power on the
dust of the Earth. His "κέλευθος" is a wide word meaning all
the paths of sea and land. Consider, therefore, what Athena's own work actually is—in the literal fact of it. The blue, clear air is the sculpturing power upon the earth and sea. Where the surface of the earth is reached by that, and its matter and substance inspired with, and filled by that, organic form becomes possible. You must indeed have the sun, also, and moisture; the kingdom of Apollo risen out of the sea: but the sculpturing of living things, shape by shape, is Athena's, so that under the brooding spirit of the air, what was without form, and void brings forth the moving creature that hath life.

99. That is her work then—the giving of Form; then the separately Apolline work is the giving of Light; or, more strictly, Sight: giving that faculty to the retina to which we owe not merely the idea of light, but the existence of it; for light is to be defined only as the sensation produced in the eye of an animal, under given conditions; those same conditions being: to a stone, only warmth or chemical influence, but not light. And that power of seeing, and the other various personalities and authorities of the animal body, in pleasure and pain, have never, hitherto, been, I do not say, explained, but in any wise touched or approached by scientific discovery. Some of the conditions of mere external animal form and of muscular vitality have been shown; but for the most part that is true, even of external form, which I wrote six years ago. "You may always stand by Form against Force. To a painter, the essential character of anything is the form of it, and the philosophers cannot touch that. They come and tell you, for instance, that there is as much heat, or motion, or calorific energy (or whatever else they like to call it), in a tea-kettle, as in a gier-eagle. Very good: that is so; and it is very interesting. It requires just as much heat as will boil the kettle, to take the gier-eagle up to his nest, and as much more to bring him down again on a hare or a partridge. But we painters, acknowledging the equality and similarity of the kettle and the bird in all scientific respects, attach, for our part, our principal interest to the difference in their forms. For us, the primarily cognisable facts, in the two things, are,
that the kettle has a spout, and the eagle a beak; the one a lid on its back, the other a pair of wings; not to speak of the distinction also of volition, which the philosophers may properly call merely a form or mode of force—but, then to an artist, the form or mode is the gist of the business."

100. As you will find that it is, not to the artist only, but to all of us. The laws under which matter is collected and constructed are the same throughout the universe: the substance so collected, whether for the making of the eagle, or the worm, may be analyzed into gaseous identity; a diffusive vital force, apparently so closely related to mechanically measurable heat as to admit the conception of its being itself mechanically measurable, and unchanging in total quantity, ebbs and flows alike through the limbs of men, and the fibres of insects. But, above all this, and ruling every grotesque or degraded accident of this, are two laws of beauty in form, and of nobility in character, which stand in the chaos of creation between the Living and the Dead, to separate the things that have in them a sacred and helpful, from those that have in them an accursed and destroying, nature; and the power of Athena, first physically put forth in the sculpturing of these ζώα and ἐρπετά, these living and reptile things, is put forth, finally, in enabling the hearts of men to discern the one from the other; to know the unquenchable fires of the Spirit from the unquenchable fires of Death; and to choose, not unaided, between submission to the Love that cannot end, or to the Worm that cannot die.

101. The unconsciousness of their antagonism is the most notable characteristic of the modern scientific mind; and I believe no credulity or fallacy admitted by the weakness (or it may sometimes rather have been the strength) of early imagination, indicates so strange a depression beneath the due scale of human intellect, as the failure of the sense of beauty in form, and loss of faith in heroism of conduct, which have become the curses of recent science,* art, and policy.

* The best modern illustrated scientific works show perfect faculty of representing monkeys, lizards, and insects; absolute incapability of representing either a man, a horse, or a lion.
102. That depression of intellect has been alike exhibited in the mean consternation confessedly felt on one side, and the mean triumph apparently felt on the other, during the course of the dispute now pending as to the origin of man. Dispute for the present, not to be decided, and of which the decision is to persons in the modern temper of mind, wholly without significance: and I earnestly desire that you, my pupils, may have firmness enough to disengage your energies from investigation so premature and so fruitless, and sense enough to perceive that it does not matter how you have been made, so long as you are satisfied with being what you are. If you are dissatisfied with yourselves, it ought not to console, but humiliate you, to imagine that you were once seraphs; and if you are pleased with yourselves, it is not any ground of reasonable shame to you if, by no fault of your own, you have passed through the elementary condition of apes.

103. Remember, therefore, that it is of the very highest importance that you should know what you are, and determine to be the best that you may be; but it is of no importance whatever, except as it may contribute to that end, to know what you have been. Whether your Creator shaped you with fingers, or tools, as a sculptor would a lump of clay, or gradually raised you to manhood through a series of inferior forms, is only of moment to you in this respect—that in the one case you cannot expect your children to be nobler creatures than you are yourselves—in the other, every act and thought of your present life may be hastening the advent of a race which will look back to you, their fathers (and you ought at least to have attained the dignity of desiring that it may be so), with incredulous disdain.

104. But that you are yourselves capable of that disdain and dismay; that you are ashamed of having been apes, if you ever were so; that you acknowledge instinctively, a relation of better and worse, and a law respecting what is noble and base, which makes it no question to you that the man is worthier than the baboon—this is a fact of infinite significance. This law of preference in your hearts is the true
essence of your being, and the consciousness of that law is a more positive existence than any dependent on the coherence or forms of matter.

105. Now, but a few words more of mythology, and I have done. Remember that Athena holds the weaver's shuttle, not merely as an instrument of texture, but as an instrument of picture; the ideas of clothing, and of the warmth of life, being thus inseparably connected with those of graphic beauty, and the brightness of life. I have told you that no art could be recovered among us without perfectness in dress, nor without the elementary graphic art of women, in divers colours of needlework. There has been no nation of any art-energy, but has strenuously occupied and interested itself in this household picturing, from the web of Penelope to the tapestry of Queen Matilda, and the meshes of Arras and Gobelins.

106. We should then naturally ask what kind of embroidery Athena put on her own robe; "πέπλον ἔανον, ποικίλον, ὕπ' ἅυτή ποιήσατο κἀλ κάμε χέρσων."

The subject of that ποικίλα of hers, as you know, was the war of the giants and gods. Now the real name of these giants, remember, is that used by Hesiod, "πηλόχονοι," "mud-begotten," and the meaning of the contest between these and Zeus, πηλογόνον ἐλατήριον, is, again, the inspiration of life into the clay, by the goddess of breath; and the actual confusion going on visibly before you, daily, of the earth, heaping itself into cumbrous war with the powers above it.

107. Thus briefly, the entire material of Art, under Athena's hand, is the contest of life with clay; and all my task in explaining to you the early thought of both the Athenian and Tuscan schools will only be the tracing of this battle of the giants into its full heroic form, when, not in tapestry only—but in sculpture—and on the portal of the Temple of Delphi itself, you have the "κλόνος ἐν τείχεσιν λαύνουσι γέγαντες," and their defeat hailed by the passionate cry of delight from the Athenian maids, beholding Pallas in her full power, "λέοντος Πάλλαδος ἐμίνθ θεόν," my own goddess. All our work, I repeat, will be nothing but the inquiry into the development of this one subject, and the pressing fully home the question of Plato.
about that embroidery—"And think you that there is verily war with each other among the Gods? and dreadful enmities and battle, such as the poets have told, and such as our painters set forth in graven scripture, to adorn all our sacred rites and holy places; yes, and in the great Panathenaeas themselves, the Peplus, full of such wild picturing, is carried up into the Acropolis—shall we say that these things are true, oh Euthuphron, right-minded friend?"

108. Yes, we say, and know, that these things are true; and true for ever: battles of the gods, not among themselves, but against the earth-giants. Battle prevailing age by age, in nobler life and lovelier imagery; creation, which no theory of mechanism, no definition of force, can explain, the adoption and completing of individual form by individual animation, breathed out of the lips of the Father of Spirits. And to recognize the presence in every knitted shape of dust, by which it lives and moves and has its being—to recognize it, revere, and show it forth, is to be our eternal Idolatry.

"Thou shalt not bow down to them, nor worship them."

"Assuredly no," we answered once, in our pride; and through porch and aisle, broke down the carved work thereof, with axes and hammers.

Who would have thought the day so near when we should bow down to worship, not the creatures, but their atoms,—not the forces that form, but those that dissolve them? Trust me, gentlemen, the command which is stringent against adoration of brutality, is stringent no less against adoration of chaos, nor is faith in an image fallen from heaven to be reformed by a faith only in the phenomenon of decadence. We have ceased from the making of monsters to be appeased by sacrifice;—it is well,—if indeed we have also ceased from making them in our thoughts. We have learned to distrust the adorning of fair phantasms, to which we once sought for succour;—it is well, if we learn to distrust also the adorning of those to which we seek, for temptation; but the verity of gains like these can only be known by our confession of the divine seal of strength and beauty upon the tempered frame, and honour in the fervent heart, by which, increasing visibly, may
yet be manifested to us the holy presence, and the approving love, of the Loving God, who visits the iniquities of the Fathers upon the Children, unto the third and fourth generation of them that hate Him, and shows mercy unto thousands in them that love Him, and keep His Commandments.

LECTURE IV.

LIKENESS.

November, 1870.

109. You were probably vexed, and tired, towards the close of my last lecture, by the time it took us to arrive at the apparently simple conclusion, that sculpture must only represent organic form, and the strength of life in its contest with matter. But it is no small thing to have that "λεύσως Πάλλαδα" fixed in your minds, as the one necessary sign by which you are to recognize right sculpture, and believe me you will find it the best of all things, if you can take for yourselves the saying from the lips of the Athenian maids, in its entirety, and say also—λεύσως Πάλλαδ' ἐμαν θεόν. I proceed to-day into the practical appliance of this apparently speculative, but in reality imperative, law.

110. You observe, I have hitherto spoken of the power of Athena, as over painting no less than sculpture. But her rule over both arts is only so far as they are zoographic;—representative, that is to say, of animal life, or of such order and discipline among other elements, as may invigorate and purify it. Now there is a speciality of the art of painting beyond this, namely, the representation of phenomena of colour and shadow, as such, without question of the nature of the things that receive them. I am now accordingly obliged to speak of sculpture and painting as distinct arts, but the laws which bind sculpture, bind no less the painting of the higher schools which has, for its main purpose, the showing beauty in human or animal form; and which is therefore placed by the Greeks
equally under the rule of Athena, as the Spirit, first, of Life, and then of Wisdom in conduct.

111. First, I say, you are to "see Pallas" in all such work, as the Queen of Life; and the practical law which follows from this, is one of enormous range and importance, namely, that nothing must be represented by sculpture, external to any living form, which does not help to enforce or illustrate the conception of life. Both dress and armour may be made to do this, by great sculptors, and are continually so used by the greatest. One of the essential distinctions between the Athenian and Florentine schools is dependent on their treatment of drapery in this respect; an Athenian always sets it to exhibit the action of the body, by flowing with it, or over it, or from it, so as to illustrate both its form and gesture; a Florentine, on the contrary, always uses his drapery to conceal or disguise the forms of the body, and exhibit mental emotion: but both use it to enhance the life, either of the body or soul; Donatello and Michael Angelo, no less than the sculptors of Gothic chivalry, ennoble armour in the same way; but base sculptors carve drapery and armour for the sake of their folds and picturesqueness only, and forget the body beneath. The rule is so stern that all delight in mere incidental beauty, which painting often triumphs in, is wholly forbidden to sculpture;—for instance, in painting the branch of a tree, you may rightly represent and enjoy the lichens and moss on it, but a sculptor must not touch one of them: they are inessential to the tree's life,—he must give the flow and bending of the branch only, else he does not enough "see Pallas" in it.

Or to take a higher instance, here is an exquisite little painted poem, by Edward Frere; a cottage interior, one of the thousands which within the last two months * have been laid desolate in unhappy France. Every accessory in the painting is of value—the fire-side, the tiled floor, the vegetables lying upon it, and the basket hanging from the roof. But not one of these accessories would have been admissible

* See date of delivery of Lecture. The picture was of a peasant girl of eleven or twelve years old, peeling carrots by a cottage fire.
in sculpture. You must carve nothing but what has life. "Why"? you probably feel instantly inclined to ask me.—You see the principle we have got, instead of being blunt or useless, is such an edged tool that you are startled the moment I apply it. "Must we refuse every pleasant accessory and picturesque detail, and petrify nothing but living creatures"?—Even so: I would not assert it on my own authority. It is the Greeks who say it, but whatever they say of sculpture, be assured, is true.

112. That then is the first law—you must see Pallas as the Lady of Life—the second is, you must see her as the Lady of Wisdom; or σοφία—and this is the chief matter of all. I cannot but think, that after the considerations into which we have now entered, you will find more interest than hitherto in comparing the statements of Aristotle, in the Ethics, with those of Plato in the Polity, which are authoritative as Greek definitions of goodness in art, and which you may safely hold authoritative as constant definitions of it. You remember, doubtless, that the σοφία, or ἄρετή τέχνης, for the sake of which Phidias is called σοφός as a sculptor, and Polyclitus as an image-maker, Eth. 6. 7. (the opposition is both between ideal and portrait sculpture, and between working in stone and bronze) consists in the "νο̂μ τῶν τιμωτάτων τῆ θέμης," "the mental apprehension of the things that are most honourable in their nature." Therefore what is, indeed, most lovely, the true image-maker will most love; and what is most hateful, he will most hate, and in all things discern the best and strongest part of them, and represent that essentially, or, if the opposite of that, then with manifest detestation and horror. That is his art wisdom; the knowledge of good and evil, and the love of good, so that you may discern, even in his representation of the vilest thing, his acknowledgment of what redemption is possible for it, or latent power exists in it; and, contrariwise, his sense of its present misery. But for the most part, he will idolize, and force us also to idolize, whatever is living, and virtuous, and victoriously right; opposing to it in some definite mode the image of the conquered ἐπετόιν.

113. This is generally true of both the great arts; but in
LIKENESS.

severity and precision, true of sculpture. To return to our illustration: this poor little girl was more interesting to Edward Frere, he being a painter, because she was poorly dressed, and wore these clumsy shoes, and old red cap, and patched gown. May we sculpture her so? No. We may sculpture her naked, if we like; but not in rags.

But if we may not put her into marble in rags, may we give her a pretty frock with ribands and flounces to it, and put her into marble in that? No. We may put her simplest peasant's dress, so it be perfect and orderly, into marble; anything finer than that would be more dishonourable in the eyes of Athena than rags. If she were a French princess, you might carve her embroidered robe and diadem; if she were Joan of Arc you might carve her armour—for then these also would be “τῶν τιμωτατῶν,” not otherwise.

114. Is not this an edge-tool we have got hold of, unawares? and a subtle one too; so delicate and scimitar-like in decision. For note, that even Joan of Arc's armour must be only sculptured, if she has it on; it is not the honourableness or beauty of it that are enough, but the direct bearing of it by her body. You might be deeply, even pathetically, interested by looking at a good knight's dinted coat of mail, left in his desolate hall. May you sculpture it where it hangs? No; the helmet for his pillow, if you will—no more.

You see we did not do our dull work for nothing in last lecture. I define what we have gained once more, and then we will enter on our new ground.

115. The proper subject of sculpture, we have determined, is the spiritual power seen in the form of any living thing, and so represented as to give evidence that the sculptor has loved the good of it and hated the evil.

“So represented,” we say; but how is that to be done? Why should it not be represented, if possible, just as it is seen? What mode or limit of representation may we adopt? We are to carve things that have life;—shall we try so to imitate them that they may indeed seem living,—or only half living, and like stone instead of flesh?

It will simplify this question if I show you three examples
of what the Greeks actually did: three typical pieces of their sculpture, in order of perfection.

116. And now, observe that in all our historical work, I will endeavour to do, myself, what I have asked you to do in your drawing exercises; namely, to outline firmly in the beginning, and then fill in the detail more minutely. I will give you first, therefore, in a symmetrical form, absolutely simple and easily remembered, the large chronology of the Greek school; within that unforgettable scheme we will place, as we discover them, the minor relations of arts and times.

I number the nine centuries before Christ thus, upwards, and divide them into three groups of three each.

\[
\begin{align*}
\text{A. Archaic} & : \begin{cases} 9 \\ 8 \\ 7 \end{cases} \\
\text{B. Best} & : \begin{cases} 6 \\ 5 \\ 4 \end{cases} \\
\text{C. Corrupt} & : \begin{cases} 3 \\ 2 \\ 1 \end{cases}
\end{align*}
\]

Then the ninth, eighth, and seventh centuries are the period of Archaic Greek Art, steadily progressive wherever it existed. The sixth, fifth, and fourth are the period of central Greek Art; the fifth, or central century producing the finest. That is easily recollected by the battle of Marathon. And the third, second, and first centuries are the period of steady decline.

Learn this A B C thoroughly, and mark, for yourselves, what you, at present, think the vital events in each century. As you know more, you will think other events the vital ones; but the best historical knowledge only approximates to true
Plate VII.—Archaic, Central and Declining Art of Greece.
thought in that matter; only be sure that what is truly vital in the character which governs events, is always expressed by the art of the century; so that if you could interpret that art rightly, the better part of your task in reading history would be done to your hand.

117. It is generally impossible to date with precision art of the archaic period—often difficult to date even that of the central three hundred years. I will not weary you with futile minor divisions of time; here are three coins (Plate VII) roughly, but decisively, characteristic of the three ages. The first is an early coin of Tarentum. The city was founded as you know, by the Spartan Phalanthus, late in the eighth century. I believe the head is meant for that of Apollo Archegetes, it may however be Tarsus, the son of Poseidon; it is no matter to us at present whom it is meant for, but the fact that we cannot know, is itself of the greatest import. We cannot say, with any certainty, unless by discovery of some collateral evidence, whether this head is intended for that of a god, or demi-god, or a mortal warrior. Ought not that to disturb some of your thoughts respecting Greek idealism? Farther, if by investigation we discover that the head is meant for that of Phalanthus, we shall know nothing of the character of Phalanthus from the face; for there is no portraiture at this early time.

118. The second coin is of Æatus in Macedonia; probably of the fifth or early fourth century, and entirely characteristic of the central period. This we know to represent the face of a god—Hermes. The third coin is a king's, not a city's. I will not tell you, at this moment, what king's; but only that it is a late coin of the third period, and that it is as distinct in purpose as the coin of Tarentum is obscure. We know of this coin, that it represents no god nor demi-god, but a mere mortal; and we know precisely, from the portrait, what that mortal's face was like.

119. A glance at the three coins, as they are set side by side, will now show you the main differences in the three great Greek styles. The archaic coin is sharp and hard; every line decisive and numbered, set unhesitatingly in its place; nothing
is wrong, though everything incomplete, and, to us who have seen finer art, ugly. The central coin is as decisive and clear in arrangement of masses, but its contours are completely rounded and finished. There is no character in its execution so prominent that you can give an epithet to the style. It is not hard, it is not soft, it is not delicate, it is not coarse, it is not grotesque, it is not beautiful; and I am convinced, unless you had been told that this is fine central Greek art, you would have seen nothing at all in it to interest you. Do not let yourselves be anywise forced into admiring it; there is, indeed, nothing more here, than an approximately true rendering of a healthy youthful face, without the slightest attempt to give an expression of activity, cunning, nobility, or any other attribute of the Mercurial mind. Extreme simplicity, unpretending vigour of work, which claims no admiration either for minuteness or dexterity, and suggests no idea of effort at all; refusal of extraneous ornament, and perfectly arranged disposition of counted masses in a sequent order, whether in the beads, or the ringlets of hair; this is all you have to be pleased with; neither will you ever find, in the best Greek Art, more. You might at first suppose that the chain of beads round the cap was an extraneous ornament; but I have little doubt that it is as definitely the proper fillet for the head of Hermes, as the olive for Zeus, or corn for Triptolemus. The cap or petasus cannot have expanded edges, there is no room for them on the coin; these must be understood, therefore; but the nature of the cloud-petasus is explained by edging it with beads, representing either dew or hail. The shield of Athena often bears white pellets for hail, in like manner.

120. The third coin will, I think, at once strike you by what we moderns should call its "vigour of character." You may observe also that the features are finished with great care and subtlety, but at the cost of simplicity and breadth. But the essential difference between it and the central art, is its disorder in design—you see the locks of hair cannot be counted any longer—they are entirely dishevelled and irregular. Now the individual character may, or may not
be, a sign of decline; but the licentiousness, the casting loose of the masses in the design, is an infallible one. The effort at portraiture is good for art if the men to be portrayed are good men, not otherwise. In the instance before you, the head is that of Mithridates VI. of Pontus, who had, indeed, the good qualities of being a linguist and a patron of the arts; but as you will remember, murdered, according to report, his mother; certainly his brother, certainly his wives and sisters, I have not counted how many of his children, and from a hundred to a hundred and fifty thousand persons besides; these last in a single day's massacre. The effort to represent this kind of person is not by any means a method of study from life ultimately beneficial to art.

121. This however is not the point I have to urge to-day. What I want you to observe is that, though the master of the great time does not attempt portraiture, he does attempt animation. And as far as his means will admit, he succeeds in making the face—you might almost think—vulgarly animated; as like a real face, literally, "as it can stare." Yes: and its sculptor meant it to be so; and that was what Phidias meant his Jupiter to be, if he could manage it. Not, indeed, to be taken for Zeus himself; and yet, to be as like a living Zeus as art could make it. Perhaps you think he tried to make it look living only for the sake of the mob, and would not have tried to do so for connoisseurs. Pardon me; for real connoisseurs, he would, and did; and herein consists a truth which belongs to all the arts, and which I will at once drive home in your minds, as firmly as I can.

122. All second-rate artists—(and remember, the second-rate ones are a loquacious multitude, while the great come only one or two in a century; and then, silently)—all second-rate artists will tell you that the object of fine art is not resemblance, but some kind of abstraction more refined than reality. Put that out of your heads at once. The object of the great Resemblant Arts is, and always has been, to resemble; and to resemble as closely as possible. It is the function of a good portrait to set the man before you in habit as he lived, and I would we had a few more that did so. It is the function
of a good landscape to set the scene before you in its reality; to make you, if it may be, think the clouds are flying, and the streams foaming. It is the function of the best sculptor—the true Dædalus—to make stillness look like breathing, and marble look like flesh.

123. And in all great times of art, this purpose is as naively expressed as it is steadily held. All the talk about abstraction belongs to periods of decadence. In living times, people see something living that pleases them; and they try to make it live for ever, or to make it something as like it as possible, that will last for ever. They paint their statues, and inlay the eyes with jewels, and set real crowns on their heads; they finish, in their pictures, every thread of embroidery, and would fain, if they could, draw every leaf upon the trees. And their only verbal expression of conscious success is, that they have made their work "look real."

124. You think all that very wrong. So did I, once; but it was I that was wrong. A long time ago, before ever I had seen Oxford, I painted a picture of the Lake of Como, for my father. It was not at all like the Lake of Como; but I thought it rather the better for that. My father differed with me; and objected particularly to a boat with a red and yellow awning, which I had put into the most conspicuous corner of my drawing. I declared this boat to be "necessary to the composition." My father not the less objected, that he had never seen such a boat, either at Como or elsewhere; and suggested that if I would make the lake look a little more like water, I should be under no necessity of explaining its nature by the presence of floating objects. I thought him at the time a very simple person for his pains; but have since learned, and it is the very gist of all practical matters, which, as professor of fine art, I have now to tell you, that the great point in painting a lake is—to get it to look like water.

125. So far, so good. We lay it down for a first principle, that our graphic art, whether painting or sculpture, is to produce something which shall look as like Nature as possible. But now we must go one step farther, and say that it is to produce what shall look like Nature to people who know what
Nature is like! You see this is at once a great restriction, as well as a great exaltation of our aim. Our business is not to deceive the simple; but to deceive the wise! Here, for instance, is a modern Italian print, representing, to the best of its power, St. Cecilia, in a brilliantly realistic manner. And the fault of the work is not in its earnest endeavour to show St. Cecilia in habit as she lived, but in that the effort could only be successful with persons unaware of the habit St. Cecilia lived in. And this condition of appeal only to the wise increases the difficulty of imitative resemblance so greatly, that, with only average skill or materials, we must surrender all hope of it, and be content with an imperfect representation, true as far as it reaches, and such as to excite the imagination of a wise beholder to complete it; though falling very far short of what either he or we should otherwise have desired. For instance, here is a suggestion, by Sir Joshua Reynolds, of the general appearance of a British Judge—requiring the imagination of a very wise beholder indeed, to fill it up, or even at first to discover what it is meant for. Nevertheless, it is better art than the Italian St. Cecilia, because the artist, however little he may have done to represent his knowledge, does, indeed, know altogether what a Judge is like, and appeals only to the criticism of those who know also.

126. There must be, therefore, two degrees of truth to be looked for in the good graphic arts; one, the commonest, which, by any partial or imperfect sign conveys to you an idea which you must complete for yourself; and the other, the finest, a representation so perfect as to leave you nothing to be farther accomplished by this independent exertion; but to give you the same feeling of possession and presence which you would experience from the natural object itself. For instance of the first, in this representation of a rainbow,* the artist has no hope that, by the black lines of engraving, he can deceive you into any belief of the rainbow’s being there, but he gives indication enough of what he intends, to enable you to supply the rest of the idea yourself, providing always you know beforehand what a rainbow is like. But in this drawing

* In Durer’s "Melencolia."
of the falls of Terni,* the painter has strained his skill to the utmost to give an actually deceptive resemblance of the iris, dawning and fading among the foam. So far as he has not actually deceived you, it is not because he would not have done so if he could; but only because his colours and science have fallen short of his desire. They have fallen so little short that, in a good light, you may all but believe the foam and the sunshine are drifting and changing among the rocks.

127. And after looking a little while, you will begin to regret that they are not so: you will feel that, lovely as the drawing is, you would like far better to see the real place, and the goats skipping among the rocks, and the spray floating above the fall. And this is the true sign of the greatest art—to part voluntarily with its greatness;—to make itself poor and unnoticed; but so to exalt and set forth its theme that you may be fain to see the theme instead of it. So that you have never enough admired a great workman’s doing till you have begun to despise it. The best homage that could be paid to the Athena of Phidias would be to desire rather to see the living goddess; and the loveliest Madonnas of Christian art fall short of their due power, if they do not make their beholders sick at heart to see the living Virgin.

128. We have then, for our requirement of the finest art (sculpture, or anything else), that it shall be so like the thing it represents as to please those who best know or can conceive the original; and, if possible, please them deceptively—its final triumph being to deceive even the wise; and (the Greeks thought) to please even the Immortals, who were so wise as to be undeceivable. So that you get the Greek, thus far entirely true, idea of perfectness in sculpture, expressed to you by what Phalaris says, at first sight of the bull of Perilasus, “It only wanted motion and bellowing to seem alive; and as soon as I saw it, I cried out, it ought to be sent to the god.” To Apollo, for only he, the undeceivable, could thoroughly understand such sculpture, and perfectly delight in it.

129. And with this expression of the Greek ideal of sculpt-

* Turner’s, in the Hakewill series.
ure, I wish you to join the early Italian, summed in a single line by Dante—"non vide me' di me, chi vide 'l vero." Read the 12th canto of the "Purgatory," and learn that whole passage by heart; and if ever you chance to go to Pistoja, look at La Robbia's coloured porcelain bas-reliefs of the seven works of Mercy on the front of the hospital there; and note especially the faces of the two sick men—one at the point of death, and the other in the first peace and long-drawn breathing of health after fever—and you will know what Dante meant by the preceding line, "Morti li morti, e i vivi paren vivi."

130. But now, may we not ask farther,—is it impossible for art such as this, prepared for the wise, to please the simple also? Without entering on the awkward questions of degree, how many the wise can be, or how much men should know, in order to be rightly called wise, may we not conceive an art to be possible, which would deceive everybody, or everybody worth deceiving? I showed you at my first lecture, a little ringlet of Japan ivory, as a type of elementary bas-relief touched with colour; and in your rudimentary series you have a drawing by Mr. Burgess, of one of the little fishes enlarged, with every touch of the chisel facsimiled on the more visible scale; and showing the little black bead inlaid for the eye, which in the original is hardly to be seen without a lens. You may, perhaps be surprised, when I tell you, that (putting the question of subject aside for the moment, and speaking only of the mode of execution and aim at resemblance), you have there a perfect example of the Greek ideal of method in sculpture. And you will admit that, to the simplest person whom we could introduce as a critic, that fish would be a satisfactory, nay, almost a deceptive fish; while to any one caring for subtleties of art, I need not point out that every touch of the chisel is applied with consummate knowledge, and that it would be impossible to convey more truth and life with the given quantity of workmanship.

131. Here is, indeed, a drawing by Turner, (Edu. 131), in which with some fifty times the quantity of labour, and
far more highly educated faculty of sight, the artist has expressed some qualities of lustre and colour which only very wise persons indeed could perceive in a John Dory; and this piece of paper contains, therefore, much more, and more subtle, art, than the Japan ivory; but are we sure that it is therefore greater art? or that the painter was better employed in producing this drawing, which only one person can possess, and only one in a hundred enjoy, than he would have been in producing two or three pieces on a larger scale, which should have been at once accessible to, and enjoyable by, a number of simpler persons? Suppose for instance, that Turner, instead of faintly touching this outline, on white paper, with his camel's hair pencil, had struck the main forms of his fish into marble, thus (Fig. 7): and instead of colouring the white paper so delicately that, perhaps, only a few of the most keenly observant artists in England can see it at all, had,
with his strong hand, tinted the marble with a few colours, deceptive to the people, and harmonious to the initiated; suppose that he had even conceded so much to the spirit of popular applause as to allow of a bright glass bead being inlaid for the eye, in the Japanese manner; and that the enlarged, deceptive, and popularly pleasing work had been carved on the outside of a great building,—say Fishmongers' Hall,—where everybody commercially connected with Billingsgate could have seen it, and ratified it with the wisdom of the market;—might not the art have been greater, worthier, and kinder in such use?

132. Perhaps the idea does not once approve itself to you of having your public buildings covered with ornaments like this; but pray, remember that the choice of subject is an ethical question, not now before us. All I ask you to decide is whether the method is right, and would be pleasant in giving the distinctiveness to pretty things, which it has here given to what, I suppose it may be assumed, you feel to be an ugly thing. Of course, I must note parenthetically, such realistic work is impossible in a country where the buildings are to be discoloured by coal-smoke; but so is all fine sculpture, whatsoever; and the whiter, the worse its chance. For that which is prepared for private persons, to be kept under cover, will, of necessity, degenerate into the copyism of past work, or merely sensational and sensual forms of present life, unless there be a governing school addressing the populace, for their instruction, on the outside of buildings. So that, as I partly warned you in my third lecture, you can simply have no sculpture in a coal country. Whether you like coals or carvings best, is no business of mine. I merely have to assure you of the fact that they are incompatible.

But, assuming that we are again, some day, to become a civilized and governing race, deputing ironmongery, coal-digging, and lucre-digging, to our slaves in other countries, it is quite conceivable that, with an increasing knowledge of natural history, and desire for such knowledge, what is now done by careful, but inefficient, woodcuts, and in ill-coloured engravings, might be put in quite permanent sculptures, with
inlay of variegated precious stones, on the outside of buildings, where such pictures would be little costly to the people; and in a more popular manner still, by Robbia ware and Palissy ware, and inlaid majolica, which would differ from the housewives' present favourite decoration of plates above her kitchen dresser; by being every piece of it various, instructive, and universally visible.

133. You hardly know, I suppose, whether I am speaking in jest or earnest. In the most solemn earnest, I assure you; though such is the strange course of our popular life that all the irrational arts of destruction are at once felt to be earnest; while any plan for those of instruction on a grand scale, sounds like a dream or jest. Still, I do not absolutely propose to decorate our public buildings with sculpture wholly of this character; though beast, and fowl, and creeping things, and fishes, might all find room on such a building as the Solomon's House of a New Atlantis; and some of them might even become symbolic of much to us again. Passing through the Strand, only the other day, for instance, I saw four highly finished and delicately coloured pictures of cock-fighting, which, for imitative quality, were nearly all that could be desired, going far beyond the Greek cock of Himera; and they would have delighted a Greek's soul, if they had meant as much as a Greek cock-fight; but they were only types of the "ἐνδομάχας ἀλέκτωρ," and of the spirit of home contest, which has been so fatal lately to the Bird of France; and not of the defence of one's own barnyard, in thought of which the Olympians set the cock on the pillars of their chariot course; and gave it goodly alliance in its battle, as you may see here, in what is left of the angle of mouldering marble in the chair of the priest of Dionusos. The cast of it, from the centre of the theatre under the Acropolis, is in the British Museum; and I wanted its spiral for you, and this kneeling Angel of Victory;—it is late Greek art, but nobly systematic flat bas-relief. So I set Mr. Burgess to draw it; but neither he nor I for a little while, could make out what the Angel of Victory was kneeling for. His attitude is an ancient and grandly conventional one among the Egyptians;
and I was tracing it back to a kneeling goddess of the greatest dynasty of the Pharaohs—a goddess of Evening, or Death, laying down the sun out of her right hand;—when, one bright day, the shadows came out clear on the Athenian throne, and I saw that my Angel of Victory was only backing a cock at a cock-fight.

134. Still, as I have said, there is no reason why sculpture, even for simplest persons, should confine itself to imagery of fish, or fowl, or four-footed things.

We go back to our first principle: we ought to carve nothing but what is honourable. And you are offended, at this moment, with my fish, (as I believe, when the first sculptures appeared on the windows of this museum, offence was taken at the unnecessary introduction of cats), these dissatisfactions being properly felt by your "νοῦς τῶν τιμωτάτων." For indeed, in all cases, our right judgment must depend on our wish to give honour only to things and creatures that deserve it.

135. And now I must state to you another principle of veracity, both in sculpture, and all following arts, of wider scope than any hitherto examined. We have seen that sculpture is to be a true representation of true external form. Much more is it to be a representation of true internal emotion. You must carve only what you yourself see as you see it; but, much more, you must carve only what you yourself feel, as you feel it. You may no more endeavour to feel through other men’s souls, than to see with other men’s eyes. Whereas generally now in Europe and America, every man’s energy is bent upon acquiring some false emotion, not his own, but belonging to the past, or to other persons, because he has been taught that such and such a result of it will be fine. Every attempted sentiment in relation to art is hypocritical; our notions of sublimity, of grace, or pious serenity, are all second hand; and we are practically incapable of designing so much as a bell-handle or a door-knocker without borrowing the first notion of it from those who are gone—where we shall not wake them with our knocking. I would we could.
136. In the midst of this desolation we have nothing to count on for real growth, but what we can find of honest liking and longing, in ourselves and in others. We must discover, if we would healthily advance, what things are verily ἀξιότατα among us; and if we delight to honour the dishonourable, consider how, in future, we may better bestow our likings. Now it appears to me from all our popular declarations, that we, at present, honour nothing so much as liberty and independence; and no person so much as the Free man and Self-made man, who will be ruled by no one, and has been taught, or helped, by no one. And the reason I chose a fish for you as the first subject of sculpture, was that in men who are free and self-made, you have the nearest approach, humanly possible, to the state of the fish, and finely organized ἐρπετόν. You get the exact phrase in Habakkuk, if you take the Septuagint text.—“ποιήσεις τοῖς ἀνθρώποις ὡς τοῖς ἰχθῦας τῆς θαλάσσης, καὶ ὡς τὰ ἐρπετά τὰ σύκ ἔχοντα ἔργουμεν.” “Thou wilt make men as the fishes of the sea, and as the reptile things, that have no ruler over them.” And it chanced that as I was preparing this lecture, one of our most able and popular prints gave me a woodcut of the “self-made man,” specified as such, so vigorously drawn, and with so few touches, that Phidias or Turner himself could scarcely have done it better; so that I had only to ask my assistant to enlarge it with accuracy, and it became comparable with my fish at once. Of course it is not given by the caricaturist as an admirable face; only, I am enabled by his skill to set before you, without any suspicion of unfairness on my part, the expression to which the life we profess to think most honourable, naturally leads. If we were to take the hat off, you see how nearly the profile corresponds with that of the typical fish.

137. Such, then, being the definition by your best popular art, of the ideal of feature at which we are gradually arriving by self-manufacture; when I place opposite to it (in Plate VIII.) the profile of a man not in any wise self-made, neither by the law of his own will, nor by the love of his own interest—nor capable, for a moment, of any kind of “Independence,” or of
the idea of independence; but wholly dependent upon, and subjeeted to, external influence of just law, wise teaching, and trusted love and truth, in his fellow-spirits;—setting before you, I say, this profile of a God-made instead of a self-made, man, I know that you will feel, on the instant, that you are brought into contact with the vital elements of human art; and that this, the sculpture of the good, is indeed the only permissible sculpture.

138. A God-made man, I say. The face, indeed, stands as a symbol of more than man in its sculptor's mind. For as I gave you, to lead your first effort in the form of leaves, the sceptre of Apollo, so this, which I give you as the first type of rightness in the form of flesh, is the countenance of the holder of that sceptre, the Sun-God of Syracuse. But there is nothing in the face (nor did the Greek suppose there was) more perfect than might be seen in the daily beauty of the creatures the Sun-God shone upon, and whom his strength and honour animated. This is not an ideal, but a quite literally true, face of a Greek youth; nay, I will undertake to show you that it is not supremely beautiful, and even to surpass it altogether with the literal portrait of an Italian one. It is in verity no more than the form habitually taken by the features of a well educated young Athenian or Sicilian citizen; and the one requirement for the sculptors of to-day is not, as it has been thought, to invent the same ideal, but merely to see the same reality.

Now, you know I told you in my fourth lecture, that the beginning of art was in getting our country clean and our people beautiful, and you supposed that to be a statement irrelevant to my subject; just as, at this moment, you perhaps think, I am quitting the great subject of this present lecture—the method of likeness-making—and letting myself branch into the discussion of what things we are to make likeness of. But you shall see hereafter that the method of imitating a beautiful thing must be different from the method of imitating an ugly one; and that, with the change in subject from what is dishonourable to what is honourable, there will be involved a parallel change in the management of tools, of lines,
and of colours. So that before I can determine for you how you are to imitate, you must tell me what kind of face you wish to imitate. The best draughtsmen in the world could not draw this Apollo in ten scratches, though he can draw the self-made man. Still less this nobler Apollo of Ionian Greece, (Plate IX.) in which the incisions are softened into a harmony like that of Correggio's painting. So that you see the method itself,—the choice between black incision or fine sculpture, and perhaps, presently, the choice between colour or no colour, will depend on what you have to represent. Colour may be expedient for a glistening dolphin or a spotted fawn;—perhaps inexpedient for white Poseidon, and gleaming Dian. So that, before defining the laws of sculpture, I am compelled to ask you, what you mean to carve; and that, little as you think it, is asking you how you mean to live, and what the laws of your State are to be, for they determine those of your statue. You can only have this kind of face to study from, in the sort of state that produced it. And you will find that sort of state described in the beginning of the fourth book of the laws of Plato; as founded, for one thing, on the conviction that of all the evils that can happen to a state, quantity of money is the greatest! μείζον κακῶν, ὡς ἐπος εἰπεῖν, πόλει οὐδὲν ἄν γίνοντο, εἰς γενναίων καὶ δικαιών ἡθῶν κτήσιν, "for, to speak shortly, no greater evil, matching each against each, can possibly happen to a city, as adverse to its forming just or generous character," than its being full of silver and gold.

139. Of course, the Greek notion may be wrong, and ours right, only—ὡς ἐπος εἰπεῖν—you can have Greek sculpture only on that Greek theory: shortly expressed by the words put into the mouth of Poverty herself, in the Plutus of Aristophanes "Τοῦ πλούτου παρέχω βελτίωνας ἄνδρας, καὶ τὴν γνώμην, καὶ τὴν Ἴδεαν," "I deliver to you better men than the God of Money can, both in imagination and feature." So on the other hand, this ichthyoid, reptilian, or mono-chondyloid ideal of the self-made man can only be reached, universally, by a nation which holds that poverty, either of purse or spirit, —but especially the spiritual character of being πτωχοὶ τὰ πνεύματι, is the lowest of degradations; and which believes
PLATE IX.—APOLLO CHRYSOCOMES OF CLAZOMENÆ.
LIKENESS.

that the desire of wealth is the first of manly and moral sentiments. As I have been able to get the popular ideal represented by its own living art, so I can give you this popular faith in its own living words; but in words meant seriously and not at all as caricature, from one of our leading journals, professedly aesthetic also in its very name, the *Spectator*, of August 6th, 1870.

"Mr. Ruskin's plan," it says, "would make England poor, in order that she might be cultivated, and refined and artistic. A wilder proposal was never broached by a man of ability; and it might be regarded as a proof that the assiduous study of art emasculates the intellect, and even the moral sense. Such a theory almost warrants the contempt with which art is often regarded by essentially intellectual natures, like Proudhon" (sic). "Art is noble as the flower of life, and the creations of a Titian are a great heritage of the race; but if England could secure high art and Venetian glory of colour only by the sacrifice of her manufacturing supremacy, and by the acceptance of national poverty, then the pursuit of such artistic achievements would imply that we had ceased to possess natures of manly strength, or to know the meaning of moral aims. If we must choose between a Titian and a Lancashire cotton mill, then, in the name of manhood and of morality, give us the cotton mill. Only the dilettantism of the studio; that dilettantism which loosens the moral no less than the intellectual fibre, and which is as fatal to rectitude of action as to correctness of reasoning power, would make a different choice."

You see also, by this interesting and most memorable passage, how completely the question is admitted to be one of ethics—the only real point at issue being, whether this face or that is developed on the truer moral principle.

140. I assume, however, for the present, that this Apolline type is the kind of form you wish to reach and to represent. And now observe, instantly, the whole question of manner of imitation is altered for us. The fins of the fish, the plumes of the swan, and the flowing of the Sun-God's hair are all represented by incisions—but the incisions do sufficiently represent the fin and feather,—they insufficiently represent the
but am on just that excite a show you tress great the round let in’ and If obtain and and Now, finish 3 can but And distance, and and could flat mean else by of is to though it must must of which changes first, command more discord, and may be beauty quite to me works, this at the would at the absolutely hair.

And the orders can be given, quite clearly, up to a certain point, in form; but they cannot be given clearly in colour, now that the subject is subtle. All beauty of this high kind depends on harmony; let but the slightest discord come into it, and the finer the thing is, the more fatal will be the flaw. Now, on a flat surface, I can command my colour to be precisely what and where I mean it to be; on a round one I cannot. For all harmony depends first, on the fixed proportion of the colour of the light, to that of the relative shadow; and therefore, if I fasten my colour, I must fasten my shade. But on a round surface the shadow changes at every hour of the day; and therefore, all colouring which is expressive of form, is impossible; and if the form is fine, (and here there is nothing but what is fine), you may bid farewell to colour.

141. Farewell to colour; that is to say, if the thing is to be seen distinctly, and you have only wise people to show it to; but if it is to be seen indistinctly, at a distance, colour may become explanatory; and if you have simple people to show it to, colour may be necessary to excite their imaginations, though not to excite yours. And the art is great always by meeting its conditions in the straightest way; and if it is to please a multitude of innocent and bluntly-minded persons, must express itself in the terms that will touch them; else it is not good. And I have to trace for you through the history of the past, and possibilities of the future, the expedients used by great sculptors to obtain clearness, impressiveness, or splendour; and the manner of their appeal to the people,
under various light and shadow, and with reference to different degrees of public intelligence: such investigation resolving itself again and again, as we proceed, into questions absolutely ethical; as for instance, whether colour is to be bright or dull, that is to say, for a populace cheerful or heartless;—whether it is to be delicate or strong; that is to say, for a populace attentive or careless; whether it is to be a background like the sky, for a procession of young men and maidens, because your populace revere life—or the shadow of a vault behind a corpse, stained with drops of blackened blood, for a populace taught to worship Death. Every critical determination of rightness depends on the obedience to some ethical law, by the most rational and, therefore, simplest, means. And you see how it depends most, of all things, on whether you are working for chosen persons or for the mob; for the joy of the boudoir, or of the Borgo. And if for the mob, whether the mob of Olympia, or of St. Antoine. Phidias, showing his Jupiter for the first time, hides behind the temple door to listen, resolved afterwards, "μὴ μίξεν τὸ ἄγαλμα πρὸς τὸ τοῖς πλεῖστοις δοκοῖν, οὐ γὰρ ἦγείτο μικράν εἶναί συμβολήν δήμου τοσοῦτον," and truly, as your people is, in judgment, and in multitude, so must your sculpture be, in glory. An elementary principle which has been too long out of mind.

142. I leave you to consider it, since, for some time, we shall not again be able to take up the inquiries to which it leads. But, ultimately, I do not doubt that you will rest satisfied in these following conclusions:

1. Not only sculpture, but all the other fine arts, must be for the people.

2. They must be didactic to the people, and that as their chief end. The structural arts, didactic in their manner; the graphic arts in their matter also.

3. And chiefly the great representative and imaginative arts, that is to say, the drama, and sculpture, are to teach what is noble in past history, and lovely in existing human and organic life.

4. And the test of right manner of execution in these arts,
is that they strike, in the most emphatic manner, the rank of popular minds to which they are addressed.

5. And the test of utmost fineness in execution in these arts, is that they make themselves be forgotten in what they represent; and so fulfil the words of their greatest Master,

"The best, in this kind, are but shadows."

LECTURE V.

structure.

December, 1870.

143. On previous occasions of addressing you, I have endeavoured to show you, first, how sculpture is distinguished from other arts; then its proper subjects, then its proper method in the realization of these subjects. To-day, we must, in the fourth place, consider the means at its command for the accomplishment of these ends; the nature of its materials; and the mechanical or other difficulties of their treatment.

And however doubtful we may have remained, as to the justice of Greek ideals, or propriety of Greek methods of representing them, we may be certain that the example of the Greeks will be instructive in all practical matters relating to this great art, peculiarly their own. I think even the evidence I have already laid before you is enough to convince you, that it was by rightness and reality, not by idealism or delightfulness only, that their minds were finally guided; and I am sure that, before closing the present course, I shall be able so far to complete that evidence, as to prove to you that the commonly received notions of classic art are, not only unfounded, but even in many respects, directly contrary to the truth. You are constantly told that Greece idealized whatever she contemplated. She did the exact contrary: she realized and verified it. You are constantly told she sought only the beautiful. She sought, indeed, with all her heart; but
she found, because she never doubted that the search was to be consistent with propriety and common sense. And the first thing you will always discern in Greek work is the first which you ought to discern in all work; namely, that the object of it has been rational, and has been obtained by simple and unostentatious means.

144. "That the object of the work has been rational!" Consider how much that implies. That it should be by all means seen to have been determined upon, and carried through, with sense and discretion; these being gifts of intellect far more precious than any knowledge of mathematics, or of the mechanical resources of art. Therefore, also, that it should be a modest and temperate work, a structure fitted to the actual state of men; proportioned to their actual size, as animals,—to their average strength,—to their true necessities,—and to the degree of easy command they have over the forces and substances of nature.

145. You see how much this law excludes! All that is fondly magnificent, insolently ambitious, or vainly difficult. There is, indeed, such a thing as Magnanimity in design, but never unless it be joined also with modesty and Equanimity. Nothing extravagant, monstrous, strained, or singular, can be structurally beautiful. No towers of Babel envious of the skies; no pyramids in mimicry of the mountains of the earth; no streets that are a weariness to traverse, nor temples that make pigmies of the worshippers.

It is one of the primal merits and decencies of Greek work that it was, on the whole, singularly small in scale, and wholly within reach of sight, to its finest details. And, indeed, the best buildings that I know are thus modest; and some of the best are minute jewel cases for sweet sculpture. The Parthenon would hardly attract notice, if it were set by the Charing Cross Railway Station: the Church of the Miracoli, at Venice, the Chapel of the Rose, at Lucca, and the Chapel of the Thorn, at Pisa, would not, I suppose, all three together, fill the tenth part, cube, of a transept of the Crystal Palace. And they are better so.

146. In the chapter on Power in the "Seven Lamps of Archi-
tecture," I have stated what seems, at first, the reverse of what I am saying now; namely, that it is better to have one grand building than any number of mean ones. And that is true, but you cannot command grandeur by size till you can command grace in minuteness; and least of all, remember, will you so command it to-day, when magnitude has become the chief exponent of folly and misery, co-ordinate in the fraternal enormities of the Factory and Poorhouse,—the Barracks and Hospital. And the final law in this matter is, that if you require edifices only for the grace and health of mankind, and build them without pretence and without chicanery, they will be sublime on a modest scale, and lovely with little decoration.

147. From these principles of simplicity and temperance, two very severely fixed laws of construction follow; namely, first, that our structure, to be beautiful, must be produced with tools of men; and secondly, that it must be composed of natural substances. First, I say, produced with tools of men. All fine art requires the application of the whole strength and subtlety of the body, so that such art is not possible to any sickly person, but involves the action and force of a strong man's arm from the shoulder, as well as the delicatest touch of his finger: and it is the evidence that this full and fine strength has been spent on it which makes the art executively noble; so that no instrument must be used, habitually, which is either too heavy to be delicately restrained, or too small and weak to transmit a vigorous impulse; much less any mechanical aid, such as would render the sensibility of the fingers ineffectual.*

148. Of course, any kind of work in glass, or in metal, on a

* Nothing is more wonderful, or more disgraceful among the forms of ignorance engendered by modern vulgar occupations in pursuit of gain, than the unconsciousness, now total, that fine art is essentially Athletic. I received a letter from Birmingham, some little time since, inviting me to see how much, in glass manufacture, "machinery excelled rude hand work." The writer had not the remotest conception that he might as well have asked me to come and see a mechanical boat-race rowed by automatæ, and "how much machinery excelled rude arm-work."
large scale, involves some painful endurance of heat; and working in clay, some habitual endurance of cold; but the point beyond which the effort must not be carried is marked by loss of power of manipulation. As long as the eyes and fingers have complete command of the material (as a glass blower has, for instance, in doing fine ornamental work)—the law is not violated; but all our great engine and furnace work, in gun-making and the like, is degrading to the intellect; and no nation can long persist in it without losing many of its human faculties. Nay, even the use of machinery, other than the common rope and pulley, for the lifting of weights, is degrading to architecture; the invention of expedients for the raising of enormous stones has always been a characteristic of partly savage or corrupted races. A block of marble not larger than a cart with a couple of oxen could carry, and a cross-beam, with a couple of pulleys, raise, is as large as should generally be used in any building. The employment of large masses is sure to lead to vulgar exhibitions of geometrical arrangement,* and to draw away the attention from the sculpture. In general, rocks naturally break into such pieces as the human beings that have to build with them can easily lift, and no larger should be sought for.

149. In this respect, and in many other subtle ways, the law that the work is to be with tools of men is connected with the farther condition of its modesty, that it is to be wrought in substance provided by Nature, and to have a faithful respect to all the essential qualities of such substance.

And here I must ask your attention to the idea, and, more than idea,—the fact, involved in that infinitely misused term, "Providentia," when applied to the Divine Power. In its truest sense and scholarly use, it is a human virtue, Προμήθεια; the personal type of it is in Prometheus, and all the first power of τέχνη, is from him, as compared to the weakness of days when men without foresight "εἰσπυρον εἰκὴ πάντα." But, so far as we use the word "Providence" as an attribute of the Maker and Giver of all things, it does not mean that in a

*Such as the sculptureless arch of Waterloo Bridge, for instance, referred to in the Third Lecture, § 84.
shipwreck He takes care of the passengers who are to be saved and takes none of those who are to be drowned; but it does mean that every race of creatures is born into the world under circumstances of approximate adaptation to its necessities; and, beyond all others, the ingenious and observant race of man is surrounded with elements naturally good for his food, pleasant to his sight, and suitable for the subjects of his ingenuity;—the stone, metal, and clay of the earth he walks upon lending themselves at once to his hand, for all manner of workmanship.

150. Thus, his truest respect for the law of the entire creation is shown by his making the most of what he can get most easily; and there is no virtue of art, nor application of common sense, more sacredly necessary than this respect to the beauty of natural substance, and the ease of local use; neither are there any other precepts of construction so vital as these—that you show all the strength of your material, tempt none of its weaknesses, and do with it only what can be simply and permanently done.

151. Thus, all good building will be with rocks, or pebbles, or burnt clay, but with no artificial compound; all good painting, with common oils and pigments on common canvas, paper, plaster, or wood,—admitting, sometimes for precious work, precious things, but all applied in a simple and visible way. The highest imitative art should not, indeed, at first sight, call attention to the means of it; but even that, at length, should do so distinctly, and provoke the observer to take pleasure in seeing how completely the workman is master of the particular material he has used, and how beautiful and desirable a substance it was, for work of that kind. In oil painting its unctious quality is to be delighted in; in fresco, its chalky quality; in glass, its transparency; in wood, its grain; in marble, its softness; in porphyry, its hardness; in iron, its toughness. In a flint country, one should feel the delightful-ness of having flints to pick up, and fasten together into rugged walls. In a marble country one should be always more and more astonished at the exquisite colour and structure of marble; in a slate country one should feel as if every rock
cleft itself only for the sake of being built with conveniently.

152. Now, for sculpture, there are, briefly, two materials—Clay, and Stone; for glass is only a clay that gets clear and brittle as it cools, and metal a clay that gets opaque and tough as it cools. Indeed, the true use of gold in this world is only as a very pretty and very ductile clay, which you can spread as flat as you like, spin as fine as you like, and which will neither crack, nor tarnish.

All the arts of sculpture in clay may be summed up under the word "Plastic," and all of those in stone, under the word "Glyptic."

153. Sculpture in clay will accordingly include all cast brick-work, pottery, and tile-work*—a somewhat important branch of human skill. Next to the potter's work, you have all the arts in porcelain, glass, enamel, and metal; everything, that is to say, playful and familiar in design, much of what is most felicitously inventive, and, in bronze or gold, most precious and permanent.

154. Sculpture in stone, whether granite, gem, or marble, while we accurately use the general term "glyptic" for it, may be thought of with, perhaps, the most clear force under the English word "engraving." For, from the mere angular incision which the Greek consecrated in the triglyphs of his greatest order of architecture, grow forth all the arts of bas-relief, and methods of localized groups of sculpture connected with each other and with architecture: as, in another direction, the arts of engraving and wood-cutting themselves.

155. Over all this vast field of human skill the laws which I have enunciated to you rule with inevitable authority, embracing the greatest, and consenting to the humblest, exertion; strong to repress the ambition of nations, if fantastic and vain, but gentle to approve the efforts of children, made in accordance with the visible intention of the Maker of all flesh, and

* It is strange, at this day, to think of the relation of the Athenian Ceramicus to the French Tile-fields, Tileries, or Tuileries; and how these last may yet become—have already partly become—"the Potter's field," blood-bought. (December, 1870.)
the Giver of all Intelligence. These laws, therefore, I now re-
peat, and beg of you to observe them as irrefragable.
1. That the work is to be with tools of men.
2. That it is to be in natural materials.
3. That it is to exhibit the virtues of those materials, and
aim at no quality inconsistent with them.
4. That its temper is to be quiet and gentle, in harmony
with common needs, and in consent to common intelli-
gence.

We will now observe the bearing of these laws on the ele-
mentary conditions of the art at present under discussion.

156. There is, first, work in baked clay, which contracts as
it dries, and is very easily frangible. Then you must put no
work into it requiring niceness in dimension, nor any so elabo-
rate that it would be a great loss if it were broken, but as the
clay yields at once to the hand, and the sculptor can do any-
ting with it he likes, it is a material for him to sketch with
and play with,—to record his fancies in, before they escape
him—and to express roughly, for people who can enjoy such
sketches, what he has not time to complete in marble. The
clay, being ductile, lends itself to all softness of line; being
easily frangible, it would be ridiculous to give it sharp edges,
so that a blunt and massive rendering of graceful gesture will
be its natural function; but as it can be pinched, or pulled,
or thrust in a moment into projection which it would take
hours of chiselling to get in stone, it will also properly be
used for all fantastic and grotesque form, not involving sharp
edges. Therefore, what is true of chalk and charcoal, for
painters, is equally true of clay, for sculptors; they are all
most precious materials for true masters, but tempt the false
ones into fatal license; and to judge rightly of terra-cotta
work is a far higher reach of skill in sculpture-criticism than
to distinguish the merits of a finished statue.

157. We have, secondly, work in bronze, iron, gold, and
other metals; in which the laws of structure are still more
definite.

All kinds of twisted and wreathen work on every scale be-
come delightful when wrought in ductile or tenacious metal:
but metal which is to be *hammered* into form separates itself into two great divisions—solid, and flat.

(A.) In solid metal work, *i.e.*, metal cast thick enough to resist bending, whether it be hollow or not, violent and various projection may be admitted, which would be offensive in marble; but no sharp edges, because it is difficult to produce them with the hammer. But since the permanence of the material justifies exquisiteness of workmanship, whatever delicate ornamentation can be wrought with rounded surfaces may be advisedly introduced; and since the colour of bronze or any other metal is not so pleasantly representative of flesh as that of marble, a wise sculptor will depend less on flesh contour, and more on picturesque accessories, which, though they would be vulgar if attempted in stone, are rightly entertaining in bronze or silver. Verrochio’s statue of Colleone at Venice, Cellini’s Perseus at Florence, and Ghiberti’s gates at Florence, are models of bronze treatment.

(B.) When metal is beaten thin, it becomes what is technically called “plate,” (the *flattened* thing) and may be treated advisably in two ways; one, by beating it out into bosses, the other by cutting it into strips and ramifications. The vast schools of goldsmith’s work and of iron decoration, founded on these two principles, have had the most powerful influences over general taste in all ages and countries. One of the simplest and most interesting elementary examples of the treatment of flat metal by cutting is the common branched iron bar, Fig. 8, used to close small apertures in countries possessing any good primitive style of ironwork, formed by alternate cuts on its sides, and the bending down of the several portions. The ordinary domestic window balcony of Verona is formed by mere ribands of iron, bent into curves as studiously refined as those of a Greek vase, and decorated merely by their own terminations in spiral volutes.

All cast work in metal, unfinished by hand, is inadmissible
in any school of living art, since it cannot possess the perfection of form due to a permanent substance; and the continual sight of it is destructive of the faculty of taste: but metal stamped with precision, as in coins, is to sculpture what engraving is to painting.

158. Thirdly. Stone-sculpture divides itself into three schools: one in very hard material; one in very soft, and one in that of centrally useful consistence.

A. The virtue of work in hard material is the expression of form in shallow relief, or in broad contours; deep cutting in hard material is inadmissible, and the art, at once pompous and trivial, of gem engraving, has been in the last degree destructive of the honour and service of sculpture.

B. The virtue of work in soft material is deep cutting, with studiously graceful disposition of the masses of light and shade. The greater number of flamboyant churches of France are cut out of an adhesive chalk; and the fantasy of their latest decoration was, in great part, induced by the facility of obtaining contrast of black space, undercut, with white tracery easily left in sweeping and interwoven rods—the lavish use of wood in domestic architecture materially increasing the habit of delight in branched complexity of line. These points, however, I must reserve for illustration in my lectures on architecture. To-day, I shall limit myself to the illustration of elementary sculptural structure in the best material;—that is to say, in crystalline marble, neither soft enough to encourage the caprice of the workman, nor hard enough to resist his will.

159. C. By the true "Providence" of Nature, the rock which is thus submissive has been in some places stained with the fairest colours, and in others blanched into the fairest absence of colour, that can be found to give harmony to inlaying, or dignity to form. The possession by the Greeks of their λευκός λίθος was indeed the first circumstance regulating the development of their art; it enabled them at once to express their passion for light by executing the faces, hands, and feet of their dark wooden statues in white marble, so that what we look upon only with pleasure for fineness of texture
was to them an imitation of the luminous body of the deity shining from behind its dark robes; and ivory afterwards is employed in their best statues for its yet more soft and flesh-like brightness, receptive also of the most delicate colour—(therefore to this day the favourite ground of miniature painters). In like manner, the existence of quarries of peach-coloured marble within twelve miles of Verona, and of white marble and green serpentine between Pisa and Genoa, defined the manner both of sculpture and architecture for all the Gothic buildings of Italy. No subtlety of education could have formed a high school of art without these materials.

160. Next to the colour, the fineness of substance which will take a perfectly sharp edge, is essential; and this not merely to admit fine delineation in the sculpture itself, but to secure a delightful precision in placing the blocks of which it is composed. For the possession of too fine marble, as far as regards the work itself, is a temptation instead of an advantage to an inferior sculptor; and the abuse of the facility of under-cutting, especially of under-cutting so as to leave profiles defined by an edge against shadow, is one of the chief causes of decline of style in such encrusted bas-reliefs as those of the Certosa of Pavia and its contemporary monuments. But no undue temptation ever exists as to the fineness of block fitting; nothing contributes to give so pure and healthy a tone to sculpture as the attention of the builder to the jointing of his stones; and his having both the power to make them fit so perfectly as not to admit of the slightest portion of cement showing externally, and the skill to insure, if needful, and to suggest always, their stability in cementless construction. Plate X. represents a piece of entirely fine Lombardic building, the central portion of the arch in the Duomo of Verona, which corresponds to that of the porch of San Zenone, represented in Plate I. In both these pieces of building, the only line that traces the architrave round the arch, is that of the masonry joint; yet this line is drawn with extremest subtlety, with intention of delighting the eye by its relation of varied curvature to the arch itself; and it is just as much considered as the finest pen-line of a Raphael drawing. Every joint of
the stone is used, in like manner, as a thin black line, which the slightest sign of cement would spoil like a blot. And so proud is the builder of his fine jointing, and so fearless of any distortion or strain spoiling the adjustment afterwards, that in one place he runs his joint quite gratuitously through a bas-relief, and gives the keystone its only sign of pre-eminence by the minute inlaying of the head of the Lamb, into the stone of the course above.

161. Proceeding from this fine jointing to fine draughtsmanship, you have, in the very outset and earliest stage of sculpture, your flat stone surface given you as a sheet of white paper, on which you are required to produce the utmost effect you can with the simplest means, cutting away as little of the stone as may be, to save both time and trouble; and, above all, leaving the block itself, when shaped, as solid as you can, that its surface may better resist weather, and the carved parts be as much protected as possible by the masses left around them.

162. The first thing to be done is clearly to trace the outline of subject with an incision approximating in section to that of the furrow of a plough, only more equal-sided. A fine sculptor strikes it, as his chisel leans, freely, on marble; an Egyptian, in hard rock, cuts it sharp, as in cuneiform inscriptions. In any case, you have a result somewhat like the upper figure, Plate XI., in which I show you the most elementary indication of form possible, by cutting the outline of the typical archaic Greek head with an incision like that of a Greek triglyph, only not so precise in edge or slope, as it is to be modified afterwards.

163. Now, the simplest thing we can do next, is to round off the flat surface within the incision, and put what form we can get into the feebler projection of it thus obtained. The Egyptians do this, often with exquisite skill, and then, as I showed you in a former lecture, colour the whole—using the incision as an outline. Such a method of treatment is capable of good service in representing, at little cost of pains, subjects in distant effect, and common, or merely picturesque, subjects even near. To show you what it is capable of, and what
Plate XI.—The First Elements of Sculpture.

Incised Outline and Opened Space.
coloured sculpture would be in its rudest type, I have prepared the coloured relief of the John Dory* as a natural history drawing for distant effect. You know, also, that I meant him to be ugly—as ugly as any creature can well be. In time, I hope to show you prettier things—peacocks and kingfishers,—butterflies and flowers, on grounds of gold, and the like, as they were in Byzantine work. I shall expect you, in right use of your aesthetic faculties, to like those better than what I show you to-day. But it is now a question of method only; and if you will look, after the lecture, first at the mere white relief, and then see how much may be gained by a few dashes of colour, such as a practised workman could lay in a quarter of an hour,—the whole forming, if well done, almost a deceptive image—you will, at least, have the range of power in Egyptian sculpture clearly expressed to you.

164. But for fine sculpture, we must advance by far other methods. If we carve the subject with real delicacy, the cast shadow of the incision will interfere with its outline, so that, for representation of beautiful things, you must clear away the ground about it, at all events for a little distance. As the law of work is to use the least pains possible, you clear it only just as far back as you need, and then for the sake of order and finish, you give the space a geometrical outline. By taking, in this case, the simplest I can,—a circle,—I can clear the head with little labor in the removal of surface round it; (see the lower figure in Plate XI.)

165. Now, these are the first terms of all well-constructed bas-relief. The mass you have to treat consists of a piece of stone, which, however you afterwards carve it, can but, at its most projecting point, reach the level of the external plane surface out of which it was mapped, and defined by a depression round it; that depression being at first a mere trench, then a moat of certain width, of which the outer sloping bank is in contact, as a limiting geometrical line, with the laterally salient portions of sculpture. This, I repeat, is the primal

* This relief is now among the other casts which I have placed in the lower school in the University galleries.
construction of good bas-relief, implying, first, perfect protection to its surface from any transverse blow, and a geometrically limited space to be occupied by the design, into which it shall pleasantly (and as you shall ultimately see, ingeniously,) contract itself: implying, secondly, a determined depth of projection, which it shall rarely reach, and never exceed: and implying, finally, the production of the whole piece with the least possible labor of chisel and loss of stone.

166. And these, which are the first, are very nearly the last constructive laws of sculpture. You will be surprised to find how much they include, and how much of minor propriety in treatment their observance involves.

In a very interesting essay on the architecture of the Parthenon, by the professor of architecture of the Ecole Polytechnique, M. Emile Boutmy, you will find it noticed that the Greeks do not usually weaken, by carving, the constructive masses of their building; but put their chief sculpture in the empty spaces between the triglyphs, or beneath the roof. This is true; but in so doing, they merely build their panel instead of carving it; they accept no less than the Goths, the laws of recess and limitation, as being vital to the safety and dignity of their design; and their noblest recumbent statues are, constructively, the fillings of the acute extremity of a panel in the form of an obtusely summitted triangle.

167. In gradual descent from that severest type, you will find that an immense quantity of sculpture of all times and styles may be generally embraced under the notion of a mass hewn out of, or, at least, placed in, a panel or recess, deepening, it may be, into a niche; the sculpture being always designed with reference to its position in such recess; and, therefore, to the effect of the building out of which the recess is hewn.

But, for the sake of simplifying our inquiry, I will at first suppose no surrounding protective ledge to exist, and that the area of stone we have to deal with is simply a flat slab, extant from a flat surface depressed all round it.

168. A flat slab, observe. The flatness of surface is essential to the problem of bas-relief. The lateral limit of the
panel may, or may not, be required; but the vertical limit of surface must be expressed; and the art of bas-relief is to give the effect of true form on that condition. For observe, if nothing more were needed than to make first a cast of a solid form, then cut it in half, and apply the half of it to the flat surface;—if, for instance, to carve a bas-relief of an apple, all I had to do was to cut my sculpture of the whole apple in half, and pin it to the wall, any ordinary trained sculptor, or even a mechanical workman, could produce bas-relief; but the business is to carve a round thing out of a flat thing; to carve an apple out of a biscuit!—to conquer, as a subtle Florentine has here conquered,* his marble, so as not only to get motion into what is most rigidly fixed, but to get boundlessness into what is most narrowly bounded; and carve Madonna and Child, rolling clouds, flying angels, and space of heavenly air behind all, out of a film of stone not the third of an inch thick where it is thickest.

169. Carried, however, to such a degree of subtlety as this, and with so ambitious and extravagant aim, bas-relief becomes a tour-de-force; and, you know, I have just told you all tours-de-force are wrong. The true law of bas-relief is to begin with a depth of incision proportioned justly to the distance of the observer and the character of the subject, and out of that rationally determined depth, neither increased for ostentation of effect, nor diminished for ostentation of skill, to do the utmost that will be easily visible to an observer, supposing him to give an average human amount of attention, but not to peer into, or critically scrutinize the work.

170. I cannot arrest you to day by the statement of any of the laws of sight and distance which determine the proper depth of bas-relief. Suppose that depth fixed; then observe what a pretty problem, or, rather, continually varying cluster of problems, will be offered to us. You might, at first, imagine that, given what we may call our scale of solidity, or scale of depth, the diminution from nature would be in regular

* The reference is to a cast from a small and low relief of Florentine work in the Kensington Museum.
proportion, as for instance, if the real depth of your subject be, suppose a foot, and the depth of your bas-relief an inch, then the parts of the real subject which were six inches round the side of it would be carved, you might imagine, at the depth of half-an-inch, and so the whole thing mechanically reduced to scale. But not a bit of it. Here is a Greek bas-relief of a chariot with two horses (upper figure, Plate XXI). Your whole subject has therefore the depth of two horses side by side, say six or eight feet. Your bas-relief has, on the scale,* say the depth of the third of an inch. Now, if you gave only the sixth of an inch for the depth of the off horse, and, dividing him again, only the twelfth of an inch for that of each foreleg, you would make him look a mile away from the other, and his own forelegs a mile apart. Actually, the Greek has made the near leg of the off horse project much beyond the off leg of the near horse; and has put nearly the whole depth and power of his relief into the breast of the off horse, while for the whole distance from the head of the nearest to the neck of the other, he has allowed himself only a shallow line; knowing that, if he deepened that, he would give the nearest horse the look of having a thick nose; whereas, by keeping that line down, he has not only made the head itself more delicate, but detached it from the other by giving no cast shadow, and left the shadow below to serve for thickness of breast, cutting it as sharp down as he possibly can, to make it bolder.

171. Here is a fine piece of business we have got into! —even supposing that all this selection and adaptation were to be contrived under constant laws, and related only to the expression of given forms. But the Greek sculptor, all this while, is not only debating and deciding how to show what he wants, but, much more, debating and deciding what, as he can't show everything, he will choose to show at all. Thus, being himself interested, and supposing that you will be, in

* The actual bas-relief is on a coin, and the projection not above the twentieth of an inch, but I magnified it in photograph, for this Lecture, so as to represent a relief with about the third of an inch for maximum projection.
the manner of the driving, he takes great pains to carve the reins, to show you where they are knotted, and how they are fastened round the driver's waist (you recollect how Hippolitus was lost by doing that), but he does not care the least bit about the chariot, and having rather more geometry than he likes in the cross and circle of one wheel of it, entirely omits the other!

172. I think you must see by this time that the sculptor's is not quite a trade which you can teach like brickmaking; nor its produce an article of which you can supply any quantity "demanded" for the next railroad waiting-room. It may perhaps, indeed, seem to you that, in the difficulties thus presented by it, bas-relief involves more direct exertion of intellect than finished solid sculpture. It is not so, however. The questions involved by bas-relief are of a more curious and amusing kind, requiring great variety of expedients; though none except such as a true workmanly instinct delights in inventing and invents easily; but design in solid sculpture involves considerations of weight in mass, of balance, of perspective and opposition, in projecting forms, and of restraint for those which must not project, such as none but the greatest masters have ever completely solved; and they, not always; the difficulty of arranging the composition so as to be agreeable from points of view on all sides of it, being, itself, arduous enough.

173. Thus far, I have been speaking only of the laws of structure relating to the projection of the mass which becomes itself the sculpture. Another most interesting group of constructive laws governs its relation to the line that contains or defines it.

In your Standard Series I have placed a photograph of the south transept of Rouen Cathedral. Strictly speaking, all standards of Gothic are of the thirteenth century; but, in the fourteenth, certain qualities of richness are obtained by the diminution of restraint; out of which we must choose what is best in their kinds. The pedestals of the statues which once occupied the lateral recesses are, as you see, covered with groups of figures, enclosed each in a quatrefoil panel; the
spaces between this panel and the enclosing square being filled with sculptures of animals.

You cannot anywhere find a more lovely piece of fancy, or more illustrative of the quantity of result that may be obtained with low and simple chiselling. The figures are all perfectly simple in drapery, the story told by lines of action only in the main group, no accessories being admitted. There is no undercutting anywhere, nor exhibition of technical skill, but the fondest and tenderest appliance of it; and one of the principal charms of the whole is the adaptation of every subject to its quaint limit. The tale must be told within the four petals of the quatrefoil, and the wildest and playfulllest beasts must never come out of their narrow corners. The attention with which spaces of this kind are filled by the Gothic designers is not merely a beautiful compliance with architectural requirements, but a definite assertion of their delight in the restraint of law; for, in illuminating books, although, if they chose it, they might have designed floral ornaments, as we now usually do, rambling loosely over the leaves, and although, in later works, such license is often taken by them, in all books of the fine time the wandering tendrils are enclosed by limits approximately rectilinear, and in gracefullest branching often detach themselves from the right line only by curvature of extreme severity.

174. Since the darkness and extent of shadow by which the sculpture is relieved necessarily vary with the depth of the recess, there arise a series of problems, in deciding which the wholesome desire for emphasis by means of shadow is too often exaggerated by the ambition of the sculptor to show his skill in undercutting. The extreme of vulgarity is usually reached when the entire bas-relief is cut hollow underneath, as in much Indian and Chinese work, so as to relieve its forms against an absolute darkness; but no formal law can ever be given; for exactly the same thing may be beautifully done for a wise purpose, by one person, which is basely done, and to no purpose, or to a bad one, by another. Thus, the desire for emphasis itself may be the craving of a deadened imagination, or the passion of a vigorous one; and relief against shadow
STRUCTURE.

may be sought by one man only for sensation, and by another for intelligibility. John of Pisa undercuts fiercely, in order to bring out the vigour of life which no level contour could render; the Lombardi of Venice undercut delicately, in order to obtain beautiful lines, and edges of faultless precision; but the base Indian craftsmen undercut only that people may wonder how the chiselling was done through the holes, or that they may see every monster white against black.

175. Yet, here again we are met by another necessity for discrimination. There may be a true delight in the inlaying of white on dark, as there is a true delight in vigorous rounding. Nevertheless, the general law is always, that, the lighter the incisions, and the broader the surface, the grander, cæteris paribus, will be the work. Of the structural terms of that work you now know enough to understand that the schools of good sculpture, considered in relation to projection, divide themselves into four entirely distinct groups:

1st. Flat Relief, in which the surface is, in many places, absolutely flat; and the expression depends greatly on the lines of its outer contour, and on fine incisions within them.

2nd. Round Relief, in which, as in the best coins, the sculptured mass projects so as to be capable of complete modulation into form, but is not anywhere undercut. The formation of a coin by the blow of a die necessitates, of course, the severest obedience to this law.

3rd. Edged Relief. Undercutting admitted, so as to throw out the forms against a background of shadow.

4th. Full Relief. The statue completely solid in form, and unreduced in retreating depth of it, yet connected locally with some definite part of the building, so as to be still dependent on the shadow of its background and direction of protective line.

176. Let me recommend you at once to take what pains may be needful to enable you to distinguish these four kinds of sculpture, for the distinctions between them are not founded on mere differences in gradation of depth. They are truly four species, or orders, of sculpture, separated from each other
by determined characters. I have used, you may have noted, hitherto in my Lectures, the word "bas-relief" almost indiscriminately for all, because the degree of lowness or highness of relief is not the question, but the method of relief. Observe again, therefore—

A. If a portion of the surface is absolutely flat, you have the first order—Flat Relief.

B. If every portion of the surface is rounded, but none undercut, you have Round Relief—essentially that of seals and coins.

C. If any part of the edges be undercut, but the general projection of solid form reduced, you have what I think you may conveniently call Foliate Relief,—the parts of the design overlapping each other in places, like edges of leaves.

D. If the undercutting is bold and deep, and the projection of solid form unreduced, you have full relief.

Learn these four names at once by heart:—
Flat Relief.
Round Relief.
Foliate Relief.
Full Relief.

And whenever you look at any piece of sculpture, determine first to which of these classes it belongs; and then consider how the sculptor has treated it with reference to the necessary structure—that reference, remember, being partly to the mechanical conditions of the material, partly to the means of light and shade at his command.

177. To take a single instance. You know, for these many years, I have been telling our architects with all the force of voice I had in me, that they could design nothing until they could carve natural forms rightly. Many imagine that work was easy; but judge for yourselves whether it be or not. In Plate XII, I have drawn, with approximate accuracy, a cluster of Phillyrea leaves as they grow. Now, if we wanted to cut them in bas-relief, the first thing we should have to consider would be the position of their outline on the marble;—here it is, as far down as the spring of the leaves. But do you suppose that is what an ordinary sculptor could either lay for
his first sketch, or contemplate as a limit to be worked down
to? Then consider how the interlacing and springing of the
leaves can be expressed within this outline. It must be done
by leaving such projection in the marble as will take the light
in the same proportion as the drawing does;—and a Floren-
tine workman could do it, for close sight, without driving one
incision deeper, or raising a single surface higher, than the
eighth of an inch. Indeed, no sculptor of the finest time

![Diagram](image)

**Fig. 9.**

would design such a complex cluster of leaves as this, except
for bronze or iron work; they would take simpler contours
for marble; but the laws of treatment would, under these
conditions, remain just as strict: and you may, perhaps, be-
lieve me now when I tell you that, in any piece of fine struc-
tural sculpture by the great masters, there is more subtlety
and noble obedience to lovely laws than could be explained to
you if I took twenty lectures to do it in, instead of one.

178. There remains yet a point of mechanical treatment, on
which I have not yet touched at all; nor that the least impor-
tant,—namely, the actual method and style of handling. A great sculptor uses his tools exactly as a painter his pencil, and you may recognize the decision of his thought, and glow of his temper, no less in the workmanship than the design. The modern system of modelling the work in clay, getting it into form by machinery, and by the hands of subordinates, and touching it at last, if indeed the (so called) sculptor touch it at all, only to correct their inefficiencies, renders the production of good work in marble a physical impossibility. The first result of it is that the sculptor thinks in clay instead of marble, and loses his instinctive sense of the proper treatment of a brittle substance. The second is that neither he nor the public recognize the touch of the chisel as expressive of personal feeling or power, and that nothing is looked for except mechanical polish.

179. The perfectly simple piece of Greek relief represented in Plate XIII., will enable you to understand at once,—examination of the original, at your leisure, will prevent you, I trust, from ever forgetting,—what is meant by the virtue of handling in sculpture.

The projection of the heads of the four horses, one behind the other, is certainly not more, altogether, than three-quarters of an inch from the flat ground, and the one in front does not in reality project more than the one behind it, yet, by mere drawing,* you see the sculptor has got them to appear to recede in due order, and by the soft rounding of the flesh surfaces, and modulation of the veins, he has taken away all look of flatness from the necks. He has drawn the eyes and nostrils with dark incision, careful as the finest touches of a painter's pencil: and then, at last, when he comes to the manes, he has let fly hand and chisel with their full force, and where a base workman, (above all, if he had modelled the thing in clay first,) would have lost himself in laborious imitation of Lair, the Greek has struck the tresses out with angular inci-

* This plate has been executed from a drawing by Mr. Burgess, in which he has followed the curves of incision with exquisite care, and preserved the effect of the surface of the stone, where a photograph would have lost it by exaggerating accidental stains.
sions, deep driven, every one in appointed place and deliberate curve, yet flowing so free under his noble hand that you cannot alter, without harm, the bending of any single ridge, nor contract, nor extend, a point of them. And if you will look back to Plate IX. you will see the difference between this sharp incision, used to express horse-hair, and the soft incision with intervening rounded ridge, used to express the hair of Apollo Chrysocomes; and, beneath, the obliquely ridged incision used to express the plumes of his swan; in both these cases the handling being much more slow, because the engraving is in metal; but the structural importance of incision, as the means of effect, never lost sight of. Finally, here are two actual examples of the work in marble of the two great schools of the world; one, a little Fortune, standing tiptoe on the globe of the Earth, its surface traced with lines in hexagons; not chaotic under Fortune's feet; Greek, this, and by a trained workman;—dug up in the temple of Neptune at Corfu;—and here, a Florentine portrait-marble, found in the recent alterations, face downwards, under the pavement of Sta Maria Novella;* both of them first-rate of their kind; and both of them, while exquisitely finished at the telling points, showing, on all their unregarded surfaces, the rough furrow of the fast-driven chisel, as distinctly as the edge of a common paving-stone.

180. Let me suggest to you, in conclusion, one most interesting point of mental expression in these necessary aspects of finely executed sculpture. I have already again and again pressed on your attention the beginning of the arts of men in the make and use of the ploughshare. Read more carefully—you might indeed do well to learn at once by heart,—the twenty-seven lines of the Fourth Pythian, which describe the ploughing of Jason. There is nothing grander extant in human fancy, nor set down in human words: but this great mythical expression of the conquest of the earth-clay, and brute-force, by vital human energy, will become yet more interesting to you when you reflect what enchantment has been cut, on whiter clay, by the tracing of finer furrows;—

* These two marbles will always, henceforward, be sufficiently accessible for reference in my room at Corpus Christi College.
what the delicate and consummate arts of man have done by
the ploughing of marble, and granite, and iron. You will
learn daily more and more, as you advance in actual practice,
how the primary manual art of engraving, in the steadiness,
clearness, and irrevocableness of it, is the best art-discipline
that can be given either to mind or hand;* you will recog-
nize one law of right, pronouncing itself in the well-resolved
work of every age; you will see the firmly traced and irre-
vcable incision determining not only the forms, but, in great
part, the moral temper, of all vitally progressive art; you will
trace the same principle and power in the furrows which the
oblique sun shows on the granite of his own Egyptian city,—
in the white scratch of the stylus through the colour on a
Greek vase—in the first delineation, on the wet wall, of the
groups of an Italian fresco; in the unerring and unalterable
touch of the great engraver of Nuremberg,—and in the deep
driven and deep bitten ravines of metal by which Turner
closed, in embossed limits, the shadows of the Liber Studi-
orum.

Learn, therefore, in its full extent, the force of the great
Greek word, χαράσσω;—and, give me pardon—if you think
pardon needed, that I ask you also to learn the full meaning
of the English word derived from it. Here, at the Ford of
the Oxen of Jason, are other furrows to be driven than these
in the marble of Pentelicus. The fruitfullest, or the fatallest
of all ploughing is that by the thoughts of your youth, on the
white field of its imagination. For by these, either down to
the disturbed spirit, "κέκοπται καὶ χαράσσεται πέδου;" or
around the quiet spirit, and on all the laws of conduct that
hold it, as a fair vase its frankincense, are ordained the pure
colours, and engraved the just Characters, of Αœonian life.

* That it was also, in some cases, the earliest that the Greeks gave,
is proved by Lucian's account of his first lesson at his uncle's; the
ἐγκοστεύς, literally "in-cutter"—being the first tool put into his hand,
and an earthenware tablet to cut upon, which the boy pressing too hard,
presently breaks;—gets beaten—goes home crying, and becomes, after
his dream above quoted, a philosopher instead of a sculptor.
LECTURE VI.

THE SCHOOL OF ATHENS.

December, 1870.

181. It can scarcely be needful for me to tell even the younger members of my present audience, that the conditions necessary for the production of a perfect school of sculpture have only twice been met in the history of the world, and then for a short time; nor for short time only, but also in narrow districts, namely, in the valleys and islands of Ionian Greece, and in the strip of land deposited by the Arno, between the Apennine crests and the sea.

All other schools, except these two, led severally by Athens in the fifth century before Christ, and by Florence in the fifteenth of our own era, are imperfect; and the best of them are derivative: these two are consummate in themselves, and the origin of what is best in others.

182. And observe, these Athenian and Florentine schools are both of equal rank, as essentially original and independent. The Florentine, being subsequent to the Greek, borrowed much from it; but it would have existed just as strongly—and, perhaps, in some respects, more nobly—had it been the first, instead of the latter of the two. The task set to each of these mightiest of the nations was, indeed, practically the same, and as hard to the one as to the other. The Greeks found Phœnician and Etruscan art monstrous, and had to make them human. The Italians found Byzantine and Norman art monstrous, and had to make them human. The original power in the one case is easily traced; in the other it has partly to be unmasked, because the change at Florence was, in many points, suggested and stimulated by the former school. But we mistake in supposing that Athens taught Florence the laws of design; she taught her, in reality, only the duty of truth.

183. You remember that I told you the highest art could
do no more than rightly represent the human form. This is
the simple test, then, of a perfect school,—that it has repre-
\[\text{sent}ed the human form, so that it is impossible to conceive of
\text{its being better done. And that, I repeat, has been accom-
plished twice only: once in Athens, once in Florence. And}
so narrow is the excellence even of these two exclusive schools,
that it cannot be said of either of them that they represented
the entire human form. The Greeks perfectly drew, and per-
fectedly moulded the body and limbs; but there is, so far as I
am aware, no instance of their representing the face as well
as any great Italian. On the other hand, the Italian painted
and carved the face insuperably; but I believe there is no in-
stance of his having perfectly represented the body, which,
by command of his religion, it became his pride to despise,
and his safety to mortify.

184. The general course of your study here renders it de-
sirable that you should be accurately acquainted with the lead-
ing principles of Greek sculpture; but I cannot lay these be-
fore you without giving undue prominence to some of the
special merits of that school, unless I previously indicate the
relation it holds to the more advanced, though less disciplined,
excellence of Christian art.

In this and the last lecture of the present course,* I shall
endeavour, therefore, to mass for you, in such rude and dia-
gram-like outline as may be possible or intelligible, the main
characteristics of the two schools, completing and correcting
the details of comparison afterwards; and not answering, ob-
serve, at present, for any generalization I give you, except as a
ground for subsequent closer and more qualified statements.

And in carrying out this parallel, I shall speak indifferently
of works of sculpture, and of the modes of painting which

* The closing Lecture, on the religious temper of the Florentine,
though necessary for the complete explanation of the subject to my
class, at the time, introduced new points of inquiry which I do not
choose to lay before the general reader until they can be examined in
fuller sequence. The present volume, therefore, closes with the Sixth
Lecture, and that on Christian art will be given as the first of the pub-
ished course on Florentine Sculpture.
propose to themselves the same objects as sculpture. And
this indeed Florentine, as opposed to Venetian, painting, and
that of Athens in the fifth century, nearly always did.

185. I begin, therefore, by comparing two designs of the
simplest kind—engravings, or, at least, linear drawings, both;
one on clay, one on copper, made in the central periods of
each style, and representing the same goddess—Aphrodite.
They are now set beside each other in your Rudimentary
Series. The first is from a patera lately found at Camirus,
authoritatively assigned by Mr. Newton, in his recent catalogue,
to the best period of Greek art. The second is from one of
the series of engravings executed, probably, by Baccio Baldini,
in 1485, out of which I chose your first practical exercise—the
Sceptre of Apollo. I cannot, however, make the comparison
accurate in all respects, for I am obliged to set the restricted
type of the Aphrodite Urania of the Greeks beside the uni-
versal Deity conceived by the Italian as governing the air, earth,
and sea; nevertheless the restriction in the mind of the Greek,
and expatiation in that of the Florentine, are both character-
istic. The Greek Venus Urania is flying in heaven, her power
over the waters symbolized by her being borne by a swan, and
her power over the earth by a single flower in her right hand;
but the Italian Aphrodite is rising out of the actual sea, and
only half risen: her limbs are still in the sea, her merely ani-
mal strength filling the waters with their life; but her body
to the loins is in the sunshine, her face raised to the sky; her
hand is about to lay a garland of flowers on the earth.

186. The Venus Urania of the Greeks, in her relation to
men, has power only over lawful and domestic love; there-
fore, she is fully dressed, and not only quite dressed, but most
daintily and trimly: her feet delicately sandalled, her gown
spotted with little stars, her hair brushed exquisitely smooth
at the top of her head, trickling in minute waves down her
forehead; and though, because there's such a quantity of it,
she can't possibly help having a chignon, look how tightly she
has fastened it in with her broad fillet. Of course she is
married, so she must wear a cap with pretty minute pendant
jewels at the border; and a very small necklace, all that her
husband can properly afford, just enough to go closely round the neck, and no more. On the contrary, the Aphrodite of the Italian, being universal love, is pure-naked; and her long hair is thrown wild to the wind and sea.

These primal differences in the symbolism, observe, are only because the artists are thinking of separate powers: they do not necessarily involve any national distinction in feeling. But the differences I have next to indicate are essential, and characterize the two opposed national modes of mind.

187. First, and chiefly. The Greek Aphrodite is a very pretty person, and the Italian a decidedly plain one. That is because a Greek thought no one could possibly love any but pretty people; but an Italian thought that love could give dignity to the meanest form that it inhabited, and light to the poorest that it looked upon. So his Aphrodite will not condescend to be pretty.

188. Secondly. In the Greek Venus the breasts are broad and full, though perfectly severe in their almost conical profile;—you are allowed on purpose to see the outline of the right breast, under the chiton)—also the right arm is left bare, and you can just see the contour of the front of the right limb and knee; both arm and limb pure and firm, but lovely. The plant she holds in her hand is a branching and flowering one, the seed vessel prominent. These signs all mean that her essential function is child-bearing.

On the contrary, in the Italian Venus the breasts are so small as to be scarcely traceable; the body strong, and almost masculine in its angles; the arms meagre and unattractive, and she lays a decorative garland of flowers on the earth. These signs mean that the Italian thought of love as the strength of an eternal spirit, for ever helpful; and for ever crowned with flowers, that neither know seed-time nor harvest, and bloom where there is neither death, nor birth.

189. Thirdly. The Greek Aphrodite is entirely calm, and looks straight forward. Not one feature of her face is disturbed, or seems ever to have been subject to emotion. The Italian Aphrodite looks up, her face all quivering and burning
with passion and wasting anxiety. The Greek one is quiet, self-possessed, and self-satisfied; the Italian incapable of rest; she has had no thought nor care for herself; her hair has been bound by a fillet like the Greeks; but it is now all fallen loose, and clotted with the sea, or clinging to her body; only the front tress of it is caught by the breeze from her raised forehead, and lifted, in the place where the tongues of fire rest on the brows, in the early Christian pictures of Pentecost, and the waving fires abide upon the heads of Angelico's seraphim.

190. There are almost endless points of interest, great and small, to be noted in these differences of treatment. This binding of the hair by the single fillet marks the straight course of one great system of art method, from that Greek head which I showed you on the archaic coin of the seventh century before Christ, to this of the fifteenth of our own era—nay, when you look close, you will see the entire action of the head depends on one lock of hair falling back from the ear, which it does in compliance with the old Greek observance of its being bent there by the pressure of the helmet. That rippling of it down her shoulders comes from the Athena of of Corinth; the raising of it on her forehead, from the knot of the hair of Diana, changed into the vestal fire of the angels. But chiefly, the calmness of the features in the one face, and their anxiety in the other, indicate first, indeed, the characteristic difference in every conception of the schools, the Greek never representing expression, the Italian primarily seeking it; but far more, mark for us here the utter change in the conception of love; from the tranquil guide and queen of a happy terrestrial domestic life, accepting its immediate pleasures and natural duties, to the agonizing hope of an infinite good, and the ever mingled joy and terror of a love divine in jealousy, crying, "Set me as a seal upon thine heart, as a seal upon thine arm; for love is strong as death, jealousy is cruel as the grave."

The vast issues dependent on this change in the conception of the ruling passion of the human soul, I will endeavour to show you, on a future occasion: in my present lecture, I
shall limit myself to the definition of the temper of Greek sculpture, and of its distinctions from Florentine in the treatment of any subject whatever, be it love or hatred, hope or despair.

These great differences are mainly the following.

191. 1. A Greek never expresses momentary passion; a Florentine looks to momentary passion as the ultimate object of his skill.

When you are next in London, look carefully in the British Museum at the casts from the statues in the pediment of the Temple of Minerva at Ægina. You have there Greek work of definite date;—about 600 B.C., certainly before 580—of the purest kind; and you have the representation of a noble ideal subject, the combats of the Æacidae at Troy, with Athena herself looking on. But there is no attempt whatever to represent expression in the features, none to give complexity of action or gesture; there is no struggling, no anxiety, no visible temporary exertion of muscles. There are fallen figures, one pulling a lance out of his wound, and others in attitudes of attack and defence; several kneeling to draw their bows. But all inflict and suffer, conquer or expire, with the same smile.

192. Plate XIV. gives you examples, from more advanced art, of true Greek representation; the subjects being the two contests of leading import to the Greek heart—that of Apollo with the Python, and of Hercules with the Nemean Lion. You see that in neither case is there the slightest effort to represent the λύσσα, or agony of contest. No good Greek artist would have you behold the suffering, either of gods, heroes, or men; nor allow you to be apprehensive of the issue of their contest with evil beasts, or evil spirits. All such lower sources of excitement are to be closed to you; your interest is to be in the thoughts involved by the fact of the war; and in the beauty or rightness of form, whether active or inactive. I have to work out this subject with you afterwards, and to compare with the pure Greek method of thought, that of modern dramatic passion, engrafted on it, as typically in Turner's contest of Apollo and the Python; in the meantime.
Plate XIV.—Apollo and the Python.

Heracles and the Nemean Lion.
PLATE XV.—HERA OF ARGOS. ZEUS OF SYRACUSE.
be content with the statement of this first great principle—that a Greek, as such, never expresses momentary passion.

193. Secondly. The Greek, as such, never expresses personal character, while a Florentine holds it to be the ultimate condition of beauty. You are startled, I suppose, at my saying this, having had it often pointed out to you, as a transcendent piece of subtlety in Greek art, that you could distinguish Hercules from Apollo by his being stout, and Diana from Juno by her being slender. That is very true; but those are general distinctions of class, not special distinctions of personal character. Even as general, they are bodily, not mental. They are the distinctions, in fleshly aspect, between an athlete and a musician,—between a matron and a huntress; but in no wise distinguish the simple-hearted hero from the subtle Master of the Muses, nor the wilful and fitful girl-goddess from the cruel and resolute matron-goddess. But judge for yourselves;—In the successive plates, XV.—XVIII., I show you,* typically represented as the protectresses of nations, the Argive, Cretan, and Lacinian Hera, the Messenian Demeter, the Athena of Corinth, the Artemis of Syracuse, the fountain Arethusa of Syracuse, and the Sirem Ligeia of Terina. Now, of these heads, it is true that some are more delicate in feature than the rest, and some softer in expression: in other respects, can you trace any distinction between the Goddesses of Earth and Heaven, or between the Goddess of Wisdom and the Water Nymph of Syracuse? So little can you do so, that it would have remained a disputed question—had not the name luckily been inscribed on some Syracusan coins—whether the head upon them was meant for Arethusa at all; and, continually, it becomes a question respecting finished statues, if without attributes, "Is this Bacchus or Apollo—Zeus or Poseidon?" There is a fact for you; noteworthy, I think! There is no personal character in

* These plates of coins are given for future reference and examination, not merely for the use made of them in this place. The Lacinian Hera, if a coin could be found unworn in surface, would be very noble; her hair is thrown free because she is the goddess of the cape of storms, though in her temple, there, the wind never moved the ashes on its altar. (Livy, xxiv. 3.)
true Greek art:—abstract ideas of youth and age, strength and swiftness, virtue and vice,—yes: but there is no individuality; and the negative holds down to the revived conventionalism of the Greek school by Leonardo, when he tells you how you are to paint young women, and how old ones; though a Greek would hardly have been so discourteous to age as the Italian is in his canon of it,—“old women should be represented as passionate and hasty, after the manner of Infernal Furies.”

194. “But at least, if the Greeks do not give character, they give ideal beauty?” So it is said, without contradiction. But will you look again at the series of coins of the best time of Greek art, which I have just set before you? Are any of these goddesses or nymphs very beautiful? Certainly the Junos are not. Certainly the Demeters are not. The Siren, and Arethusa, have well-formed and regular features; but I am quite sure that if you look at them without prejudice, you will think neither reach even the average standard of pretty English girls. The Venus Urania suggests at first, the idea of a very charming person, but you will find there is no real depth nor sweetness in the contours, looked at closely. And remember, these are chosen examples; the best I can find of art current in Greece at the great time; and if even I were to take the celebrated statues, of which only two or three are extant, not one of them excels the Venus of Melos; and she, as I have already asserted, in The Queen of the Air, has nothing notable in feature except dignity and simplicity. Of Athena I do not know one authentic type of great beauty; but the intense ugliness which the Greeks could tolerate in their symbolism of her will be convincingly proved to you by the coin represented in Plate VI. You need only look at two or three vases of the best time, to assure yourselves that beauty of feature was, in popular art, not only unattained, but unattempted; and finally,—and this you may accept as a conclusive proof of the Greek insensitiveness to the most subtle beauty—there is little evidence even in their literature, and none in their art, of their having ever perceived any beauty in infancy, or early childhood,
Plate XVI.—Demeter of Messene. Hera of Crossus.
Plate XVII.—Athena of Thurium.
Sereia Ligeia of Terina.
195. The Greeks, then, do not give passion, do not give character, do not give refined or naïve beauty. But you may think that the absence of these is intended to give dignity to the gods and nymphs; and that their calm faces would be found, if you long observed them, instinct with some expression of divine mystery or power.

I will convince you of the narrow range of Greek thought in these respects, by showing you, from the two sides of one and the same coin, images of the most mysterious of their Deities, and the most powerful,—Demeter and Zeus.

Remember, that just as the west coasts of Ireland and England catch first on their hills the rain of the Atlantic, so the western Peloponnese arrests, in the clouds of the first mountain ranges of Arcadia, the moisture of the Mediterranean; and over all the plains of Elis, Pylos, and Messene, the strength and sustenance of men was naturally felt to be granted by Zeus; as, on the east coast of Greece, the greater clearness of the air by the power of Athena. If you will recollect the prayer of Rhea, in the single line of Callimachus—"Γαΐα φλαγη, τέκε καὶ σύ τεαὶ ἥδινες ἔλαφραι," (compare Pausanias iv. 33, at the beginning)—it will mark for you the connection, in the Greek mind, of the birth of the mountain springs of Arcadia with the birth of Zeus. And the centres of Greek thought on this western coast are necessarily Elis, and, (after the time of Epaminondas,) Messene.

196. I show you the coin of Messene, because the splendid height and form of Mount Ithome were more expressive of the physical power of Zeus than the lower hills of Olympia; and also because it was struck just at the time of the most finished and delicate Greek art—a little after the main strength of Phidias, but before decadence had generally pronounced itself. The coin is a silver didrachm, bearing on one side a head of Demeter (Plate XVI., at the top); on the other a full figure of Zeus Aietophoros (Plate XIX., at the top); the two together signifying the sustaining strength of the earth and heaven. Look first at the head of Demeter. It is merely meant to personify fulness of harvest; there is no mystery in it, no sadness, no vestige of the expression which
we should have looked for in any effort to realize the Greek thoughts of the Earth Mother, as we find them spoken by the poets. But take it merely as personified abundance;—the goddess of black furrow and tawny grass—how commonplace it is, and how poor! The hair is grand, and there is one stalk of wheat set in it, which is enough to indicate the goddess who is meant; but, in that very office, ignoble, for it shows that the artist could only inform you that this was Demeter by such a symbol. How easy it would have been for a great designer to have made the hair lovely with fruitful flowers, and the features noble in mystery of gloom, or of tenderness. But here you have nothing to interest you, except the common Greek perfections of a straight nose and a full chin.

197. We pass, on the reverse of the die, to the figure of Zeus Aietophoros. Think of the invocation to Zeus in the Suppliant, (525), “King of Kings, and Happiest of the Happy, Perfectest of the Perfect in strength, abounding in all things, Jove—hear us and be with us;” and then, consider what strange phase of mind it was, which, under the very mountain-home of the god, was content with this symbol of him as a well-fed athlete, holding a diminutive and crouching eagle on his fist. The features and the right hand have been injured in this coin, but the action of the arms shows that it held a thunderbolt, of which, I believe, the twisted rays were triple. In the, presumably earlier, coin engraved by Millingen, however,* it is singly pointed only; and the added inscription “ΙΘΩΜ,” in the field, renders the conjecture of Millingen probable, that this is a rude representation of the statue of Zeus Ithomates, made by Ageladas, the master of Phidias; and I think it has, indeed, the aspect of the endeavour, by a workman of more advanced knowledge, and more vulgar temper, to put the softer anatomy of later schools into the simple action of an archaic figure. Be that as it may, here is one of the most refined cities of Greece content with the figure of an athlete as the representative of their own mountain god; marked as a divine power merely by the attributes of the eagle and thunderbolt.

* Ancient Cities and Kings, Plate IV. No. 20.
PLATE XVIII.—Artemis of Syracuse.
Hera of Lacinian Cape.
Plate XIX.—Zeus of Messene. Ajax of Opus.
Lastly. The Greeks have not, it appears, in any supreme way, given to their statues character, beauty, or divine strength. Can they give divine sadness? Shall we find in their artwork any of that pensiveness and yearning for the dead, which fills the chants of their tragedy? I suppose if anything like nearness or firmness of faith in afterlife is to be found in Greek legend, you might look for it in the stories about the Island of Leuce, at the mouth of the Danube, inhabited by the ghosts of Achilles, Patroclus, Ajax the son of Oileus, and Helen; and in which the pavement of the Temple of Achilles was washed daily by the sea-birds with their wings, dipping them in the sea.

Now it happens that we have actually on a coin of the Locrians the representation of the ghost of the Lesser Ajax. There is nothing in the history of human imagination more lovely, than their leaving always a place for his spirit, vacant in their ranks of battle. But here is their sculptural representation of the phantom; (lower figure, Plate XIX.), and I think you will at once agree with me in feeling that it would be impossible to conceive anything more completely unspiritual. You might more than doubt that it could have been meant for the departed soul, unless you were aware of the meaning of this little circlet between the feet. On other coins you find his name inscribed there, but in this you have his habitation, the haunted Island of Leuce itself, with the waves flowing round it.

Again and again, however, I have to remind you, with respect to these apparently frank and simple failures, that the Greek always intends you to think for yourself, and understand, more than he can speak. Take this instance at our hands, the trim little circlet for the Island of Leuce. The workman knows very well it is not like the island, and that he could not make it so; that at its best, his sculpture can be little more than a letter; and yet, in putting this circlet, and its encompassing fretwork of minute waves, he does more than if he had merely given you a letter L, or written "Leuce." If you know anything of beaches and sea, this symbol will set your imagination at work in recalling them;
then you will think of the temple service of the novitiate sea-birds, and of the ghosts of Achilles and Patroclus appearing, like the Dioscuri, above the storm-clouds of the Euxine. And the artist, throughout his work, never for an instant loses faith in your sympathy and passion being ready to answer his;—if you have none to give, he does not care to take you into his counsel; on the whole, would rather that you should not look at his work.

200. But if you have this sympathy to give, you may be sure that whatever he does for you will be right, as far as he can render it so. It may not be sublime, nor beautiful, nor amusing; but it will be full of meaning, and faithful in guidance. He will give you clue to myriads of things that he cannot literally teach; and, so far as he does teach, you may trust him. Is not this saying much?

And as he strove only to teach what was true, so, in his sculptured symbol, he strove only to carve what was—Right. He rules over the arts to this day, and will for ever, because he sought not first for beauty, nor first for passion, or for invention, but for Rightness; striving to display, neither himself nor his art, but the thing that he dealt with, in its simplicity. That is his specific character as a Greek. Of course, every nation's character is connected with that of others surrounding or preceding it; and in the best Greek work you will find some things that are still false, or fanciful; but whatever in it is false or fanciful, is not the Greek part of it—it is the Phoenician, or Egyptian, or Pelasgian part. The essential Hellenic stamp is veracity:—Eastern nations drew their heroes with eight legs, but the Greeks drew them with two;—Egyptians drew their deities with cats' heads, but the Greeks drew them with men's; and out of all fallacy, disproportion, and indefiniteness, they were, day by day, resolutely withdrawing and exalting themselves into restricted and demonstrable truth.

201. And now, having cut away the misconceptions which encumbered our thoughts, I shall be able to put the Greek school into some clearness of its position for you, with respect to the art of the world. That relation is strangely duplicate;
for on one side, Greek art is the root of all simplicity; and on the other, of all complexity.

On one side I say, it is the root of all simplicity. If you were for some prolonged period to study Greek sculpture exclusively in the Elgin Room of the British Museum, and were then suddenly transported to the Hôtel de Cluny, or any other museum of Gothic and barbarian workmanship, you would imagine the Greeks were the masters of all that was grand, simple, wise, and tenderly human, opposed to the pettiness of the toys of the rest of mankind.

202. On one side of their work they are so. From all vain and mean decoration—all weak and monstrous error, the Greeks rescue the forms of man and beast, and sculpture them in the nakedness of their true flesh, and with the fire of their living soul. Distinctively from other races, as I have now, perhaps to your weariness, told you, this is the work of the Greek, to give health to what was diseased, and chastisement to what was untrue. So far as this is found in any other school, hereafter, it belongs to them by inheritance from the Greeks, or invests them with the brotherhood of the Greek. And this is the deep meaning of the myth of Daedalus as the giver of motion to statues. The literal change from the binding together of the feet to their separation, and the other modifications of action which took place, either in progressive skill, or often, as the mere consequence of the transition from wood to stone, (a figure carved out of one wooden log must have necessarily its feet near each other, and hands at its sides), these literal changes are as nothing, in the Greek fable, compared to the bestowing of apparent life. The figures of monstrous gods on Indian temples have their legs separate enough; but they are infinitely more dead than the rude figures at Branchidae sitting with their hands on their knees. And, briefly, the work of Daedalus is the giving of deceptive life, as that of Prometheus the giving of real life; and I can put the relation of Greek to all other art, in this function, before you in easily compared and remembered examples.

203. Here, on the right, in Plate XX., is an Indian bull, colossal, and elaborately carved, which you may take as a
sufficient type of the bad art of all the earth. False in form, dead in heart, and loaded with wealth, externally. We will not ask the date of this; it may rest in the eternal obscenity of evil art, everywhere, and for ever. Now, besides this colossal bull, here is a bit of Dædalus work, enlarged from a coin not bigger than a shilling: look at the two together, and you ought to know, henceforward, what Greek art means, to the end of your days.

204. In this aspect of it then, I say, it is the simplest and nakedest of lovely veracities. But it has another aspect, or rather another pole, for the opposition is diamic. As the simplest, so also it is the most complex of human art. I told you in my fifth Lecture, showing you the spotty picture of Velasquez, that an essential Greek character is a liking for things that are dappled. And you cannot but have noticed how often and how prevalently the idea which gave its name to the Porch of Polygnotus, "\(\sigma \tau \omega \delta \ \pi \omega \xi \kappa \iota \lambda \eta,\)" occurs to the Greeks as connected with the finest art. Thus, when the luxurious city is opposed to the simple and healthful one, in the second book of Plato's Polity, you find that, next to perfumes, pretty ladies, and dice, you must have in it "\(\pi \omega \kappa \iota \lambda \iota \alpha,\)" which observe, both in that place and again in the third book, is the separate art of joiners' work, or inlaying; but the idea of exquisitely divided variegation or division, both in sight and sound—the "ravishing division to the lute," as in Pindar's "\(\pi \omega \kappa \iota \lambda \omicron \nu \mu \nu \omicron\)"—runs through the compass of all Greek art description; and if, instead of studying that art among marbles, you were to look at it only on vases of a fine time, (look back, for instance, to Plate IV. here), your impression of it would be, instead of breadth and simplicity, one of universal spot-tiness and chequeredness, "\(\epsilon \nu \\alpha \gamma \gamma \epsilon \omega \nu \ \varepsilon \rho \kappa \varepsilon \sigma \iota \nu \ \tau \alpha \mu \pi \tau \omega \kappa \iota \lambda \iota \omicron \iota\)" and of the artist's delighting in nothing so much as in crossed or starred or spotted things; which, in right places, he and his public both do unlimitedly. Indeed they hold it complimentary even to a trout, to call him a "spotty." Do you recollect the trout in the tributaries of the Ladon, which Pausanias says were spotted, so that they were like thrushes, and which, the Arcadians told him, could speak? In this last
PLATE XXI.—THE BEGINNINGS OF CHIVALRY.
...οἰκία, however, they disappointed him. "I, indeed, saw some of them caught," he says, "but I did not hear any of them speak, though I waited beside the river till sunset."

205. I must sum roughly now, for I have detained you too long:

The Greeks have been thus the origin not only of all broad, mighty, and calm conception, but of all that is divided, delicate, and tremulous; "variable as the shade, by the light quivering aspen made." To them, as first leaders of ornamental design, belongs, of right, the praise of glistenings in gold, piercings in ivory, stainings in purple, burnishings in dark blue steel; of the fantasy of the Arabian roof—quartering of the Christian shield,—rubric and arabesque of Christian scripture; in fine, all enlargement, and all diminution of adorning thought, from the temple to the toy, and from the mountainous pillars of Agrigentum to the last fineness of fretwork in the Pisan Chapel of the Thorn.

And in their doing all this, they stand as masters of human order and justice, subduing the animal nature guided by the spiritual one, as you see the Sicilian Charioteer stands, holding his horse-reins, with the wild lion racing beneath him, and the flying angel above, on the beautiful coin of early Syracuse; (lowest in Plate XXI.).

And the beginnings of Christian chivalry were in that Greek bridling of the dark and the white horses.

206. Not that a Greek never made mistakes. He made as many as we do ourselves, nearly;—he died of his mistakes at last—as we shall die of them; but so far he was separated from the herd of more mistaken and more wretched nations—so far as he was Greek—it was by his rightness. He lived, and worked, and was satisfied with the fatness of his land, and the fame of his deeds, by his justice, and reason, and modesty. He became Græculus esuriens, little, and hungry, and every man's errand-boy, by his iniquity, and his competition, and his love of talk. But his Græcism was in having done, at least at one period of his dominion, more than anybody else, what was modest, useful, and eternally true; and as a workman, he
verily did, or first suggested the doing of, everything possible to man.

Take Daedalus, his great type of the practically executive craftsman, and the inventor of expedients in craftmanship, (as distinguished from Prometheus, the institutor of moral order in art). Daedalus invents,—he, or his nephew,—
The potter's wheel, and all work in clay;
The saw, and all work in wood;
The masts and sails of ships, and all modes of motion;
(wings only proving too dangerous!)
The entire art of minute ornament;
And the deceptive life of statues.

By his personal toil, he involves the fatal labyrinth for Minos; builds an impregnable fortress for the Agrigentines; adorns healing baths among the wild parsley fields of Selinus; buttresses the precipices of Eryx, under the temple of Aphrodite; and for her temple itself—finishes in exquisiteness the golden honeycomb.

207. Take note of that last piece of his art: it is connected with many things which I must bring before you when we enter on the study of architecture. That study we shall begin at the foot of the Baptistery of Florence, which, of all buildings known to me, unites the most perfect symmetry with the quaintest ποιημα. Then, from the tomb of your own Edward the Confessor, to the farthest shrine of the opposite Arabian and Indian world, I must show you how the glittering and iridescent dominion of Daedalus prevails; and his ingenuity in division, interposition, and labyrinthine sequence, more widely still. Only this last summer I found the dark red masses of the rough sandstone of Furness Abbey had been fitted by him, with no less pleasure than he had in carving them, into wedged hexagons—reminiscences of the honeycomb of Venus Erycina. His ingenuity plays around the framework of all the noblest things; and yet the brightness of it has a lurid shadow. The spot of the fawn, of the bird, and the moth, may be harmless. But Daedalus reigns no less over the spot of the leopard and snake. That cruel and venomous power of his art is marked, in the legends of him, by
his invention of the saw from the serpent's tooth; and his seeking refuge, under blood-guiltiness, with Minos, who can judge evil, and measure, or remit, the penalty of it, but not reward good: Rhadamanthus only can measure that; but Minos is essentially the recognizer of evil deeds "conoscitor delle peccata," whom, therefore, you find in Dante under the form of the ἐπετόν. "Cignesi con la coda tante volte, quantunque gradi vuol che giu sia messa."

And this peril of the influence of Daedalus is twofold; first in leading us to delight in glitterings and semblances of things, more than in their form, or truth;—admire the harlequin's jacket more than the hero's strength; and love the gilding of the missal more than its words;—but farther, and worse, the ingenuity of Daedalus may even become bestial, an instinct for mechanical labour only, strangely involved with a feverish and ghastly cruelty:—(you will find this distinct in the intensely Daedal work of the Japanese); rebellious, finally, against the laws of nature and honour, and building labyrinths for monsters,—not combs for bees.

208. Gentlemen, we of the rough northern race may never, perhaps, be able to learn from the Greek his reverence for beauty: but we may at least learn his disdain of mechanism:—of all work which he felt to be monstrous and inhuman in its imprudent dexterities.

We hold ourselves, we English, to be good workmen. I do not think I speak with light reference to recent calamity, (for I myself lost a young relation, full of hope and good purpose, in the foundered ship London,) when I say that either an Ἑginetan or Ionian shipwright built ships that could be fought from, though they were under water; and neither of them would have been proud of having built one that would fill and sink helplessly if the sea washed over her deck, or turn upside down if a squall struck her topsail.

Believe me, gentlemen, good workmanship consists in continence and common sense, more than in frantic expatiation of mechanical ingenuity; and if you would be continent and rational, you had better learn more of Art than you do now, and less of Engineering. What is taking place at this very
hour,* among the streets, once so bright, and avenues once so pleasant, of the fairest city in Europe, may surely lead us all to feel that the skill of Dædalus, set to build impregnable fortresses, is not so wisely applied as in framing the τρητόν πόνου,—the golden honeycomb.

* The siege of Paris, at the time of the delivery of this Lecture, was in one of its most destructive phases.
